## Appendix D Biological Resources Technical Report

The conclusions in the Report titled Biological Resources Technical Report are Stantec's professional opinion, as of the time of the Report, and concerning the scope described in the Report. The opinions in the document are based on conditions and information existing at the time the scope of work was conducted and do not take into account any subsequent changes. The Report relates solely to the specific project for which Stantec was retained and the stated purpose for which the Report was prepared. The Report is not to be used or relied on for any variation or extension of the project, or for any other project or purpose, and any unauthorized use or reliance is at the recipient's own risk.

Stantec has assumed all information received from Judicial Council of California (the "Client") and third parties in the preparation of the Report to be correct. While Stantec has exercised a customary level of judgment or due diligence in the use of such information, Stantec assumes no responsibility for the consequences of any error or omission contained therein.

This Report is intended solely for use by the Client in accordance with Stantec's contract with the Client. While the Report may be provided by the Client to applicable authorities having jurisdiction and to other third parties in connection with the project, Stantec disclaims any legal duty based upon warranty, reliance or any other theory to any third party, and will not be liable to such third party for any damages or losses of any kind that may result.

# 1 Introduction

This Biological Resources Technical Report (BRTR) has been prepared to evaluate the potential effects on sensitive biological resources that may occur for the proposed Sixth Appellate District Courthouse Project (Project). The Project consists of the demolition of an existing building and the construction of a new courthouse with onsite parking for the Sixth Appellate District of the Court of Appeal in a more practical and accessible infill location. The Site is located at 605 W. El Camino Real (Santa Clara County Assessor's Parcel Number [APN]: 165-02-004) in the City of Sunnyvale (City) in Santa Clara County, California. The 2.03-acre Site is situated on the north side of W. El Camino Real between Mathilda Avenue and Pastoria Avenue. It is approximately 1.4 miles east of Highway 85 (W. Valley Freeway) and southeast of Highway 237 (Mountain View Alviso Road) (**Figure 1**).

The Site was formerly used as a trial courthouse for the Superior Court of California, County of Santa Clara and currently maintains a vacant building and parking lot. Surrounding properties consist of commercial and residential buildings, government buildings and public open space.

This BRTR is based on information gathered from a review of desktop resources including existing literature, data, and maps; and from a reconnaissance-level field survey of the Project Area performed by a Stantec Consulting Services Inc. (Stantec) biologist. The Project Area for this BRTR encompasses the proposed demolition area and proposed development area totaling approximately 2.03 acres (Site) with a 250-foot buffer (**Figure 2**).

The overall purpose of this BRTR is to:

- Characterize the habitat and vegetation communities present;
- Evaluate the potential for special-status plant and animal species to occur;
- Discuss potential impacts to special-status species, sensitive natural communities and jurisdictional aquatic features.

## **2 Project Description**

The Project consists of the demolition of an existing courthouse building (Sunnyvale Courthouse) and the construction of a new courthouse with onsite parking for the Sixth Appellate District of the Court of Appeal in a more practical and accessible infill location. Site preparation would require the demolition of the existing approximately 19,994-square-foot (SF), one-story building with a partial basement as well as an unused shed structure currently within the parking lot. It would additionally involve demolition of approximately 19,760 SF of existing paving, full repaving of approximately 4,580 SF of existing drive access road, resurfacing of approximately 9,800 SF of existing parking area, and paving of approximately 13,200 SF of new parking area to build a new courthouse within the approximately 2.03-acre Site.

The proposed new courthouse would be approximately 50,000 SF and up to three stories in height located in the same general footprint as the existing building on the Site. The new courthouse would include one courtroom with support spaces, justice chambers, administrative support and operations areas, a law library, mediation area, public entry and lobby, and a building support area including a conference room, training room, and breakroom.

The Project would include approximately 50 total parking spaces, including 12 secure parking spaces for justices with solar power generation capability and surface parking spaces for the public and the staff. Phase 1 construction (civil, grading, utilities, and foundations) is anticipated to start in December 2025 and be completed by May 2026. Phase 2 construction (structure, building and finish Site work) is anticipated to start in December 2026 with construction completed by September 2028. Site work (paving, landscape irrigation, and planting) would occur during the last four to six months of construction. Up to 12 construction workers per day would be anticipated during construction activities.

The Site includes mature trees consisting of African yellow trees (*Afrocarpus* sp.), pepper trees (*chinus* sp.), ash trees (*Fraxinus* sp.) and pine trees (*Pinus* sp.) located at the west and south perimeter of the property where a 25-foot vehicle setback naturally occurs. The trees onsite are well established mature trees that potentially range in age from 30 to 50 years old. Trees line the west side of the Site, providing shade and privacy. On the east side of the property, two groups of three trees are centered with the building. The building is fronted on El Camino Real, where asymmetrical tree groupings frame the existing courthouse entrance. Access to the new courthouse parking area would be within the existing footprint. The existing vehicle entrance to the parking area is established off El Camino Real.

## **3 Methods**

The analysis presented in this BRTR includes a review of existing information about sensitive biological resources known to occur in the vicinity of the Project as well as the reconnaissance-level field survey conducted to determine whether the biological resources are absent, present, and/or are likely to be present.

### **3.1 Definitions**

#### **3.1.1 SPECIAL-STATUS SPECIES AND SENSITIVE COMMUNITIES**

For the purpose of this evaluation, “special-status” plant species include plants that are: 1) listed as threatened or endangered under the California Endangered Species Act (CESA) and/or Federal Endangered Species Act (FESA); 2) proposed for federal listing as threatened or endangered; 3) State or federal candidate species; 4) designated as rare by the California Department of Fish and Wildlife (CDFW); or 5) California Rare Plant Rank (CRPR) 1A, 1B, 2A or 2B species. Special-status animal species include species that are: 1) listed as threatened or endangered under the CESA and/or FESA; 2) proposed for federal listing as threatened or endangered; 3) State and/or federal candidate species; or 4) identified by the CDFW as species of special concern or fully protected species.

Sensitive natural communities are those communities that are of highly limited distribution, and may or may not contain rare, threatened, or endangered species. The California Natural Diversity Database (CNDDDB) ranks natural communities according to their rarity and endangerment in California. Habitats are considered “sensitive” if they are identified on the CDFW List of Vegetation Alliances and Associations as being highly imperiled or classified by CDFW in the CNDDDB as natural communities of special concern – Ranks S1 to S3.

##### **3.1.1.1 Potential to Occur**

The potential for special-status species to occur within the Project Area, was classified under one of five categories as described below. Only those special-status species with an occurrence potential of “Moderate” or greater are evaluated in detail as those species are most likely to occur.

- **Present:** The species is known to be present or has been recently observed in the Project Area.
- **High:** The species has been observed and documented within five miles of the Project Area within the last five years and suitable habitat for the species is present.
- **Moderate:** The Project is located within the range of the species, there are documented occurrences within five miles of the Project Area, and/or suitable habitat for the species exists in the Project Area.
- **Low:** The Project is located within the range of the species and low-quality (e.g., disturbed, agricultural) habitat is present.

## Biological Resources Technical Report

### 3 Methods

- **Absent:** The proposed Project Area is located outside of the species range and/or potential habitat to support the species is not present in the Project Area.

## 3.2 Literature and Database Review

Information about habitat types and special-status species that could occur in the Project Area was obtained from the following sources:

- CDFW CNDDDB plant and animal records (CDFW 2024a) (Appendix A);
- California Native Plant Society (CNPS) online *Inventory of Rare and Endangered Plants* (CNPS 2024a) (Appendix A);
- Calflora (2024);
- United States Fish and Wildlife Service (USFWS) list of endangered and threatened species that may occur in the Project Area (USFWS 2024b) (Appendix A); and
- USFWS Designated Critical Habitat within the Project Area (USFWS 2024d)

The Project Area is within the *Cupertino* U.S. Geological Survey (USGS) 7.5-minute quadrangle. A CNDDDB and CNPS database search for special-status species included the Cupertino USGS 7.5-minute quadrangle and eight surrounding quadrangles. In this case, the *Cupertino*, *Palo Alto*, *Mountain View*, *Milpitas*, *Fruitdale*, *Los Gatos*, *Castle Rock Ridge*, *Big Basin* and *Mindego Hill* topographic quadrangles were queried. A 5-mile radius quadrangle search was conducted based on habitat types and migration distances for potential special-status species that could occur within the Project Area. The USFWS database of endangered species was also utilized to query all federally endangered, threatened, candidate, and proposed animal and plant species, as well as DCH with known occurrences in the Project quadrangle and the adjacent quadrangles. Calflora and CNPS' Online Inventory databases were used to obtain more information on the habitat requirements of rare plants.

Other information sources consulted to determine which special-status species could potentially occur in the Project Area included:

- Aerial photographs of the Project Area and surrounding vicinity (Google Earth 2024)
- USFWS National Wetlands Inventory (USFWS 2024c).

Based on this background research, a list of special-status species that have the potential to occur or are known to occur in the Project Area and vicinity was developed. The list was refined based on a reconnaissance-level biological field surveys to determine the potential for those species to occur in the Project Area.

### **3.3 Field Surveys Conducted**

A biological survey for special-status species and sensitive natural communities, including wetlands, was conducted by a Stantec biologist on March 14<sup>th</sup>, 2024. The biological survey was performed by walking meandering transects throughout the entire Project Area, and using binoculars to look for nesting birds, including raptors, within a 250-foot buffer around the Project Area. The main objective of the biological survey included characterizing habitats, identifying aquatic resources that may be subject to regulatory agency jurisdiction (e.g., United States Army Corps of Engineers [USACE], Regional Water Quality Control Board (RWQCB) and CDFW), assessing potential for special-status species or their habitat to occur, and recording observed species. There was a large emphasis on nesting birds due to the urban setting of the Project.

## 4 Regulatory Context

### 4.1 Federal Regulatory Requirements

#### 4.1.1 FEDERAL ENDANGERED SPECIES ACT

The FESA of 1973 was established to protect and recover endangered and threatened species and the ecosystems upon which they depend. According to the FESA "endangered" indicates a species is in danger of extinction throughout all or a significant portion of its range. In addition, the FESA defines a species as "threatened" if that species is likely to become endangered within the foreseeable future. The USFWS maintains a list of endangered and threatened species. The USFWS and the National Marine Fisheries Service administer FESA and are responsible for consulting with other federal agencies pursuant to FESA. Consultation with the USFWS would be necessary if a Project action has the potential to affect federally listed species, their habitat, as well as areas of Designated Critical Habitat (DCH). This consultation would proceed under Section 7 of the FESA if a federal action is required for the Project or it would proceed through Section 10 of the FESA if no such federal nexus were available.

