# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

## RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

Date of Government Version: 07/24/2023	Source: Environmental Protection Agency
Date Data Arrived at EDR: 07/31/2023	Telephone: (415) 495-8895
Date Made Active in Reports: 08/14/2023	Last EDR Contact: 09/20/2023
Number of Days to Update: 14	Next Scheduled EDR Contact: 01/01/2024
	Data Release Frequency: Quarterly

## RCRA-VSQG: RCRA - Very Small Quantity Generators (Formerly Conditionally Exempt Small Quantity Generators)

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

Date of Government Version: 07/24/2023	Source: Environmental Protection Agency
Date Data Arrived at EDR: 07/31/2023	Telephone: (415) 495-8895

## ***Federal institutional controls / engineering controls registries***

### LUCIS: Land Use Control Information System

LUCIS contains records of land use control information pertaining to the former Navy Base Realignment and Closure properties.

Date of Government Version: 08/03/2023	Source: Department of the Navy
Date Data Arrived at EDR: 08/07/2023	Telephone: 843-820-7326
Date Made Active in Reports: 10/10/2023	Last EDR Contact: 11/02/2023
Number of Days to Update: 64	Next Scheduled EDR Contact: 02/19/2024
	Data Release Frequency: Varies

### US ENG CONTROLS: Engineering Controls Sites List

A listing of sites with engineering controls in place. Engineering controls include various forms of caps, building foundations, liners, and treatment methods to create pathway elimination for regulated substances to enter environmental media or effect human health.

Date of Government Version: 08/21/2023	Source: Environmental Protection Agency
Date Data Arrived at EDR: 08/21/2023	Telephone: 703-603-0695
Date Made Active in Reports: 11/07/2023	Last EDR Contact: 11/17/2023
Number of Days to Update: 78	Next Scheduled EDR Contact: 03/04/2024
	Data Release Frequency: Varies

### US INST CONTROLS: Institutional Controls Sites List

A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

Date of Government Version: 08/21/2023	Source: Environmental Protection Agency

## ***Lists of state- and tribal hazardous waste facilities***

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

Next Scheduled EDR Contact: 01/15/2024  
Data Release Frequency: Varies

### UST CLOSURE: Proposed Closure of Underground Storage Tank (UST) Cases

UST cases that are being considered for closure by either the State Water Resources Control Board or the Executive Director have been posted for a 60-day public comment period. UST Case Closures being proposed for consideration by the State Water Resources Control Board. These are primarily UST cases that meet closure criteria under the decisional framework in State Water Board Resolution No. 92-49 and other Board orders. UST Case Closures proposed for consideration by the Executive Director pursuant to State Water Board Resolution No. 2012-0061. These are cases that meet the criteria of the Low-Threat UST Case Closure Policy. UST Case Closure Review Denials and Approved Orders.

## **ADDITIONAL ENVIRONMENTAL RECORDS**

### ***Local Brownfield lists***

## US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

Date of Government Version: 04/06/2023	Source: Environmental Protection Agency
Date Data Arrived at EDR: 04/13/2023	Telephone: 202-566-2777

## US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

Date of Government Version: 08/21/2023

### DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

## Records of Emergency Release Reports

### HMIRS: Hazardous Materials Information Reporting System

Hazardous Materials Incident Report System. HMIRS contains hazardous material spill incidents reported to DOT.

Date of Government Version: 09/18/2023	Source: U.S. Department of Transportation
Date Data Arrived at EDR: 09/20/2023	Telephone: 202-366-4555
Date Made Active in Reports: 11/14/2023	Last EDR Contact: 09/20/2023
Number of Days to Update: 55	Next Scheduled EDR Contact: 01/01/2024
	Data Release Frequency: Quarterly

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

## CHMIRS: California Hazardous Material Incident Report System

California Hazardous Material Incident Reporting System. CHMIRS contains information on reported hazardous material incidents (accidental releases or spills).

Date of Government Version: 06/01/2023	Source: Office of Emergency Services
Date Data Arrived at EDR: 07/18/2023	Telephone: 916-845-8400
Date Made Active in Reports: 10/05/2023	Last EDR Contact: 10/20/2023
Number of Days to Update: 79	Next Scheduled EDR Contact: 01/29/2024
	Data Release Frequency: Semi-Annually

## LDS: Land Disposal Sites Listing (GEOTRACKER)

Land Disposal sites (Landfills) included in GeoTracker. GeoTracker is the Water Boards data management system for sites that impact, or have the potential to impact, water quality in California, with emphasis on groundwater.

Date of Government Version: 09/05/2023	Source: State Water Quality Control Board
Date Data Arrived at EDR: 09/06/2023	Telephone: 866-480-1028
Date Made Active in Reports: 11/22/2023	Last EDR Contact: 09/06/2023
Number of Days to Update: 77	Next Scheduled EDR Contact: 12/18/2023
	Data Release Frequency: Quarterly

## MCS: Military Cleanup Sites Listing (GEOTRACKER)

Military sites (consisting of: Military UST sites; Military Privatized sites; and Military Cleanup sites [formerly known as DoD non UST]) included in GeoTracker. GeoTracker is the Water Boards data management system for sites that impact, or have the potential to impact, water quality in California, with emphasis on groundwater.

Date of Government Version: 09/05/2023	Source: State Water Resources Control Board
Date Data Arrived at EDR: 09/06/2023	Telephone: 866-480-1028
Date Made Active in Reports: 11/22/2023	Last EDR Contact: 09/06/2023
Number of Days to Update: 77	Next Scheduled EDR Contact: 12/18/2023
	Data Release Frequency: Quarterly

## SPILLS 90: SPILLS90 data from FirstSearch

Spills 90 includes those spill and release records available exclusively from FirstSearch databases. Typically, they may include chemical, oil and/or hazardous substance spills recorded after 1990. Duplicate records that are already included in EDR incident and release records are not included in Spills 90.

Date of Government Version: 06/06/2012	Source: FirstSearch
Date Data Arrived at EDR: 01/03/2013	Telephone: N/A
Date Made Active in Reports: 02/22/2013	Last EDR Contact: 01/03/2013
Number of Days to Update: 50	Next Scheduled EDR Contact: N/A
	Data Release Frequency: No Update Planned

## **Other Ascertainable Records**

### RCRA NonGen / NLR: RCRA - Non Generators / No Longer Regulated

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

Date of Government Version: 07/24/2023	Source: Environmental Protection Agency

## EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

## 2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

Date of Government Version: 09/30/2017

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

## RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

Date of Government Version: 05/09/2023	Source: Environmental Protection Agency

	Data Release Frequency: Varies

## RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

Date of Government Version: 04/17/1995	Source: EPA
Date Data Arrived at EDR: 07/03/1995	Telephone: 202-564-4104

## HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006

## UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

## US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

## ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

## PFAS RCRA MANIFEST: PFAS Transfers Identified In the RCRA Database Listing

To work around the lack of PFAS waste codes in the RCRA database, EPA developed the PFAS Transfers dataset by mining e-Manifest records containing at least one of these common PFAS keywords: PFAS, PFOA, PFOS, PERFL, AFFF, GENX, GEN-X (plus the VT waste codes). These keywords were searched for in the following text fields: Manifest handling instructions (MANIFEST\_HANDLING\_INSTR), Non-hazardous waste description (NON\_HAZ\_WASTE\_DESCRIPTION), DOT printed information (DOT\_PRINTED\_INFORMATION), Waste line handling instructions (WASTE\_LINE\_HANDLING\_INSTR), Waste residue comments (WASTE\_RESIDUE\_COMMENTS).

## PFAS WQP: Ambient Environmental Sampling for PFAS

The Water Quality Portal (WQP) is a part of a modernized repository storing ambient sampling data for all environmental media and tissue samples. A wide range of federal, state, tribal and local governments, academic and non-governmental organizations and individuals submit project details and sampling results to this public repository. The information is commonly used for research and assessments of environmental quality.

## PFAS NPDES: Clean Water Act Discharge Monitoring Information

Any discharger of pollutants to waters of the United States from a point source must have a National Pollutant Discharge Elimination System (NPDES) permit. The process for obtaining limits involves the regulated entity (permittee) disclosing releases in a NPDES permit application and the permitting authority (typically the state but sometimes EPA) deciding whether to require monitoring or monitoring with limits. Caveats and Limitations: Less than half of states have required PFAS monitoring for at least one of their permittees and fewer states have established PFAS effluent limits for permittees. New rulemakings have been initiated that may increase the number of facilities monitoring for PFAS in the future.

## PFAS ECHO: Facilities in Industries that May Be Handling PFAS Listing

Regulators and the public have expressed interest in knowing which regulated entities may be using PFAS. EPA has developed a dataset from various sources that show which industries may be handling PFAS. Approximately 120,000 facilities subject to federal environmental programs have operated or currently operate in industry sectors with processes that may involve handling and/or release of PFAS.

## PFAS ECHO FIRE TRAINING: Facilities in Industries that May Be Handling PFAS Listing

A list of fire training sites was added to the Industry Sectors dataset using a keyword search on the permitted facility's name to identify sites where fire-fighting foam may have been used in training exercises. Additionally, you may view an example spreadsheet of the subset of fire training facility data, as well as the keywords used in selecting or deselecting a facility for the subset. as well as the keywords used in selecting or deselecting a facility for the subset. These keywords were tested to maximize accuracy in selecting facilities that may use fire-fighting foam in training exercises, however, due to the lack of a required reporting field in the data systems for designating fire training sites, this methodology may not identify all fire training sites or may potentially misidentify them.

## PFAS PART 139 AIRPORT: All Certified Part 139 Airports PFAS Information Listing

Since July 1, 2006, all certified part 139 airports are required to have fire-fighting foam onsite that meet military specifications (MIL-F-24385) (14 CFR 139.317). To date, these military specification fire-fighting foams are fluorinated and have been historically used for training and extinguishing. The 2018 FAA Reauthorization Act has a provision stating that no later than October 2021, FAA shall not require the use of fluorinated AFFF. This provision does not prohibit the use of fluorinated AFFF at Part 139 civilian airports; it only prohibits FAA from mandating its use. The Federal Aviation Administration's document AC 150/5210-6D - Aircraft Fire Extinguishing Agents provides guidance on Aircraft Fire Extinguishing Agents, which includes Aqueous Film Forming Foam (AFFF).

## AQUEOUS FOAM NRC: Aqueous Foam Related Incidents Listing

The National Response Center (NRC) serves as an emergency call center that fields initial reports for pollution and railroad incidents and forwards that information to appropriate federal/state agencies for response. The spreadsheets posted to the NRC website contain initial incident data that has not been validated or investigated by a federal/state response agency. Response center calls from 1990 to the most recent complete calendar year where there was indication of Aqueous Film Forming Foam (AFFF) usage are included in this dataset. NRC calls may reference AFFF usage in the ?Material Involved? or ?Incident Description? fields.

## CHROME PLATING: Chrome Plating Facilities Listing

This listing represents chrome plating facilities the California State Water Resources Control Board staff identified as possibly being a source of Per- and polyfluoroalkyl substance (PFAS) contamination. Sites and locations were identified by staff with the Division of Water Quality in the California State Water Board. Data was collected from the CA Air Resources Board 2013 and 2018 - Cr VI emission survey, CA Emission Inventory, CA HAZ Waste discharge database and by reviewing storm water permits. Former chrome plating sites are also included that are open site investigation or remediation cases with the Regional Water Quality Control Boards and the Department of Toxic Substances Control.

## HWT: Registered Hazardous Waste Transporter Database

A listing of hazardous waste transporters. In California, unless specifically exempted, it is unlawful for any person to transport hazardous wastes unless the person holds a valid registration issued by DTSC. A hazardous waste transporter registration is valid for one year and is assigned a unique registration number.

Date of Government Version: 06/29/2023  
Date Data Arrived at EDR: 06/29/2023  
Date Made Active in Reports: 09/19/2023  
Number of Days to Update: 82

Data Release Frequency: Quarterly

## HWTS: Hazardous Waste Tracking System

DTSC maintains the Hazardous Waste Tracking System that stores ID number information since the early 1980s and manifest data since 1993. The system collects both manifest copies from the generator and destination facility.

Date of Government Version: 08/04/2023  
Date Data Arrived at EDR: 08/09/2023  
Date Made Active in Reports: 10/26/2023  
Number of Days to Update: 78

Source: Department of Toxic Substances Control

Last EDR Contact: 09/27/2023  
Next Scheduled EDR Contact: 01/15/2024  
Data Release Frequency: Varies

## HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

Date of Government Version: 12/31/2021  
Date Data Arrived at EDR: 07/05/2022

## WASTEWATER PITS: Oil Wastewater Pits Listing

Water officials discovered that oil producers have been dumping chemical-laden wastewater into hundreds of unlined pits that are operating without proper permits. Inspections completed by the Central Valley Regional Water Quality Control Board revealed the existence of previously unidentified waste sites. The water boards review found that more than one-third of the region's active disposal pits are operating without permission.

## WDR: Waste Discharge Requirements Listing

In general, the Waste Discharge Requirements (WDRs) Program (sometimes also referred to as the "Non Chapter 15 (Non 15) Program") regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. Exemptions from Title 27 may be granted for nine categories of discharges (e.g., sewage, wastewater, etc.) that meet, and continue to meet, the preconditions listed for each specific exemption. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

## CERS: CalEPA Regulated Site Portal Data

The CalEPA Regulated Site Portal database combines data about environmentally regulated sites and facilities in California into a single database. It combines data from a variety of state and federal databases, and provides an overview of regulated activities across the spectrum of environmental programs for any given location in California. These activities include hazardous materials and waste, state and federal cleanups, impacted ground and surface waters, and toxic materials

## EDR HIGH RISK HISTORICAL RECORDS

### ***EDR Exclusive Records***

#### EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

## EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

## EDR Hist Cleaner: EDR Exclusive Historical Cleaners

EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

## LOS ANGELES CO LF METHANE: Methane Producing Landfills

This data was created on April 30, 2012 to represent known disposal sites in Los Angeles County that may produce and emanate methane gas. The shapefile contains disposal sites within Los Angeles County that once accepted degradable refuse material. Information used to create this data was extracted from a landfill survey performed by County Engineers (Major Waste System Map, 1973) as well as historical records from CalRecycle, Regional Water Quality Control Board, and Los Angeles County Department of Public Health

## OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

### CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Date of Government Version: 08/07/2023  
Date Data Arrived at EDR: 08/08/2023  
Date Made Active in Reports: 10/24/2023

**Sensitive Receptors:** There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

## AHA Hospitals:

North Map:	50005371 MOUNTAIN VIEW, CA
Version Date:	2021

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

# GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

## GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

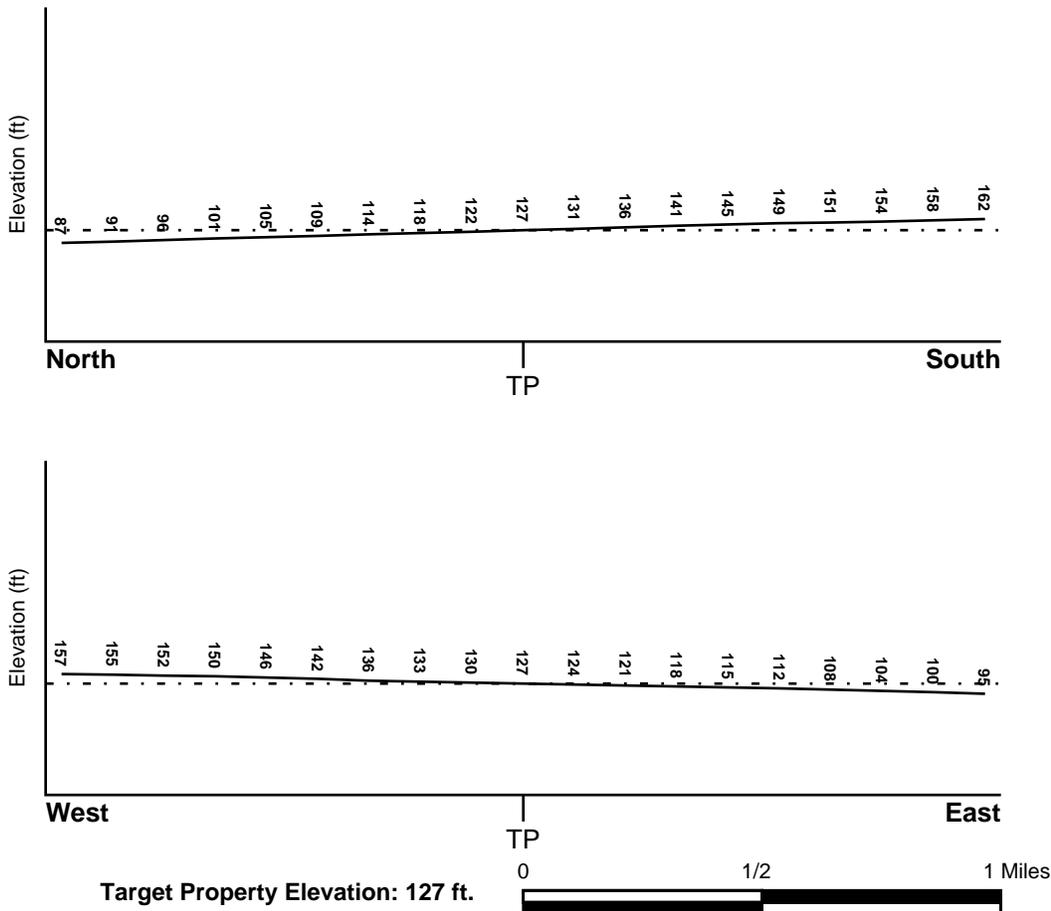

## TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

## TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General NNE

## SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

# GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

## HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

## FEMA FLOOD ZONE

<u>Flood Plain Panel at Target Property</u>	<u>FEMA Source Type</u>
06085C0206H	FEMA FIRM Flood data
<u>Additional Panels in search area:</u>	<u>FEMA Source Type</u>
06085C0045H	FEMA FIRM Flood data
06085C0207H	FEMA FIRM Flood data

## NATIONAL WETLAND INVENTORY

<u>NWI Quad at Target Property</u>	<u>NWI Electronic Data Coverage</u>
CUPERTINO	YES - refer to the Overview Map and Detail Map

## HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

### **Site-Specific Hydrogeological Data\*:**

Search Radius:	1.25 miles
Location Relative to TP:	1/4 - 1/2 Mile North
Site Name:	VERBATIM CORP
Site EPA ID Number:	CAD981408867
Groundwater Flow Direction:	NE IN THE "A" ZONE.
Measured Depth to Water:	13 feet to 23 feet in the shallow "A" zone and 53 feet in the deeper "B" zone.
Hydraulic Connection:	The "A" and "B" zones are separated from the lower confined aquifer by a dense blue clay aquitard that is present at depths of 200 to 250 feet.
Sole Source Aquifer:	No information about a sole source aquifer is available
Data Quality:	Information based on site-specific subsurface investigations is documented in the CERCLIS investigation report(s)

## AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

<u>MAP ID</u>	<u>LOCATION FROM TP</u>	<u>GENERAL DIRECTION GROUNDWATER FLOW</u>
Not Reported		

## GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

### GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

### GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

#### ROCK STRATIGRAPHIC UNIT

Era: Cenozoic  
System: Quaternary  
Series: Quaternary  
Code: Q (*decoded above as Era, System & Series*)

#### GEOLOGIC AGE IDENTIFICATION

Category: Stratified Sequence

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

### DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: BOTELLA

Soil Surface Texture: clay loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: MODERATE

Depth to Bedrock Min: > 60 inches

Depth to Bedrock Max: > 60 inches

## GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Permeability Rate (in/hr)	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	9 inches	clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay Soils.	Max: 0.60 Min: 0.20	Max: 7.30 Min: 5.60
2	9 inches	41 inches	silty clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay Soils.	Max: 0.60 Min: 0.20	Max: 7.80 Min: 5.60
3	41 inches	76 inches	sandy clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Clayey sand.	Max: 0.60 Min: 0.20	Max: 7.80 Min: 5.60

### OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures: No Other Soil Types

Surficial Soil Types: No Other Soil Types

Shallow Soil Types: No Other Soil Types

Deeper Soil Types: No Other Soil Types

### LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

# GEOCHECK® - PHYSICAL SETTING SOURCE MAP FINDINGS RADON

## AREA RADON INFORMATION

State Database: CA Radon

### Radon Test Results

Zipcode	Num Tests	> 4 pCi/L
94086	34	5

Federal EPA Radon Zone for SANTA CLARA County: 2

- Note: Zone 1 indoor average level > 4 pCi/L.  
 : Zone 2 indoor average level >= 2 pCi/L and <= 4 pCi/L.  
 : Zone 3 indoor average level < 2 pCi/L.

---

### Federal Area Radon Information for SANTA CLARA COUNTY, CA

Number of sites tested: 70

Area	Average Activity	% <4 pCi/L	% 4-20 pCi/L	% >20 pCi/L
Living Area - 1st Floor	1.363 pCi/L	91%	9%	0%
Living Area - 2nd Floor	2.100 pCi/L	100%	0%	0%
Basement	2.300 pCi/L	100%	0%	0%

# PHYSICAL SETTING SOURCE RECORDS SEARCHED

## TOPOGRAPHIC INFORMATION

### USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

### Current USGS 7.5 Minute Topographic Map

Source: U.S. Geological Survey

## HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

Source: FEMA

Telephone: 877-336-2627

Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005, 2010 and 2015 from the U.S. Fish and Wildlife Service.

### State Wetlands Data: Wetland Inventory

Source: Department of Fish and Wildlife

Telephone: 916-445-0411

## HYDROGEOLOGIC INFORMATION

### AQUIFLOW<sup>R</sup> Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

## GEOLOGIC INFORMATION

### Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

### STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

### SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

# PHYSICAL SETTING SOURCE RECORDS SEARCHED

## LOCAL / REGIONAL WATER AGENCY RECORDS

### FEDERAL WATER WELLS

#### PWS: Public Water Systems

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

#### PWS ENF: Public Water Systems Violation and Enforcement Data

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

#### USGS Water Wells: USGS National Water Inventory System (NWIS)

This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

## OTHER STATE DATABASE INFORMATION

### Groundwater Ambient Monitoring & Assessment Program

State Water Resources Control Board

Telephone: 916-341-5577

The GAMA Program is California's comprehensive groundwater quality monitoring program. GAMA collects data by testing the untreated, raw water in different types of wells for naturally-occurring and man-made chemicals. The GAMA data includes Domestic, Monitoring and Municipal well types from the following sources, Department of Water Resources, Department of Health Services, EDF, Agricultural Lands, Lawrence Livermore National Laboratory, Department of Pesticide Regulation, United States Geological Survey, Groundwater Ambient Monitoring and Assessment Program and Local Groundwater Projects.

### Water Well Database

Source: Department of Water Resources

Telephone: 916-651-9648

### California Drinking Water Quality Database

Source: Department of Public Health

Telephone: 916-324-2319

The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.

### California Oil and Gas Well Locations

Source: Dept of Conservation, Geologic Energy Management Division

Telephone: 916-323-1779

Oil and Gas well locations in the state.

### California Earthquake Fault Lines

Source: California Division of Mines and Geology

The fault lines displayed on EDR's Topographic map are digitized quaternary fault lines prepared in 1975 by the United State Geological Survey. Additional information (also from 1975) regarding activity at specific fault lines comes from California's Preliminary Fault Activity Map prepared by the California Division of Mines and Geology.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Stantec were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting [www.edrnet.com/sanborn](http://www.edrnet.com/sanborn).

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

## Certified Sanborn Results:

**Project** JCCA - Sunnyvale Courthouse

### UNMAPPED PROPERTY

This report certifies that the complete holdings of the Sanborn Library, LLC collection have been searched based on client supplied target property information, and fire insurance maps covering the target property were not found.

Sanborn® Library search results

Certification #: 4A12-4E81-AB08

The Sanborn Library includes more than 1.2 million fire insurance maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow and others which track historical property usage in approximately 12,000 American cities and towns. Collections searched:

- Library of Congress
- University Publications of America
- EDR Private Collection

*The Sanborn Library LLC Since 1866™*

### Limited Permission To Make Copies

Stantec (the client) is permitted to make up to FIVE photocopies of this Sanborn Map transmittal and each fire insurance map accompanying this report solely for the limited use of its customer. No one other than the client is authorized to make copies. Upon request made directly to an EDR Account Executive, the client may be permitted to make a limited number of additional photocopies. This permission is conditioned upon compliance by the client, its customer and their agents with EDR's copyright policy; a copy of which is available upon request.