#### 4.1.2 CLEAN WATER ACT

The objective of the Clean Water Act (CWA) of 1977, as amended, is to maintain and restore the chemical, physical, and biological integrity of the nation's waters. The discharge of dredged or fill material into Waters of the US (WOTUS), including jurisdictional wetlands, is regulated under Section 404 of the CWA by the USACE via a permitting process. Surface water quality is further regulated by the United States Environmental Protection Agency; in California, this authority is delegated to the State Water Resources Control Board (SWRCB) or the RWQCB. Applicants for Section 404 permits are also required to comply with Section 401 of the CWA by obtaining Water Quality Certification (WQC) through the state.

#### 4.1.3 MIGRATORY BIRD TREATY ACT

The Migratory Bird Treaty Act (MBTA) of 1918 enacts the provisions of treaties between the United States, Great Britain, Mexico, Japan, and the Soviet Union and authorizes the U.S. Secretary of the Interior to protect and regulate the taking of migratory birds. This treaty prohibits "take," which has been defined to include harming any migratory bird listed under the MBTA, including nests, eggs, and/or young.

### 4.2 California Regulatory Requirements

#### 4.2.1 CALIFORNIA ENDANGERED SPECIES ACT

The CESA prohibits "take" of plants or animals listed as endangered or threatened and protects native species of fish, amphibians, reptiles, birds, mammals, invertebrates, and plants, and their habitats, which are threatened with extinction or experiencing a significant decline which, if not halted, would lead to a threatened or endangered designation. "Take" is defined in Section 86 of the California Fish and Game Code (FGC) as to "hunt, pursue, catch, capture, or kill, or attempt to hunt, pursue, catch, capture, or kill."

## Biological Resources Technical Report

### 4 Regulatory Context

CESA authorizes the CDFW to issue incidental take permits for state-listed species when specific criteria are met.

#### 4.2.2 PORTER-COLOGNE WATER QUALITY CONTROL ACT

The Porter-Cologne Water Quality Control Act (Porter-Cologne), Sections 1601 to 1602 of the California FGC, authorizes the SWRCB to oversee water rights and water quality policy, and the SWRCB has established nine RWQCBs to protect and enhance water quality at the regional and local levels. In addition to preparing WQCs to designate beneficial uses of water bodies in each region, the RWQCBs issue a permit, referred to as a Waste Discharge Requirement (WDR), for activities that result in pollutant or nuisance discharges that may affect surface or groundwater, including isolated wetlands not subject to the jurisdiction of the USACE.

#### 4.2.3 CALIFORNIA FISH AND GAME CODE

The California FGC has several provisions for the protection of Waters of the State (WOTS), and special-status plant, fish, and wildlife resources, including their habitat. The applicable California FGCs are as follows:

- **Sections 1600-1616 (Streambed Alteration):** The CDFW is responsible for the protection and conservation of fish and wildlife resources in California. Under Section 1602, CDFW has the authority to issue Lake or Streambed Alteration Agreements for construction activities that substantially divert or obstruct the natural flow or substantially change the bed, channel, or bank of any river, stream, or lake designated by the CDFW as providing resources for fish or wildlife.
- **Sections 1900-1913 (Native Plant Protection Act):** The Native Plant Protection Act of 1977 prohibits the taking, possessing, or sale within the state of any plants that the CDFW has determined are rare, threatened, or endangered. The CDFW has the authority to enforce the provisions of this act and authorize measures to salvage native plants that may otherwise be affected by Project activities, if deemed appropriate.
- **Sections 3500-3516 (Game Birds and Birds of Prey):** The CDFW protects game birds, birds of prey, migratory birds, and fully protected birds and their nests, eggs, and young from take or possession, except as otherwise provided by the code (e.g., incidental take under CESA).
- **Sections 3511, 4700, 5050, and 5515 (Fully Protected Species):** California statutes accord a “fully protected” status to specific birds, mammals, reptiles, amphibians, and fish. These species cannot be “taken,” and no process exists for the issuance of incidental take permits for fully protected species.

### **4.3 Local Regulations**

#### City of Sunnyvale – Tree Preservation

The City requires a tree removal permit for the removal of any protected tree on public or private property within the City limits. A protected tree is defined as a tree of significant size. Significant size is defined below (Section 19.94.030 of the Code of Ordinances):

“a tree thirty-eight inches or greater in circumference measured four and one-half feet above ground for single-trunk trees. For multi-trunk trees "significant size" means a tree which has at least one trunk with a circumference thirty-eight inches or greater measured four and one-half feet above ground level, or in which the measurements of the circumferences of each of the multi-trunks, when measured four and one-half feet above the ground level, added together equal an overall circumference one hundred 13 inches or greater.”

Because the Judicial Council is the CEQA lead agency for the Project, and is acting for the State of California, local government regulations do not apply to the Project. However, the Judicial Council considers policies and guidelines, as appropriate.

## **5 Environmental Setting**

### **5.1 Site Conditions and Land Use**

#### **5.1.1 LOCAL SETTING AND EXISTING LAND USE**

The Site is located on an approximately 2.03-acre Judicial Council-owned parcel (APN: 165-02-004). The Site was formerly used as a courthouse for the Superior Court of California, County of Santa Clara and is currently vacant. Surrounding properties consist of commercial and residential buildings. The Site is located west of Mathilda Avenue, north of El Camino Real and east of Pastoria Avenue, generally in the center region of the City. It is approximately 1.4 miles east of Highway 85 (W. Valley Freeway) and southeast of Highway 237 (Mountain View Alviso Road).

#### **5.1.2 PHYSICAL CONDITIONS**

The overall topography is extremely low-gradient with elevations ranging from approximately 122 to 127 feet above mean sea level. The regional climate is typical of the San Francisco Bay Area and is characterized by a Mediterranean climate with cool, wet winters and hot, dry summers. Precipitation in the region primarily occurs as rain. The average annual rainfall is approximately 14.5 inches and typically occurs between October and April. The Project Area climate typically exhibits a nine-month growing season from February through November. Most herbaceous growth occurs during spring and ceases as soil moisture depletes in early summer. Air temperatures range from an average January high of 58.4 degrees Fahrenheit (°F) to an average July high of 82.0°F. The annual average high temperature is 71.3 °F (Western Regional Climate Center [WRCC] 2024).

### **5.2 Biotic Habitats**

#### **5.2.1 VEGETATION COMMUNITIES**

Vegetation types in the Project Area were classified based on descriptions provided in *A Guide to Wildlife Habitats of California* (Mayer and Laudenslayer 1988), as well as the *California Natural Community List* (CDFW 2023), which is adapted from the technical approach and vegetation alliance classification system described in *A Manual of California Vegetation*, Online Edition (CNPS 2023b). The vegetation communities present in the Project Area are urban. No aquatic features were observed within the Project Area. Descriptions of the vegetation communities within the Project Area are provided below. Representative photographs are provided in Appendix B, and a complete list of plant and wildlife species observed is provided in Appendix C.

## **5.2.2 NON-SENSITIVE BIOLOGICAL COMMUNITIES**

### **5.2.2.1 Urban Vegetation**

Urban vegetation can be classified into five general areas: tree grove, street strip, shade tree/lawn, lawn, and shrub cover. Urban areas typically have a small diversity of trees, shrubs, and grasses, but greater productivity than natural grasslands due to abundant water and fertilizer (McBride and Reid 1988). Examples include residential landscapes, golf courses, parks, and school grounds. Non-native landscape species and invasive weeds are common. Species observed within the Site included all non-native landscape vegetation species.

## **5.2.3 HABITAT CONNECTIVITY**

Habitat corridors are segments of land that provide linkages for wildlife movement between different habitats while also providing cover. Corridors also function as avenues along which plants can propagate, genetic interchange can occur, populations can move in response to environmental changes and natural disasters, and populations can be replenished from other areas. Habitat corridors often consist of riparian areas along streams, rivers, or other natural features. The Site is surrounded by urban development and does not provide habitat corridors for terrestrial or aquatic species.

## **5.2.4 INVASIVE SPECIES**

Invasive plants (i.e., noxious weeds) are undesirable, non-native plants that commonly invade disturbed sites. Most species were introduced from Europe and Asia, and many are known to negatively affect native wildlife habitat and plant communities. When disturbance results in the creation of habitat openings or in the loss of intact native vegetation, invasive plants may colonize the site and spread, often out-competing native species. Once established, they are very difficult to eradicate.

All pertinent non-native plant species were reviewed to determine their status as invasive plants according to the ratings in the California Invasive Plant Inventory produced by California Invasive Plant Council (Cal-IPC) (Cal-IPC 2024). Cal-IPC categorizes non-native invasive plants into three categories of overall negative ecological impact in California as “high,” “moderate,” and “limited.” Invasive species with a Cal-IPC rating of “high,” “moderate,” or “limited” were not observed within the Project Area during the reconnaissance survey. Although the Project Area consists of primarily ornamental vegetation, these species are not considered “non-native invasive” plants. The Project would not result in the introduction of non-native invasive plants once construction is completed.

## **5.2.5 SENSITIVE NATURAL COMMUNITIES AND AQUATIC HABITATS**

Habitats are considered “sensitive” by CDFW if they are identified on the List of Vegetation Alliances and Associations as being highly imperiled or classified by CDFW in the CNDDDB as natural communities of special concern – Ranks S1 to S3. No sensitive natural communities are present within the Project Area as the Project is located within a heavily urbanized and developed area.

### **5.2.6 SPECIAL-STATUS PLANT SPECIES**

Regionally occurring special-status plant species were identified based on a review of pertinent literature, the USFWS species list, CNDDDB, and CNPS database records, and the reconnaissance-level biological field survey results. No special-status plants were observed during the reconnaissance survey within the Project Area. CNDDDB special-status plant species occurrences within five miles of the Project Area are illustrated in Appendix A Figure 3. For each species, habitat requirements were assessed and compared to the habitats in the Project Area to determine if potential habitat occurs at the Site. Database records included 62 special-status plants within a nine-quad search of the Project Area. Out of those 62 species, none were found to have a potential to occur in the Project Area due to the Project Area occurring in a heavily developed and urbanized area. Special-status plant species are described in Table 1.