This Report contains certain information obtained from a variety of public and other sources reasonably available to Environmental Data Resources, LLC. It cannot be concluded from this Report that coverage information for the target and surrounding properties does not exist from other sources. This Report is provided on an "AS IS", "AS AVAILABLE" basis. **NO WARRANTY EXPRESS OR IMPLIED IS MADE WHATSOEVER IN CONNECTION WITH THIS REPORT. ENVIRONMENTAL DATA RESOURCES, LLC AND ITS SUBSIDIARIES, AFFILIATES AND THIRD PARTY SUPPLIERS DISCLAIM ALL WARRANTIES, OF ANY KIND OR NATURE, EXPRESS OR IMPLIED, ARISING OUT OF OR RELATED TO THIS REPORT OR ANY OF THE DATA AND INFORMATION PROVIDED IN THIS REPORT, INCLUDING WITHOUT LIMITATION, ANY WARRANTIES REGARDING ACCURACY, QUALITY, CORRECTNESS, COMPLETENESS, COMPREHENSIVENESS, SUITABILITY, MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE, TITLE, NON-INFRINGEMENT, MISAPPROPRIATION, OR OTHERWISE. ALL RISK IS ASSUMED BY THE USER. IN NO EVENT SHALL ENVIRONMENTAL DATA RESOURCES, LLC OR ITS SUBSIDIARIES, AFFILIATES OR THIRD PARTY SUPPLIERS BE LIABLE TO ANYONE FOR ANY DIRECT, INCIDENTAL, INDIRECT, SPECIAL, CONSEQUENTIAL OR OTHER DAMAGES OF ANY TYPE OR KIND (INCLUDING BUT NOT LIMITED TO LOSS OF PROFITS, LOSS OF USE, OR LOSS OF DATA), ARISING OUT OF OR IN ANY WAY CONNECTED WITH THIS REPORT OR ANY OF THE DATA AND INFORMATION PROVIDED IN THIS REPORT.** Any analyses, estimates, ratings, environmental risk levels, or risk codes provided in this Report are provided for illustrative purposes only, and are not intended to provide, nor should they be interpreted as providing any facts regarding, or prediction or forecast of, any environmental risk for any property. Only an assessment performed by a qualified environmental professional can provide findings, opinions or conclusions regarding the environmental risk or conditions in, on or at any property.

## EXECUTIVE SUMMARY

### DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at approximately five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1922 through current. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 660 feet of the target property.

Summary information obtained is provided in the text of this report.

### RECORD SOURCES

The EDR City Directory Report accesses a variety of business directory sources, including Haines, InfoUSA, Polk, Cole, Bresser, and Stewart. Listings marked as EDR Digital Archive access Cole and InfoUSA records. The various directory sources enhance and complement each other to provide a more thorough and accurate report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer.

### RESEARCH SUMMARY

The following research sources were consulted in the preparation of this report. An "X" indicates where information was identified in the source and provided in this report.

SUNNYVALE DEPARTMENT OF PUBLIC SAFETY

FIRE PREVENTION & HAZARDOUS MATERIALS CONSOLIDATED PERMIT

PERMITTEE: SUNNYVALE MUNI COURT OCCUPANCY#: 3346001-N
ADDRESS: 605 W. EL CAMINO REAL EFFECTIVE DATE: 12/13/2013
SUNNYVALE, CA 94086 EXPIRATION DATE: 12/13/2018

The permittee noted above and their representatives are hereby authorized to carry out the activities specified in this permit in compliance with the Sunnyvale Municipal Code (SMC), California Fire Code, the attached conditions, and other laws or regulations applicable thereto, whether specified or not, and in complete accordance with approved plans and specifications.

- Fire Code-Regulated Operations - see attached. (Title 16.52 SMC)
Hazardous Materials Storage and Use (Title 16.52, 16.53 and Title 20 SMC; HSC Chapter 6.95)
Hazardous Materials Business Plan Quantities
Small Quantity
Underground Storage Tank Operations (Title 16.52 SMC)
California Accidental Release Program (CCR Title 19)
Aboveground Petroleum Storage Act
Hazardous Waste Generator (Health & Safety Code Div 20, Chapter 6.5)
Hazardous Waste Treatment on Site

This permit applies only to the programs specified herein at the facility address noted. Permits are not transferrable. Other related permits may be required to meet Fire Code, Building Code, or other Sunnyvale Municipal Code requirements. Where other permits or approvals are required, it is the permit holder's responsibility to obtain them.

This permit shall be kept on the premises designated therein at all times and shall be posted in a conspicuous location on the premises or shall be made available for review at all times by a member of the Sunnyvale Department of Public Safety or other authorized persons.

This permit is subject to annual renewal fees as authorized in the City of Sunnyvale Fee Schedule.

Lynne M. Kilpatrick
Lynne M. Kilpatrick, Fire Marshal

"REDUCE RISK. PRESERVE PROPERTY. SAVE LIVES."

## FIRE CODE-REGULATED OPERATIONS

**PERMITTEE: SUNNYVALE MUNI COURT**

**ADDRESS: 605 W. EL CAMINO REAL**

This above-noted facility has met the applicable requirements set forth in the California Fire Code (CFC) and the Sunnyvale Municipal Code (SMC) to conduct the following operation(s). Additional limits and restrictions specific to this permit may apply and are set forth in the attached permit conditions.

- Aerosol Products** - Store or handle aerosol products in accordance with Chapter 28 of the CFC.
- Cellulose Nitrate Storage** - Store or handle cellulose nitrate plastic (pyroxylin) for the manufacturing or assembly of articles or parts of articles containing cellulose nitrate in accordance with Chapter 42 of the CFC.
- Combustible Storage – Fibers** - Store or handle combustible fibers in accordance with Chapter 29 of the CFC.
- Combustible Storage - Miscellaneous** - Store combustible empty packing cases, boxes, barrels, or similar containers, or rubber, tires, cork, or other similarly combustible material in accordance with Section 315 of the CFC.
- Covered Mall** - To conduct regulated activities within a covered mall building in accordance with the CFC.
- Dust-producing Operations** - Conduct a combustible dust-producing operation in accordance with Chapter 13.
- Explosives or Blasting Agents** - Manufacture, possess, store, sell, or use explosive materials or blasting agents.
- High-pile Combustible Storage** - Use any building or portion thereof for the storage of high-piled combustible storage exceeding 500 square feet.
  - 500 – 2,499 sq. ft.
  - 2,500 – 4,999 sq. ft.
  - 5,000+ sq. ft.
- Hot Work** – Conduct hot work at a fixed location in accordance with Chapter 26 of the CFC.
- Industrial Oven** - Operation of industrial baking and drying oven regulated by Chapter 21 of the CFC.
- Institutional Occupancy** - Operate a hospital, board and care, or adult day care facility having > 50 persons.
- Large Family Day Care** – Operate a large family day care for 9-14 children in a private home.
- Child Care Center** – Operate a child day care facility for more than 6 children of any age.
  - E Occupancy. 7-49 children. **Maximum Occupant Load -**
  - E Occupancy 50+ children. **Maximum Occupant Load -**
  - I-4 Occupancy. 7+ children. **Maximum Occupant Load -**
- Residential Care Facility for the Elderly (RCFE)** – Operate a RCFE (24-hr nonmedical care) for 7- 49 people.
- Community Care Facility 15-49**
  - Description -**
  - Maximum Occupant Load -**
- Lumber Yard** – To store or process lumber in accordance with Chapter 19 of the CFC.
- Open Burning** - Kindle or maintain an open fire or a fire on a public street, alley, road, or other public or private ground.
- Place of Assembly** - Operate or use a place for the assembly of 50 or more people.
  - Maximum Occupant Load in Assembly Area – See conditions**
  - 50-100 people
  - 101-300 people
  - 301+ people
- Refrigeration Equipment** – Operation of a mechanical refrigeration unit regulated by Section 606 of the CFC.
- Repair Garages** - Use a structure as a place of business for servicing or repairing motor vehicles.
  - 1-2 Bays
  - 3-4 Bays
  - 5-9 Bays
  - 10+ Bays
- Spray Finishing or Dipping** – Conduct spray finishing or dipping operations utilizing flammable or combustible liquids or the application of combustible powders.
- Wood Products – Storage** - Store chips, logged material, lumber, or plywood in accordance with CFC Chapter 19.

**“REDUCE RISK. PRESERVE PROPERTY. SAVE LIVES.”**

# CONSOLIDATED PERMIT CONDITIONS

# FIRE/LIFE SAFETY INSPECTION REPORT

## ADULT/JUVENILE DETENTION FACILITIES

Facility:

Sunnyvale Municipal  
Courthouse  
605 W. EL Camino BL.  
Sunnyvale, CA  
94086

FACILITY TYPE: (CHECK ONE)

- Adult max/med security  
 Adult minimum security  
 Juvenile max/med security  
 Juvenile minimum security  
 Holding Cell(s) only

An inspection of this facility was conducted per the mandate of Section 13146.1, California Health and Safety Code, and applicable requirements of Titles 19 and 24, California Code of Regulations. **(Check appropriate box):**

- No deficiencies affecting fire/life safety were noted. Fire clearance is granted.
- Minor deficiencies affecting fire/life safety were noted and are pending correction. Fire clearance is granted.
- Fire clearance is withheld pending correction of deficiencies. (List of deficiencies is attached).
- Prisoners are no longer detained at this facility.

The authority conducting the inspection **shall submit copies of this report to the appropriate bodies listed below.** Where fire/life safety deficiencies are noted, a list of the deficiencies must accompany this report.

- Office of the State Fire Marshal  
Fire and Life Safety Division  
602 E. Huntington Drive, Suite A  
Monrovia, CA 91016  
FAX: (626) 305-5173
- Board of State and Community Corrections  
600 Bercut Drive  
Sacramento, CA 95814  
FAX: (916) 327-3317

Date of Inspection: 12/13/13

Inspected by: Steve Simmons

Fire Authority: Sunnyvale Dept. of Public Safety

Facility Representative: Mari Greco

# ADULT/JUVENILE DETENTION FACILITY INSPECTION GUIDE

The following is to be used only as a guide and is not intended to include all applicable requirements.

		Yes	No	N/A
<b>A. CONSTRUCTION</b>				
1.	Building construction type and fire resistive rating conform throughout and are maintained in good repair. (19 CCR 308.2; CBC 408.1.2)	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
2.	Proper interior and ceiling finish ratings are provided. (CBC 804.4.2)	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
3.	Vertical shaft enclosures are in good repair and fire assemblies at openings are properly maintained. (CBC 708)	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
<b>B. EXITS</b>				
4.	Proper corridor construction and opening protection are provided and maintained. Dead-end corridors do not exceed 20 feet in length. (CBC 1018.4)	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
5.	All means of egress are unobstructed and free of storage. (19 CCR 3.11)	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
6.	Exitways and exit signs are illuminated and, maintained. (CBC 1007, 1011)	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
7.	Corridors are not used as part of the air distribution system. (CBC 1018.5)	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
8.	Supervisory personnel are continually on duty and effective provisions are made to remove occupants in case of fire or other emergency.	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
<b>C. MECHANICAL/ELECTRICAL</b>				
9.	Fire dampers, smoke detectors and similar devices are adequate, properly maintained and tested. (CMC 606; CBC 716.3)	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
10.	All heating, cooling and ventilation equipment is maintained satisfactorily. There are no visible defects. (CMC 109.2)	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
11.	Electrical wiring, fixtures and appliances are properly installed and operated in a safe manner. (19 CCR 3.24)	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
12.	Emergency power is provided for minimal lighting and fire/life safety systems. (CBC 1011.5.3)	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
<b>D. HOUSEKEEPING</b>				
13.	Kitchen hoods, vents, ducts and filters are adequate, are maintained in proper condition and are free of grease. (19 CCR 3.19, 3.24)	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
14.	All areas are free of unacceptable amounts of storage. (19 CCR 3.19)	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
<b>E. FIRE EXTINGUISHING/ALARM</b>				
15.	All first-aid fire fighting equipment is properly located and maintained. (19 CCR 3.24, 3.29)	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
16.	All fire extinguishing systems are properly maintained and serviced. (19 CCR 3.24)	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
17.	The automatic fire alarm system is properly maintained. (19 CCR 3.24)	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
<b>F. TRAINING/PREPLANNING</b>				
18.	At least one person is on duty who meets the training standards established for general fire and life safety relating specifically to the facility.	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
19.	Fire suppression preplanning inspections are conducted by the local fire authority at least every two years.	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Where any deficiency is identified, please provide specific information regarding the deficiency type and location (e.g., the fire alarm in Building C indicated a trouble alarm and must be repaired.)

Provide 5-year fire Sprinkler Certification on Suppression System located in the basement area.

Subject: **GEOTECHNICAL INVESTIGATION**  
**Judicial Council of California, Sixth District Court of Appeal**  
Sunnyvale, California

Dear Ms. Brodsky:

We are pleased to transmit herewith an electronic copy of our final geotechnical investigation report for the proposed Sixth District Court of Appeal in Sunnyvale, California.

This report summarizes the findings of the geotechnical investigation, which consisted of a review of available literature, field investigation, engineering analysis, and development of geotechnical recommendations.

We greatly appreciate the opportunity to be of service to you on this project. If you have questions regarding this report, please contact us.

Sincerely,

RUTHERFORD + CHEKENE

# 1 Site and Project Information

# RUTHERFORD + CHEKENE

## 1.1 INTRODUCTION

### 1.1.1 General

This report summarizes the findings and recommendations from our geotechnical investigation for the proposed Sixth District Court of Appeal project in Sunnyvale, California.

### 1.1.2 Site and Project Descriptions

The proposed project site is currently occupied by the existing Superior Courthouse building and the improvements around the building. The project site can be considered as being constituted by the following parcel and ingress/egress easement strips:

1. Assessor's Parcel Number (APN) 484-06-112
2. Ingress/Egress Easement Strip #1
3. Ingress/Egress Easement Strip #2
4. Ingress/Egress Easement Strip #3

Alternatively, one could consider one or more of the three easement strips as not being part of the project site.

The site is roughly bounded by All American Way to the north, El Camino Real to the south, City of Sunnyvale Public Safety Facility to the west, and to the east by a hypothetical line located about 150 feet east of the east edge of the existing courthouse. The site coordinates are as follows: 37.37012 degrees north and 122.03880 degrees west.

The proposed project is expected to include the construction of a new two-story building with no basement. The Level 1 finish floor elevation is expected to be the same as that of the existing courthouse or approximate elevation 128 feet. The proposed building footprint is slated to be approximately 125 feet in the east-west direction, by 200 feet in the north-south direction. The new building is expected to occupy approximately the western half of the site. The main entrance to the new building will be on the east side of the new building as are the parking areas for vehicles. The Ingress/Egress Easement Strip #1 along the east side of the existing courthouse, which provides vehicular connection between El Camino Real and All American Way, will serve as the main access road to the parking areas.

The location of the site is shown on Figure 1, "Site Vicinity Map", Figure 2, "Site Boundaries Map", and Figure 3, "Site and Exploration Locations Plan", in Appendix A.

### 1.1.3 Site Elevations

The site elevations in this report are based on the topographic survey prepared by Sandis, dated March 6, 2024. The elevation reference is a Sunnyvale City Benchmark (BM ID 70) at the intersection of El Camino Real and Pastoria Avenue. The vertical datum is NAVD88. We have therefore based all elevations in this report on the NAVD88 datum, unless otherwise noted.

## 1.1.4 Summary of Field Exploration and Laboratory Testing

This exploration program involved drilling and logging of two exploratory borings and collection of geotechnical samples in both borings for subsequent laboratory testing. The exploratory borings were supplemented by three conventional cone penetration tests and two seismic cone penetration tests. The locations of the exploratory borings and the cone penetration tests are shown in Figure 3, "Site and Exploration Locations Map". The logs of borings for this investigation are presented in Appendix B and the cone penetration tests results are presented in Appendix C.

*Laboratory Testing:* We commissioned Cooper Testing Laboratory of Palo Alto to perform a program of laboratory tests on soil samples encountered in the exploratory borings to determine their index, strength and compressibility characteristics.

The results of the laboratory tests are presented at the appropriate sample depths on the boring logs that are presented in Appendix D.

## 1.1.5 Organization of Report

This report has been organized as follows:

Section 1 – Site and Project Information

Section 2 – Geology and Subsurface Conditions

Section 3 – Summary of Geologic Hazards Evaluation

Section 4 – Structural Design Issues

Section 5 – Civil Design Issues

Section 6 – Miscellaneous

Section 7 – Field Exploration and Laboratory Program

Section 8 – References

Section 9 – Appendices

This report also contains the following appendices:

Appendix A: Contains figures relating to this report

Appendix B: Contains the boring logs for the current project

Appendix C: Contains results of cone penetration tests

Appendix D: Contains results of laboratory tests

## 1.1.6 Review of the Design Documents

We should be provided with the opportunity to perform a general review of the design drawings and specifications, prepared by members of the design team, for their conformance to and proper application of our geotechnical recommendations. Our review will be brief in nature, limited to the earthwork and foundation aspects of the project, and will not involve any calculations or checking of plan for completeness. If we are not given the opportunity to do this recommended review, we can assume no responsibility for misinterpretation of our recommendations.

## 1.1.7 Limitations

1. This report has been prepared for the exclusive use of Page and Turnbull and its consultants for specific application to the Sixth District Court of Appeal project as described herein. If there are any changes in ownership, nature, location or design of the project, the information contained in this report shall not be considered valid unless the project changes are reviewed by Rutherford + Chekene.
2. Simplified interpretations of geotechnical data have been made to facilitate the geotechnical analysis performed for this project. Such interpretations, while adequate for the analysis performed, are inadequate for estimating quantities for the purposes of developing construction costs or submitting bids for this project. These simplified geotechnical interpretations should therefore not be used for purposes other than the use stated in this paragraph.
3. This report should not be made part of the contract documents for the proposed project described herein. Instead, the report should serve as a guide for preparing design drawings and specifications that are part of the contract documents, which we should be given the opportunity to review for conformance with our recommendations.
4. We cannot be responsible for the impacts of any changes in geotechnical or geologic standards, practices, or regulations subsequent to the performance of our services if we are not consulted subsequent to the changes.
5. We can neither vouch for the accuracy of information supplied by others, nor accept consequences for use of segregated portions of this report without consultation with our office.
6. The opinions set forth in this report are not based upon an examination of the location or condition of utility lines or other subsurface structures on the property. Those performing the construction must assume any risks arising from the locations or conditions of such lines.
7. Rutherford + Chekene assumes no responsibility for the management of contaminated or hazardous materials that may be found on the site.
  - a. Rutherford + Chekene has not performed investigations to determine the presence of contaminated or hazardous materials. The Owner must provide the results of any such investigations to the Contractor.
  - b. The Construction Contractor is responsible for ensuring that personnel within the work area are protected from hazardous materials. If hazardous materials are discovered, the Contractor must immediately notify the Owner and cease work until conditions can be maintained in accordance with all applicable regulations.

## 2 Site Conditions

## 2.1 SUBSURFACE CONDITIONS

### 2.1.1 Regional and Site Geology

The site is located in the northwest trending Santa Clara valley, which is bounded on the southwest by the Santa Cruz mountains and then the northeast by the Diablo Range. These topographic boundaries have been created in large part by movement within the San Andreas Fault system; principally, along the San Andreas West (west) and the Hayward and Calaveras (east) faults. This movement has produced a structural block which has subsided over time (graben) and allowed the accumulation of both marine and continental deposits.

Basement rock in the block is the metamorphic complex of the Franciscan formation (Cretaceous-Jurassic age), which is unconformably overlain by continental alluvium and lake beds of the Santa Clara formation (late Pliocene-Pleistocene age). In turn, the Santa Clara formation is overlain by several hundred feet of Pleistocene as well as Recent alluvium and marine sediments: bay muds, silts, and sands. The site is situated in the young alluvial fan unit and near the contact with the fluvial deposits.

The tectonic activity which produced the structural block accelerated in the late Miocene and has operated essentially continuously through the Pliocene and Pleistocene to the present day.

### 2.1.2 Local Geology

The earth materials on the site have been eroded from the adjoining hills and deposited by streams to form low lying fans. The processes of erosion and deposition which have produced these materials occurred within the framework of tectonism (uplifting hills and subsiding intervening block) and glacio-eustasy (sea level changes caused by advancing slash /retreating ice sheets).

### 2.1.3 Site Soil Conditions

*General:* Based on the earth materials encountered in our borings and CPTs at the locations shown in Figure 3, we have developed generalized soil profiles for the site as shown in Figures 4 to 6.

The upper 2 to 5 feet of soil in portions of the site appears to be artificial fill, consisting mostly of lean clay with sand. The artificial fill layer is underlain by alluvial fan deposits, consisting of sand with clay and varying amounts of gravel, and sand and silty sand with occasional interbeds of lean and fat clay with sand to the maximum depth of exploration of 100 feet.

### 2.1.4 Groundwater Conditions

Groundwater was not encountered in any of the borings drilled on the site. The deepest boring extended to a depth of about 40 feet. On the other hand, the two seismic cone penetration tests, each of which extended to a depth of about 100 feet showed that groundwater was at a depth of about 53 feet below existing grade at the time of our exploration.

The historically highest groundwater at the site is estimated by California Geological Survey (CGS) to be about 40 to 50 feet below ground surface.

### 2.1.5 Site Development History

*General:* An unknown factor that might have impacted the subsurface conditions on the site is the site development history. The site is currently occupied by an existing building, which is going to be demolished to make way for the new building. The existing building was constructed sometime after 1966 on a project site that seems to have extended some 75 feet west of the current west boundary of the site. The layout of the development is shown in Figure 7, which indicates that the approximately 75-foot-wide strip was intended to serve as a parking lot with 44 parking spaces (25 spaces on the west side and 19 on the east side of the strip). The current site boundaries map in Figure 2 shows that the parking lot in the strip was not constructed and that the strip fell within the parcel (APN- 165-02-003), which is owned by the City of Sunnyvale.

The existing court building has a partial basement the footprint of which is shown Figure 3. It is likely that spoils from the basement excavation were used as part of the cutting and filling operations that was part of the grading required on the site. The presence of the old basement has to be considered in developing recommendations for backfilling the basement excavation after demolition.

# 3 Seismic and Geologic Hazards

# RUTHERFORD + CHEKENE

## 3.1 SUMMARY OF GEOLOGIC HAZARDS

### 3.1.1 General

Table 1 shows a summary of the results of our geologic hazards evaluation of the site. The potential for occurrence of each identified hazard is rate on a scale of increasing probability: low, moderate, and high.

**Table 1**  
**Summary of Potential Geologic Hazards**

Possible Geologic Hazard	Potential Occurrence at Site
Seismic Ground Shaking	High
Fault Rupture	Low
Seismically Induced Ground Motion Displacement or Failure:	
-Liquefaction in Localized Sand Pockets	Low
-Cyclic Softening of Fine-Grained Materials	Low
-Lateral Spreading	Low
-Compaction Settlement (Large Scale)	Low
Non-Seismically Induced Ground Motion Displacement or Failure:	
-Slope Stability	Low
-Expansive Soil	Low
-Consolidation of Soil	Low
Large Scale Flood Inundation & Reservoir Failure	Low
Tsunamis	Low
Seiches	Low
Erosion	Low
Soil Corrosivity	Moderate to High
Sea Level Rise	Low

The hazards summarized in Table 1 are briefly discussed as follows:

### 3.1.2 Seismic Ground Shaking

In keeping with the seismicity of the region, the site is susceptible to very strong ground shaking induced by a major earthquake. The potential sources of such a major earthquake include: 1) Monte Vista Shannon fault, located about 3.6 miles to the west, 2) San Andreas fault, located about 7.5 miles to the west, 3) the Hayward fault, located about 9.9 miles to the northeast, and 4) the San Gregorio fault, located about 19.8 miles to the west. The potential sources of a major earthquake and their estimated slip rates and recurrence intervals are presented in Table 2.

**Table 2  
Major Earthquake Sources Impacting the Project Site**

<b>Fault</b>	<b>Slip Rate</b>	<b>Mean Recurrence Interval</b>
Monte Vista Shannon	0.2-1.0 mm/yr	~400 yrs.
San Andreas	17 mm/yr.	223 to 229 yrs.
Hayward-Rodgers Creek	9+2 mm/yr.	155 to 205 yrs.
Calaveras	6+2 to 15+3 mm/yr.	54 to 187 yrs.
San Gregorio	3+2 to 7+3 mm/yr.	392 to 540 yrs.
Concord-Green Valley	4+2 to 5+3 mm/yr.	201 to 219 yrs.

The site has been subjected to strong ground shaking from moderate to large earthquakes on the San Andreas and Hayward faults, indicating that there is a high potential for strong ground shaking affecting the site in the future. We therefore judge the potential for strong ground shaking to be high.

**3.1.3 Fault Rupture**

The site is located outside the Alquist-Priolo Special Studies Zones. The locations of nearby fault zones relative to the site are shown in Figure 8. No fault has been mapped and/or documented as traversing the project site. Therefore, the hazard due to fault rupture within the site is considered low.

**3.1.4 Seismically Induced Ground Motion Displacement or Failure**

*Liquefaction:* Seismic-induced liquefaction is a phenomenon whereby loose, saturated, granular sediments lose a significant portion of their shear strength due to the generation of excess pore water pressure resulting from cyclic loading during an earthquake event. Liquefaction can result in loss of foundation support, failures due to lateral spreading, and differential compaction of affected soils. The requisite condition for liquefaction is the presence of loose, cohesionless, granular soils below the water table.

Seismic hazard mapping by the California Geological Survey (formerly the California Division of Mines and Geology or CDMG) identified zones in the site vicinity considered susceptible to earthquake-induced liquefaction (CDMG, 2006). The geologic hazards map in Figure 8 shows that the project site is outside the liquefaction hazard zone.

Based on the seismic hazard map and the soil and groundwater conditions encountered, we conclude that the potential for liquefaction is low.

*Cyclic Softening of Fine-Grained Materials:* Cyclic softening occurs when fined-grained soils subjected to ground shaking exhibits behavior similar to liquefaction. Based on the criteria developed by Bray and Sancio (2004) and the materials encountered at the site, it appears that the fine-grained soils are not susceptible to cyclic softening during a major earthquake. We therefore judge the potential for cyclic softening of fine-grained soils to be low.

*Lateral Spreading:* Lateral spreading is defined by lateral displacement of gently sloping ground as a result of pore pressure build-up or liquefaction in a shallow underlying deposit during an earthquake. Based on the relatively flat site, we judge the potential for lateral spreading to be low.

## **RUTHERFORD + CHEKENE**

*Compaction Settlement:* Compaction settlement, or seismic densification, occurs when loose granular soils above the water table increase in density as a result of earthquake shaking. The soil densification can result in differential settlement because of variations in soil composition, thickness, and initial density.

Materials encountered in the exploration locations are less susceptible to earthquake-induced densification. We therefore judge the potential for compaction settlement affecting the proposed construction to be low.

### **3.1.1 Non-Seismically Induced Ground Motion Displacement or Failure**

*Slope Stability:* The location of the site relative to zones of landslide hazards in the site vicinity is shown in Figure 8. The site is relatively flat; therefore, we judge the potential for future instability of the site slopes to be low.

*Expansive Soil:* Expansive soils are those that shrink or swell significantly with changes in moisture content. Clay content and porosity of the soil influence the change in volume. Based on the materials encountered at the surface we therefore judge the potential for expansive soils to be low.

*Consolidation of Soils:* Consolidation settlement occurs when excess pore water pressure is “squeezed” out of the soft saturated fine-grained soil by an increase in the vertical effective stress. In these conditions, soil tends to settle at different rates and by varying amounts depending on the load weight, which is referred to as differential settlement. Based on the firm to stiff clayey layers found in the exploration holes, we judge the potential settlement to be low.

### **3.1.2 Flood Inundation and Reservoir Failure**

The site is not located within a designated flood prone area, as mapped by FEMA. The site is also not located within the dam or levee failure inundation zone. We therefore judge that the potential for inundation of the site due to flood and dam failure to be low.

### **3.1.3 Tsunamis**

Tsunamis are transient long-period sea waves generated by submarine earthquakes or volcanic eruptions. According to the CGS Tsunami Hazard Area Map the site is not within projected areas of inundation resulting from a tsunami. Therefore, we judge the potential for tsunami inundation at the site to be low.

### **3.1.4 Seiches**

Seiches occur as large waves within enclosed bodies of water such as lakes or reservoirs and result from violent earthquake shaking. Based on the absence of enclosed water bodies adjacent to the site, we judge the potential for seiche inundation at the site to be low.

### **3.1.5 Erosion**

The site is either vegetated or paved. Assuming the site remains vegetated and/or is covered with hardscape in association with surface drainage provisions, we judge the potential for substantial erosion at the site to be low.

### **3.1.6 Soil Corrosivity**

We commissioned tests to evaluate the corrosive potential of selected soil samples obtained from our exploratory borings. Our test results indicate that, based primarily on resistivity measurements, both

## **RUTHERFORD + CHEKENE**

samples tested can be classified as “moderately corrosive.” Therefore, we judge that the corrosivity potential of the site soils to be high.

### **3.1.7 Sea Level Rise**

Sea level rise occurs due to thermal expansion of sea water and melting of glaciers caused by climate change. The site is not located within the area affected by the most critical scenario of sea level rise (i.e., sea level rise of 108 inches), as mapped by the San Francisco Bay Conservation and Development Commission (BCDC). We therefore judge that the impact of sea level rise on the site to be low.

### **3.1.8 Conclusions**

Based on the results of the geologic hazard evaluation, we developed the following conclusions regarding the potential impacts of the following identified hazards on the proposed projects:

1. Ground Shaking: Strong shaking should be expected at the site during a major earthquake. Ground shaking will induce seismic forces in the structure.
2. Soil Corrosivity: Soil corrosivity can lead to corrosion of buried metallic pipes as well as reinforcing bars in foundation elements.

## **3.2 MITIGATION OF IDENTIFIED HAZARDS**

### **3.2.1 General**

The following subsections contain discussions about mitigation options for the two seismic and geologic hazards that were identified as having moderate to high likelihood of occurrence: ground shaking and soil corrosivity.

### **3.2.2 Ground Shaking**

The primary approach to mitigating the potential impacts of ground shaking on the project is to design the structures in accordance with the current design code. We have therefore developed recommendations for seismic design parameters per the 2022 California Building Code (CBC). The seismic design recommendations are summarized in Section 4 of this report.

### **3.2.3 Soil Corrosivity**

Adequate corrosion protection should be provided for all buried iron, steel, cast iron, ductile iron, galvanized steel, and dielectric coated steel or iron, depending on the nature of the utility line being considered. All underground metallic pressure piping should also be protected against corrosion. Foundation reinforcement should also be protected against corrosion.

## 3.3 GROUND MOTION STUDY

### 3.3.1 General

Based on the measured shear wave velocity,  $V_{s30}$ , at EB-1 of about 346 m/s, the site should be classified as Site Class D.

The project is governed by the 2022 California Building Code, which references ASCE/SEI 7 16. Per the 2022 California Building Code (CBC), a site-specific seismic hazard study is required in order to develop the seismic design parameters for sites classified as Site Class D unless the project meets one of the exemptions.

We therefore conducted a site-specific seismic hazard analysis for the site. The results of the analyses are presented as 5% damped maximum direction response spectra at the Maximum Considered Earthquake ( $MCE_R$ ) hazard level and at the Design Earthquake (DRS) hazard level. This study follows the general requirements of ASCE/SEI 7 16 Chapter 21 for the development of site-specific response spectra.

### 3.3.2 Site Specific Risk Targeted $MCE_R$ Spectrum

To estimate the earthquake ground shaking hazard at the project site, we performed a site-specific seismic hazard analysis. The project coordinates used were: 37.37012° North and -122.03880° West.

Parameters for Site Specific Seismic Hazard Analysis: Our analysis was based on the following properties for earthquake sources, site characteristics, and ground motion models:

1. *Fault Seismic Sources:* We considered active seismogenic fault sources within 200 km of the project site, using the Third Uniform California Earthquake Rupture Forecast (UCERF 3) model developed by the USGS Working Group.
2. *Site Shear Wave Velocity:* Shear wave velocity was measured as part of our site exploration. Based on the shear wave velocity profiles, the  $V_{s30}$  is about 346 m/s.
3. *Ground Motion Prediction Equations (GMPEs):* For shallow crustal fault seismic sources, we used the NGA-West equations of Abrahamson, Silva, and Kamai (2014), Boore, Stewart, Seyhan, and Atkinson (2014), Campbell and Bozorgnia (2014), and Chiou and Youngs (2014) equally weighted. The relations were developed as a part of the NGAWEST2 project by the Pacific Earthquake Engineering Research (PEER) Center.
4. *Intensity Measure:* Ground surface spectra are presented according to the requirements of ASCE/SEI 7-16 using the spectral acceleration rotated to the maximum direction, SaROTD100.

Probabilistic Seismic Hazard Analysis (PSHA): Probabilistic seismic hazard analysis involves the estimation of the likelihood of experiencing a given intensity of earthquake ground shaking over a defined time period. The process considers uncertainty due to lack of knowledge (epistemic uncertainty) and due to the inherent randomness (aleatory uncertainty) of earthquake seismicity.

We computed the probabilistic acceleration response spectrum at the  $MCE_R$  level per Section 21.2.1.1 of ASCE 7-16, using the analysis parameters discussed in the preceding section. We used the OpenSHA computer program to determine the uniform-hazard spectrum with a return period of 2475 years (2% probability of exceedance in 50 years) and 5% damping. We converted the spectrum to SaROTD100, using the factors from Shahi and Baker (2013). We applied the risk coefficients  $C_R$  to obtain the risk targeted probabilistic  $MCE_R$ .

## RUTHERFORD + CHEKENE

Deterministic Seismic Hazard Analysis (DSHA): We computed the deterministic acceleration response spectrum at the  $MCE_R$  level per Section 21.2.2 of ASCE/SEI 7-16 as the 84th percentile 5% damped spectrum in the direction of maximum horizontal response computed at each period, based on the average of the GMPEs. The deterministic spectrum does not represent a single scenario earthquake, as different seismic sources may govern at different periods or for different GMPEs. The deterministic analysis considers only known fault sources. Background seismicity is not included in the analysis, in accordance with ASCE/SEI 7-16.

If the largest spectral response acceleration of the deterministic  $MCE_R$  spectrum is less than  $1.5F_a$ , where  $F_a$  is defined in Chapter 21.2.2 of the ASCE 7-16 Supplement 1, then the deterministic  $MCE_R$  is scaled by a single factor such that the maximum spectral acceleration equals to  $1.5F_a$ .

Initial Site Specific  $MCE_R$  Response Spectrum: We computed the initial site-specific  $MCE_R$  acceleration spectrum by comparing the probabilistic and deterministic  $MCE_R$ , using the lower spectral ordinate at each period.

Site Specific  $MCE_R$  and DRS Spectra: We computed the site-specific design response spectrum (DRS) acceleration spectrum as follows: We computed the initial DRS as two-thirds of the initial site-specific  $MCE_R$ . We then compared the initial DRS and 80-percent of the Code Based Site Class D DRS, taking the greater spectral ordinate at each period to construct the final site-specific DRS. This final site specific  $MCE_R$  is determined as 1.5 times the final site-specific DRS. The final site specific  $MCE_R$  and the DRS spectra are shown in Figure 9. The data points for the recommended spectra are presented in Table 3.

**Table 3**  
**Data Points for Recommended  $MCE_R$  and DRS**

<b>Period</b>	<b><math>MCE_R</math></b>	<b>DRS</b>
<b>T (seconds)</b>	<b>Sa (g)</b>	<b>Sa (g)</b>
0.01	0.792	0.528
0.02	0.794	0.530
0.03	0.822	0.548
0.05	0.937	0.624
0.075	1.136	0.757
0.1	1.322	0.881
0.15	1.622	1.081
0.2	1.817	1.211
0.25	1.933	1.288
0.3	1.967	1.312
0.4	1.946	1.298
0.5	1.849	1.233
0.75	1.474	0.983
1	1.206	0.804
1.5	0.862	0.575
2	0.654	0.436

## RUTHERFORD + CHEKENE

Period	MCE <sub>R</sub>	DRS
T (seconds)	Sa (g)	Sa (g)
3	0.441	0.294
4	0.326	0.217
5	0.249	0.166
7.5	0.138	0.092
10	0.082	0.055

*Site Specific PGA<sub>M</sub>*: We determined the site-specific MCE<sub>G</sub> peak ground acceleration PGA<sub>M</sub> per section 21.5.3 of the ASCE 7-16 as the lesser of the probabilistic geometric mean peak ground acceleration and the deterministic geometric mean peak ground acceleration, but no less than the 80% of the PGA<sub>M</sub> of Section 11.8.3 adjusted for site class effect. The site specific PGA<sub>M</sub> is determined to be 0.666 g.

# 4 Structural Design Issues

**4.1 SEISMIC DESIGN RECOMMENDATIONS**

**4.1.1 Seismic Design Requirements**

*General:* The primary approach to mitigating the potential impacts of ground shaking on the proposed building is to design the building in accordance with the current seismic design code. We have therefore developed recommendations for seismic design parameters per the 2022 California Building Code (CBC) and ASCE 7-16.

*Site Coordinates:* The project site has the following coordinates:

Latitude: 37.37012 degrees North  
 Longitude: 122.03880 degrees West

*Site Classification:* Based on the results of the field exploration program, one part of the site is classified as Site Class D and the other portion of the site is classified as Site Class C. Based on the shear wave velocity profile from SCPT-1 and the time averaged shear wave velocity of the upper 30 meters,  $V_{s30}$ , of 1,134 and feet per second, the site is classified as Site Class D. However, based on the shear wave velocity profile from SCPT-2 and the time averaged shear wave velocity of the upper 30 meters,  $V_{s30}$ , of 1,349 and feet per second, the site is classified as Site Class C.

*Seismic Design Parameters:* The new building should be designed using the seismic parameters shown in Table 4 for Site Class C and Site Class D, whichever is more conservative for the design. For Site Class D, the seismic parameters are based our site-specific hazard analysis performed in accordance with ASCE 7-16.

**Table 4  
 Seismic Design Parameters**

Site Category	Seismic Design Parameter	Mapped Spectral Values for Site Class C	Site Specific Spectral Values for Site Class D
Mapped Spectral Response Acceleration Parameters	$S_s$ (From 0.2 sec Mapped Spectral Accelerations)	1.604	1.604
	$S_1$ (From 1.0 sec. Mapped Spectral Accelerations)	0.6	0.6
Adjusted MCE Spectral Acceleration Parameters	$S_{MS} = F_a S_s$	1.925	1.771
	$S_{M1} = F_v S_1$	0.84	1.322
Design Spectral Acceleration Parameters	$S_{DS} = 2/3 S_{MS}$	1.283	1.18
	$S_{D1} = 2/3 S_{M1}$	0.56	0.881
Site-Specific $MCE_G$ Peak Ground Acceleration	$MCE_G PG_{AM}$	0.791	0.666

## 4.2 DESIGN RECOMMENDATIONS FOR SHALLOW FOUNDATIONS

### 4.2.1 Foundation Systems

*General:* The new building can be supported on a shallow foundation system.

*Vertical Loads:* We recommend that the new building be supported on a shallow foundation system consisting of individual column footings and/or continuous footings bearing on native alluvium, which varies from 2 to 5 feet below existing grade.

We have developed the bearing pressures for footings bearing in native alluvium, presented in Table 5, for design. The values recommended are suitable for spread footings having a minimum width of 2 feet and a minimum embedment of at least 2 feet into the native alluvium.

**Table 5**  
**Allowable Bearing Pressures for Shallow Footings**

Loading Conditions	Allowable Bearing Pressure (psf)
Dead + All Live Loads	2,400
Dead + Live + Seismic Loads	3,200
Ultimate Load	7,200

*Sub-footings:* Where sub-footings are required to embed the footings in the bearing materials, the sub-footing can be constructed with controlled low strength material (CLSM).

*Lateral Loads:* Lateral loads applied to a footing may be resisted by a combination of 1) friction at the base of the footing, 2) soil pressure against the side of the footing or grade beam perpendicular to the applied force, and 3) friction along retaining walls parallel to the applied force.

1. *Friction at the Base of the Footing*

The horizontal frictional resistance,  $F_{base}$ , at the interface of soil and a footing may be taken as:

$$F_{base} = 0.3 \times \text{Actual Dead Load Pressure (psf)}$$

2. *Passive Pressure Against the Side of the Footing/Grade Beam*

For design purposes, the following recommended allowable passive pressure perpendicular to the side of the footing or grade beam should be taken as 200 pcf equivalent fluid pressure.

To obtain the ultimate frictional resistance and passive soil pressure, the allowable value should be multiplied by 1.5.

The values for friction at the base of footings provided above apply to foundations cast directly on native soil. For a condition where a waterproofing assembly is installed between the soil and the foundation element, the friction value is likely to be lower, depending on the properties of the proposed waterproofing assembly. Appropriate values should be provided by the manufacturer of the waterproofing assembly, based on test results, or by a qualified waterproofing consultant.

### 4.2.2 New Foundation Elements Located Within the Existing Basement Footprint

Figure 10 shows that some of the column footings for the new building will fall within the footprint of the old basement. It is therefore necessary to evaluate the potential for differential settlement of footings within the basement footprint relative to each other as well as relative to nearby footings outside the basement footprint.

The following general guidelines should be followed to minimize the differential settlement potential:

1. Adjacent or nearby new footings should bear at the same elevations. This requirement might require using a CLSM sub-footing under the footing bearing at the higher elevation.
2. If there has to be a difference in bearing elevations between nearby footings, the footing bearing at a lower elevation has to be evaluated for potential surcharge effects from the footing bearing at a higher elevation, as shown in Figure 11. If there are potential surcharge effects, the upper footing should be lowered to prevent surcharge effects.
3. The walls, footings and floor slab of the basement space should be completely demolished, and the basement space should be properly backfilled with approved engineered fill materials, as described in Section 5.3.1.

### 4.2.3 Foundation Settlement

*General:* Foundation settlements can be grouped into three main components: elastic settlement, inelastic settlement, and settlement induced by construction activities. The sum of these components can be considered as the total settlement.

*Elastic and Inelastic:* Actual magnitudes of the total settlement depend on the degree of disturbance existing in the foundation materials at the time of the foundation placement and on the final dead load pressure.

Based on column loads for dead plus long term live loads provided by the SEOR, we estimate potential maximum total settlement to be about 0.6 inch and differential settlement to be about 0.3 inch over a span of 12 feet.

*Effects of Construction Activities:* In addition to the above causes, settlement may also result from construction activities and practices. This settlement is impossible to estimate because the actual construction conditions, activities and practices cannot be anticipated. To minimize the impact of these unknowns on settlement, we recommend that the requirements contained in Section 4.2.4, "Construction of Footings" be satisfied.

### 4.2.4 Construction of Footings

To ensure that the recommended passive and frictional resistances are developed from all footings, they should be cast directly against firm native earth materials. The excavation should not be left open for an extended period of time.

The following measures are recommended to minimize the potential detrimental impacts of footings excavations on foundation performance:

1. Footing excavations should be thoroughly cleaned of all loose materials immediately prior to concrete placement. The effort to clean the excavations is usually hampered by the presence of

reinforcing bars in the excavations, making this a less-preferred approach than the option described below for creating acceptable bearing conditions.

2. The bottom of the foundation excavations could be covered with a minimum 2-inch-thick lean concrete layer after suitable bearing conditions have been established. This lean concrete layer would ensure that the bearing conditions are maintained, provide a firm bearing surface for the footing reinforcement, and ensure adequate concrete cover on the bottom reinforcing bars. Also, any loose materials that accumulate in the excavation can be easily removed using air-blowing techniques. We recommend that the Contractor utilizes this approach if individual column footings are used, and they are not connected with tie beams or if footings are to be installed during the rainy season.

The Geotechnical Engineer should be given the opportunity to observe the bearing conditions prior to the placement of reinforcement and immediately before concrete placement. Remedial work should be performed, if necessary, until the bearing conditions are deemed to be satisfactory by the Geotechnical Engineer. The responsibility to maintain suitable bearing conditions and control sloughing of the sides of the excavation should remain with the Contractor.

## 4.3 RETAINING WALLS

### 4.3.1 Permanent Retaining Walls

*General:* Permanent retaining walls should be designed to resist lateral earth pressures plus additional lateral pressures that may be caused by earthquakes, surcharge loads behind them, and water pressures, as described below. The design criteria for these walls are for permanent loading conditions. It should be noted that the design lateral earth pressures described below do not include contributions from hydrostatic pressures.

Footings for retaining walls should be designed using the applicable criteria presented above for shallow foundations.

*Design Lateral Earth Pressures:* The retaining walls should be designed to resist lateral earth pressures from: 1) the static case and surcharge-induced pressures; and 2) the dynamic case and surcharge-induced pressures.

It should be noted that the following recommendations apply to walls retaining a horizontal surface. If the ground surface behind the retaining walls is sloping, the lateral earth pressure will be higher.

The recommended design lateral earth pressures are as follows:

1. **Static Forces:** For top-restrained walls, a lateral earth pressure equal to 60 pcf equivalent fluid pressure should be used and for cantilevered walls, a lateral earth pressure equal to 45 pcf equivalent fluid pressure should be used.
2. **Dynamic Case:** For a wall of height  $H$ , where  $H$  is 6 feet or greater, the dynamic earth pressure increment induced by an earthquake should be assumed to be  $15H$  psf. The associated static earth pressure is equal to an equivalent fluid pressure of 45 pcf. The total lateral earth pressure is equal to the sum of the dynamic earth pressure increment and the static earth pressure.
3. **Surcharge-Induced Pressure:** A uniform lateral pressure equal to 0.33 times any surcharge loads (uniform vertical pressure) behind walls should account for surcharge directly behind cantilever walls. The corresponding factor for top-restrained wall is equal to 0.5.
4. **Other Surcharge-Related Issues:** For lateral pressures from nearby footings, traffic, trees, and other types of loading, we recommend using the procedure in Figure 12. Surcharge from nearby footings should be considered as strip load whereas surcharge from traffic loading should be considered as point loads spaced as axle loads at the applicable distances from each other and from the wall. Trees should also be considered as point loads representing the individual weights of the trees. The weights of the trees can be provided by an arborist.

### 4.3.2 Subdrainage for Permanent Retaining Walls

To prevent hydrostatic pressures against the retaining walls, a continuous drain should be installed. The drain should consist of prefabricated drainage panels (Miradrain or approved equal) with filter fabric on the side facing the earth, draining into a perforated collector pipe placed at the base of the wall. The pipe should be at least four inches in diameter and should connect to a free outlet.

As an alternative to prefabricated drainage panels, permeable backfill material at least one foot thick may be used. For this alternative, the permeable backfill material should conform to the gradation requirements

## RUTHERFORD + CHEKENE

for Class 2 Permeable Material as specified by the California Department of Transportation (Caltrans) Standard Specifications, Section 68.

The drainage panels or permeable blanket should extend from the bottom of the wall up to a depth of two feet below the finish grade level. The uppermost two feet of backfill should be composed of soils of lower permeability, placed as a “cap” to prevent direct flow of surface runoff water into the subdrainage system.

### 4.3.3 Slabs-on-Grade

*Slab-On-Grade Floor:* Design requirements for slab-on-grade floors that are not subjected to traffic loads should include provision of an adequate section for floor loads and prevention of dampness and efflorescence in the floor. To fulfill these objectives, we recommend the following section for such slab-on-grade floors:

1. Reinforced concrete slab of minimum 5-inch thickness.
2. Impervious membrane of good quality, per ASTM E1745, Class C. The membrane should be Stego Wrap or approved equal.
3. Granular cushion, with a minimum nominal thickness of six inches, and consisting of broken stone or crushed or uncrushed gravel. It should also be angular and free of deleterious matter. The gradation should conform to the following:

<u>U.S. Series Sieve Size</u>	<u>Percentage Passing Sieve (Dry Weight Composition)</u>
3/4-inch	100
No. 4	0-10
No. 200	0-2

The granular cushion should be compacted with a vibro-plate until there is no evidence of further consolidation of the gravel before subsequent construction.

*Slabs for Below-Grade Structures:* Concrete slabs-on-grade for below-grade structures, such as elevators or utility pits, may serve the dual role of acting as a foundation as well as a floor element. If the slab serves as a foundation, neither a granular base course nor a vapor barrier would be required, and the thickness of the slab should be based on criteria for designing a foundation.

If the slab is serving only as a floor element without traffic loads and is above the zone of influence of the design groundwater level, it should have the same elements as described above for slab-on-grade floor.

Structures with slabs-on-grade exposed to the atmosphere may not require the elements necessary to prevent dampness and efflorescence. The Architect should decide on which of these below-grade structures should be provided with the elements required to prevent dampness and efflorescence.

*Slab-on-Grade-Exterior Locations:* Sidewalk slab-on-grade should consist of a minimum 4-inch thick concrete slab. If the sidewalk is to be subjected to forklift traffic, a minimum eight-inch-thick concrete slab

should be used. For better future performance of the sidewalk, the sidewalk slab can be supported on a 6-inch-thick Class 2 aggregate base course.

### 4.3.4 Waterproofing and Dampproofing

*General:* Simply stated, as a minimum, waterproofing and/or vapor barrier should be provided where a hydrostatic pressure condition exists and dampproofing should be provided where such a condition does not exist. Based on this rule of thumb, waterproofing should be provided behind subsurface walls and dampproofing might suffice for slab-on-grade floors although waterproofing could be provided in that case as well to minimize the potential impacts of rare event such as leaking or breaking of a nearby fluid-carrying line.

*Expertise:* The general guideline described above should be considered as a minimum requirement. Details concerning the type, appropriateness, effectiveness, and adequacy of waterproofing elements, their lateral extent, and the locations of the elements are beyond our expertise. We recommend therefore that the services of a waterproofing consultant be sought for recommendations on those issues.