**Biological Resources Technical Report  
5 Environmental Setting**

**Table 1. Special-Status Plant Species with Potential to Occur in the Project Area**

<b>Common Name Scientific Name</b>	<b>Listing Status<sup>1</sup> (Fed/State/CRPR)</b>	<b>Known Habitat and Elevation Range (Feet)</b>	<b>Blooming Period</b>	<b>Potential for Occurrence</b>
San Mateo thorn-mint <i>Acanthomintha duttonii</i>	FE/SE/1B.1	Serpentine soils in chaparral and valley and foothill grassland. Elevation: 165-985 feet.	April-June	<b>Absent.</b> No CNDDDB occurrences within 5 miles of the Project Area. The Project Area does not contain chaparral or grassland habitats preferred by this species.
Franciscan onion <i>Allium peninsulare</i> var. <i>franciscanum</i>	-/1B.2	Often serpentine, clay, or volcanic soils in cismontane woodland and valley and foothill grassland. Elevation: 170-1000 feet.	May-June	<b>Absent.</b> No CNDDDB occurrences within 5 miles of the Project Area. The Project Area does not contain woodland or grassland habitats preferred by this species.
bent-flowered fiddleneck <i>Amsinckia lunaris</i>	-/1B.2	Coastal bluff scrub, cismontane woodland, and valley and foothill grassland. Elevation: 10-1640 feet.	March-June	<b>Absent.</b> No CNDDDB occurrences within 5 miles of the Project Area. The Project Area does not contain scrub, woodland or grassland habitats preferred by this species.
Anderson's manzanita <i>Arctostaphylos andersonii</i>	-/1B.2	Edges and openings in broadleaved upland forest, chaparral, and North Coast coniferous forest. Elevation: 195-2495 feet.	November-May	<b>Absent.</b> No CNDDDB occurrences within 5 miles of the Project Area. The Project Area does not contain forest or chaparral habitats preferred by this species.
Schreiber's manzanita <i>Arctostaphylos glutinosa</i>	-/1B.2	Closed-cone coniferous forest and chaparral with diatomaceous shale. Elevation: 560-2245 feet.	March-April	<b>Absent.</b> No CNDDDB occurrences within 5 miles of the Project Area. The Project Area does not contain forest or chaparral habitats preferred by this species.
Ohlone manzanita <i>Arctostaphylos ohloneana</i>	-/1B.1	Closed-cone coniferous forest and coastal scrub with siliceous shale. Elevation: 1475-1740 feet.	February-March	<b>Absent.</b> No CNDDDB occurrences within 5 miles of the Project Area. The Project Area does not contain forest or scrub habitats preferred by this species.

**Biological Resources Technical Report**  
**5 Environmental Setting**

Common Name Scientific Name	Listing Status <sup>1</sup> (Fed/State/CRPR)	Known Habitat and Elevation Range (Feet)	Blooming Period	Potential for Occurrence
Kings Mountain manzanita <i>Arctostaphylos regismontana</i>	-/1B.2	Granitic and sandstone soils in broadleaved upland forest, chaparral, and North Coast coniferous forest. Elevation: 1000-2395 feet.	December-April	<b>Absent.</b> No CNDDDB occurrences within 5 miles of the Project Area. The Project Area does not contain forest or chaparral habitats preferred by this species.
Bonny Doon manzanita <i>Arctostaphylos silvicola</i>	-/1B.2	Inland marine sands in closed-cone coniferous forest, chaparral, and lower montane coniferous forest. Elevation: 395-1970 feet.	January-March	<b>Absent.</b> No CNDDDB occurrences within 5 miles of the Project Area. The Project Area does not contain forest or chaparral habitats preferred by this species.
Humboldt County milk-vetch <i>Astragalus agnicidus</i>	-/SE/1B.1	Disturbed areas, openings, or sometimes roadsides in broadleaved upland forest and North Coast coniferous forest. Elevation: 395-2625 feet.	April-September	<b>Absent.</b> No CNDDDB occurrences within 5 miles of the Project Area. The Project Area does not contain forest habitat preferred by this species.
Alkali milk-vetch <i>Astragalus tener</i> var. <i>tener</i>	-/1B.2	Alkaline soils in playas, valley and foothill grasslands with adobe clay soils, and vernal pools. Elevation: 5-195 feet.	March-June	<b>Absent.</b> No CNDDDB occurrences within 5 miles of the Project Area. The Project Area does not contain playas, grassland, or vernal pool habitats preferred by this species.
Brittlescale <i>Atriplex depressa</i>	-/1B.2	Alkaline and clay soils in chenopod scrub, meadows and seeps, playas, valley and foothill grassland, and vernal pools. Elevation: 5-1050 feet.	April-October	<b>Absent.</b> No CNDDDB occurrences within 5 miles of the Project Area. The Project Area does not contain scrub, playas, grassland, or vernal pool habitats preferred by this species.
lesser saltscale <i>Atriplex minuscula</i>	-/1B.1	Alkaline and sandy soils in chenopod scrub, playas, and valley and foothill grassland. Elevation: 50-655 feet.	May-October	<b>Absent.</b> No CNDDDB occurrences within 5 miles of the Project Area. The Project Area does not contain scrub, playas, or grassland habitats preferred by this species.

**Biological Resources Technical Report**  
**5 Environmental Setting**

Common Name Scientific Name	Listing Status <sup>1</sup> (Fed/State/CRPR)	Known Habitat and Elevation Range (Feet)	Blooming Period	Potential for Occurrence
Santa Cruz Mountains pussypaws <i>Calyptidium parryi</i> var. <i>hesseae</i>	-/-1B.1	Sometimes gravelly and sandy soils in openings in chaparral and cismontane woodland. Elevation: 1000-5020 feet.	May- August	<b>Absent.</b> No CNDDDB occurrences within 5 miles of the Project Area. The Project Area does not contain chaparral or woodland habitats preferred by this species.
Congdon's tarplant <i>Centromadia parryi</i> ssp. <i>congdonii</i>	-/-1B.1	Valley and foothill grassland with alkaline soils. Elevation: 0-755 feet.	May- October	<b>Absent.</b> Two documented CNDDDB occurrences from 2015 and 2019 approximately 3.6 to 4.3 miles north of the Project Area. The Project Area does not contain grassland habitat preferred by this species.
Point Reyes salty bird's-beak <i>Chloropyron maritimum</i> ssp. <i>palustre</i>	-/-1B.2	Coastal salt marshes and swamps. Elevation: 0-35 feet.	June- October	<b>Absent.</b> No CNDDDB occurrences within 5 miles of the Project Area. The Project Area does not contain coastal salt marsh and swamp habitats preferred by this species.
Ben Lomond spineflower <i>Chorizanthe pungens</i> var. <i>hartwegiana</i>	FE/-1B.1	Maritime ponderosa pine sandhills in lower montane coniferous forest. Elevation: 295-2000 feet.	April-July	<b>Absent.</b> No CNDDDB occurrences within 5 miles of the Project Area. The Project Area does not contain forest habitat preferred by this species.
robust spineflower <i>Chorizanthe robusta</i> var. <i>robusta</i>	FE/-1B.1	Gravelly or sandy soils in maritime chaparral, open cismontane woodland, coastal dunes, and coastal scrub. Elevation: 10-985 feet.	April- September	<b>Absent.</b> One documented CNDDDB occurrence from 1882 approximately 3.39 miles southeast of the Project Area. The Project Area does not contain chaparral, cismontane woodland, coastal dune, or coastal scrub habitats preferred by this species.
Mt. Hamilton thistle <i>Cirsium fontinale</i> var. <i>campylon</i>	-/-1B.2	Seeps and serpentine soils in chaparral, cismontane woodland, and valley and foothill grassland. Elevation: 330-2920 feet.	April- October	<b>Absent.</b> No CNDDDB occurrences within 5 miles of the Project Area. The Project Area does not contain chaparral, woodland, or grassland habitats preferred by this species.

Common Name Scientific Name	Listing Status <sup>1</sup> (Fed/State/CRPR)	Known Habitat and Elevation Range (Feet)	Blooming Period	Potential for Occurrence
fountain thistle <i>Cirsium fontinale</i> var. <i>fontinale</i>	FE/SE/1B.1	Seeps and serpentine soils in chaparral openings, cismontane woodland, meadows and seeps, and valley and foothill grassland. Elevation: 150-575 feet.	May-October	<b>Absent.</b> No CNDDDB occurrences within 5 miles of the Project Area. The Project Area does not contain chaparral, woodland, meadows and seeps, or grassland habitats preferred by this species.
round-headed collinsia <i>Collinsia corymbosa</i>	-/-1B.2	Coastal dunes. Elevation: 0-65 feet.	April-June	<b>Absent.</b> No CNDDDB occurrences within 5 miles of the Project Area. The Project Area does not contain coastal dune habitat preferred by this species.
San Francisco collinsia <i>Collinsia multicolor</i>	-/-1B.2	Sometimes serpentine soils in closed-cone coniferous forest and coastal scrub. Elevation: 100-900 feet.	March-May	<b>Absent.</b> No CNDDDB occurrences within 5 miles of the Project Area. The Project Area does not contain scrub or forest habitats preferred by this species.
western leatherwood <i>Dirca occidentalis</i>	-/-1B.2	Mesic environments in broadleafed upland forest, closed-cone coniferous forest, chaparral, cismontane woodland, North Coast coniferous forest, riparian forest, and riparian woodland. Elevation: 80-1395 feet.	January-March	<b>Absent.</b> Two documented CNDDDB occurrences from 1979 and 2021 approximately 3.5 to 4 miles southwest of the Project Area. The Project Area does not contain chaparral, cismontane woodland, forest, or riparian habitats preferred by this species.
Santa Clara Valley dudleya <i>Dudleya abramsii</i> ssp. <i>setchellii</i>	FE/-1B.1	Serpentine and rocky soils in cismontane woodland and valley and foothill grassland. Elevation: 195-1755 feet.	April-October	<b>Absent.</b> No CNDDDB occurrences within 5 miles of the Project Area. The Project Area does not contain woodland or grassland habitats preferred by this species.
San Mateo woolly sunflower <i>Eriophyllum latilobum</i>	FE/SE/1B.1	Cismontane woodland (often in serpentinite soils and along roadcuts, coastal scrub, and lower montane coniferous forest). Elevation: 150-1085 feet.	May-June	<b>Absent.</b> No CNDDDB occurrences within 5 miles of the Project Area. The Project Area does not contain woodland, forest, or scrub habitats preferred by this species.

Common Name Scientific Name	Listing Status <sup>1</sup> (Fed/State/CRPR)	Known Habitat and Elevation Range (Feet)	Blooming Period	Potential for Occurrence
Hoover's button-celery <i>Eryngium aristulatum</i> var. <i>hooveri</i>	-/-1B.1	Vernal pools. Elevation: 10-150 feet.	July	<b>Absent.</b> One documented CNDDDB occurrence from 1902 approximately 3.8 miles northeast of the Project Area. The Project Area does not contain vernal pool habitat preferred by this species.
Jepson's coyote-thistle <i>Eryngium jepsonii</i>	-/-1B.2	Clay soils in valley and foothill grassland and vernal pools. Elevation: 10-985 feet.	April-August	<b>Absent.</b> No CNDDDB occurrences within 5 miles of the Project Area. The Project Area does not contain grassland or vernal pool habitats preferred by this species.
San Joaquin spearscale <i>Extriplex joaquinana</i>	-/-1B.2	Alkaline soils in chenopod scrub, meadows and seeps, playas, and valley and foothill grassland. Elevation: 5-2740 feet.	April-October	<b>Absent.</b> No CNDDDB occurrences within 5 miles of the Project Area. The Project Area does not contain scrub, Meadows and seeps, playas, or grassland habitats preferred by this species.
minute pocket moss <i>Fissidens pauperculus</i>	-/-1B.2	Damp coastal soils in North Coast coniferous forest. Elevation: 35-3360 feet.	N/A (moss)	<b>Absent.</b> No CNDDDB occurrences within 5 miles of the Project Area. The Project Area does not contain forest habitat preferred by this species.
fragrant fritillary <i>Fritillaria liliacea</i>	-/-1B.2	Often serpentine soils in cismontane woodland, coastal prairie, coastal scrub, and valley and foothill grassland. Elevation: 10-1345 feet.	February-April	<b>Absent.</b> No CNDDDB occurrences within 5 miles of the Project Area. The Project Area does not contain scrub, woodland, prairie, or grassland habitats preferred by this species.
Toren's grimmia <i>Grimmia torenii</i>	-/-1B.3	Carbonate, rocky, or volcanic soils along boulder and rock walls in openings within chaparral, cismontane woodland, and lower montane coniferous forest. Elevation: 1065-3805 feet.	N/A (moss)	<b>Absent.</b> No CNDDDB occurrences within 5 miles of the Project Area. The Project Area does not contain chaparral, woodland, or forest habitats preferred by this species.

Common Name Scientific Name	Listing Status <sup>1</sup> (Fed/State/CRPR)	Known Habitat and Elevation Range (Feet)	Blooming Period	Potential for Occurrence
hairless popcornflower <i>Plagiobothrys glaber</i>	-/-1A	Coastal salt marshes and swamps and alkaline meadows and seeps. Elevation: 50-590 feet.	March-May	<b>Absent.</b> One documented CNDDDB occurrence from 1892 approximately 4.2 miles southeast of the Project Area. The Project Area does not contain marshes and swamps or meadows and seeps habitat preferred by this species.
California alkali grass <i>Puccinellia simplex</i>	-/-1B.2	Along lake margins and flats, vernal mesic, alkaline soils in chenopod scrub, meadows and seeps, valley and foothill grassland, and vernal pools. Elevation: 5-3050 feet.	March-May	<b>Absent.</b> No CNDDDB occurrences within 5 miles of the Project Area. The Project Area does not contain scrub, meadows and seeps, or grassland habitats preferred by this species.
Sanford's arrowhead <i>Sagittaria sanfordii</i>	-/-1B.2	Shallow freshwater marshes and swamps. Elevation: 0-2135 feet.	May-October	<b>Absent.</b> No CNDDDB occurrences within 5 miles of the Project Area. The Project Area does not contain marsh and swamp habitats preferred by this species.
rock sanicle <i>Sanicula saxatilis</i>	-/SR/1B.2	Rocky, scree, or talus soils in broadleaved upland forest, chaparral, and valley and foothill grassland. Elevation: 2035-3855 feet.	April-May	<b>Absent.</b> No CNDDDB occurrences within 5 miles of the Project Area. The Project Area does not contain forest, chaparral, or grassland habitats preferred by this species.
chaparral ragwort <i>Senecio aphanactis</i>	-/-2B.2	Sometimes alkaline soils in chaparral, cismontane woodland, and coastal scrub. Elevation: 50-2625 feet.	January-April	<b>Absent.</b> No CNDDDB occurrences within 5 miles of the Project Area. The Project Area does not contain chaparral, woodland or scrub habitats preferred by this species.
Santa Cruz microseris <i>Stebbinsoseris decipiens</i>	-/-1B.2	Sometimes serpentine soils in openings in broadleaved upland forest, closed-cone coniferous forest, chaparral, coastal prairie, coastal scrub, and valley and foothill grassland. Elevation: 35-1640 feet.	April-May	<b>Absent.</b> No CNDDDB occurrences within 5 miles of the Project Area. The Project Area does not contain forest, chaparral, prairie, scrub, or grassland habitats preferred by this species.

**Biological Resources Technical Report**  
**5 Environmental Setting**

Common Name Scientific Name	Listing Status <sup>1</sup> (Fed/State/CRPR)	Known Habitat and Elevation Range (Feet)	Blooming Period	Potential for Occurrence
most beautiful jewelflower <i>Streptanthus albidus</i> ssp. <i>peramoenus</i>	-/-1B.2	Serpentine soils in chaparral, cismontane woodland, and valley and foothill grassland. Elevation: 310-3280 feet.	April-September	<b>Absent.</b> No CNDDDB occurrences within 5 miles of the Project Area. The Project Area does not contain chaparral, woodland, or grassland habitats preferred by this species.
northern slender pondweed <i>Stuckenia filiformis</i> ssp. <i>alpina</i>	-/-2B.2	Shallow freshwater marshes and swamps. Elevation: 985-7055 feet.	May-July	<b>Absent.</b> No CNDDDB occurrences within 5 miles of the Project Area. The Project Area does not contain marsh and swamp habitats preferred by this species.
California seablite <i>Suaeda californica</i>	FE/-1B.1	Coastal salt marshes and swamps. Elevation: 0-50 feet.	July-October	<b>Absent.</b> No CNDDDB occurrences within 5 miles of the Project Area. The Project Area does not contain marsh and swamp habitats preferred by this species.
Two-fork clover <i>Trifolium amoenum</i>	FE/-1B.1	Coastal bluff scrub and valley and foothill grassland (sometimes in serpentinite soils). Elevation: 15-1360 feet.	Apr-Jun	<b>Absent.</b> No CNDDDB occurrences within 5 miles of the Project Area. The Project Area does not contain bluff scrub or grassland habitats preferred by this species.
Santa Cruz clover <i>Trifolium buckwestiorum</i>	-/-1B.1	Gravelly soils in broadleaved upland forest, cismontane woodland, and coastal prairie. Elevation: 115-2000 feet.	April-October	<b>Absent.</b> No CNDDDB occurrences within 5 miles of the Project Area. The Project Area does not contain forest, woodland, or prairie habitats preferred by this species.
saline clover <i>Trifolium hydrophilum</i>	-/-1B.2	Marshes and swamps, mesic alkaline valley and foothill grassland, and vernal pools. Elevation: 0-985 feet.	April-June	<b>Absent.</b> No CNDDDB occurrences within 5 miles of the Project Area. The Project Area does not contain marshes and swamps, grassland, or vernal pool habitats preferred by this species.

**Biological Resources Technical Report**  
**5 Environmental Setting**

Common Name Scientific Name	Listing Status <sup>1</sup> (Fed/State/CRPR)	Known Habitat and Elevation Range (Feet)	Blooming Period	Potential for Occurrence
Pacific Grove clover <i>Trifolium polyodon</i>	-/SR/1B.1	Mesic environments, sometimes granitic soils in closed-cone coniferous forest, coastal prairie, meadows and seeps, and valley and foothill grassland. Elevation: 15-1395 feet.	April-June	<b>Absent.</b> No CNDDDB occurrences within 5 miles of the Project Area. The Project Area does not contain forest, prairie, meadows and seeps, or grassland habitats preferred by this species.

**<sup>1</sup>Federal and State Status Codes**

- = No status, or not applicable  
 FE = Listed as endangered under the Federal Endangered Species Act (FESA);  
 FT = Listed as threatened under FESA;  
 SE = Listed as endangered under the California Endangered Species Act (CESA);  
 SR = Listed as rare under the Native Plant Protection Act.

**CNPS Ranking**

1A = Presumed extinct in California and either rare or extinct elsewhere.  
 1B = Rare, threatened, or endangered in California and elsewhere.  
 2A = Presumed extinct in California but common elsewhere.  
 2B = Rare, threatened, or endangered in California but more common elsewhere.

**Threat Ranks**

0.1 = Seriously threatened in California (more than 80% of occurrences threatened/high degree and immediacy of threat).  
 0.2 = Moderately threatened in California (20-80% occurrences threatened/moderate degree and immediacy of threat).  
 0.3 = Not very threatened in California (less than 20% of occurrences threatened/low degree and immediacy of threat or no current threats known).

### **5.2.7 SPECIAL-STATUS ANIMAL SPECIES**

Regionally occurring special-status animal species were identified based on a review of pertinent literature, the USFWS species list, CNDDDB database records, and the reconnaissance-level biological field survey results. CNDDDB special-status animal species occurrences within five miles of the Project Area are illustrated in Appendix A Figure 4. For each species, habitat requirements were assessed and compared to the habitats in the Project Area to determine the species' potential to occur in or near the Site. For the purposes of this review, regionally occurring wildlife species listed under the FESA or CESA with a present, moderate, or high potential to occur within the Project Area are included in Table 2. The literature and database review identified 29 special-status wildlife species; however, based on initial assessment of wildlife habitats conducted during the biological survey, 26 of these species were determined to have a moderate or low potential to occur as described in Table 2.