# 5 Civil Design Issues

## 5.1 RECOMMENDATIONS FOR PAVEMENTS

### 5.1.1 Asphalt Concrete and Other Paving

*General:* We anticipate that asphalt concrete and concrete paving would be required for the new driveway and parking areas area at the project site. This paving section is based on the procedures contained in Chapter 600 of the Caltrans Highway Design Manual, dated July 1, 2020, using a Traffic Index range of 5.0 to 7.0. Selection of this design traffic parameter was based on assumed use and not on a detailed equivalent wheel load analysis or traffic study.

*Asphalt Concrete Paving:* For flexible paving design, the R-value, which represents the ability of the subsurface material to resist lateral deformation when acted upon by a vertical load, is 14 for this site based on laboratory test result. The R-value is estimated based on the soil classification rather than on the laboratory test results. Our recommendations for flexible asphalt concrete paving are presented in Table 6.

*Concrete Pavements:* The concrete pavement design was based on the highway design manual procedures for standard rigid pavement design. The concrete pavement design is based on the determination that the site is classified as falling in the “Central Coast” region, based on the California Highway Design Manual’s classification of California Pavement Climate regions. The site soil is classified as Type II subgrade soil. We estimated the section thickness, which is presented in Table 5, based on the assumption that curbs will be installed to provide lateral support for the pavement sections.

*Subgrade-All Paving Types:* The subgrade for all paving types in areas should consist of existing non-organic site soils (after stripping) scarified to a depth of six inches, moisture conditioned, and recompacted to a minimum 95 percent relative compaction (based on ASTM Test Method D1557).

Materials removed can only be re-used if they are free of debris or rubble. The Geotechnical Engineer should be given the opportunity to determine if materials that are removed are suitable for re-use.

*Pavement Drainage:* Our observations of pavement performance indicate that there is a strong correlation between poor pavement drainage conditions and the amount of pavement failures (potholes, settlement bowls, alligator cracks, etc.) observed. For this reason, we recommend that new pavement sections should be adequately drained by providing swales, culverts, subdrains, as deemed necessary. Particular attention should be paid to the pavement section in the artificial fill area of the site, where excessive moisture could saturate the pavement subgrade materials and cause the pavement to fail.

*Miscellaneous:* For the rigid (pervious) pavements, the designer should refer to AASHTO, ACI and other pavement design documents regarding requirements for concrete strength, jointing, etc.

**Table 6  
Recommended Pavement Section**

Assumed Traffic Index	Asphalt Concrete Pavement		Concrete Pavement	
	Asphalt Section (inches)	Aggregate Base (inches)	Concrete Section (inches)	Aggregate Base (inches)
5	2.5	10	8.4	12
6	3	9	8.4	12
	2.5	13	8.4	12
7	3	12	8.4	12
	3.5	11	8.4	12

It should be noted that the pavement sections described above will not be able to accommodate construction traffic. The Contractor should be aware of this and should sequence the construction in such a way that new pavement sections are not subjected to construction traffic.

**5.1.2 Aggregate Base Materials**

Where aggregate base material is specified, the furnished material should meet the requirements of Class 2 Aggregate Base as described in the California Department of Transportation (Caltrans) Standard Specifications. Aggregate base materials should consist of virgin rock aggregates only, unless the Contractor can provide certification by a registered environmental professional that any proposed recycled materials are free of hazardous and/or deleterious contaminants. The Contractor should provide written certification from the quarry stating that aggregate base materials meet all the requirements of Caltrans Class 2 Aggregate Base.

## **5.2 STORMWATER CONTROL FACILITY**

### **5.2.1 Hydrologic Soils Group Classification**

The project site is underlain by a surficial fill layer, consisting of lean clay with sand and varying amounts of gravel. The fill layer is underlain by alluvial fan deposits and materials consisting of sand and silty with interbeds of lean and fat clay.

Based on the materials underlying the site, in terms of hydrologic soil group (HSG) classifications, the site can be classified as Hydrologic Soil Group D.

### **5.2.2 Feasibility**

Based solely on the HSG classifications, the site does not appear to be a potential candidate for siting infiltration facilities.

Based on the preceding, we recommend that an infiltration facility should not be installed on the project site. We recommend that a retention or detention type of facility should be considered instead.

We note however that a detailed infiltration study can be performed to verify the conclusions in this report when the location and the elevation of the bottom of the stormwater control facility has been established.

## 5.3 EARTHWORK AND GRADING

### 5.3.1 Site Preparation, Demolition and Backfilling

*General:* If an existing below-grade structural element such as a utility structure is encountered within the footprint of proposed construction, it should be removed to at least three feet below the subgrade for new site work improvements, and the pit should be properly backfilled with site-derived or imported materials in accordance with Sections 5.3.6 “Fill and Backfill Materials” and 5.3.5 “Engineered Fill and Backfill Placement.”

In the areas of new improvements, any unpaved portions of the site should be stripped at least 6 to 9 inches below the existing grade. Concrete, wood, and other debris should be hauled off the site. In the existing paved areas, the asphalt and subgrade should be stripped to the depth of undisturbed native soil.

Stripping should extend at least five feet beyond the footprints of the proposed improvements. Unless the stripped materials are considered suitable for landscaping purposes, they should be hauled off the site.

*Demolition and Backfilling of Existing Basement:* The existing basement should be removed completely including basement walls, footings, and slabs. The excavation walls should be sloped 1:1 or flatter and the resulting excavation should be backfilled in accordance with Sections 5.3.6 “Fill and Backfill Materials” and 5.3.5 “Engineered Fill and Backfill Placement.” The backfill should be compacted to a relative compaction of 95-percent at optimum to 2-percent above optimum moisture content. The backfill, which should be placed in lifts and the backfill should be keyed into the walls of the excavation, as shown in Figure 13.

### 5.3.2 Subgrade Stabilization

Subgrade stabilization may be required during grading because of 1) wet or soft soil conditions and/or 2) unstable or pumping subgrade. These conditions may occur at the site due to saturated soil or inclement weather conditions during construction. Where such conditions occur, the existing soil should be excavated to a minimum depth of 12 inches. The overexcavated area should then be stabilized with geotextile fabric as described below. If stabilization is required, we recommend that Mirafi 500X or approved equal should be used. The stabilization should meet the following requirements:

1. The fabric should be laid loosely on a smooth, fairly level surface; folds and wrinkles in the fabric should be avoided.
2. Adjacent rolls of fabric should overlap a minimum of 24 inches.
3. During fill placement, a 9- to 12-inch lift of un-compacted fill should be placed over the fabric before compaction is commenced. Subsequent lifts of fill should then be placed per the requirements described under Section 5.3.5.
4. The fabric should be stored away and protected per the recommendations of the manufacturer.

Alternatively, the subgrade could be stabilized using lime treatment if the soil materials are amenable to such treatment.

### 5.3.3 Excavation and Slopes

*General:* Conventional excavation and earthwork equipment should be satisfactory for mass grading, foundation, and utility trenching on this site.

## RUTHERFORD + CHEKENE

*Sloped Excavations:* During the excavation operations, temporary cut slopes should be used, where feasible, to prevent movement of materials exposed on the excavation walls. A temporary slope gradient of 1.5:1 (horizontal: vertical) or flatter should be used.

Permanent cut and fill slopes, if any, should have a gradient of 2:1 (horizontal: vertical) or flatter in order to ensure stability, encourage plant growth, and minimize erosion.

To provide erosion protection, permanent slopes should be initially stabilized with straw plugs and then planted with native plants, grasses, and shrubs consistent with the approved landscaping plan. A swale should be provided at the toe of the permanent slope to minimize the potential for erosion of the toe by surface runoff.

The Contractor should be aware that slope height, slope inclination, and excavation depths (including utility trench excavations) should in no case exceed those specified in local, state, or federal safety regulations, e.g., OSHA Health and Safety Standards for Excavations, 29 CFR Part 1926, or successor regulations.

### 5.3.4 Subgrade Preparation

Unless otherwise stated in this report, any exposed subgrade that will receive fill or aggregate base should be prepared by scarifying to a depth of six inches and moisture-conditioning to a moisture content of about two percent above optimum moisture content or as directed by the Geotechnical Engineer. The moisture-conditioned material should then be compacted to 95% relative compaction (based on ASTM Test Method D1557). The moisture conditions are to be maintained until fill is placed.

Directly under paving, the exposed subgrade should be scarified to a depth of six inches, moisture conditioned as described above and compacted to 95% relative compaction. If the paving will bear on engineered fill, the fill should be compacted to a minimum 95% relative compaction at the specified moisture content.

### 5.3.5 Engineered Fill and Backfill Placement

In areas designated to receive fill whether by removal and compaction or replacement, the subgrade-to-receive-fill should be prepared as described under the preceding subheading. Approved fill material should then be placed in lifts not exceeding eight inches in uncompacted thickness, moisture-conditioned to a moisture content of about two percent above the optimum moisture content of the material and compacted to at least 90 percent relative compaction (ASTM D1557).

In addition to being compacted to the required relative compaction, the engineered fill should also be stable, i.e., not exhibit “pumping” behavior. Ponding or jetting should not be used to densify fill or backfill.

### 5.3.6 Fill and Backfill Materials

*Imported Fill:* If imported material is required for fill and backfill, the imported material must be granular soil, free of organic matter, which does not exhibit excessive shrinkage or swelling behavior when subjected to changes in water content. Imported fill should contain no environmental contaminants or construction debris. The material should conform to the requirements of soils with USCS classifications of SW and SC.

1. Meet the following plasticity requirements, where applicable:
  - a. Maximum Plasticity Index of 12 (ASTM D4318).
  - b. Maximum Liquid Limit of 35 (ASTM D4318).

## RUTHERFORD + CHEKENE

2. Be certified as being free of hazardous and/or deleterious contaminants by a California-registered environmental professional.

**Selective Stockpiling of Site-Derived Fill Materials:** During the excavation operations, the Geotechnical Engineer should be given the opportunity to identify native soils to be selectively stockpiled for use as fill or backfill.

**Controlled Low Strength Material (CLSM):** CLSM (also known as “Controlled Density Fill or CDF”) should be a flowable and self-compacting mixture of Portland cement, fly ash, fine aggregates, water, and entrained air; conforming to ACI 229R. The mix should have the following properties:

1. Minimum Compressive Strength: 1500 psi at 28 days where the CLSM is used for sub-footings and 500 psi at 28 days where the CLSM is to be used for trench backfilling and other similar applications.
2. Slump: Eight inches minimum to ten inches maximum (unless otherwise stated), when tested in accordance with ASTM C143.

Each batch of CDF delivered to the site should be sampled and tested for slump and strength.

### 5.3.7 Site-Derived Recycled Materials

From the geotechnical point of view, site-derived materials from the existing pavement sections can be salvaged, appropriately processed, and re-used for filling and backfilling. These materials must however be evaluated and approved by the Geotechnical Engineer as suitable fill or backfill materials. The materials should also be reviewed from the environmental point of view and be certified as acceptable by an environmental professional registered in the State of California.

### 5.3.8 Drain Rock and Filter Fabric

Drain rock, if required, should consist of Class 2 Permeable Material, meeting gradation and other requirements contained in the California Standard Specifications. Alternatively, three-quarter-inch crushed rock encapsulated in filter fabric (Mirafi 140N or equivalent) can be used instead of Class 2 Permeable Material. The Contractor should provide written certification from a registered environmental professional to the Geotechnical Engineer stating that drain rock materials meet all the requirements of Caltrans Class 2 Permeable Material.

### 5.3.9 Surface Drainage and Erosion Control

**General:** Finished grading for surface drainage should be designed to direct surface runoff away from the new buildings toward discharge facilities. Ponding of surface water should not be allowed adjacent to the new buildings. Downspouts and gutters should be provided, and water from downspouts should be directed through unperforated pipes to storm drains.

For areas where the surface water is anticipated to infiltrate down through pervious pavers, it should be noted that if there is a “hard point” (grade beams or footings extending under the pavers) that prevents/blocks the infiltration of water, there could be potential differential settlement at the interfaces of the hard point.

**Best Management Practices:** Various best management practices for surface runoff, subsurface seepage, and erosion control can be employed either singularly or jointly to mitigate the potential for erosion. These include: 1) using curbs to keep runoff on the paved roadway and directing the runoff to strategically placed

## **RUTHERFORD + CHEKENE**

catch basins, 2) providing swales at the toes of slopes to capture current surface runoff and directing them to the storm drain system, and 3) using erosion mat and/or vegetation on slopes.

### **5.3.10 Utility Trench Backfilling**

*Bedding and Initial Backfill Materials:* Utility trench backfills generally consist of bedding, initial backfill, and final backfill. The bedding and initial backfill materials are selected based on the type of pipe in the trench. We request that the Civil Engineer or other designers specify the type of bedding and initial backfill materials that are appropriate for the utility line in the trench.

*Site-Derived Final Backfill Materials:* Site-derived soils from the trenches, except those containing organic materials, can be used as final backfill material. The Contractor should selectively stockpile site-derived soils that meet this general requirement.

The proper procedures for stockpiling the site-derived materials are as follows:

1. Strip surface material that contains organic materials and place in an “unacceptable fill material” stockpile.
2. Obtain the approval of the Geotechnical Engineer that materials exposed along the trace of the trench can be placed in an acceptable fill material stockpile.
3. Selectively stockpile the materials designated as acceptable at a location where the stockpile would not adversely impact the stability of the trenches.

*Compaction Requirements:* Approved initial and final backfill materials should be placed in lifts not exceeding eight inches in uncompacted thickness, moisture-conditioned to a moisture content of about zero to two percent above the optimum moisture content of the material and compacted to at least 90 percent relative compaction (ASTM D1557). In areas where a trench is to be overlain by a pavement, the upper 6 inches of the backfill should be compacted to a minimum relative compaction of 95 percent.

*Use of Controlled Low Strength Material (CLSM):* Conventional backfilling and compaction of trenches could be challenging sometimes for deep trenches if required on the site. If acceptable to the designer from the performance point of view, consideration should be given to fully or partially backfilling the deep trenches with CLSM.

*Moisture Flow Control Barriers:* Utility trench backfills, even when properly compacted could still serve as the path of least resistance for flow of moisture from storm water runoff or artificial sources. Moisture flow control barriers made up of low permeability clay soil or CLSM should be installed at strategic locations to prevent moisture flow into utility structures or under new improvements.

# 6 Miscellaneous Design Issues

## 6.1 MISCELLANEOUS ISSUES

### 6.1.1 Corrosion Potential and Below-Grade Construction

Soils within the zone of influence of the project consist predominantly of clayey and sandy soils, which have a moderate to high corrosion potential.

To mitigate the potential for corrosion effects, we recommend the following for below-grade concrete construction, as a minimum:

1. Allow for adequate concrete cover (per ACI requirements) over reinforcing steel for construction in contact with native soils.
2. Consult a corrosion engineer for an appropriate concrete mix to mitigate the potential impacts of the corrosive elements on reinforced concrete.

We note that some of these requirements might already be part of the standard practice in structural design.

Subsurface utilities should be designed using materials and installation methods appropriate for an environment of moderate to high corrosion potential. A corrosion engineer should be hired for detailed recommendations regarding corrosion protection of utility lines that are considered critical.

### 6.1.2 Impacts of Site Conditions on Construction

*General:* Although this investigation was performed primarily for design purposes, a brief discussion of the impact of the site conditions on construction is presented for information purposes only. This discussion must not be considered to be a presentation of every possible impact of site conditions on construction.

*Utility Lines:* The Contractor should be aware that a number of utility lines traverse the site and run in close proximity to the project boundaries, prior to the demolition phase. The Contractor should take necessary precautions, prior to and during earthwork operations, to prevent damage to any of the old utility lines that might still be active.

*Demolition:* In areas of proposed site improvements, the Contractor should completely remove any subsurface structures. The Contractor should review design drawings (or as-built drawings, if they exist) of the structures that were demolished to become familiar with the depths and locations of all buried and underground elements to be removed.

*Subsurface Conditions Shown in Profiles:* The Contractor should be aware that the idealized conditions shown in our subsurface profiles are based on our interpolation and extrapolation of boring log data for the purposes of performing our geotechnical analysis. The profiles are not intended to be used for estimating quantities of various soil types. The stratification lines shown are approximate at best. Actual conditions will not be known until the soils are excavated. The Contractor should therefore perform his own interpretation of the boring log data and should avoid optimistic interpretation of the logs as a basis for a soils-related bid.

*Dust, Noise, and Vibration Control:* Dust, noise and vibration control may be necessary to minimize the impact of construction activities on nearby buildings.

### **6.1.3 Winter Construction**

If earthwork operations are performed during the winter or the rainy season, delays may result from the Contractor's inability to properly moisture-condition the mostly clayey site soils to achieve the required relative compaction. Also, water-logged, or boggy conditions that will limit movement of construction equipment, or lead to the equipment being stuck, should be expected during winter construction. In either case, lime treatment could be considered for site soils that are amenable to lime treatment to make them workable and compactable. Please refer to the discussion in Section 5.3.2 "Subgrade Stabilization" for additional mitigation measures.

Once the subgrade soils have been properly compacted, a six-inch layer of Caltrans Class 2 Aggregate Base can be placed over the subgrade as a cap to maintain suitable working conditions, if necessary. Alternatively, the Contractor may choose to lime-treat the surface soils. Also, a gravelly surface course may be required on construction traffic routes to improve working conditions.

Provisions should be made to dewater any excavations and to minimize the flow of surface runoff into the excavations if earthwork is performed during the rainy season.

We must note that the moisture content shown on the boring logs for the native soils reflects the moisture conditions at the time of the field exploration. The moisture content of those materials should be expected to be much higher if earthwork is performed during the winter or rainy season.

## **6.2 CONSTRUCTION OBSERVATION**

### **6.2.1 Summary**

Since our recommendations are based on the interpretation of available subsurface information, and actual subsurface conditions may not be known fully until the construction phase, it is necessary that a qualified geotechnical engineer be retained to provide continuous geotechnical engineering services during the excavation and foundation phases of the project. This will allow us to 1) make necessary modifications to our recommendations should actual subsurface conditions differ substantially from the conditions anticipated prior to the start of construction and 2) observe that the Contractor's work conforms to the geotechnical aspects of the construction documents.

The construction observation services should include (but will not necessarily be limited to) engineering observation of the following:

1. Meet with the Construction Manager, the Architect/Engineer, Contractor, and Earthwork Subcontractor on the site at critical points during site preparation, excavation, foundation, and backfilling operations to coordinate our observation services with the work.
2. Review submittals on earthwork materials and respond to RFIs.
3. Review any proposed earthwork materials, both on-site and imported, to determine their acceptability. Our review will include review of the results of all laboratory testing required to evaluate conformance with the specifications and to establish any necessary reference standards.
4. Interact with personnel of testing laboratory that will perform field density testing. Review all test results, and provide recommendations for remedial work, if necessary.
5. Observe bearing conditions in foundation excavations, prior to placement of reinforcing and again immediately prior to the placement of concrete.
6. Prepare a report summarizing construction observations and field density test results upon completion of construction.

# 7 Field Exploration and Laboratory Testing Programs

## 7.1 FIELD INVESTIGATION PROGRAM

### 7.1.1 Exploratory Borings

We observed and logged the drilling of two exploratory borings, which were drilled as part of the geotechnical investigation. The exploratory borings were drilled by Taber Drilling of West Sacramento between November February 285 to November 6, 2024. A summary of the final depths of the exploratory borings is shown in Table 7.

**Table 7  
Exploratory Boring Depths**

<b>Boring No.</b>	<b>Approximate Ground Surface Elevation (ft)</b>	<b>Depth Below Existing Ground Surface (ft)</b>
EB-1	125.6	50.5
EB-2	125.6	51.5
PT-1	124.8	5.0

The locations of the borings are shown in Figure 3. The key to the boring logs is shown in Figure B1 and our exploratory boring logs are shown in Figures B2 through B5 in Appendix B.

We obtained two different types of samples during the course of our field investigation. The sampler types are as follows:

1. **Standard Penetration Test (SPT) Sampler:** We obtained disturbed samples using an SPT split-spoon sampler with equipment and procedures in accordance with ASTM Test Method D1586.
2. **Modified California Sampler:** We obtained fairly disturbed samples using a Modified California split-spoon drive sampler with liners. The Modified California sampler has an approximate inside diameter of 2.438 inches and an outside diameter of about 2.5 inches.

For each of the drive samples obtained (either SPT or Modified California), the number of blows required for every six-inch increment of penetration (or fraction thereof) was recorded. For each test, the total for the last 12-inches is the blow count. The blow counts on our exploratory boring logs represent the actual number of blows recorded during sampling. No conversions were made to the recorded blow counts on boring logs. For each sample obtained using an SPT sampler, the blow count is the SPT value, N.

We referenced Figure 1.24 of Fang (1991) to estimate conversion factors for blow counts from various samplers to N-value. The conversion method takes into consideration soil type, sampler size, hammer weight, and hammer drop distance. To convert actual blow counts by the Modified California Sampler to equivalent N-values, multiply by 0.6.

We logged the exploratory borings by visually examining the drill cuttings and recovered samples. On the corresponding logs, we recorded the number of blows required to advance the samplers. At the completion of drilling, we retained representative samples for laboratory testing and future reference. Our boring logs contain the information obtained in this exploration program.

## RUTHERFORD + CHEKENE

The locations of the exploratory borings were determined by referencing landmarks around the site and by using a measuring wheel or measuring tape. The locations and elevations of the borings should be considered accurate only to the degree implied by the methods used.

The exploratory boring logs and soil profiles included herein show our interpretation of the subsurface conditions at the locations and dates indicated, and it is not warranted that the logs are representative of subsurface conditions at other locations and times. The stratification lines shown represent the approximate boundaries between material types; these transitions may be gradual. Also, we have developed soil and subsurface profiles by interpolation between the available data points, between which variations may occur in the actual conditions.

We must reiterate that the moisture contents shown on the boring logs in Appendix B for the native soils reflect the moisture conditions at the time of the field explorations. The moisture content of these materials should be expected to be much higher if earthwork is performed during the winter or rainy season.

### 7.1.2 Cone Penetration Testing

*Seismic Cone Penetration Tests (SCPTs):* We commissioned Gregg Drilling of Martinez, California to perform two seismic cone penetration tests (SCPTs) on February 28, 2024. All SCPT soundings were performed in accordance with ASTM D7400-08.

*Cone Penetration Tests (CPTs):* We commissioned Gregg Drilling of Martinez, California to perform three cone penetration tests (CPTs) on February 29, 2024. All CPT soundings were performed in accordance with ASTM D5778-12.

A summary of the final depths of the SCPTs and CPTs is shown in Table 7.

**Table 8**  
**Seismic Cone Penetration Test and Cone Penetration Test Summary**

CPT/ SCPT I.D.	Approximate Ground Surface Elevation (ft)	Depth Below Existing Ground Surface (ft)
SCPT-1	125.0	100.2
SCPT-2	126.2	100.3
CPT-1	125.0	50.3
CPT-2	125.5	50.3
CPT-3	125.0	10.3

We determined the CPT and SCPT locations and the surface elevations using the same methods described above for the borings.

An integrated electronic cone system was used to perform all the SCPTs and CPTs. The values for tip resistance, sleeve resistance, and penetration pore water pressure were recorded at either 2.5 or 5 cm intervals as cone penetrated through the subsurface. For SCPTs, the system was also equipped to measure shear wave velocities ( $V_s$ ) and calculate the average shear wave velocity to a depth of 30 meters ( $V_{s30}$ ), with seismic wave measurements conducted at regular depth intervals to ensure accurate profiling of the subsurface conditions.

A complete summary of SCPT and CPT is presented in Gregg Drilling report.

## 7.2 LABORATORY TESTING PROGRAM

### 7.2.1 Testing Laboratory

We commissioned Cooper Testing Laboratory of Palo Alto to perform a program of laboratory tests on materials encountered in the exploratory borings to determine their index and strength properties.

Our program of tests included tests on soil samples to determine their moisture contents and dry densities, according to ASTM D7263b.

Sieve analyses were performed on nine samples to determine their gradation characteristics in accordance with ASTM D422.

Undrained triaxial compression tests were performed on two samples in accordance with ASTM D4767m.

We also had one sample tested to determine their R-Value, the test was performed in accordance with CTM 301.

The results of the laboratory tests are presented on the boring logs at the appropriate sample depths and in Appendix D.

### 7.2.2 Corrosivity Analysis

We commissioned CERCO Analytical of Concord to perform a corrosivity analysis (per ASTM D1586) on two soil samples obtained from our exploratory boring EB-1 at a depth of 1-1.5 feet (Sample 001) and EB-2 at a depth of 1.5-2 feet (Sample 002). Tests were performed to measure the resistivity, pH, chloride and sulfate ion concentrations, and redox potentials of the samples.

Based on the resistivity measurements, CERCO concluded that both samples are classified as moderately corrosive. All buried iron, steel, cast iron, ductile iron, galvanized steel and dielectric coated steel or iron should be properly protected against corrosion depending upon the critical nature of the structure. All buried metallic pressure piping such as ductile iron firewater pipelines should be protected against corrosion.