**Biological Resources Technical Report  
5 Environmental Setting**

**Table 2. Special-Status Animal Species with Potential to Occur in the Project Area**

<b>Common Name Scientific Name</b>	<b>Listing Status<sup>1</sup> (Fed/State)</b>	<b>Known Habitat Requirements</b>	<b>Potential for Occurrence</b>
<b>Invertebrates</b>			
Crotch's bumble bee <i>Bombus crotchii</i>	-/CE	Found near grasslands and shrublands, and generally prefers hotter and drier habitats than other bumblebee species. Nests found underground in abandoned rodent burrows, old bird nests, rock piles or in cavities of dead trees.	<b>Low.</b> The Project Area provides marginal foraging habitat for this species.
Monarch butterfly - California overwintering population <i>Danaus plexippus</i> <i>plexippus pop. 1</i>	FC/-	Occurs in a variety of habitats spring through fall and uses milkweed ( <i>Asclepias</i> spp.) as the larval host plant. Migrates to overwintering sites within 1.5 miles off the California coast from September to November. They overwinter on eucalyptus trees ( <i>Eucalyptus globulus</i> ), Monterey pines ( <i>Pinus radiata</i> ), and/or Monterey cypress ( <i>Cupressus macrocarpa</i> ).	<b>Moderate.</b> The Project Area does not provide suitable larval host plant habitat. There is potentially suitable foraging habitat within the Project Area.
western bumble bee <i>Bombus occidentalis</i>	-/SCE	Found near blooming flowers along streams, meadows, roadsides, and burned or logged areas. Nests found underground in abandoned rodent burrows. The colonies start in early spring and occupy the nest through early fall.	<b>Low.</b> The Project Area provides marginal foraging habitat for this species.
<b>Fish</b>			
steelhead - central California coast DPS <i>Oncorhynchus mykiss</i> <i>irideus pop. 8</i>	FT/-	Riverine and ocean environments; spawns in gravel river bottoms and stream tributaries.	<b>Absent.</b> The Project Area does not provide suitable aquatic habitat for this species.
<b>Amphibians</b>			

**Biological Resources Technical Report**  
**5 Environmental Setting**

Common Name Scientific Name	Listing Status <sup>1</sup> (Fed/State)	Known Habitat Requirements	Potential for Occurrence
California red-legged frog <i>Rana draytonii</i>	FT/SSC	Requires perennial or near-perennial aquatic habitats, especially for breeding; often slow-moving streams, freshwater pools and ponds over one-foot deep, often with overhanging vegetation; adjacent upland habitats are often used for temporary refuges or dispersal movements.	<b>Absent.</b> The Project Area does not provide suitable breeding or dispersal habitat for this species.
California tiger salamander – central California DPS <i>Ambystoma californiense pop. 1</i>	FT/ST	Requires underground refuges, such as ground squirrel burrows, and vernal pools or other seasonal water sources for breeding.	<b>Absent.</b> The Project Area does not provide suitable aquatic or terrestrial habitat for this species.
Foothill yellow-legged frog – central coast DPS <i>Rana boylei pop. 4</i>	FT/SE	Found in or near-perennial or intermittent streams during all seasons but may be found up to 50 feet from flowing water.	<b>Absent.</b> The Project Area does not provide suitable aquatic or terrestrial habitat for this species.
Santa Cruz black salamander <i>Aneides niger</i>	-/SSC	Occurs in mesic woodland habitats in the fog belt with talus and downed woody debris typically near streams and seeps.	<b>Absent.</b> The Project Area does not provide suitable aquatic or woodland habitat for this species.
<b>Reptiles</b>			
Northern California legless lizard <i>Anniella pulchra</i>	-/SSC	Occurs in warm loose soils with plant cover for protection. Requires moisture and found in beach dunes, chaparral, pine-oak woodland, and desert scrub habitats. Leaf litter under trees can be suitable habitat.	<b>Absent.</b> The Project Area does not provide suitable habitat for this species.
San Francisco garter snake <i>Thamnophis sirtalis tetrataenia</i>	FE/SE, FP	Densely vegetated ponds near open hillsides with abundant rodent burrows. Emergent bankside vegetation such as cattails, bulrushes, and spike rushes are preferred for cover. Temporary ponds and other seasonal freshwater bodies may also be used for habitat.	<b>Absent.</b> The Project Area does not provide suitable aquatic or terrestrial habitat for this species.

**Biological Resources Technical Report**  
**5 Environmental Setting**

Common Name Scientific Name	Listing Status <sup>1</sup> (Fed/State)	Known Habitat Requirements	Potential for Occurrence
northwestern pond turtle <i>Actinemys marmorata</i>	PT/SSC	Slow water aquatic habitat with available basking sites. Hatchlings require shallow water with dense submergent or short emergent vegetation. Require an upland oviposition site near the aquatic site.	<b>Absent.</b> The Project Area does not provide suitable nesting or aquatic habitat for this species.
<b>Birds</b>			
Alameda song sparrow <i>Melospiza melodia pusillula</i>	-/SSC	Tidal salt marshes with abundant vegetation especially in the upper regions of marshes for nesting. Exposed ground in marshes are used for foraging areas.	<b>Absent.</b> No suitable nesting habitat is present in the Project Area due to lack of tidal salt marshes.
Burrowing owl <i>Athene cunicularia</i>	-/SSC	Grasslands and ruderal habitats. Uses mammal burrows or other suitable underground cavities.	<b>Absent.</b> No suitable nesting or foraging habitat is present in the Project Area due to lack of rodent burrows within the Project Area.
California black rail <i>Laterallus jamaicensis coturniculus</i>	-/ST, FP	Freshwater marshes, wet meadows and shallow margins of saltwater marshes boarding larger bays. Requires dense vegetation for nesting habitat.	<b>Absent.</b> The Project Area does not provide suitable nesting or foraging habitat for this species.
California condor <i>Gymnogyps californianus</i>	FE/SE, FP	Natural cavities or caves in cliffs are primarily used for nesting, but have also been known to nest in large trees, such as coast redwoods and giant sequoias. Foraging habitat can be far from nest sites, is typically in open grasslands and oak savannas.	<b>Absent.</b> The Project Area does not provide suitable nesting or foraging habitat.
California least tern <i>Sternula antillarum browni</i>	FE/SE, FP	Nests are found on sandy beaches or coastlines of islands and rivers. Foraging takes place in most aquatic habitats such as oceans, bays, estuaries, and marshes.	<b>Absent.</b> The Project Area does not provide suitable nesting or foraging habitat for this species.
California Ridgway's rail <i>Rallus obsoletus obsoletus</i>	FE/SE, FP	Saltmarsh swamps with extensive vegetation.	<b>Absent.</b> The Project Area does not provide suitable nesting or foraging habitat for this species.

**Biological Resources Technical Report**  
**5 Environmental Setting**

<b>Common Name Scientific Name</b>	<b>Listing Status<sup>1</sup> (Fed/State)</b>	<b>Known Habitat Requirements</b>	<b>Potential for Occurrence</b>
Marbled murrelet <i>Brachyramphus marmoratus</i>	FT/SE	Marine subtidal and pelagic habitats; requires dense, mature forests of redwood and Douglas fir for breeding.	<b>Absent.</b> The Project Area does not provide suitable nesting or foraging habitat for this species.
saltmarsh common yellowthroat <i>Geothlypis trichas sinuosa</i>	-/SSC	Woody swamps, brackish marsh, and freshwater marsh throughout the San Francisco Bay region. Found in wetland habitats as well as dry upland habitats. Nests are built near the ground in grasses, herbaceous vegetation, cattails, tules, and shrubs.	<b>Absent.</b> The Project Area does not provide suitable nesting or foraging habitat for this species.
Swainson's hawk <i>Buteo swainsoni</i>	-/ST	Breeds in grasslands with scattered trees, juniper-sage flats, riparian areas, savannahs, and agricultural or ranchlands with groves or lines of trees. Requires adjacent suitable foraging areas such as grasslands, or alfalfa or grain fields supporting rodent populations.	<b>Absent.</b> The Project Area does not provide suitable nesting or foraging habitat for this species.
western snowy plover <i>Charadrius nivosus nivosus</i>	FT/SSC	Estuarine wetlands and coastal dune habitats. Nests are found on sand in open areas.	<b>Absent.</b> The Project Area does not provide suitable nesting or foraging habitat for this species.
white-tailed kite <i>Elanus leucurus</i>	-/FP	Nests in tall shrubs and trees, forages in grasslands, agricultural fields and marshes.	<b>Absent.</b> The Project Area does not provide suitable nesting or foraging habitat for this species.
yellow rail <i>Coturnicops noveboracensis</i>	-/SSC	Shallow marshes with short vegetation. Nests are mostly commonly found among sedges or bulrushes. They can also be found in wet meadows, and agricultural fields with grass cover.	<b>Absent.</b> The Project Area does not provide suitable nesting or foraging habitat for this species.
<b>Mammals</b>			
American badger <i>Taxidea taxus</i>	-/SSC	Most abundant in drier, open stages of most shrub, forest, and herbaceous habitats, with friable soils. Needs open, uncultivated ground. Preys on burrowing rodents. Digs burrows.	<b>Absent.</b> The Project Area does not provide suitable burrowing habitat or foraging habitat for this species.

**Biological Resources Technical Report**  
**5 Environmental Setting**

Common Name Scientific Name	Listing Status <sup>1</sup> (Fed/State)	Known Habitat Requirements	Potential for Occurrence
Pallid bat <i>Antrozous pallidus</i>	-/SSC	Found in deserts, grasslands, shrublands, woodlands, and forests. Most common in open, dry habitats with rocky areas for roosting.	<b>Absent.</b> No suitable roosting habitat occurs within the Project Area or foraging habitat for this species.
salt marsh harvest mouse <i>Reithrodontomys raviventris</i>	FE/SE, FP	Pickleweed-dominated vegetation, saline or subsaline marsh habitats around the San Francisco Bay Estuary, and brackish diked marshes in the Suisun Bay.	<b>Absent.</b> The Project Area does not provide suitable habitat for this species.
salt marsh wandering shrew <i>Sorex vagrans halicoetes</i>	-/SSC	Saltmarsh habitat around the San Francisco Bay.	<b>Absent.</b> The Project Area does not provide suitable habitat for this species.
San Francisco dusky-footed woodrat <i>Neotoma fuscipes annectens</i>	-/SSC	Forested habitats with a moderate overstory and brushy understory to build stick houses for nests.	<b>Absent.</b> The Project Area does not provide suitable habitat for this species.
Townsend's big-eared bat <i>Corynorhinus townsendii</i>	-/SSC	Forms maternity roosts and hibernacula in caves, mines, tunnels, or buildings in mesic habitats. Occasionally uses hollow trees and bridges for day or night roosting. The species forages along habitat edges, gleaning insects from bushes and trees.	<b>Low.</b> The Project Area provides potential roosting and foraging habitat for this species, although it is marginal.

**<sup>1</sup>Federal and State Status Codes**

- = No status, or not applicable

FE = Listed as endangered under the Federal Endangered Species Act (FESA)

FT = Listed as threatened under FESA

SE = Listed as endangered under the California Endangered Species Act (CESA)

ST = Listed as threatened under CESA

SSC = Designated as a Species of Special Concern by CDFW under the California Environmental Quality Act (CEQA)

FP = Fully Protected under the California Fish and Game Code (F.G.C.)

C = Candidate for listing as either endangered or threatened under FESA

CE = Candidate for listing as endangered under CESA

CT = Candidate for listing as threatened under CESA

P = Proposed for listing as either endangered or threatened under FESA

## 6 Results: Biological Resources

### 6.1 Habitats and Natural Communities of Concern

#### 6.1.1 SENSITIVE NATURAL COMMUNITIES

There are no sensitive natural communities within or adjacent to the Project Area.

#### 6.1.2 WETLANDS AND OTHER WATERS

There are no wetlands or other waters that could be considered potential WOTUS or WOTS within or adjacent to the Project Area.

#### 6.1.3 CRITICAL HABITAT

The Project Area is not within USFWS DCH. The nearest USFWS DCH is for steelhead (*Oncorhynchus mykiss*), located 1.33 miles southwest of the Project Area. The Project Area does not provide aquatic habitat for this species (USFWS 2024d).

### 6.2 Special-Status Plant Species

There is no potential for special-status plant species to occur within the Project Area due to the developed and urban habitat. Landscaped vegetation growing throughout the Project Area is actively maintained and does not provide a suitable habitat for any special-status plants. In addition, no special-status plants were observed during the reconnaissance survey. All the vegetation within the Project Area consists of non-native landscape species, with no native species observed. The nearest CNDDDB occurrences for special-status plants is for robust spineflower (*Chorizanthe robusta var. robusta*) from 1882 located approximately 3.39 miles southeast of the Project Area (Figure 3).

### 6.3 Special-Status Animal Species

One special-status species has a moderate potential to occur within the Project Area, the monarch butterfly. None of the special-status species have a high potential to occur within the Project Area. The remaining 28 species have a low potential to occur or are absent in the Project Area and the Project Area provides only marginal habitat or foraging habitat for these special-status animal species. The Project Area is fully developed with buildings, parking lots, landscaping, and roadways which makes it marginal habitat for most special-status species.

Within five miles, and to the southwest of the Project Area are hillsides and less developed areas where there were CNDDDB occurrences for several species. This includes six occurrences for California red-legged frog (between 1994-2023), two occurrences for California tiger salamander (between 1893-1895), and one occurrence for Santa Cruz black salamander (1989). This region also had seven occurrences of

## **Biological Resources Technical Report**

### **6 Results: Biological Resources**

San Francisco garter snake (between 1922-2012) and two occurrences for San Francisco dusky-footed woodrat (2016). These locations can be found in Figures 4a and 4b.

Within five miles, to the north of the Project Area is the southern portion of the San Francisco Bay, which provides marsh and tidal habitats which are less developed than the Project Area. This habitat is where there were CNDDDB occurrences for several species. This includes eight occurrences for northwestern pond turtle (between 1987-2023), 17 occurrences for burrowing owl (between 1971-2016), two occurrences for California black rail (between 2012-2014), one occurrence for California least tern (1987), two occurrences for California Ridgway's rail (1979-2001), four occurrences for saltmarsh common yellowthroat (between 1985-2016), one occurrence for western snowy plover (2009), two occurrences for yellow rail (between 1895-1901), three occurrences for salt marsh harvest mouse (between 1990-1991), and one occurrence for salt marsh wandering shrew (1951). These locations can be found in Figures 4a and 4b. Detailed information on species with a moderate potential to occur in the Project Area are described below.

#### **6.3.1 MONARCH BUTTERFLY**

##### **6.3.1.1 Distribution, Biology, and Habitat Requirements**

The monarch butterfly's distribution range is from the Rocky Mountains to the coast of California. They typically live west of the Rocky Mountains and travel to the coast of California to overwinter due to colder temperatures they cannot withstand. Overwintering sites along the Pacific Coast are roost sites in eucalyptus, Monterey pines, and Monterey cypress trees (USFWS 2024d).

Monarchs rely on flowering plants for foraging in many different habitats but require milkweed plants to lay their eggs on. The milkweed becomes a source of food for the larvae and then caterpillars. The overwintering migration can be more than 1,500 miles and take over two months to complete. Overwintering is complete in early spring when the butterflies disperse back to where they came from (USFWS 2024d).

Monarch eggs are laid on milkweed plants that hatch within two to five days. They emerge as caterpillars, which are active for about two weeks. After this time, they pupate and emerge one to two weeks later as a butterfly. Caterpillars have black, white and yellow stripes. Adult monarchs have two sets of wings that span three to four inches. The wings are bright orange with a black outline, which has a double row of white spots on the upper section of the wings (USFWS 2024d).

##### **6.3.1.2 Occurrence Records**

There were no CNDDDB occurrences for monarch butterflies within five miles of the Project Area (CDFW 2023a).

##### **6.3.1.3 Suitable Habitat within the Project Area**

No monarch butterflies were observed during the March 14, 2024, reconnaissance survey. Suitable foraging habitat within the Project Area was observed in the form of limited flowering plants. Potential for

**Biological Resources Technical Report**  
**6 Results: Biological Resources**

occurrence is marginal due to potential suitable foraging habitat found within the Project Area; however, monarch butterflies could temporarily feed within the Project Area.

### **6.3.2 MIGRATORY NESTING BIRDS**

The Project Area does provide suitable nesting habitat for special-status birds and raptors and other migratory birds protected under the MBTA or California FGC. Removal of trees during the typical nesting season (February 1 through September 1) could have an impact to nesting migratory birds. During the biological reconnaissance survey, there were no nesting birds or nesting behavior observed. Several bird species were observed during the biological survey, none of which are special-status species. Bird species observed included: California scrub-jay (*Aphelocoma californica*), house finch (*Haemorhous mexicanus*), song sparrow (*Melospiza melodia*), dark-eyed junco (*Junco hyemalis*), American crow (*Corvus brachyrhynchos*), western bluebird (*Sialia mexicana*), Anna's hummingbird (*Calypte anna*), black phoebe (*Sayornis nigricans*), oak titmouse (*Baeolophus inornatus*), and California gull (*Larus californicus*).

If tree removal occurs during the typical nesting season (February 1 through September 1) the Project would implement avoidance and minimization measures to avoid impacts to migratory nesting birds. If tree removal occurs during the typical nesting season (February 1 through September 1), a pre-construction nesting bird survey will be conducted during the nesting season to document any nests on the Site. Nesting bird surveys will be performed at a minimum of two weeks prior to the start of Project activities. If an active nest is observed, a protective buffer will be established around the nest to avoid any disturbances. A biological monitor may also be required to monitor the nest during Project activities to ensure there are no disturbances to the nesting bird and prevent nest failure.

**Appendix B USFWS, CNDDDB and CNPS Database Results**

# IPaC resource list

This report is an automatically generated list of species and other resources such as critical habitat (collectively referred to as *trust resources*) under the U.S. Fish and Wildlife Service's (USFWS) jurisdiction that are known or expected to be on or near the project area referenced below. The list may also include trust resources that occur outside of the project area, but that could potentially be directly or indirectly affected by activities in the project area. However, determining the likelihood and extent of effects a project may have on trust resources typically requires gathering additional site-specific (e.g., vegetation/species surveys) and project-specific (e.g., magnitude and timing of proposed activities) information.

Below is a summary of the project information you provided and contact information for the USFWS office(s) with jurisdiction in the defined project area. Please read the introduction to each section that follows (Endangered Species, Migratory Birds, USFWS Facilities, and NWI Wetlands) for additional information applicable to the trust resources addressed in that section.

## Project information

### NAME

Sunnyvale Courthouse Initial Study Project

### LOCATION

Santa Clara County, California

### DESCRIPTION

Some(The proposed Project consists of the demolition of the existing courthouse building and the construction of a new courthouse building with additional parking for the Sith Appellate District of the Court of Appeal in a more practical and accessible infill location.)

# Local office

Sacramento Fish And Wildlife Office

 (916) 414-6600

 (916) 414-6713

Federal Building

2800 Cottage Way, Room W-2605

Sacramento, CA 95825-1846

NOT FOR CONSULTATION

# Endangered species

**This resource list is for informational purposes only and does not constitute an analysis of project level impacts.**

The primary information used to generate this list is the known or expected range of each species. Additional areas of influence (AOI) for species are also considered. An AOI includes areas outside of the species range if the species could be indirectly affected by activities in that area (e.g., placing a dam upstream of a fish population even if that fish does not occur at the dam site, may indirectly impact the species by reducing or eliminating water flow downstream). Because species can move, and site conditions can change, the species on this list are not guaranteed to be found on or near the project area. To fully determine any potential effects to species, additional site-specific and project-specific information is often required.

Section 7 of the Endangered Species Act **requires** Federal agencies to "request of the Secretary information whether any species which is listed or proposed to be listed may be present in the area of such proposed action" for any project that is conducted, permitted, funded, or licensed by any Federal agency. A letter from the local office and a species list which fulfills this requirement can **only** be obtained by requesting an official species list from either the Regulatory Review section in IPaC (see directions below) or from the local field office directly.

For project evaluations that require USFWS concurrence/review, please return to the IPaC website and request an official species list by doing the following:

1. Log in to IPaC.
2. Go to your My Projects list.
3. Click PROJECT HOME for this project.
4. Click REQUEST SPECIES LIST.

Listed species<sup>1</sup> and their critical habitats are managed by the [Ecological Services Program](#) of the U.S. Fish and Wildlife Service (USFWS) and the fisheries division of the National Oceanic and Atmospheric Administration (NOAA Fisheries<sup>2</sup>).

Species and critical habitats under the sole responsibility of NOAA Fisheries are **not** shown on this list. Please contact [NOAA Fisheries](#) for [species under their jurisdiction](#).

- 
1. Species listed under the [Endangered Species Act](#) are threatened or endangered; IPaC also shows species that are candidates, or proposed, for listing. See the [listing status page](#) for more information. IPaC only shows species that are regulated by USFWS (see FAQ).
  2. [NOAA Fisheries](#), also known as the National Marine Fisheries Service (NMFS), is an office of the National Oceanic and Atmospheric Administration within the Department of

Commerce.