Measurements of chloride ion concentration for both samples is 23 mg/kg and is determined to be insufficient to attack steel embedded in a concrete mortar coating.

Measurements of sulfate ion concentration in the samples are none with a reporting limit of 15 mg/kg.

The pH level of the soil samples ranged from 7.17 to 8.04, which are considered to be not corrosive to buried iron, steel, mortar-coated steel and reinforced concrete structures.

The redox potential of the samples ranged from 310 to 350-mV. Both samples are indicative of potentially "slightly corrosive" soils resulting from anaerobic soil conditions.

CERCO's original report, which is summarized above, is presented in Appendix D.

# B Exploratory Boring Logs

## SOIL SYMBOLS AND DESCRIPTIONS

GROUP ABBREVIATION (U.S.C.S.)	SYMBOL	GROUP NAME
GW		WELL GRADED GRAVELS
GP		POORLY GRADED GRAVELS
GM		SILTY GRAVELS
GC		CLAYEY GRAVELS
SW		WELL GRADED SANDS
SP		POORLY GRADED SANDS
SM		SILTY SANDS
SC		CLAYEY SANDS
ML		LOW PLASTICITY SILT
CL		LOW PLASTICITY CLAY
OL		LOW PLASTICITY ORGANIC SILT AND CLAY
MH		HIGH PLASTICITY SILT
CH		HIGH PLASTICITY CLAY
OH		HIGH PLASTICITY ORGANIC SILT AND CLAY

### SAMPLE TYPES

SYMBOL	SAMPLE METHOD OR TOOL
	STANDARD PENETRATION TEST
	MODIFIED CALIFORNIA (2.0" O.D.)
	MODIFIED CALIFORNIA (2.5" O.D., 1.92" I.D.)
	CORE
	AUGER SAMPLE
	BULK SAMPLE
	NO RECOVERY

STANDARD PENETRATION TEST (SPT) SAMPLES ARE TAKEN BY DRIVING A STANDARD 1.4" I.D. SPLIT-SPOON SAMPLER INTO THE GROUND WITH A 140- POUND WEIGHT (HAMMER) FALLING 30 INCHES, PER ASTM D1586.

## WATER LEVEL SYMBOLS

	WATER LEVEL DURING DRILLING, WITH DATE
	WATER LEVEL AFTER DRILLING, WITH DATE

## SOIL DESCRIPTION TERMINOLOGY

SOILS ARE IDENTIFIED AND CLASSIFIED IN THIS REPORT ACCORDING TO THE UNIFIED SOIL CLASSIFICATION SYSTEM WITH THE FOLLOWING MODIFIERS:

### CONSISTENCY OF SOILS

SPT, N BLOW COUNT	RELATIVE DENSITY	SPT, N BLOW COUNT	CLAY CONSISTENCY	UNCONFINED COMPRESSION STRENGTH (PSF)
< 4	VERY LOOSE	< 2	VERY SOFT	< 500
4 - 10	LOOSE	2 - 5	SOFT	500 - 1000
10 - 30	MED. DENSE	5 - 10	MED. STIFF	1000 - 2000
30 - 50	DENSE	10 - 20	STIFF	2000 - 4000
> 50	VERY DENSE	20 - 30	VERY STIFF	4000 - 8000
		> 30	HARD	> 8000

### SOIL MOISTURE

DESCRIPTIVE TERM	DESCRIPTION
DRY	DRY OF STANDARD PROCTOR OPTIMUM
DAMP	SAND ONLY
MOIST	NEAR STANDARD PROCTOR OPTIMUM
WET	WET OF STANDARD PROCTOR OPTIMUM
SATURATED	FREE WATER IN SAMPLE

### PARTICLE SIZES

COMPONENTS	SIEVE OR SIEVE NO.
BOULDERS	OVER 12 INCHES
COBBLES	3 TO 12 INCHES
GRAVEL- COARSE	3/4 TO 3 INCHES
- FINE	NO. 4 TO 3/4 INCH
SAND - COARSE	NO. 10 TO NO. 4
- MEDIUM	NO. 40 TO NO. 10
- FINE	NO. 200 TO NO. 40
FINES (SILT AND CLAY)	BELOW NO. 200

#### NOTE:

1) THE BORING LOGS SHOW SUBSURFACE CONDITIONS AT THE DATES AND LOCATIONS SHOWN, AND ARE NOT WARRANTED TO BE REPRESENTATIVE OF SUBSURFACE CONDITIONS AT THE OTHER LOCATIONS AND TIMES.

# Gregg Drilling CPT Report

March 1, 2024

Rutherford & Chekene

Attn: Gyimah Kasali

Subject: CPT Site Investigation  
605 West El Camino Real  
Sunnyvale, CA  
GREGG Project Number: D2249012

Dear Gyimah:

The following report presents the results of Gregg Drilling’s Cone Penetration Test investigation for the above referenced site. The following testing services were performed:

1	Cone Penetration Tests	(CPTU)	<input checked="" type="checkbox"/>
2	Pore Pressure Dissipation Tests	(PPD)	<input checked="" type="checkbox"/>
3	Seismic Cone Penetration Tests	(SCPTU)	<input checked="" type="checkbox"/>
4	Groundwater Samples	(GWS)	<input type="checkbox"/>
5	Soil Samples	(SS)	<input type="checkbox"/>
6	Vapor Samples	(VS)	<input type="checkbox"/>

A list of reference papers providing additional background on the specific tests conducted is provided in the bibliography following the text of the report. If you would like a copy of any of these publications or should you have any questions or comments regarding the contents of this report, please do not hesitate to contact me at 562-427-6899.

Sincerely,

CPT Reports Team  
Gregg Drilling, LLC.

## Cone Penetration Testing (CPT) Procedure

Gregg Drilling carries out all Cone Penetration Tests (CPT) using an integrated electronic cone system, Figure CPT.

The cone takes measurements of tip resistance ( $q_c$ ), sleeve resistance ( $f_s$ ), and penetration pore water pressure ( $u_2$ ). Measurements are taken at either 2.5 or 5cm intervals during penetration to provide a nearly continuous profile. CPT data reduction and basic interpretation is performed in real time facilitating on-site decision making. The above-mentioned parameters are stored electronically for further analysis and reference. All CPT soundings are performed in accordance with revised ASTM standards (D 5778-12).

The 5mm thick porous plastic filter element is located directly behind the cone tip in the  $u_2$  location. A new saturated filter element is used on each sounding to measure both penetration pore pressures as well as measurements during a dissipation test (PPDT). Prior to each test, the filter element is fully saturated with oil under vacuum pressure to improve accuracy.

When the sounding is completed, the test hole is backfilled according to client specifications. If grouting is used, the procedure generally consists of pushing a hollow tremie pipe with a "knock out" plug to the termination depth of the CPT hole. Grout is then pumped under pressure as the tremie pipe is pulled from the hole. Disruption or further contamination to the site is therefore minimized.

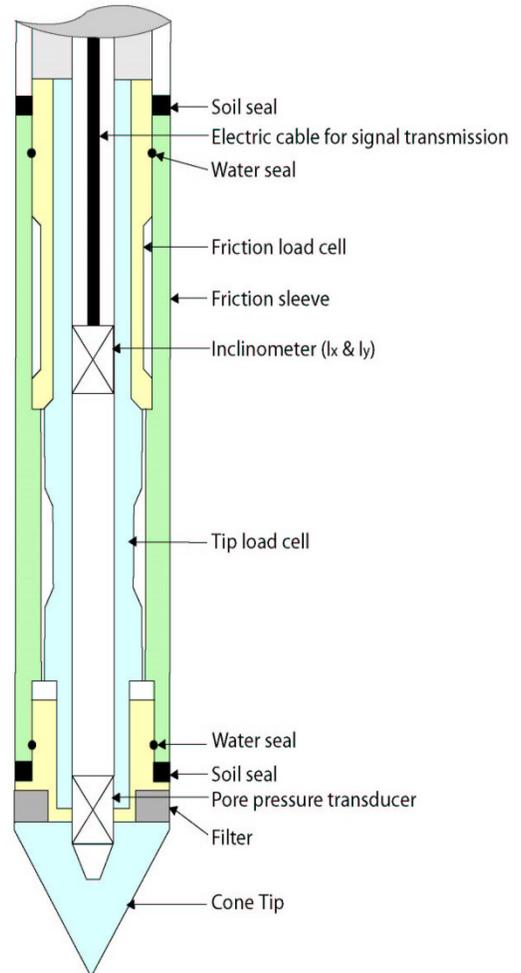

Figure CPT

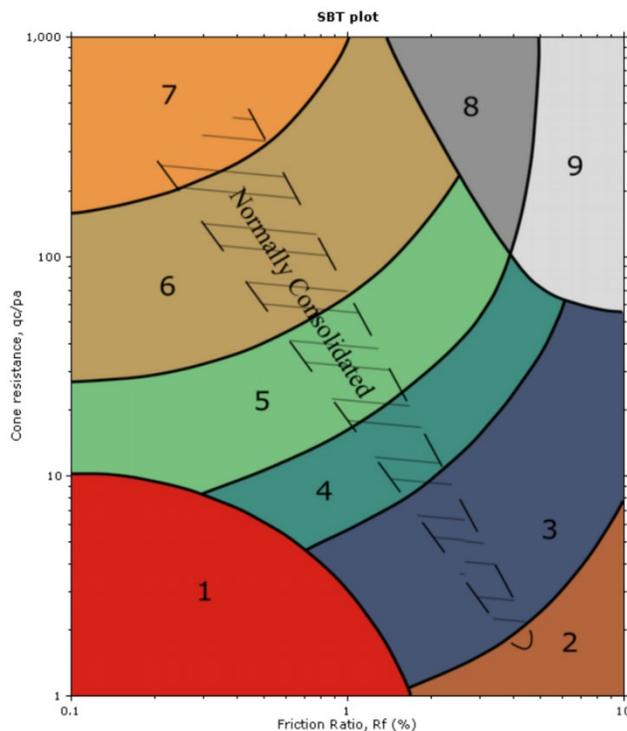

## 15cm<sup>2</sup> Standard Cone Specifications

Dimensions	
<b>Cone base area</b>	15 cm <sup>2</sup>
<b>Sleeve surface area</b>	225 cm <sup>2</sup>
<b>Cone net area ratio</b>	0.85
Specifications	
Cone load cell	
<b>Full scale range</b>	180 kN (20 tons)
<b>Overload capacity</b>	150%
<b>Full scale tip stress</b>	120 MPa (1,200 tsf)
<b>Repeatability</b>	120 kPa (1.2 tsf)
Sleeve load cell	
<b>Full scale range</b>	31 kN (3.5 tons)
<b>Overload capacity</b>	150%
<b>Full scale sleeve stress</b>	1,400 kPa (15 tsf)
<b>Repeatability</b>	1.4 kPa (0.015 tsf)
Pore pressure transducer	
<b>Full scale range</b>	7,000 kPa (1,000 psi)
<b>Overload capacity</b>	150%
<b>Repeatability</b>	7 kPa (1 psi)

*Note: The repeatability during field use will depend somewhat on ground conditions, abrasion, maintenance and zero load stability.*

## Cone Penetration Test Data & Interpretation

The Cone Penetration Test (CPT) data collected are presented in graphical and electronic form in the report. The plots include interpreted Soil Behavior Type (SBT) based on the charts described by Robertson (2010) (Figure SBT). Typical plots display SBT based on the non-normalized charts of Robertson (2010) or normalized data (2009 and 2016). For CPT soundings deeper than 30m, we recommend the use of the normalized charts of Robertson (2009 and 2016) which can be displayed as SBTn. The report also includes spreadsheet output of computer calculations of basic interpretation in terms of SBT and SBTn and various geotechnical parameters using current published correlations based on the comprehensive review by Lunne, Robertson and Powell (1997), as well as recent updates by Robertson and Cabal (Guide to Cone Penetration Testing 7<sup>th</sup> Edition, 2022). The interpretations are presented only as a guide for geotechnical use and should be carefully reviewed. Gregg Drilling LLC does not warranty the correctness or the applicability of any of the geotechnical parameters interpreted by the software and does not assume any liability for use of the results in any design or review. The user should be fully aware of the techniques and limitations of any method used in the software. Some interpretation methods require input of the groundwater level to calculate vertical effective stress. An estimate of the in-situ groundwater level has been made based on field observations and/or CPT results but should be verified by the user.

An estimate of the in-situ groundwater level has been made based on field observations and/or CPT results but should be verified by the user.

A summary of locations and depths is available in Table 1. Note that all penetration depths referenced in the data are with respect to the existing ground surface.

Note that it is not always possible to clearly identify a soil type based solely on  $q_t$ ,  $f_s$ , and  $u_2$ . In these situations, experience, judgment, and an assessment of the pore pressure dissipation data should be used to infer the correct soil behavior type.

## Pore Pressure Dissipation Tests (PPDTs)

Pore Pressure Dissipation Tests (PPDT's) conducted at various intervals can be used to measure equilibrium water pressure (at the time of the CPT). If conditions are hydrostatic, the equilibrium water pressure can be used to determine the approximate depth of the ground water table. A PPDT is conducted when penetration is halted at specific intervals determined by the field representative. The variation of the penetration pore pressure ( $u$ ) with time is measured behind the tip of the cone and recorded.

Pore pressure dissipation data can be interpreted to provide estimates of:

- Equilibrium piezometric pressure
- Phreatic Surface
- In situ horizontal coefficient of consolidation ( $c_h$ )
- In situ horizontal coefficient of permeability ( $k_h$ )

To correctly interpret the equilibrium piezometric pressure and/or the phreatic surface, the pore pressure must be monitored until it reaches equilibrium, *Figure PPDT*. This time is commonly referred to as  $t_{100}$ , the point at which 100% of the excess pore pressure has dissipated.

A complete reference on pore pressure dissipation tests is presented by Robertson et al. 1992 and Lunne et al. 1997.

A summary of the pore pressure dissipation tests completed for this project is included in Table 1.

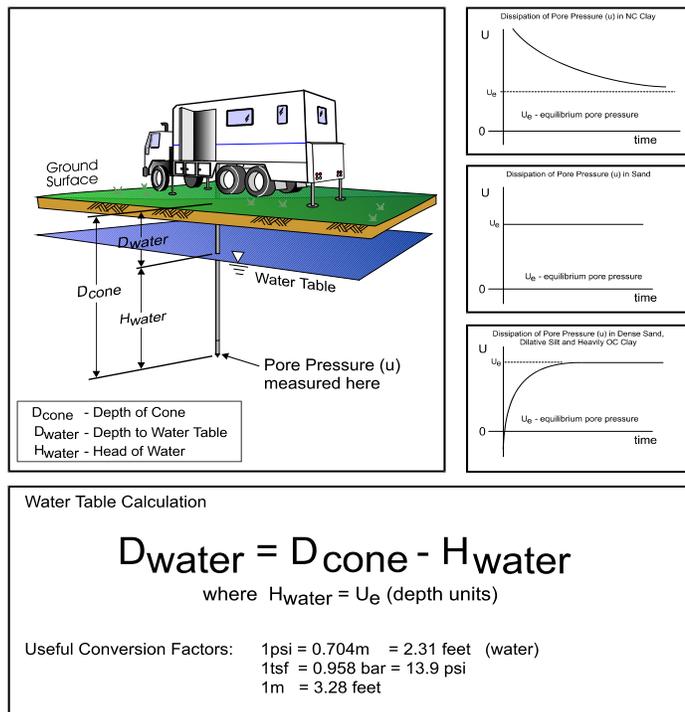

Figure PPDT

## Seismic Cone Penetration Tests (SCPT)

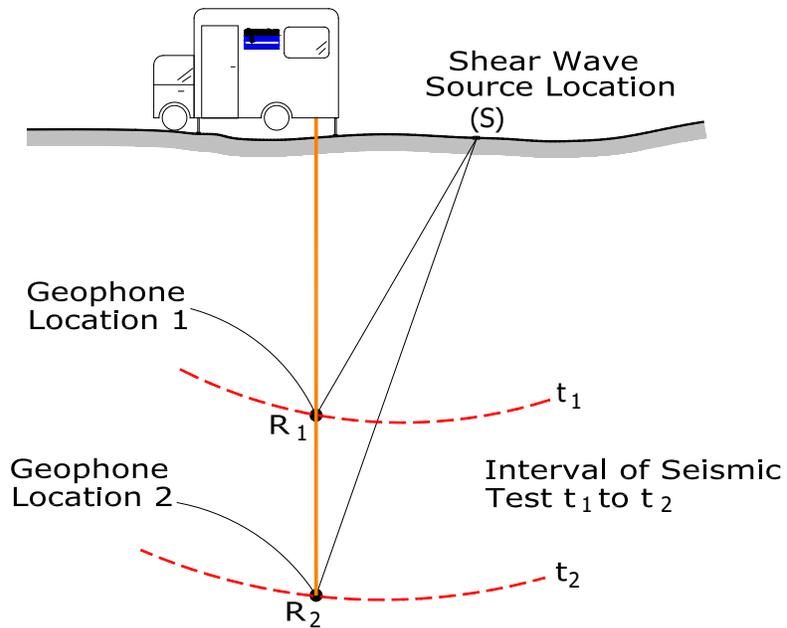

Seismic Cone Penetration Testing (SCPT) can be conducted at various intervals during the Cone Penetration Test. Shear wave velocity ( $V_s$ ) can then be calculated over a specified interval with depth. A small interval for seismic testing, such as 1-1.5m (3-5ft) allows for a detailed look at the shear wave profile with depth. Conversely, a larger interval such as 3-6m (10-20ft) allows for a more average shear wave velocity to be calculated. Gregg Drilling's cones have a horizontally active geophone located 0.2m (0.66ft) behind the tip.

To conduct the seismic shear wave test, the penetration of the cone is stopped and the rods are decoupled from the rig. An automatic hammer is triggered to send a shear wave into the soil. The distance from the source to the cone is calculated knowing the total depth of the cone and the horizontal offset distance between the source and the cone. To calculate an interval velocity, a minimum of two tests must be performed at two different depths. The arrival times between the two wave traces are compared to obtain the difference in time ( $\Delta t$ ). The difference in depth is calculated ( $\Delta d$ ) and velocity can be determined using the simple equation:  $v = \Delta d / \Delta t$

Multiple wave traces can be recorded at the same depth to improve quality of the data.

A complete reference on seismic cone penetration tests is presented by Robertson et al. 1986 and Lunne et al. 1997.

A summary of the shear wave velocities, arrival times and wave traces are provided with the report.

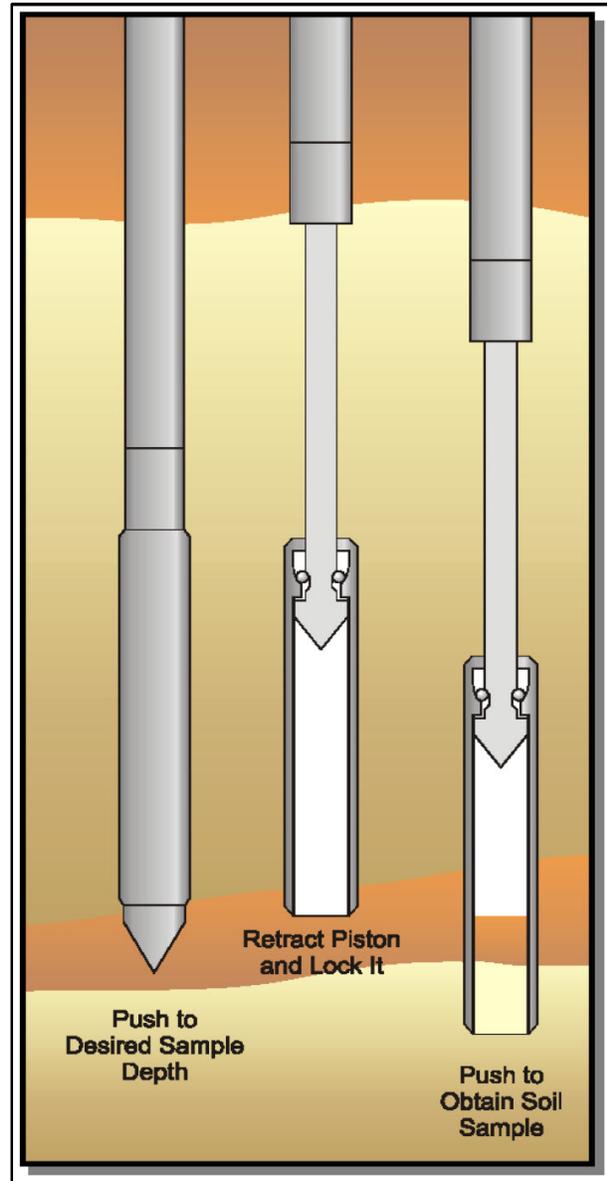

$$\text{Velocity } V = \frac{SR_2 - SR_1}{t_2 - t_1}$$

Figure SCPT

## Soil Sampling

Gregg Drilling uses a piston-type push-in sampler to obtain small soil samples without generating any soil cuttings, *Figure SS*. Two different types of samplers (12 and 18 inch) are used depending on the soil type and density. The soil sampler is initially pushed in a "closed" position to the desired sampling interval using the CPT pushing equipment. Keeping the sampler closed minimizes the potential of cross contamination. The inner tip of the sampler is then retracted leaving a hollow soil sampler with inner 1¼" diameter sample tubes. The hollow sampler is then pushed in a locked "open" position to collect a soil sample. The filled sampler and push rods are then retrieved to the ground surface. Because the soil enters the sampler at a constant rate, the opportunity for 100% recovery is increased. For environmental analysis, the soil sample tube ends are sealed with Teflon and plastic caps. Often, a longer "split tube" can be used for geotechnical sampling.

*For a detailed reference on direct push soil sampling, refer to Robertson et al, 1998.*

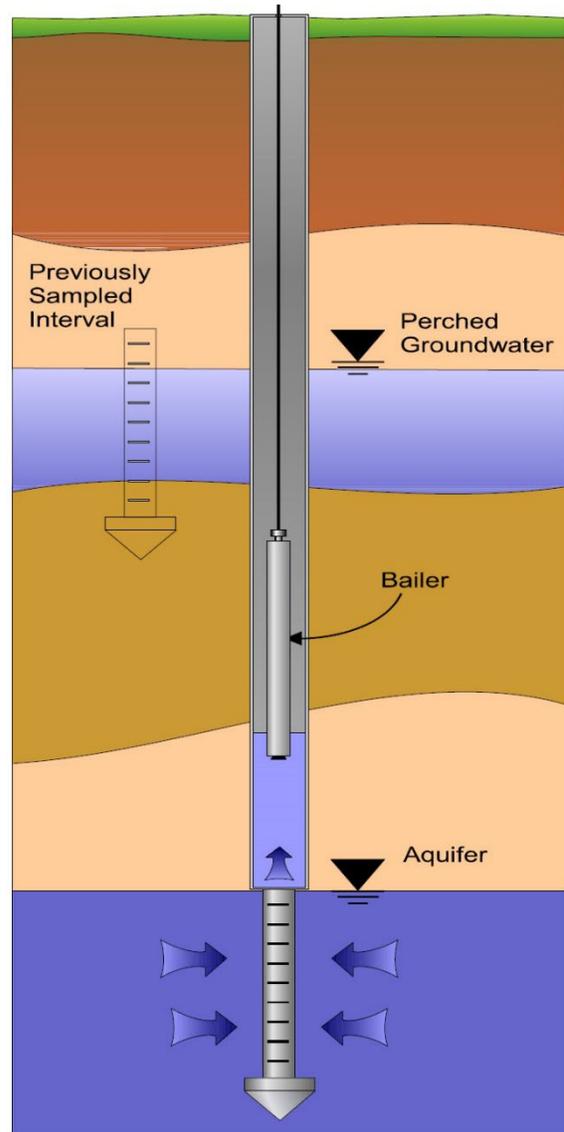

*Figure SS*

## Ground Water Sampling

Gregg Drilling conducts groundwater sampling using a sampler as shown in *Figure GWS*. The groundwater sampler has a retrievable stainless steel or disposable PVC screen with steel drop off tip. This allows for samples to be taken at multiple depth intervals within the same sounding location. In areas of slower water recharge, provisions may be made to set temporary PVC well screens during sampling to allow the pushing equipment to advance to the next sample location while the groundwater is allowed to infiltrate.

The groundwater sampler operates by advancing 44.5mm (1¾ inch) hollow push rods with the filter tip in a closed configuration to the base of the desired sampling interval. Once at the desired sample depth, the push rods are retracted; exposing the encased filter screen and allowing groundwater to infiltrate hydrostatically from the formation into the inlet screen. A small diameter bailer (approximately ½ or ¾ inch) is lowered through the push rods into the screen section for sample collection. The number of downhole trips with the bailer and time necessary to complete the sample collection at each depth interval is a function of sampling protocols, volume requirements, and the yield characteristics and storage capacity of the formation. Upon completion of sample collection, the push rods and sampler, with the exception of the PVC screen and steel drop off tip are retrieved to the ground surface, decontaminated and prepared for the next sampling event.

*Figure GWS*

*For a detailed reference on direct push groundwater sampling, refer to Zemo et. al., 1992.*

Subject: Project No.: 2024-004G  
Project Name: JCC Sixth District Court of Appeal  
Corrosivity Analysis – ASTM Test Methods

Dear Mr. Kasali:

Pursuant to your request, CERCO Analytical has analyzed the soil samples submitted on May 24, 2024. Based on the analytical results, a brief corrosivity evaluation is enclosed for your consideration.

Based upon the resistivity measurements, both samples are classified as “moderately corrosive”. All buried iron, steel, cast iron, ductile iron, galvanized steel and dielectric coated steel or iron should be properly protected against corrosion depending upon the critical nature of the structure. All buried metallic pressure piping such as ductile iron firewater pipelines should be protected against corrosion.

The chloride ion concentration for both samples is 23 mg/kg and is determined to be insufficient to attack steel embedded in a concrete mortar coating.

The sulfate ion concentrations reflect none detected with a reporting limit of 15 mg/kg.

The pH of the soils are 7.17 and 8.04, which does not present corrosion problems for buried iron, steel, mortar-coated steel and reinforced concrete structures.

The redox potentials are 310-mV and 350-mV. Both samples are indicative of potentially “slightly corrosive” soils resulting from anaerobic soil conditions.

This corrosivity evaluation is based on general corrosion engineering standards and is non-specific in nature. For specific long-term corrosion control design recommendations or consultation, please call *JDH Corrosion Consultants, Inc.* at (925) 927-6630.

We appreciate the opportunity of working with you on this project. If you have any questions, or if you require further information, please do not hesitate to contact us.

Very truly yours,  
**CERCO ANALYTICAL, INC.**

  
J. Darby Howard, Jr., P.E.  
President

# Appendix I Hazards Assessment Report

# PRE-DEMOLITION ASBESTOS, LEAD-BASED PAINT, POLYCHLORINATED BIPHENYLS, AND VISUAL HAZARDOUS MATERIALS SURVEY REPORT

Table of Contents  
July 11, 2024

The conclusions in the Report titled Pre-Demolition Asbestos, Lead-Based Paint, Polychlorinated Biphenyls, and Visual Hazardous Materials Survey Report are Stantec's professional opinion, as of the time of the Report, and concerning the scope described in the Report. The opinions in the document are based on conditions and information existing at the time the scope of work was conducted and do not take into account any subsequent changes. The Report relates solely to the specific project for which Stantec was retained and the stated purpose for which the Report was prepared. The Report is not to be used or relied on for any variation or extension of the project, or for any other project or purpose, and any unauthorized use or reliance is at the recipient's own risk.

Stantec has assumed all information received from Judicial Council of California (the "Client") and third parties in the preparation of the Report to be correct. While Stantec has exercised a customary level of judgment or due diligence in the use of such information, Stantec assumes no responsibility for the consequences of any error or omission contained therein.

This Report is intended solely for use by the Client in accordance with Stantec's contract with the Client. While the Report may be provided by the Client to applicable authorities having jurisdiction and to other third parties in connection with the project, Stantec disclaims any legal duty based upon warranty, reliance, or any other theory to any third party, and will not be liable to such third party for any damages or losses of any kind that may result.

# PRE-DEMOLITION ASBESTOS, LEAD-BASED PAINT, POLYCHLORINATED BIPHENYLS, AND VISUAL HAZARDOUS MATERIALS SURVEY REPORT

Introduction  
July 11, 2024

## 1.0 Introduction

This Pre-Demolition Asbestos, Lead-Based Paint, Polychlorinated Biphenyls, and Visual Hazardous Materials Survey Report has been prepared to evaluate the presence of asbestos-containing materials (ACM), lead-based paint (LBP) in fair and/or poor condition, polychlorinated biphenyls (PCB) in building materials, and other hazardous materials that would require special handling and/or disposal in accordance with applicable federal, state, and local regulations, for the New Sixth Appellate District Courthouse (Project). The Project consists of the demolition of an existing courthouse building and the construction of a new courthouse with onsite parking for the Sixth Appellate District of the Court of Appeal in a more practical and accessible infill location. The Project is located on 2.03-acres of state-owned land at 605 West El Camino Real, Sunnyvale (City), California 94087 (Assessor's Parcel Number [APN: 165-02-004]). The Site is located west of Mathilda Avenue, north of El Camino Real and east of Pastoria Avenue, generally in the center region of the City. It is approximately 1.4 miles east of Highway 85 (W. Valley Freeway) and southeast of Highway 237 (Mountain View Alviso Road).

The Site was formerly the Superior Court of California, County of Santa Clara, Sunnyvale Courthouse (Sunnyvale Courthouse) and is currently vacant. Surrounding properties consist of commercial and residential buildings.

The survey was performed on March 21-22 and April 3, 2024, by the following Stantec personnel:

- **Mr. Scott Edblad**, Senior Scientist with Stantec, State of California, Division of Occupational Safety and Health (DOSH) Certified Asbestos Consultant (CAC; #15-5414) and State of California, Department of Public Health (CDPH) Lead Related Construction Sampling Technician (LRCST; #LRC-00002061), and
- **Mr. Carl Miklich**, Senior Environmental Scientist with Stantec, DOSH CAC (#17-18-6221) and CDPH LRCST (#LRC-00011964).

All work was performed under the guidance of Mr. Jason Stagno, Principal Scientist with Stantec, DOSH CAC (#12-4949) and CDPH Lead Related Construction Inspector/Assessor (LRCIA; #LRC-935).

The purpose of this survey was to determine the asbestos content of suspect ACMs and suspect asbestos-containing construction materials (ACCM) in accordance with the National Emissions Standards for Hazardous Air Pollutants (NESHAP [40 Code of Federal Regulations (CFR), Part 61]). The Federal Asbestos NESHAP is promulgated through the Bay Area Air Quality Management District (BAAQMD) under Regulation 11, Rule 2 (Asbestos Demolition, Renovation, and Manufacturing). Additionally, the ACM survey satisfies certain requirements of DOSH, Construction Industry Standards (Title 8, CCR, Section 1529) and documented identified ACMs. Stantec documented potential LBP observed to be in fair and/or poor condition, PCBs in building materials, and other hazardous materials that would require special handling and/or disposal in accordance with applicable federal, state, and local regulations.

The scope of the survey and the services provided by Stantec included:

# PRE-DEMOLITION ASBESTOS, LEAD-BASED PAINT, POLYCHLORINATED BIPHENYLS, AND VISUAL HAZARDOUS MATERIALS SURVEY REPORT

Introduction  
July 11, 2024

- Performing a visual inspection of the survey areas to identify accessible suspect ACM;
- Collecting and analyzing bulk samples of select suspect materials for determination of asbestos content;
- Performing a visual inspection and collecting paint chip samples of painted surfaces observed to be in a fair or poor/deteriorated (i.e., flaking or peeling) condition for lead content following criteria outlined in applicable sections of Chapter 7 and Appendix 13.2 of the United States Housing and Urban Development (HUD) guidelines;
- Collecting bulk samples of building materials for PCB content as outlined in the United States Environmental Protection Agency's (EPA) October 24, 2012, PCB Bulk Product Waste Reinterpretation memorandum and in general accordance with Bay Area Stormwater Management Agencies Association's (BASMAA) *Protocol for Evaluating Priority PCBs-Containing Materials before Building Demolition*, dated August 2018 (Revised November 2019);
- Submitting samples to an accredited laboratory for analysis;
- Performing a visual inspection of the survey areas to identify any other hazardous materials (i.e., universal wastes);
- Ensuring the technical quality of all work by using appropriately certified personnel; and
- Consolidating data and findings into a report format.

Additionally, no sample collection was performed in the process of identifying universal wastes.

# PRE-DEMOLITION ASBESTOS, LEAD-BASED PAINT, POLYCHLORINATED BIPHENYLS, AND VISUAL HAZARDOUS MATERIALS SURVEY REPORT

Project Description  
July 11, 2024

## 2.0 Project Description

The Project consists of the demolition of an existing courthouse building (Sunnyvale Courthouse) and the construction of a new courthouse with onsite parking for the Sixth Appellate District of the Court of Appeal in a more practical and accessible infill location. Site preparation would require the demolition of the existing approximately 19,994-square-foot (SF), one-story building with a partial basement as well as an unused shed structure currently within the parking lot. It would additionally involve demolition of approximately 19,760 SF of existing paving, full repaving of approximately 4,580 SF of existing drive access road, resurfacing of approximately 9,800 SF of existing parking area, and paving of approximately 13,200 SF of new parking area to build a new courthouse within the approximately 2.03-acre Site.

The proposed new courthouse would be approximately 50,000 SF and up to three stories in height located in the same general footprint as the existing building on the Site. The new courthouse would include one courtroom with support spaces, justice chambers, administrative support and operations areas, a law library, mediation area, public entry and lobby, and a building support area including a conference room, training room, and breakroom.

The Project would include approximately 50 total parking spaces, including 12 secure parking spaces for justices with solar power generation capability and surface parking spaces for the public and the staff. Phase 1 construction (civil, grading, utilities, and foundations) is anticipated to start in December 2025 and be completed by May 2026. Phase 2 construction (structure, building and finish site work) is anticipated to start in December 2026 with construction completed by September 2028. Site work (paving, landscape irrigation, and planting) would occur during the last four to six months of construction. Up to 12 construction workers per day would be anticipated during construction activities.

Depending on the final layout and depth of proposed building foundations, site preparation may disturb areas beyond what have been previously disturbed. It is not anticipated that sidewalks or roadways would be closed to pedestrian or vehicular traffic during construction. Traffic control may be required for a short period of time during material off-loading but would not require road closure.

# PRE-DEMOLITION ASBESTOS, LEAD-BASED PAINT, POLYCHLORINATED BIPHENYLS, AND VISUAL HAZARDOUS MATERIALS SURVEY REPORT

Survey Methods  
July 11, 2024

## 3.0 Survey Methods

### 3.1 Visual Inspection

#### 3.1.1 VISUAL INSPECTION FOR ASBESTOS

Building materials were visually inspected for asbestos using the methods presented in applicable sections of the Federal Asbestos Hazard Emergency Response Act (AHERA) regulations (40 CFR, Part 763). The principles presented under AHERA are generally accepted as the industry standard for ACM inspections. Suspect ACMs were also physically assessed for friability, condition, and disturbance factors.

It is a widely accepted practice, and Stantec's recommendation, to collect additional bulk samples during actual abatement, renovation, or demolition activities when concealed suspect ACMs are discovered that are not consistent with those identified in this Report. Alternatively, these suspect ACMs can be assumed an ACM and handled accordingly.

#### 3.1.2 VISUAL INSPECTION FOR LEAD-BASED PAINT

Stantec assessed the condition of painted surfaces of the Site and collected paint chip samples of painted surfaces observed to be in fair and/or poor condition as defined within Chapter 5 of HUD guidelines. The definitions of paint condition are dependent on the location of the paint and component involved. The following table defines HUD categories for paint condition under various circumstances.

**Table 1. HUD Categories of Paint Film Quality**

Type of Building Component	Total Area of Deteriorated Paint		
	Intact	Fair	Poor
Exterior components with large surface areas.	Entire Surface is Intact.	Less than or equal to 10 square feet.	More than 10 square feet.
Interior components with large surface areas (walls, ceilings, floors, doors).	Entire Surface is Intact.	Less than or equal to 2 square feet.	More than 2 square feet.
Interior and exterior components with small surface areas (windowsills, baseboards, soffits, trim).	Entire Surface is Intact.	Less than or equal to 10 percent of the total surface area of the component.	More than 10 percent of the total surface area of the component.

#### 3.1.3 VISUAL INSPECTION FOR PCBs

Stantec performed a visual inspection of existing building material for the presence of PCB-containing building materials. Stantec makes no warranty as to the possible existence or absence of such materials or to their evaluation in respect to PCB content in concealed locations.

# PRE-DEMOLITION ASBESTOS, LEAD-BASED PAINT, POLYCHLORINATED BIPHENYLS, AND VISUAL HAZARDOUS MATERIALS SURVEY REPORT

Survey Methods  
July 11, 2024

## 3.1.4 VISUAL INSPECTION FOR OTHER HAZARDOUS MATERIALS AND UNIVERSAL WASTES

Stantec performed a visual inspection of existing building equipment for the presence of other hazardous materials and universal wastes. Universal wastes are hazardous wastes that pose a lower immediate risk to the environment compared to other hazardous wastes. The visual inspection was limited to fixtures and equipment in the buildings at the Site that were easily accessible. Assessment of these hazardous materials was based solely on the identification placards on the equipment or general knowledge of historical use. If the presence and/or absence of a material was not clearly marked, then the piece of equipment was assumed to contain a concentration of the material in question. No sample collection was performed in the process of identifying universal wastes.

## 3.2 Sample Collection and Analysis

### 3.2.1 BULK SAMPLE COLLECTION AND ANALYSIS FOR ASBESTOS

Bulk samples were collected of identified homogeneous areas which may be impacted by renovation/demolition activities. The EPA defines a homogeneous area as a surfacing material, thermal system insulation, or miscellaneous material that is uniform in color and texture. The use or application of the homogeneous area is also used to identify suspect ACMs. Examples of homogeneous materials include:

- Ceiling tiles of same color and size in contiguous areas; and
- Flooring of same color and size in contiguous areas.

Bulk samples were collected in general accordance with the AHERA sampling guidelines as outlined in 40 CFR Part 763. The location, condition, friability, and the potential for suspected ACMs to be impacted (i.e., disturbed) were assessed and documented. Bulk samples of readily accessible suspect ACMs were collected. Consistent with building demolition and renovation regulatory requirements, building material sampling was conducted regardless of the age and/or condition of the structure.

At least two samples were collected of each suspect ACM. The samples were collected by removing the materials using a hand tool to extract a representative piece. Plastic bags were used to contain the samples of suspect materials and sealed to prevent the introduction of contamination from outside sources. A unique sample number was assigned to each sample.

A total of 163 bulk samples were collected from 35 homogeneous areas at the Site during the survey.

The samples were analyzed by polarized light microscopy with dispersion staining (PLM/DS) in accordance with the EPA "Method for the Determination of Asbestos in Bulk Building Materials" (EPA/600/R93/116, July 1993). Analysis was performed by EMSL Analytical, Inc. (EMSL) located in Cinnaminson, New Jersey (NVLAP #101048-0) and San Leandro, California (NVLAP #101048-3). This laboratory is certified by the CDPH and are participants in the Environmental Laboratory Accreditation

# PRE-DEMOLITION ASBESTOS, LEAD-BASED PAINT, POLYCHLORINATED BIPHENYLS, AND VISUAL HAZARDOUS MATERIALS SURVEY REPORT

Survey Methods  
July 11, 2024

Program and the National Institute of Standards and Testing, National Voluntary Laboratory Accreditation Program. This laboratory is also accredited by the American Industrial Hygiene Association.

Both the EPA, under their asbestos NESHAP regulations, and the BAAQMD define and regulate ACMs, which are materials containing more than one percent (>1%) asbestos. Please note, in California, asbestos exposure in construction is regulated when construction, alteration, repair, maintenance, or renovation of structures, substrates, or portions thereof contain asbestos [§1529 (a)(1)(C)]. Additionally, materials containing greater than one-tenth of one percent (> 0.1%) are regulated as ACCMs. For the purpose of this Report, materials with any detectable concentration of asbestos are considered positive.

A summary of the asbestos laboratory analytical results is included in Table 1 in Appendix A. The summary table includes the asbestos analytical results of all materials sampled as a part of this survey with details including location, quantity, and type of ACM and ACCM identified. Sample location figures are provided in Appendix B; a photographic log is provided in Appendix C; laboratory analytical results and bulk sample logs are provided in Appendix D; and personnel and laboratory accreditations are provided in Appendix E.

## 3.2.2 BULK SAMPLE COLLECTION AND ANALYSIS FOR LEAD-BASED PAINT

Stantec made observations to assess the condition of painted surfaces of the Site. Paint chip samples were collected by removing painted materials using hand tools to extract representative pieces. Hard-sided containers were used to contain the sample of suspect materials. A unique sample number was assigned to each sample.

Two samples of paint types observed to be in poor condition were collected at the time of the survey. The samples were analyzed using flame atomic absorption spectrometry following the EPA SW 846-7000B/7420 analytical protocol. The samples were submitted to EMSL in Cinnaminson, New Jersey. This laboratory is accredited by the American Industrial Hygiene Association (AIHA-LAP #100194) under the Environmental Lead Laboratory Accreditation Program (ELAP) as well as the CDPH ELAP for bulk paint chip analysis.

A summary of the paint chip sample laboratory analytical results is included in Table 2 in Appendix A; sample location figures are provided in Appendix B; a photographic log is provided in Appendix C; laboratory analytical results and bulk sample logs are provided in Appendix D; personnel and laboratory accreditations are provided in Appendix E; and the CDPH Lead Hazard Evaluation Report is provided in Appendix F.

## 3.2.3 BULK SAMPLE COLLECTION AND ANALYSIS FOR PCBs

Stantec conducted a visual observation for accessible suspect PCB-containing materials throughout the Sunnyvale Courthouse and the unused shed structure at the Site. A total of 87 samples were collected. The EPA defines waste derived from materials with PCB concentrations greater than or equal to 50 parts per million (ppm, also expressed as milligrams per kilogram [mg/kg]) as PCB bulk product waste (40 CFR 761.3). Bulk PCB samples were analyzed in accordance with the EPA 3540C (Soxhlet extraction and

# PRE-DEMOLITION ASBESTOS, LEAD-BASED PAINT, POLYCHLORINATED BIPHENYLS, AND VISUAL HAZARDOUS MATERIALS SURVEY REPORT

Survey Methods  
July 11, 2024

analyzed in accordance with EPA 8082A [gas chromatography]). The samples were submitted to EMSL in Cinnaminson, New Jersey. This laboratory is accredited by A2LA (#2845.01). Results with PCB concentrations are provided as Aroclors in (mg/kg; parts per million (ppm)). All samples were stored and shipped to EMSL on ice in accordance with method protocols.

A summary of the PCB sample laboratory analytical results is included in Table 3 in Appendix A; sample location figures are provided in Appendix B; a photographic log is provided in Appendix C; and laboratory analytical results and bulk sample logs are provided in Appendix D.

## 3.2.4 OTHER HAZARDOUS MATERIALS

Stantec performed a visual inspection of the Sunnyvale Courthouse and the unused shed structure at the Site for the presence of other hazardous materials and universal wastes (pursuant to 40 CFR 273.9, 40 CFR 260.10, and 22 California Code of Regulations (CCR) §66261.9). The survey was limited to above grade (including the partial basement) only and did not include a soil or subsurface investigation. Materials evaluated as part of this inspection included: PCB-containing units such as lighting ballasts and PCB-containing electrical units (i.e., electrical transformers); lead-containing units such as car batteries or emergency exit sign batteries; fluorescent lighting tubes; mercury-containing units such as light switches and thermostats; refrigerants, halon, and other chlorofluorocarbons (CFC) such as fire extinguishing systems and Freon™ used in association with building drinking fountains; heavy metals as may be found in cooling tower water treatment systems; solvents, paints, fuel (storage tanks), lubricants, and other associated maintenance and cleaning products; radioactive materials that may be contained in units such as smoke detectors, or medical equipment; office materials, supplies, and equipment such as computer monitors and printing supplies, and miscellaneous materials such as unlabeled materials or substances of concern. Stantec's visual inspection was limited to fixtures and equipment in the Sunnyvale Courthouse and the unused shed structure at the Site that were readily accessible. Assessment of these hazardous materials was based solely on the identification placards on the equipment or general knowledge of historical use. If the presence and/or absence of a material was not clearly marked, then the piece of equipment was assumed to contain a concentration of the material in question. No sample collection was performed in the process of identifying other hazardous materials or universal wastes.

# PRE-DEMOLITION ASBESTOS, LEAD-BASED PAINT, POLYCHLORINATED BIPHENYLS, AND VISUAL HAZARDOUS MATERIALS SURVEY REPORT

Regulatory Context  
July 11, 2024

## 4.0 Regulatory Context

### 4.1 Asbestos

Asbestos is a potential health hazard capable of causing respiratory system fibrosis and various forms of systemic cancers. Its condition, handling and disposal are regulated by federal, state, and local agencies. Materials that contain asbestos generally do not pose a health threat unless the asbestos fibers are disturbed by renovation, construction, or demolition, and may then become airborne and inhaled. If the Sunnyvale Courthouse and the unused shed structure at the Site buildings are not going to be demolished, then written notification to employees, tenants, contractors, or purchasers of the property with regards to the presence and location of ACMs and ACCMs is required pursuant to the California Health and Safety Code 25915.

#### 4.1.1 US EPA NATIONAL EMISSIONS STANDARD FOR HAZARDOUS AIR POLLUTANTS (NESHAP) 40 CFR PART 61

Under the NESHAP regulation, no visible emissions are allowed during facility demolition or renovation activities, which involve regulated ACM. For this reason, all facilities must be surveyed for ACM prior to demolition or renovation. The EPA, and/or the local air quality management district (AQMD) which has delegated authority from the EPA NESHAP, must be notified prior to any building demolition, even if no ACM are present. Assessments are made by the inspector as to the condition of each material and whether or not the materials are "friable." The EPA NESHAP regulation defines "friable" materials as:

*Materials that, when dry, **can** be crumbled, pulverized or reduced to a powder using hand pressure.*

Conversely, a non-friable material **cannot**, when dry, be crumbled, pulverized, or reduced to a powder.

Generally, undamaged vinyl asbestos floor tiles/adhesives, carpet mastic, plaster, roofing materials, wallboard, concrete, electrical insulation, cove base adhesives, fire doors, and exterior facing materials and similar materials are considered to be "non-friable." These materials present a low risk of asbestos fiber release unless impacted by maintenance, construction, demolition, or another activity that disturbs the material.

Materials such as acoustical ceiling texture and many thermal system insulations (TSI), ceiling tile and similar materials are considered to be "friable" materials that may become damaged more readily through less intrusive contact. Many of these materials result in a much higher airborne concentration of asbestos than do non-friable materials. Therefore, extra care should be taken not to disturb this type of material.

The EPA defines a homogeneous area as a surface material, thermal system insulation, or miscellaneous material that is uniform in color and texture. The use or application of the homogeneous area is also used to identify suspect ACMs. The EPA and DOSH define ACM as any material that contains more than one percent (by weight) of asbestos (>1%). Only one sample from a homogeneous area with an asbestos

# PRE-DEMOLITION ASBESTOS, LEAD-BASED PAINT, POLYCHLORINATED BIPHENYLS, AND VISUAL HAZARDOUS MATERIALS SURVEY REPORT

Regulatory Context  
July 11, 2024

concentration >1% is required to collectively identify that material as an ACM. The EPA additionally categorizes ACM as follows:

- Category I non-friable ACM - asbestos-containing packings, gaskets, resilient floor covering, and asphalt roofing products containing more than 1% asbestos as determined using the PLM/DS method.
- Category II non-friable ACM - any material, excluding Category I non-friable ACM, containing more than 1% asbestos as determined using the PLM/DS method that, when dry, cannot be crumbled, pulverized, or reduced to powder by hand pressure.
- Regulated asbestos-containing material (RACM) - (a) Friable asbestos material, (b) Category I non-friable ACM that has become friable, (c) Category I non-friable ACM that will be or has been subjected to sanding, grinding, cutting, or abrading, or (d) Category II non-friable ACM that has a high probability of becoming or has become crumbled, pulverized, or reduced to powder by the forces expected to act on the material in the course of demolition or renovation operations regulated by this subpart.

Potential asbestos exposure in construction is regulated when construction, alteration, repair, maintenance, renovation or demolition of structures, substrates, or portions thereof contain asbestos (CCR, Title 8, Section 1529 [Asbestos in Construction Standard (a)(1)(C)]). Additionally, in California, materials containing greater than one-tenth of one percent (>0.1%) asbestos by weight are regulated as ACCMs. For the purpose of this Report, materials with any detectable concentration of asbestos are considered positive.

## **4.1.2 ASBESTOS HAZARD EMERGENCY RESPONSE ACT, 40 CFR PART 763, SUBPART E**

The AHERA requires performance of asbestos surveys and the development of Asbestos Management Plans for all K-12 public and non-profit private schools in the United States and its territories. Although this regulation applies to such schools only, the procedures mandated under AHERA are considered the industry standard and are applied to all surveys performed by Stantec in accordance with Federal OSHA mandates in 29 CFR 1926.1101, Subsections (k) (1), (2), and (5) and DOSH CCR, Title 8, Section 1529.