The following species are potentially affected by activities in this location:

## Birds

NAME	STATUS
<p>California Condor <i>Gymnogyps californianus</i></p> <p>There is <b>final</b> critical habitat for this species. Your location does not overlap the critical habitat.</p> <p><a href="https://ecos.fws.gov/ecp/species/8193">https://ecos.fws.gov/ecp/species/8193</a></p>	Endangered
<p>California Least Tern <i>Sternula antillarum browni</i></p> <p>Wherever found</p> <p>No critical habitat has been designated for this species.</p> <p><a href="https://ecos.fws.gov/ecp/species/8104">https://ecos.fws.gov/ecp/species/8104</a></p>	Endangered
<p>California Ridgway's Rail <i>Rallus obsoletus obsoletus</i></p> <p>Wherever found</p> <p>No critical habitat has been designated for this species.</p> <p><a href="https://ecos.fws.gov/ecp/species/4240">https://ecos.fws.gov/ecp/species/4240</a></p>	Endangered
<p>Marbled Murrelet <i>Brachyramphus marmoratus</i></p> <p>There is <b>final</b> critical habitat for this species. Your location does not overlap the critical habitat.</p> <p><a href="https://ecos.fws.gov/ecp/species/4467">https://ecos.fws.gov/ecp/species/4467</a></p>	Threatened

## Reptiles

NAME	STATUS
<p>Northwestern Pond Turtle <i>Actinemys marmorata</i></p> <p>Wherever found</p> <p>No critical habitat has been designated for this species.</p> <p><a href="https://ecos.fws.gov/ecp/species/1111">https://ecos.fws.gov/ecp/species/1111</a></p>	Proposed Threatened

## Amphibians

NAME	STATUS
<p>California Red-legged Frog <i>Rana draytonii</i></p> <p>Wherever found</p> <p>There is <b>final</b> critical habitat for this species. Your location does not overlap the critical habitat.</p> <p><a href="https://ecos.fws.gov/ecp/species/2891">https://ecos.fws.gov/ecp/species/2891</a></p>	Threatened

California Tiger Salamander *Ambystoma californiense* Threatened  
 There is **final** critical habitat for this species. Your location does not overlap the critical habitat.  
<https://ecos.fws.gov/ecp/species/2076>

Foothill Yellow-legged Frog *Rana boylei* Threatened  
 No critical habitat has been designated for this species.  
<https://ecos.fws.gov/ecp/species/5133>

## Insects

NAME	STATUS
Monarch Butterfly <i>Danaus plexippus</i> Wherever found No critical habitat has been designated for this species. <a href="https://ecos.fws.gov/ecp/species/9743">https://ecos.fws.gov/ecp/species/9743</a>	Candidate

## Critical habitats

Potential effects to critical habitat(s) in this location must be analyzed along with the endangered species themselves.

There are no critical habitats at this location.

You are still required to determine if your project(s) may have effects on all above listed species.

## Bald & Golden Eagles

Bald and golden eagles are protected under the Bald and Golden Eagle Protection Act<sup>1</sup> and the Migratory Bird Treaty Act<sup>2</sup>.

Any person or organization who plans or conducts activities that may result in impacts to bald or golden eagles, or their habitats<sup>3</sup>, should follow appropriate regulations and consider implementing appropriate conservation measures, as described in the links below. Specifically, please review the "[Supplemental Information on Migratory Birds and Eagles](#)".

Additional information can be found using the following links:

- Eagle Management <https://www.fws.gov/program/eagle-management>
- Measures for avoiding and minimizing impacts to birds  
<https://www.fws.gov/library/collections/avoiding-and-minimizing-incident-take-migratory-birds>
- Nationwide conservation measures for birds  
<https://www.fws.gov/sites/default/files/documents/nationwide-standard-conservation-measures.pdf>
- Supplemental Information for Migratory Birds and Eagles in IPaC  
<https://www.fws.gov/media/supplemental-information-migratory-birds-and-bald-and-golden-eagles-may-occur-project-action>

There are likely bald eagles present in your project area. For additional information on bald eagles, refer to [Bald Eagle Nesting and Sensitivity to Human Activity](#).

For guidance on when to schedule activities or implement avoidance and minimization measures to reduce impacts to migratory birds on your list, see the PROBABILITY OF PRESENCE SUMMARY below to see when these birds are most likely to be present and breeding in your project area.

NAME

BREEDING SEASON

**Bald Eagle** *Haliaeetus leucocephalus*

Breeds Jan 1 to Aug 31

This is not a Bird of Conservation Concern (BCC) in this area, but warrants attention because of the Eagle Act or for potential susceptibilities in offshore areas from certain types of development or activities.

<https://ecos.fws.gov/ecp/species/1626>

**Golden Eagle** *Aquila chrysaetos*

Breeds Jan 1 to Aug 31

This is not a Bird of Conservation Concern (BCC) in this area, but warrants attention because of the Eagle Act or for potential susceptibilities in offshore areas from certain types of development or activities.

<https://ecos.fws.gov/ecp/species/1680>

## Probability of Presence Summary

The graphs below provide our best understanding of when birds of concern are most likely to be present in your project area. This information can be used to tailor and schedule your project activities to avoid or minimize impacts to birds. Please make sure you read ["Supplemental Information on Migratory Birds and Eagles"](#), specifically the FAQ section titled "Proper Interpretation and Use of Your Migratory Bird Report" before using or attempting to interpret this report.

### Probability of Presence (■)

Each green bar represents the bird's relative probability of presence in the 10km grid cell(s) your project overlaps during a particular week of the year. (A year is represented as 12 4-week months.) A taller bar indicates a higher probability of species presence. The survey effort (see below) can be used to establish a level of confidence in the presence score. One can have higher confidence in the presence score if the corresponding survey effort is also high.

How is the probability of presence score calculated? The calculation is done in three steps:

1. The probability of presence for each week is calculated as the number of survey events in the week where the species was detected divided by the total number of survey events for that week. For example, if in week 12 there were 20 survey events and the Spotted Towhee was found in 5 of them, the probability of presence of the Spotted Towhee in week 12 is 0.25.
2. To properly present the pattern of presence across the year, the relative probability of presence is calculated. This is the probability of presence divided by the maximum probability of presence across all weeks. For example, imagine the probability of presence in week 20 for the Spotted Towhee is 0.05, and that the probability of presence at week 12 (0.25) is the maximum of any week of the year. The relative probability of presence on week 12 is  $0.25/0.25 = 1$ ; at week 20 it is  $0.05/0.25 = 0.2$ .
3. The relative probability of presence calculated in the previous step undergoes a statistical conversion so that all possible values fall between 0 and 10, inclusive. This is the probability of presence score.

To see a bar's probability of presence score, simply hover your mouse cursor over the bar.

### Breeding Season (■)

Yellow bars denote a very liberal estimate of the time-frame inside which the bird breeds across its entire range. If there are no yellow bars shown for a bird, it does not breed in your project area.

### Survey Effort (|)

Vertical black lines superimposed on probability of presence bars indicate the number of surveys performed for that species in the 10km grid cell(s) your project area overlaps. The number of surveys is expressed as a range, for example, 33 to 64 surveys.

To see a bar's survey effort range, simply hover your mouse cursor over the bar.

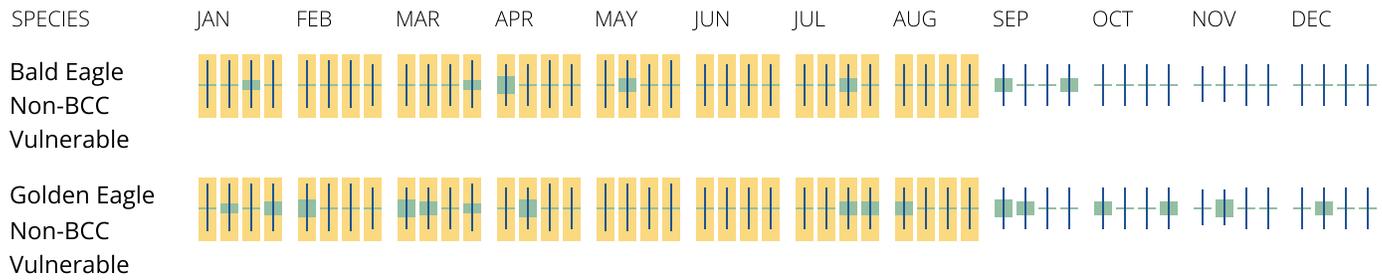

### No Data (—)

A week is marked as having no data if there were no survey events for that week.

### Survey Timeframe

Surveys from only the last 10 years are used in order to ensure delivery of currently relevant information. The exception to this is areas off the Atlantic coast, where bird returns are based on all years of available data, since data in these areas is currently much more sparse.

■ probability of presence ■ breeding season | survey effort — no data

### What does IPaC use to generate the potential presence of bald and golden eagles in my specified location?

The potential for eagle presence is derived from data provided by the [Avian Knowledge Network \(AKN\)](#). The AKN data is based on a growing collection of [survey, banding, and citizen science datasets](#) and is queried and filtered to return a list of those birds reported as occurring in the 10km grid cell(s) which your project intersects, and that have been identified as warranting special attention because they are a BCC species in that area, an eagle ([Eagle Act](#) requirements may apply). To see a list of all birds potentially present in your project area, please visit the [Rapid Avian Information Locator \(RAIL\) Tool](#).

### What does IPaC use to generate the probability of presence graphs of bald and golden eagles in my specified location?

The Migratory Bird Resource List is comprised of USFWS [Birds of Conservation Concern \(BCC\)](#) and other species that may warrant special attention in your project location.

The migratory bird list generated for your project is derived from data provided by the [Avian Knowledge Network \(AKN\)](#). The AKN data is based on a growing collection of [survey, banding, and citizen science datasets](#) and is queried and filtered to return a list of those birds reported as occurring in the 10km grid cell(s) which your project intersects, and that have been identified as warranting special attention because they are a BCC species in that area, an eagle ([Eagle Act](#) requirements may apply), or a species that has a particular vulnerability to offshore activities or development.

Again, the Migratory Bird Resource list includes only a subset of birds that may occur in your project area. It is not representative of all birds that may occur in your project area. To get a list of all birds potentially present in your project area, please visit the [Rapid Avian Information Locator \(RAIL\) Tool](#).