## **4.1.3 CALIFORNIA ASSEMBLY BILL 3713, HEALTH AND SAFETY CODE DIV. 20, CH. 10.4, SEC. 25915-25924**

The State of California has enacted legislation that requires building owners, employers, lessees, etc. to notify tenants, employees, and contractors of the presence of asbestos in both friable and non-friable forms. In addition, preventive maintenance activities must be developed and communicated to these parties. Notification is required 15 days after the identification of ACM in the building, and annually thereafter.

# PRE-DEMOLITION ASBESTOS, LEAD-BASED PAINT, POLYCHLORINATED BIPHENYLS, AND VISUAL HAZARDOUS MATERIALS SURVEY REPORT

Regulatory Context  
July 11, 2024

## 4.1.4 CALIFORNIA DIVISION OF OCCUPATIONAL SAFETY AND HEALTH (DOSH)

Pursuant to DOSH standard 1529, an ACM is any material containing greater than one percent (>1%) asbestos. However, for worker classifications, DOSH follows the California Health and Safety Code definition of ACCMs which are defined as any materials with an asbestos content greater than one-tenth of one percent (>0.1%). The DOSH set forth licensing and work requirements for disturbance of ACMs and ACCMs. The requirements have been divided into four classes of work: Class I, Class II, Class III, and Class IV work. The classes are distinguished by the potential of materials to release fibers when damaged. The DOSH prescribes specific engineering controls and work practices for each Class of work:

- Class I – This Class refers to removal of ACMs identified as TSI or surfacing (sprayed-on or troweled-on) materials. These materials are generally considered friable.
- Class II – This Class refers to removal of ACMs identified that are not TSI or surfacing materials. These materials are generally considered non-friable.
- Class III – This Class refers to repair and maintenance operations of all identified ACMs.
- Class IV – This Class refers to incidental contact with identified ACMs such as custodial staff.

## 4.1.5 HAZARDOUS WASTE

The Department of Toxic Substance Control (DTSC), a department of California Environmental Protection Agency, has the regulatory and enforcement authority for hazardous wastes deposited or transported in California. DTSC regulates “hazardous wastes” as generated wastes containing more than one percent (>1%) asbestos that have been determined to be “friable.” DTSC uses the same methods for determining percentage of asbestos and friability, as does the EPA. However, local agencies and DOSH may regulate waste handling and packaging even if the material contains one percent or less or is determined to be non-friable.

## 4.2 Lead-Based Paint

Lead is a potential health hazard. Its condition, handling and disposal are regulated by federal, state, and local agencies. Lead in paint generally does not pose a health threat unless the material is disturbed or sufficiently deteriorated to produce dust, which may become airborne and inhaled or ingested. Contractors working in the facility should be informed of the type and the location of lead-containing materials. Applicable Federal and DOSH regulations may apply depending on the work being performed.

### 4.2.1 ACCREDITATION, CERTIFICATION, AND WORK PRACTICES FOR LEAD-BASED PAINT AND LEAD HAZARDS (TITLE 17 CALIFORNIA CODE OF REGULATIONS, DIVISION 1, CHAPTER 8)

The State of California, Title 17, Division 1, Chapter 8 (Title 17) pertains to all public and residential buildings in California and is enforced by the CDPH. Pursuant to Title 17 and EPA regulations, LBP is

# PRE-DEMOLITION ASBESTOS, LEAD-BASED PAINT, POLYCHLORINATED BIPHENYLS, AND VISUAL HAZARDOUS MATERIALS SURVEY REPORT

Regulatory Context  
July 11, 2024

defined as paint or other surface coatings containing an amount of lead equal to or greater than one milligram per square centimeter or half of one percent [ $\geq 0.5\%$  or  $\geq 5,000$  ppm] by weight. Title 17 also defines a lead hazard as deteriorated LBP, disturbing LBP or presumed LBP without containment, or any other nuisances which may result in persistent or quantifiable lead exposure. Additionally, worker exposure to materials containing lead during construction work is regulated by the Federal Occupational Safety and Health Administration (OSHA) (29 CFR 1926.62(a)) and the DOSH (8 CCR §1532.1(a)). These regulations require worker protection during construction “...where lead or materials containing lead are present.”

## 4.2.2 CALIFORNIA DIVISION OF OCCUPATIONAL SAFETY AND HEALTH

Pursuant to Section 1532.1 in Title 8 of CCR, construction employers are responsible for recognizing lead hazards and submitting samples of suspect materials to an EPA lead accredited laboratory for analysis.

When lead is present on construction jobs, the following is required:

- Housekeeping methods (including high efficiency particulate air “HEPA” vacuuming, wet clean-up, or other effective methods) must be implemented to remove lead dust on surfaces;
- Hand and face washing facilities with soap and water must be provided for workers;
- Workers must receive training on lead hazards and how to protect themselves; and
- Employee breathing-zone air sampling must be conducted to assess the amount of lead breathed by workers to determine protective measures and the type of respirator required for employee protection.

Special protective measures are required for highly hazardous tasks, commonly referred to as trigger tasks, until employee airborne exposures to lead are determined to be below levels specified in Section 1532.1. Pre-job notification is required for all jobs involving trigger tasks. Written notification must be made to the local DOSH district office at least 24 hours before the job starts. Trigger tasks are described below:

- Level 1 – Any of the following with lead-containing coating or materials: spray painting, manual demolition, manual scraping, or sanding, use of a heat gun, or power tool cleaning with dust collection system. Minimum required protection is a half-face respirator with N-100, R-100, or P-100 filters.
- Level 2 – Any of the following with lead-containing coating or materials: using lead-containing mortar, lead burning, rivet busting, power tool cleaning without dust collection system, clean-up activities using dry expendable abrasives, or abrasive blasting enclosure movement or removal. Minimum required protection is an air-supplied hood or helmet or loose-fitting hood or helmet powered air-purifying respirator with N-100, R-100, or P-100 filters.

# PRE-DEMOLITION ASBESTOS, LEAD-BASED PAINT, POLYCHLORINATED BIPHENYLS, AND VISUAL HAZARDOUS MATERIALS SURVEY REPORT

Regulatory Context  
July 11, 2024

- Level 3 – Abrasive blasting, welding, cutting, or torch burning on structures where lead-containing coatings or materials are present. Minimum required protection is a half-mask supplied air respirator in a positive pressure mode.

All trigger tasks require respirators, protective equipment, and clothing; clothing change areas; initial blood testing for lead and zinc protoporphyrin; basic lead hazard, respirator, and safety training; and warning signs.

If air sampling shows exposures to workers are above the permissible exposure limit (PEL), the following additional controls are required:

- Respirators appropriate to the levels of exposures measured;
- Clean areas for eating and clothing change;
- Showers;
- Full worker training;
- Medical monitoring with routine blood testing for lead and zinc protoporphyrin; and
- Certification by the CDPH for workers and supervisors working on jobs at residential and publicly accessible buildings.

## 4.3 PCBs in Building Materials

PCBs belong to a broad family of man-made organic chemicals known as chlorinated hydrocarbons. PCBs were domestically manufactured from 1929 until their manufacture was banned in 1979. They have a range of toxicity and vary in consistency from thin, light-colored liquids to yellow or black waxy solids. Due to their non-flammability, chemical stability, high boiling point, and electrical insulating properties. PCBs were used in hundreds of industrial and commercial applications including electrical, heat transfer, and hydraulic equipment; as plasticizers in paints, plastics, and rubber products; in pigments, dyes, and carbonless copy paper; and many other industrial applications. Although no longer commercially produced in the United States, PCBs may be present in products and materials such as caulk, produced before the 1979 PCB ban. The PCBs used in these products were chemical mixtures made up of a variety of individual chlorinated biphenyl components, known as congeners. Most commercial PCB mixtures are known in the United States by their industrial trade names. The most common trade name is Aroclor.

Prior to the 1979 ban, PCBs entered the environment during their manufacture and use in the United States. Today PCBs associated with building demolition or renovation projects can still be released into the environment from illegal or improper dumping of PCB wastes; disposal of PCB-containing consumer products into municipal or other landfills not designed to handle hazardous waste and through improper containment during removal.

# PRE-DEMOLITION ASBESTOS, LEAD-BASED PAINT, POLYCHLORINATED BIPHENYLS, AND VISUAL HAZARDOUS MATERIALS SURVEY REPORT

Regulatory Context  
July 11, 2024

The EPA defines waste derived from materials with PCB concentrations greater than or equal to 50 parts per million (ppm, also expressed as mg/kg) as *PCB bulk product waste (40 CFR 761.3)*.

## 4.4 Other Hazardous Materials

### 4.4.1 EPA REGULATIONS (40 CFR 273.9 AND 40 CFR 260.10)

The EPA regulations (40 CFR 273.9 and 40 CFR 260.10) provide standards for universal waste management and hazardous waste management systems. The EPA regulations specify requirements for managing the following hazardous materials: batteries, pesticides, mercury-containing equipment, lamps, household, and conditionally exempt small quantity generator waste. In addition to the EPA universal waste regulations, the following federal regulations may also include, but not be limited to the following:

- Applicable Federal OSHA regulations;
- Title 40, CFR, Part 261 - Identification and Listing of Hazardous Waste;
- Title 40, CFR, Part 262 - Standards Applicable to Generators of Hazardous Waste;
- Title 40, CFR, Part 264 - Standards for Owners and Operators of Hazardous Waste Treatment, Storage, and Disposal Facilities;
- Title 40, CFR, Part 265 - Interim Status Standards for Owners and Operators of Hazardous Waste Treatment, Storage, and Disposal Facilities;
- Title 49, CFR, Parts 100-199 - Transportation of Hazardous Materials;
- Title 40, CFR, Part 268 - Land Disposal Restrictions;
- Title 40, CFR, Part 761 - PCBs Manufacturing, Processing, Distribution in Commerce, and Use Prohibitions; and
- NESHAP.

### 4.4.2 DEPARTMENT OF TOXIC SUBSTANCE CONTROL “UNIVERSAL WASTE RULE” (DTSC CONTROL NUMBER R-97-08)

The DTSC, “Universal Waste Rule” (DTSC Control Number R-97-08) provides requirements and standards for universal waste management for small quantity and large quantity handlers and universal waste transporters. Additionally, the “Universal Waste Rule” provides standards for destination facilities.

# PRE-DEMOLITION ASBESTOS, LEAD-BASED PAINT, POLYCHLORINATED BIPHENYLS, AND VISUAL HAZARDOUS MATERIALS SURVEY REPORT

Findings  
July 11, 2024

## 5.0 Findings

### 5.1 Asbestos

Based on the findings of this survey, the following ACMs were identified within accessible areas of the Sunnyvale Courthouse and the unused shed structure at the Site:

- Window putty, gray, associated with courthouse exterior windows, 5-10% Chrysotile (homogenous area [HA] #12)
- Acoustic ceiling texture, white, spray-on, throughout courthouse, 15-25% Chrysotile (HA #13)
- Joint compound, white, throughout courthouse walls and ceilings, 2-5% Chrysotile (HA #15)
- Floor tile, tan/brown/green, 9" x 9", throughout courthouse and concealed beneath carpet, 2-4% Chrysotile (HA #18)
- Adhesive, black, associated with HA #18, 2-5% Chrysotile (HA #19)
- Carpet tile adhesive, gray/tan/orange, 18" x 18", courthouse admin area, 2-3% Chrysotile (HA #24)
- Sink undercoat, white, courthouse breakroom, 3% Chrysotile (HA #28)
- Roof system, red/black, tar paper and gravel, shed roof, 15% Chrysotile (HA #01 SHED)
- Sealant, black, associated with shed roof penetrations, 10-12% Chrysotile (HA #02 SHED)

Based on the findings of this survey, the following ACCMs were identified within the accessible areas of the Sunnyvale Courthouse at the Site.

- Adhesive, green/cream, associated with blue/green carpet, throughout courtrooms, 0.3% Chrysotile (HA #22)

A summary of the asbestos laboratory analytical results is included in Table 1 in Appendix A. The summary table includes the asbestos analytical results of all materials sampled as a part of this survey with details including location, quantity, and type of ACM and ACCM identified. Sample location figures are provided in Appendix B; a photographic log is provided in Appendix C; laboratory analytical results and bulk sample logs are provided in Appendix D; and personnel and laboratory accreditations are provided in Appendix.

# PRE-DEMOLITION ASBESTOS, LEAD-BASED PAINT, POLYCHLORINATED BIPHENYLS, AND VISUAL HAZARDOUS MATERIALS SURVEY REPORT

Findings  
July 11, 2024

## 5.2 Lead-Based Paint

Based on the findings of this survey, the following LBP was identified at the Sunnyvale Courthouse at the Site:

- Red paint associated with the former courthouse roof (P01)

Table 2 in Appendix A presents a summary of the lead analytical results from paint sampled from the Sunnyvale Courthouse at the Site including location and type of material sampled. Sample location figures are provided in Appendix B; laboratory analytical results and bulk sample logs are provided in Appendix C; and a CDPH Lead Hazard Evaluation Report form will be submitted to the CDPH, as required, and a copy of this form is included in Appendix F.

## 5.3 PCBs in Building Materials

All PCB samples collected and analyzed were reported as either non-detect for PCBs or at concentrations below 50 ppm (also expressed as mg/kg) and are not considered to be PCB bulk product waste.

Table 3 in Appendix A presents a summary of the analytical results from materials sampled from the Sunnyvale Courthouse at the Site. Sample location figures are provided in Appendix B, and laboratory analytical results and bulk sample logs are provided in Appendix C.

## 5.4 Other Hazardous Materials

### 5.4.1 PCBs in Dielectric Fluid or Fluorescent Lighting Ballasts

Although no longer commercially produced in the United States, PCBs may be present in products and materials produced before the 1979 PCB ban. Historically some electrical components used PCBs within the dielectric fluid (transformers, ballasts, capacitors, etc.). As such, if these components are present and are not labeled “No PCBs,” they must be disposed of in accordance with current environmental regulations. Approximately 655 fluorescent light fixtures were observed throughout the Sunnyvale Courthouse of the Site. Representative light fixture ballasts observed by Stantec were labeled with “No PCBs.”

### 5.4.2 MERCURY

Many of the interior light fixtures are equipped with fluorescent light tubes. According to the EPA, fluorescent light bulbs contain varying amounts of mercury and can be hazardous to the environment if they are disposed of improperly. Therefore, the EPA encourages the recycling of mercury-containing light bulbs, regardless of the mercury content. A total of approximately 1,940 light tubes within fixtures of varying size, shape, and wattage were observed throughout the accessible areas of the Sunnyvale Courthouse at Site and may contain mercury.

# PRE-DEMOLITION ASBESTOS, LEAD-BASED PAINT, POLYCHLORINATED BIPHENYLS, AND VISUAL HAZARDOUS MATERIALS SURVEY REPORT

Findings  
July 11, 2024

Older style, “silent” light switches and analog thermostat boxes are also known to have varying amounts of mercury contained in ampules that function as an electronic switch. No mercury-containing thermostats were observed within the Sunnyvale Courthouse of the Site.

## 5.4.3 OZONE-DEPLETING SUBSTANCES

The EPA requires the recovery and recycling of refrigerants under the Clean Air Act (40 CFR Part 82, Subpart F). Approximately 11 drinking fountains were observed throughout the Sunnyvale Courthouse at the Site and are assumed to contain ozone-depleting refrigerant (i.e., Freon™).

## 5.4.4 BATTERIES

Batteries are required to be recycled and/or disposed of in accordance with applicable hazardous waste regulations. Approximately 10 illuminated exit signs and 15 emergency lights were observed within the Sunnyvale Courthouse at the Site and may contain batteries.

## 5.4.5 RADIOACTIVE MATERIALS

The California Health and Safety Code’s Radiation Law (Sections 11495-115225) and the federal Nuclear Regulatory Commission regulations (10 CFR Part 31.5) provides for the protection of the health and safety of workers and the public from ionizing radiation. Smoke detectors typically utilize a small radioactive source as a key component in detecting smoke particles. EPA regulations require smoke detectors to be disposed of at a nuclear waste facility or returned directly to the manufacturer. Smoke detectors were not observed within the Sunnyvale Courthouse of the Site.

Certain emergency exits signs found in commercial buildings that glow in the dark can contain tritium, a radioactive material. While the normal use of this signage poses no threat, disposal of the signs needs to adhere to applicable NRC requirements. These types of exit signs were not observed during the inspection.

## 5.4.6 MISCELLANEOUS

Additional miscellaneous items were not observed during the inspection.

# PRE-DEMOLITION ASBESTOS, LEAD-BASED PAINT, POLYCHLORINATED BIPHENYLS, AND VISUAL HAZARDOUS MATERIALS SURVEY REPORT

Recommendations  
July 11, 2024

## 6.0 Recommendations

### 6.1 Asbestos-Containing Materials

Based on the findings of this survey, ACMs and ACCMs were identified in several of the samples analyzed. Table 1 within Appendix A presents a summary of the asbestos analytical results of materials sampled as a part of this survey. The DOSH requires employers to implement specific work practices, which protect workers from airborne asbestos exposure, when materials are found to contain detectable concentrations of asbestos. Building materials, which contain even low levels of asbestos (trace amounts), can potentially generate concentrations of airborne asbestos fibers when disturbed. Therefore, control measures should be instituted by those disturbing ACMs and ACCMs which adequately address worker health and safety during planned renovation or demolition activities involving these materials.

It is recommended that ACMs and ACCMs be removed by a licensed abatement contractor prior to renovation, refurbishing, or demolition activities in accordance with CCR, Title 8, Section 1529 (Asbestos in Construction Standard). Submission of this Report will be required for compliance with NESHAP in accordance with the BAAQMD Regulation 11, Rule 2 (Asbestos Demolition, Renovation, and Manufacturing). If the entire area of ACMs or ACCMs is not affected by renovation, refurbishing, or demolition activities, spot abatement of the material could be completed. This would entail only abating the affected areas. If the identified ACM or ACCM is going to be managed in-place, then written notification to employees, tenants, contractors, or purchasers of the Sunnyvale Courthouse of the presence and location of ACMs and ACCMs is required pursuant to the California Health and Safety Code 25915 (formerly known as The Connelly Bill).

### 6.2 Lead-Based Paint

Based on the findings of this survey, lead was identified in the red paint of the Sunnyvale Courthouse roof. This paint would require compliance with applicable portions of the Federal OSHA 29 CFR 1926.62 and the DOSH Section 1532.1 (Lead in Construction Standards). It is recommended that the LBP be stabilized prior to renovation, refurbishing, or demolition activities. The paint stabilization work should be performed by a State of California Licensed Contractor who maintains CDPH trained and certified lead workers.

### 6.3 PCBs in Building Materials

Based on the findings of this survey, concentrations of PCBs in sampled building materials are not considered PCB bulk product waste. No additional assessment appears warranted at this time.

### 6.4 Other Hazardous Materials

There are a variety of items within the Sunnyvale Courthouse at the Site that may contain PCBs, mercury, or are identified to be a universal waste. It is recommended that these materials be handled and disposed

# **PRE-DEMOLITION ASBESTOS, LEAD-BASED PAINT, POLYCHLORINATED BIPHENYLS, AND VISUAL HAZARDOUS MATERIALS SURVEY REPORT**

Recommendations  
July 11, 2024

of in accordance with applicable EPA regulations (40 CFR 273.9 and 40 CFR 260.10) and DTSC's "Universal Waste Rule" (DTSC Control Number R-97-08). Additionally, EPA regulations require Freon™ related work be performed by EPA certified personnel.

# PRE-DEMOLITION ASBESTOS, LEAD-BASED PAINT, POLYCHLORINATED BIPHENYLS, AND VISUAL HAZARDOUS MATERIALS SURVEY REPORT

Limitations  
July 11, 2024

## 7.0 Limitations

Reasonable efforts have been made by Stantec personnel to locate, sample, and/or identify suspect ACM, LBP, PCBs, and other hazardous materials associated with the Sunnyvale Courthouse and the unused shed structure at the Site. For any facility, the existence of unique or concealed materials and debris is a possibility. In addition, sampling and laboratory analysis constraints typically hinder the investigation. Stantec does not warrant, guarantee, or profess to have the ability to locate or identify all hazardous materials in a facility. The survey is limited in nature, as only full demolition of the Sunnyvale Courthouse and the unused shed structure at the Site will reveal all concealed conditions. This survey did not include underground utilities. Historically, some underground utility piping has been known to contain asbestos (e.g., Transite pipe), as well as insulation and wire wrap that might be concealed in walls. If renovation/demolition of portions of the Sunnyvale Courthouse and the unused shed structure at the Site includes removal of onsite portions of underground utilities (storm drains, sewer, domestic water laterals, etc.), evaluation of the asbestos content of these components must be performed prior to the removal process. Suspect materials identified in these locations are assumed positive for asbestos until sampling and analysis indicates otherwise. Stantec cannot warrant the effectiveness or damage thereof, at any of the patches or temporary repairs performed at sampling locations (walls, ceilings, or floors). This Report is intended for use in planning based on the agreed upon scope of work. This Report is not intended to be a bidding document. Quantities of materials identified are estimates only and would need to be verified by contractors bidding on future work. If, during the course of a renovation/demolition project, suspect ACM, LBPs, PCBs, or any other suspect hazardous materials are discovered that are not included within this Report, those materials should be treated accordingly until additional sampling, analysis, and/or assessment can be performed.

The passage of time may result in a change in the environmental characteristics at the Site. This Report does not warrant against future operations or conditions that could affect the recommendations made. The results, findings, conclusions, and recommendations expressed in this Report are based only on conditions that were observed during Stantec's survey of the Sunnyvale Courthouse and the unused shed structure at the Site and test results provided by EMSL Analytical, Inc. These observations are time dependent, are subject to changing site conditions, and revisions to federal, state, and local regulations. Reliance on this letter report by third parties (i.e., other than the Judicial Council of California) shall be at the third party's sole risk.

**Photo #2** View of a typical interior within the Former Courthouse building.

**Photo #3** View of gray window putty associated with exterior windows (HA #12). This material is asbestos-containing.

**Photo #4** View of white acoustic ceiling texture (HA #13). This material is asbestos-containing.

**Photo #5** View of a wall system within the building interior. The joint compound (HA #15) is asbestos-containing.

**Photo #6** View of tan/brown/green floor tile. The floor tile (HA #18) and associated black adhesive (HA #19) are asbestos-containing.

**Photo #7** View of a typical courtroom. The green/cream adhesive (HA #22) associated with the blue/green carpet is an asbestos-containing construction material (ACCM).

**Photo #8** View of gray/tan/orange carpet adhesive (HA #24) associated with carpet tiles. This material is asbestos-containing.

**Photo #9** View of sink undercoat (HA #28) in the breakroom. This material is asbestos-containing.

**Photo #10** View of the shed roof system (HA #01 SHED). This material is asbestos-containing. The black roof penetration sealant (HA #02 SHED) is also asbestos-containing.

**Photo #11** View of the red paint (P01) on the Former Courthouse roof. This paint is lead-based paint (LBP).

**Photo #12** View of the Shed interior.

**Photo #13** View of the Shed exterior.

## Test Report: Asbestos Analysis of Bulk Materials via AHERA Method 40CFR 763 Subpart E Appendix E supplemented with EPA 600/R-93/116 using Polarized Light Microscopy

Sample	Description	Appearance	Non-Asbestos		Asbestos
			% Fibrous	% Non-Fibrous	% Type
30C-Mastic <small>042406379-0148A</small>	Basement - Stair Pad - Mastic	Brown Non-Fibrous Homogeneous		100% Non-fibrous (Other)	None Detected
			HA: 30		
31A <small>042406379-0149</small>	Admin - East - Red Firestop	Red Non-Fibrous Homogeneous	10% Cellulose	5% Mica 85% Non-fibrous (Other)	None Detected
			HA: 31		
31B <small>042406379-0150</small>	Admin - East - Red Firestop	Red Non-Fibrous Homogeneous	10% Cellulose	3% Mica 87% Non-fibrous (Other)	None Detected
			HA: 31		
31C <small>042406379-0151</small>	Admin - East - Red Firestop	Red Non-Fibrous Homogeneous		100% Non-fibrous (Other)	None Detected
			HA: 31

or Other Approved Signatory

EMSL maintains liability limited to cost of analysis. Interpretation and use of test results are the responsibility of the client. This report relates only to the samples reported above, and may not be reproduced, except in full, without written approval by EMSL. EMSL bears no responsibility for sample collection activities or analytical method limitations. The report reflects the samples as received. Results are generated from the field sampling data (sampling volumes and areas, locations, etc.) provided by the client on the Chain of Custody. Samples are within quality control criteria and met method specifications unless otherwise noted. The above analyses were performed in general compliance with Appendix E to Subpart E of 40 CFR (previously EPA 600/M4-82-020 "Interim Method") but augmented with procedures outlined in the 1993 ("final") version of the method. This report must not be used by the client to claim product certification, approval, or endorsement by NVLAP, NIST or any agency of the federal government. Non-friable organically bound materials present a problem matrix and therefore EMSL recommends gravimetric reduction prior to analysis. Unless requested by the client, building materials manufactured with multiple layers (i.e. linoleum, wallboard, etc.) are reported as a single sample. Estimation of uncertainty is available on request.

Samples analyzed by EMSL Analytical, Inc. Cinnaminson, NJ NVLAP Lab Code 101048-0, AIHA LAP, LLC-IHLAP Lab 100194, PA ID# 68-00367, LA #04127

### Reviewed and approved by:

Samantha Rundstrom, Laboratory Manager  
or Other Approved Signatory

EMSL maintains liability limited to cost of analysis. Interpretation and use of test results are the responsibility of the client. This is a summary report; official reports are available on LabConnect or upon request and relates only to the samples reported above, and may not be reproduced, except in full, without written approval by EMSL. EMSL bears no responsibility for sample collection activities or analytical method limitations. The report reflects the samples as received. Results are generated from the field sampling data (sampling volumes and areas, locations, etc.) provided by the client on the Chain of Custody. Samples are within quality control criteria and met method specifications unless otherwise noted. The above analyses were performed in general compliance with Appendix E to Subpart E of 40 CFR (previously EPA 600/M4-82-020 "Interim Method") but augmented with procedures outlined in the 1993 ("final") version of the method. This report must not be used by the client to claim product certification, approval, or endorsement by NVLAP, NIST or any agency of the federal government. Non-friable organically bound materials present a problem matrix and therefore EMSL recommends gravimetric reduction prior to analysis. Unless requested by the client, building materials manufactured with multiple layers (i.e. linoleum, wallboard, etc.) are reported as a single sample. Estimation of uncertainty is available on request.

Samples analyzed by EMSL Analytical, Inc. Cinnaminson, NJ NVLAP Lab Code 101048-0, AIHA LAP, LLC-IHLAP Lab 100194, PA ID# 68-00367, LA #04127

Hi Jenny,

Do you want this with gravimetric prep since it's a NOB material. Also what TAT do you need for this?

Thanks,

**Sherry Christy**

EMSL maintains liability limited to cost of analysis. Interpretation and use of test results are the responsibility of the client. This report relates only to the samples reported above, and may not be reproduced, except in full, without written approval by EMSL. EMSL bears no responsibility for sample collection activities or analytical method limitations. The report reflects the samples as received. Results are generated from the field sampling data (sampling volumes and areas, locations, etc.) provided by the client on the Chain of Custody. Samples are within quality control criteria and met method specifications unless otherwise noted. The above analyses were performed in general compliance with Appendix E to Subpart E of 40 CFR (previously EPA 600/M4-82-020 "Interim Method") but augmented with procedures outlined in the 1993 ("final") version of the method. This report must not be used by the client to claim product certification, approval, or endorsement by NVLAP, NIST or any agency of the federal government. Non-friable organically bound materials present a problem matrix and therefore EMSL recommends gravimetric reduction prior to analysis. Unless requested by the client, building materials manufactured with multiple layers (i.e. linoleum, wallboard, etc.) are reported as a single sample. Estimation of uncertainty is available on request.

Samples analyzed by EMSL Analytical, Inc. Cinnaminson, NJ NVLAP Lab Code 101048-0, AIHA LAP, LLC-IHLAP Lab 100194, PA ID# 68-00367, LA #04127

**Notes and Definitions**

<b>Item</b>	<b>Definition</b>
D	Analyte was reported from a dilution run.
(Dig)	For metals analysis, sample was digested.
[2C]	Reported from the second channel in dual column analysis.
DF	Dilution Factor
MDL	Method Detection Limit.
ND	Analyte was NOT DETECTED at or above the detection limit.
Q	Qualifier
RL	Reporting Limit For paint chips, the RL is 0.008% by wt. (equiv. to 80 mg/kg, or ppm) based upon a minimum sample weight of 0.25 grams.  For soils, the RL is 40 mg/kg (ppm) based upon a minimum sample weight of 0.5 grams.  For dust wipes, the RL is 10 µg/wipe; reporting units of µg/sq. ft. are not validated by the lab based upon data provided by non-lab personnel.

Measurement of uncertainty and any applicable definitions of method modifications are available upon request. Per EPA NLLAP policy, sample results are not blank corrected.

Owen McKenna Laboratory Manager or other approved signatory

EMSL maintains liability limited to cost of analysis. Interpretation and use of test results are the responsibility of the client. This report relates only to the samples reported above and may not be reproduced, except in full, without written approval by EMSL. EMSL bears no responsibility for sample collection activities or analytical method limitations. The report reflects the samples as received. Results are generated from the field sampling data (sampling volumes and areas, locations, etc.) provided by the client on the Chain of Custody. QC sample results are within quality control criteria and met method specifications unless otherwise noted.

Analysis following EMSL SOP for the Determination of Environmental Lead by FLAA. The laboratory has a reporting limit of 0.008% by wt., based upon a minimum sample weight of 0.25g submitted to the lab, and is not responsible for any result or reporting limit provided in mg/cm2 since it is dependent upon an area value provided by non-lab personnel. A "<" (less than) result signifies that the analyte was not detected at or above the reporting limit. Measurement of uncertainty and definitions of modifications are available upon request. Results in this report are not blank corrected unless specified.

The following analytical report covers the analysis performed on samples submitted to EMSL Analytical, Inc. on 3/27/2024. The results are tabulated on the attached pages for the following client designated project:

**185806291.500.006**

The reference number for these samples is EMSL Order #: AC11922 . Please use this reference when calling about these samples. If you have any questions, please do not hesitate to contact the lab at 856-858-4800.

EMSL maintains liability limited to cost of analysis. Interpretation and use of test results are the responsibility of the client. This report relates only to the samples reported above, and may not be reproduced, except in full, without written approval by EMSL. EMSL bears no responsibility for sample collection activities or analytical method limitations. The report reflects the samples as received. Results are generated from the field sampling data (sampling volumes and areas, locations, etc.) provided by the client on the Chain of Custody. Samples are within quality control criteria and met method specifications unless otherwise noted."

EMSL maintains liability limited to cost of analysis. Interpretation and use of test results are the responsibility of the client. This report relates only to the samples reported above, and may not be reproduced, except in full, without written approval by EMSL. EMSL bears no responsibility for sample collection activities or analytical method limitations. The report reflects the samples as received. Results are generated from the field sampling data (sampling volumes and areas, locations, etc.) provided by the client on the Chain of Custody. Samples are within quality control criteria and met method specifications unless otherwise noted."

**Notes and Definitions**

<b>Item</b>	<b>Definition</b>
D	Analyte was reported from a dilution run.
R3	Recovery is outside of the control limits due to matrix interference.
R5	Recovery is outside of the control limits due to dilution.
RO	RPD for this compound was outside of the control limits.
(Dig)	For metals analysis, sample was digested.
[2C]	Reported from the second channel in dual column analysis.
DF	Dilution Factor
MDL	Method Detection Limit.
ND	Analyte was NOT DETECTED at or above the detection limit.
Q	Qualifier
RL	Reporting Limit
%REC	Percent Recovery
RPD	Relative Percent Difference
Source	Sample that was matrix spiked or duplicated

Measurement of uncertainty and any applicable definitions of method modifications are available upon request. Per EPA NLLAP policy, sample results are not blank corrected.

The following analytical report covers the analysis performed on samples submitted to EMSL Analytical, Inc. on 4/4/2024. The results are tabulated on the attached pages for the following client designated project:

**185806291.500.006**

The reference number for these samples is EMSL Order #: AC12766 . Please use this reference when calling about these samples. If you have any questions, please do not hesitate to contact the lab at 856-858-4800.

**Notes and Definitions**

<b>Item</b>	<b>Definition</b>
(Dig)	For metals analysis, sample was digested.
[2C]	Reported from the second channel in dual column analysis.
DF	Dilution Factor
MDL	Method Detection Limit.
ND	Analyte was NOT DETECTED at or above the detection limit.
Q	Qualifier
RL	Reporting Limit
%REC	Percent Recovery
RPD	Relative Percent Difference
Source	Sample that was matrix spiked or duplicated

Measurement of uncertainty and any applicable definitions of method modifications are available upon request. Per EPA NLLAP policy, sample results are not blank corrected.

Dear Certified Asbestos Consultant or Technician:

Enclosed is your certification card. **To maintain your certification, you must abide by the rules printed on the back of the certification card.**

Your certification is valid for a period of one year. If you wish to renew your certification, you must apply for renewal at least 60 days before the expiration date shown on your card. [8 CCR 341.15(h)(1)].

Please hold and do not send copies of your required AHERA refresher renewal certificates to our office until you apply for renewal of your certification.

Certificates must be kept current if you are actively working as a CAC or CSST. The grace period is only for those who are not actively working as an asbestos consultant or site surveillance technician.

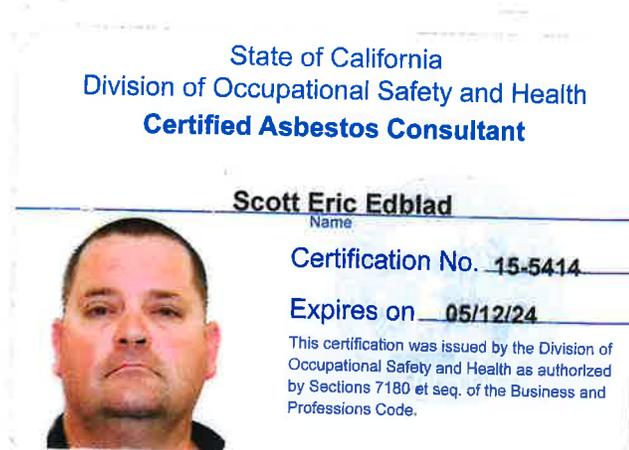

Please contact our office at the above address or email w any changes in your contact/mailling information within 15 days of the change.

Sincerely,

Kevin Graulich  
Principal Safety Engineer

# Accredited Laboratory

A2LA has accredited

**EMSL ANALYTICAL, INC.**

*Cinnaminson, NJ*

for technical competence in the field of

**Environmental Testing**

In recognition of the successful completion of the A2LA evaluation process that includes an assessment of the laboratory's compliance with ISO/IEC 17025:2017, the 2016 TNI Environmental Testing Laboratory Standard, and the requirements of the Department of Energy Consolidated Audit Program (DOECAP) as detailed in version 5.4 of the DoD Quality System Manual for Environmental Laboratories (QSM), accreditation is granted to this laboratory to perform recognized EPA methods as defined on the associated A2LA Environmental Scope of Accreditation. This accreditation demonstrates technical competence for this defined scope and the operation of a laboratory quality management system (refer to joint ISO-ILAC-IAF Communiqué dated April 2017).

Presented this 5<sup>th</sup> day of August 2022.

A blue ink signature of a person, likely the Vice President of Accreditation Services, written over a horizontal line.

Vice President, Accreditation Services  
For the Accreditation Council  
Certificate Number 2845.01  
Valid to July 31, 2024

*For the tests to which this accreditation applies, please refer to the laboratory's Environmental Scope of Accreditation.*

SCOPE OF ACCREDITATION TO ISO/IEC 17025:2017

EMSL ANALYTICAL, INC.  
200 Route 130 North  
Cinnaminson, NJ 08077  
Nicholas Straccione Phone: 856-303-2550

ENVIRONMENTAL

Valid To: July 31, 2024

Certificate Number: 2845.01

In recognition of the successful completion of the A2LA evaluation process, (including an assessment of the laboratory's compliance with the 2016 TNI Environmental Testing Laboratory Standard, the requirements of the Department of Energy Consolidated Audit Program (DOECAP) as detailed in version 5.4 of the DoD/DOE Quality Systems Manual for Environmental Laboratories), and for the test methods applicable to the National Lead Laboratory Accreditation Program (NLLAP), accreditation is granted to this laboratory to perform recognized EPA methods using the following testing technologies and in the analyte categories identified below:

Test	Test Method(s)	Parameter/Analyte
Aromatic Hydrocarbons	NIOSH 1501 mod.	Benzene Ethylbenzene Toluene o-Xylene p-Xylene m-Xylene
Elements by ICP	NIOSH 7300 NIOSH 7300 mod. NIOSH 7303 NIOSH 7303 mod. Tritium	EPA 906, EPA 906 mod.
Total Organic Carbon in Water and Wastewater; Persulfate Oxidation Method SM 5310C	MS-SOP-R2

In recognition of the successful completion of the A2LA evaluation process, accreditation is granted to this laboratory to perform the following tests on Children's Products: <sup>(1)</sup>

<b>CHEMICAL</b>	
<b>Test</b>	<b>Test Method(s)</b>
Lead in Paint and Surface Coatings	16 CFR 1303 (using ASTM E1613 and E1645); CPSC-CH-E1003-09.1
Phthalates	CPSC-CH-C1001-09.4 (using EPA SW-846 8270)
Soluble Heavy Metals Content (As, Ba, Cd, Cr, Pb, Hg, Sb, Se)	ASTM F 963-17 Section 4.3.5.1 & Section 4.3.5.2 (EMSL Analytical, Inc. LM-032)
Total Cadmium in Children's Metal Products Including Children's Metal Jewelry	EMSL Analytical, Inc. LM-016, (Modified CPSC-CH-E1001-08.1)

Total Cadmium in Children's Non-Metal Products	EMSL Analytical, Inc. LM-016, (Modified CPSC-CH-E1002-08)
Total Lead in Children's Metal Jewelry	CPSC-CH-E1001-08.1
Total Lead in Children's Metal Products	CPSC-CH-E1001-08.1
Total Lead in Children's Non-Metal Products	CPSC-CH-E1002-08

<sup>1</sup> The Consumer Product Safety Improvement Act (CPSIA) requires that every children's product subject to a federal consumer product safety requirement be tested by a Consumer Product Safety Commission (CPSC) accepted laboratory for compliance with the applicable federal children's product safety requirements. Accreditation by A2LA does not infer acceptance by the CPSC. Please verify this organization's acceptance status by using the CPSC's searchable database, located at <http://www.cpsc.gov/cgi-bin/labsearch/>.

In recognition of the successful completion of the A2LA evaluation process, (including an assessment of the laboratory's compliance with ISO/IEC 17025:2017 and the 2016 TNI Environmental Testing Laboratory Standard), accreditation is granted to this laboratory to perform recognized EPA methods using the following testing technologies and, in the analyte, categories identified below:

<b>AIR MATRIX</b>		
Combustion-by-Products (Black Carbon/Soot, Char, and Ash)	ASTM D6602	Black Carbon/Soot Char Ash
Diesel Particulate Matter (As Elemental Carbon)	NIOSH 5040	Elemental Carbon
Inorganic Fibrous Particles by SEM method	German VDI 3492	Fibrous Glass Mineral Wool Refractory Ceramic Fibers Asbestos
Inorganic Fibrous Particles by SEM method	ISO 14966	Fibrous Glass Mineral Wool Refractory Ceramic Fibers Asbestos

**AIHA Laboratory Accreditation Programs, LLC**

*acknowledges that*

**EMSL Analytical, Inc.**

**200 Route 130 North Cinnaminson, NJ 08077**

**Laboratory ID: LAP-100194**

along with all premises from which key activities are performed, as listed above, has fulfilled the requirements of the AIHA Laboratory Accreditation Programs (AIHA LAP), LLC accreditation to the ISO/IEC 17025:2017 international standard, General Requirements for the Competence of Testing and Calibration Laboratories in the following:

**LABORATORY ACCREDITATION PROGRAMS**

<input checked="" type="checkbox"/>	INDUSTRIAL HYGIENE	Accreditation Expires: January 01, 2025
<input checked="" type="checkbox"/>	ENVIRONMENTAL LEAD	Accreditation Expires: January 01, 2025
<input checked="" type="checkbox"/>	ENVIRONMENTAL MICROBIOLOGY	Accreditation Expires: January 01, 2025
<input type="checkbox"/>	FOOD	Accreditation Expires:
<input type="checkbox"/>	UNIQUE SCOPES	Accreditation Expires:

Specific Field(s) of Testing (FoT)/Method(s) within each Accreditation Program for which the above named laboratory maintains accreditation is outlined on the attached Scope of Accreditation. Continued accreditation is contingent upon successful on-going compliance with ISO/IEC 17025:2017 and AIHA LAP, LLC requirements. This certificate is not valid without the attached Scope of Accreditation. Please review the AIHA LAP, LLC website ([www.aihaaccreditedlabs.org](http://www.aihaaccreditedlabs.org)) for the most current Scope.

# AIHA Laboratory Accreditation Programs, LLC

## SCOPE OF ACCREDITATION

**EMSL Analytical, Inc.**

200 Route 130 North Cinnaminson, NJ 08077

**Laboratory ID: LAP-100194**

Issue Date: 01/01/2023

The laboratory is approved for those specific field(s) of testing/methods listed in the table below. Clients are urged to verify the laboratory's current accreditation status for the particular field(s) of testing/Methods, since these can change due to proficiency status, suspension and/or withdrawal of accreditation.

The EPA recognizes the AIHA LAP, LLC ELLAP program as meeting the requirements of the National Lead Laboratory Accreditation Program (NLLAP) established under Title X of the Residential Lead-Based Paint Hazard Reduction Act of 1992 and includes paint, soil and dust wipe analysis. Air and composited wipes analyses are not included as part of the NLLAP.

### Environmental Lead Laboratory Accreditation Program (ELLAP)

**Initial Accreditation Date: 01/18/1995**

Component, parameter or characteristic tested	Technology sub-type/Detector	Method	Method Description <i>(for internal methods only)</i>
Airborne Dust	AA	NIOSH 7082	N/A
Composited Wipes	AA	EPA SW-846 3050B	N/A
		EPA SW-846 7000B	N/A
Paint	AA	EPA SW-846 3050B	N/A
		EPA SW-846 7000B	N/A
Settled Dust by Wipe	AA	EPA SW-846 3050B	N/A
		EPA SW-846 7000B	N/A
Soil	AA	EPA SW-846 3050B	N/A
		EPA SW-846 7000B	N/A

A complete listing of currently accredited ELLAP laboratories is available on the AIHA LAP, LLC website at: <http://www.aihaaccreditedlabs.org>

ENVIRONMENTAL LABORATORY ACCREDITATION PROGRAM

**CERTIFICATE OF  
ENVIRONMENTAL LABORATORY ACCREDITATION**

Is hereby granted to

**EMSL Analytical Inc.**

**Cinnaminson, NJ**

200 Route 130 North

Cinnaminson, NJ 08077

Scope of the certificate is limited to the  
"Fields of Accreditation"  
which accompany this Certificate.

Continued accredited status depends on compliance with applicable laws and regulations,  
proficiency testing studies, and payment of applicable fees.

This Certificate is granted in accordance with provisions of  
Section 100825, et seq. of the Health and Safety Code.

Certificate No.: **1877**

Effective Date: **7/1/2023**

Expiration Date: **6/30/2024**

A handwritten signature in blue ink, appearing to read "Christine Sotelo".

ENVIRONMENTAL LABORATORY ACCREDITATION PROGRAM

**CERTIFICATE OF  
ENVIRONMENTAL LABORATORY ACCREDITATION**

Is hereby granted to

**EMSL Analytical Inc.**

**San Leandro, CA**

464 McCormick Street

San Leandro, CA 94577

Scope of the certificate is limited to the  
"Fields of Accreditation"  
which accompany this Certificate.

Continued accredited status depends on compliance with applicable laws and regulations,  
proficiency testing studies, and payment of applicable fees.

This Certificate is granted in accordance with provisions of  
Section 100825, et seq. of the Health and Safety Code.

Certificate No.: **1620**

Effective Date: **7/1/2022**

Expiration Date: **6/30/2024**

A handwritten signature in blue ink, appearing to read "Christine Sotelo".

Sacramento, California  
subject to forfeiture or revocation

Christine Sotelo, Program Manager  
Environmental Laboratory Accreditation Program

## Certificate of Accreditation to ISO/IEC 17025:2017

---

NVLAP LAB CODE: 101048-0

**EMSL Analytical, Inc.**  
Cinnaminson, NJ

*is accredited by the National Voluntary Laboratory Accreditation Program for specific services,  
listed on the Scope of Accreditation, for:*

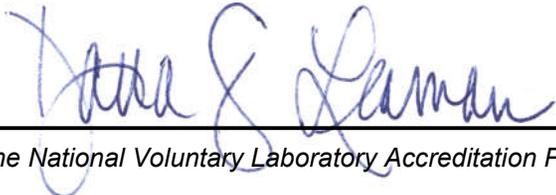

**Asbestos Fiber Analysis**

*This laboratory is accredited in accordance with the recognized International Standard ISO/IEC 17025:2017.  
This accreditation demonstrates technical competence for a defined scope and the operation of a laboratory quality  
management system (refer to joint ISO-ILAC-IAF Communique dated January 2009).*

---

2023-07-01 through 2024-06-30

*Effective Dates*

---

*For the National Voluntary Laboratory Accreditation Program*

**SCOPE OF ACCREDITATION TO ISO/IEC 17025:2017**

**EMSL Analytical, Inc.**  
200 Route 130 North  
Cinnaminson, NJ 08077

# **APPENDIX F**

## **CDPH Lead Hazard Evaluation Report**

## LEAD HAZARD EVALUATION REPORT

**Section 1 – Date of Lead Hazard Evaluation** \_\_\_\_\_

**Section 2 – Type of Lead Hazard Evaluation (Check one box only)**

Lead Inspection     Risk assessment     Clearance Inspection     Other (specify) \_\_\_\_\_

**Section 3 – Structure Where Lead Hazard Evaluation Was Conducted**

Address [number, street, apartment (if applicable)]		City	County	Zip Code
Construction date (year) of structure	Type of structure <input type="checkbox"/> Multi-unit building <input type="checkbox"/> School or daycare <input type="checkbox"/> Single family dwelling <input type="checkbox"/> Other _____		Children living in structure? <input type="checkbox"/> Yes <input type="checkbox"/> No <input type="checkbox"/> Don't Know	

**Section 4 – Owner of Structure (if business/agency, list contact person)**

Name		Telephone number		
Address [number, street, apartment (if applicable)]		City	State	Zip Code

**Section 5 – Results of Lead Hazard Evaluation (check all that apply)**

No lead-based paint detected   
  Intact lead-based paint detected   
  Deteriorated lead-based paint detected  
 No lead hazards detected   
 Lead-contaminated dust found   
 Lead-contaminated soil found   
 Other \_\_\_\_\_

**Section 6 – Individual Conducting Lead Hazard Evaluation**

Name		Telephone number		
Address [number, street, apartment (if applicable)]		City	State	Zip Code
CDPH certification number	Signature 		Date	

Name and CDPH certification number of any other individuals conducting sampling or testing (if applicable)

**Section 7 – Attachments**

- A. A foundation diagram or sketch of the structure indicating the specific locations of each lead hazard or presence of lead-based paint;
- B. Each testing method, device, and sampling procedure used;
- C. All data collected, including quality control data, laboratory results, including laboratory name, address, and phone number.

First copy and attachments retained by inspector  
 Second copy and attachments retained by owner

Third copy only (no attachments) mailed or faxed to:  
 California Department of Public Health  
 Childhood Lead Poisoning Prevention Branch Reports  
 850 Marina Bay Parkway, Building P, Third Floor  
 Richmond, CA 94804-6403  
 Fax: (510) 620-5656

## Appendix J Noise Data

Report date: 5/9/2024

## **Appendix L Santa Clara County Vehicle Miles Traveled Evaluation Tool**

## Project Details

Timestamp of Analysis May 22, 2024, 01:34:20 PM

Project Name Sunnyvale Courthouse

Project Description The Project consists of the demolition of an approximately 20,000 square feet existing building and the construction of an approximately 50,000 square feet new Courthouse

## Project Location Map

Jurisdiction:	APN	TAZ
Sunnyvale	16502004	1365

## Analysis Details

Data Version	VTA Countywide Model December 2019
Analysis Methodology	TAZ
Baseline Year	2024

## Project Land Use

### Residential:

Single Family DU:

Multifamily DU:

---

Total DUs: 0

### Non-Residential:

Office KSF: 50

Local Serving Retail KSF:

Industrial KSF:

### Residential Affordability (percent of all units):

Extremely Low Income: 0 %

Very Low Income: 0 %

Low Income: 0 %

### Parking:

Motor Vehicle Parking: 50

Bicycle Parking:

## Proximity to Transit Screening

Inside a transit priority area? Yes (Pass)

## Office Vehicle Miles Traveled (VMT) Screening Results

Land Use Type 1:	Office
VMT Metric 1:	Home-based Work VMT per Worker
VMT Baseline Description 1:	Bay Area Regional Average
VMT Baseline Value 1:	15.33
VMT Threshold Description 1 / Threshold Value 1:	-15% / 13.03
Land Use 1 has been Pre-Screened by the Local Jurisdiction:	N/A

	Without Project	With Project & Tier 1-3 VMT Reductions	With Project & All VMT Reductions
Project Generated Vehicle Miles Traveled (VMT) Rate	15.35		
Low VMT Screening Analysis	No (Fail)