### What if I have eagles on my list?

If your project has the potential to disturb or kill eagles, you may need to obtain a permit to avoid violating the [Eagle Act](#) should such impacts occur. Please contact your local Fish and Wildlife Service Field Office if you have questions.

## Migratory birds

Certain birds are protected under the Migratory Bird Treaty Act<sup>1</sup> and the Bald and Golden Eagle Protection Act<sup>2</sup>.

Any person or organization who plans or conducts activities that may result in impacts to migratory birds, eagles, and their habitats<sup>3</sup> should follow appropriate regulations and consider implementing appropriate conservation measures, as described in the links below. Specifically, please review the "[Supplemental Information on Migratory Birds and Eagles](#)".

1. The [Migratory Birds Treaty Act](#) of 1918.
2. The [Bald and Golden Eagle Protection Act](#) of 1940.

Additional information can be found using the following links:

- Eagle Management <https://www.fws.gov/program/eagle-management>
- Measures for avoiding and minimizing impacts to birds <https://www.fws.gov/library/collections/avoiding-and-minimizing-incident-take-migratory-birds>
- Nationwide conservation measures for birds <https://www.fws.gov/sites/default/files/documents/nationwide-standard-conservation-measures.pdf>
- Supplemental Information for Migratory Birds and Eagles in IPaC <https://www.fws.gov/media/supplemental-information-migratory-birds-and-bald-and-golden-eagles-may-occur-project-action>

The birds listed below are birds of particular concern either because they occur on the [USFWS Birds of Conservation Concern](#) (BCC) list or warrant special attention in your project location. To learn more about the levels of concern for birds on your list and how this list is generated, see the FAQ [below](#). This is not a list of every bird you may find in this location, nor a guarantee that every bird on this list will be found in your project area. To see exact locations of where birders and the general public have sighted birds in and around your project area, visit the [E-bird data mapping tool](#) (Tip: enter your location, desired date range and a species on your list). For projects that occur off the Atlantic Coast, additional maps and models detailing the relative occurrence and abundance of bird species on your list are available. Links to additional information about Atlantic Coast birds, and other important information about your migratory bird list, including how to properly interpret and use your migratory bird report, can be found [below](#).

For guidance on when to schedule activities or implement avoidance and minimization measures to reduce impacts to migratory birds on your list, see the PROBABILITY OF PRESENCE SUMMARY below to see when these birds are most likely to be present and breeding in your project area.

NAME	BREEDING SEASON
<p>Allen's Hummingbird <i>Selasphorus sasin</i></p> <p>This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.</p> <p><a href="https://ecos.fws.gov/ecp/species/9637">https://ecos.fws.gov/ecp/species/9637</a></p>	Breeds Feb 1 to Jul 15

- Bald Eagle** *Haliaeetus leucocephalus* Breeds Jan 1 to Aug 31  
This is not a Bird of Conservation Concern (BCC) in this area, but warrants attention because of the Eagle Act or for potential susceptibilities in offshore areas from certain types of development or activities.  
<https://ecos.fws.gov/ecp/species/1626>
- Belding's Savannah Sparrow** *Passerculus sandwichensis beldingi* Breeds Apr 1 to Aug 15  
This is a Bird of Conservation Concern (BCC) only in particular Bird Conservation Regions (BCRs) in the continental USA  
<https://ecos.fws.gov/ecp/species/8>
- Bullock's Oriole** *Icterus bullockii* Breeds Mar 21 to Jul 25  
This is a Bird of Conservation Concern (BCC) only in particular Bird Conservation Regions (BCRs) in the continental USA
- California Gull** *Larus californicus* Breeds Mar 1 to Jul 31  
This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.
- California Thrasher** *Toxostoma redivivum* Breeds Jan 1 to Jul 31  
This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.
- Common Yellowthroat** *Geothlypis trichas sinuosa* Breeds May 20 to Jul 31  
This is a Bird of Conservation Concern (BCC) only in particular Bird Conservation Regions (BCRs) in the continental USA  
<https://ecos.fws.gov/ecp/species/2084>
- Golden Eagle** *Aquila chrysaetos* Breeds Jan 1 to Aug 31  
This is not a Bird of Conservation Concern (BCC) in this area, but warrants attention because of the Eagle Act or for potential susceptibilities in offshore areas from certain types of development or activities.  
<https://ecos.fws.gov/ecp/species/1680>
- Northern Harrier** *Circus hudsonius* Breeds Apr 1 to Sep 15  
This is a Bird of Conservation Concern (BCC) only in particular Bird Conservation Regions (BCRs) in the continental USA  
<https://ecos.fws.gov/ecp/species/8350>

**Oak Titmouse** *Baeolophus inornatus*

Breeds Mar 15 to Jul 15

This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.

<https://ecos.fws.gov/ecp/species/9656>

**Olive-sided Flycatcher** *Contopus cooperi*

Breeds May 20 to Aug 31

This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.

<https://ecos.fws.gov/ecp/species/3914>

**Western Gull** *Larus occidentalis*

Breeds Apr 21 to Aug 25

This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.

**Wrentit** *Chamaea fasciata*

Breeds Mar 15 to Aug 10

This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.

## Probability of Presence Summary

The graphs below provide our best understanding of when birds of concern are most likely to be present in your project area. This information can be used to tailor and schedule your project activities to avoid or minimize impacts to birds. Please make sure you read ["Supplemental Information on Migratory Birds and Eagles"](#), specifically the FAQ section titled "Proper Interpretation and Use of Your Migratory Bird Report" before using or attempting to interpret this report.

### Probability of Presence (■)

Each green bar represents the bird's relative probability of presence in the 10km grid cell(s) your project overlaps during a particular week of the year. (A year is represented as 12 4-week months.) A taller bar indicates a higher probability of species presence. The survey effort (see below) can be used to establish a level of confidence in the presence score. One can have higher confidence in the presence score if the corresponding survey effort is also high.

How is the probability of presence score calculated? The calculation is done in three steps:

1. The probability of presence for each week is calculated as the number of survey events in the week where the species was detected divided by the total number of survey events for that week. For example, if in week 12 there were 20 survey events and the Spotted Towhee was found in 5 of them, the probability of presence of the Spotted Towhee in week 12 is 0.25.
2. To properly present the pattern of presence across the year, the relative probability of presence is calculated. This is the probability of presence divided by the maximum

probability of presence across all weeks. For example, imagine the probability of presence in week 20 for the Spotted Towhee is 0.05, and that the probability of presence at week 12 (0.25) is the maximum of any week of the year. The relative probability of presence on week 12 is  $0.25/0.25 = 1$ ; at week 20 it is  $0.05/0.25 = 0.2$ .

- The relative probability of presence calculated in the previous step undergoes a statistical conversion so that all possible values fall between 0 and 10, inclusive. This is the probability of presence score.

To see a bar's probability of presence score, simply hover your mouse cursor over the bar.

### Breeding Season (■)

Yellow bars denote a very liberal estimate of the time-frame inside which the bird breeds across its entire range. If there are no yellow bars shown for a bird, it does not breed in your project area.

### Survey Effort (|)

Vertical black lines superimposed on probability of presence bars indicate the number of surveys performed for that species in the 10km grid cell(s) your project area overlaps. The number of surveys is expressed as a range, for example, 33 to 64 surveys.

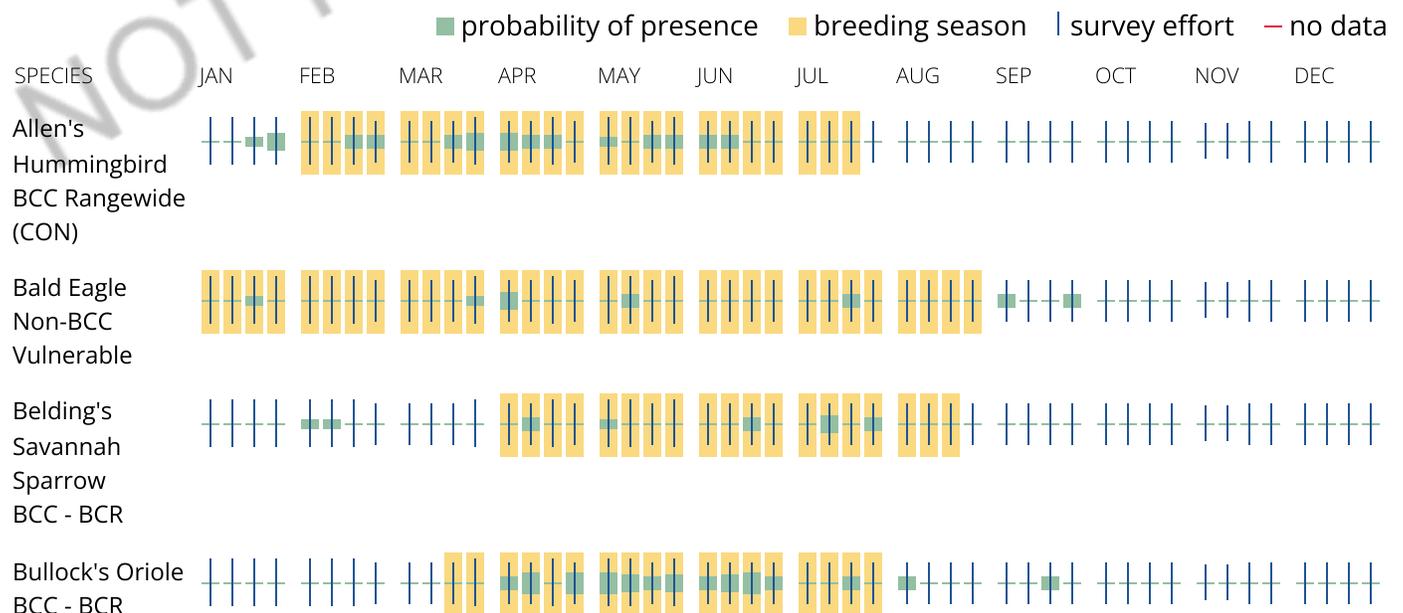

To see a bar's survey effort range, simply hover your mouse cursor over the bar.

### No Data (—)

A week is marked as having no data if there were no survey events for that week.

### Survey Timeframe

Surveys from only the last 10 years are used in order to ensure delivery of currently relevant information. The exception to this is areas off the Atlantic coast, where bird returns are based on all years of available data, since data in these areas is currently much more sparse.

**Tell me more about conservation measures I can implement to avoid or minimize impacts to migratory birds.**

[Nationwide Conservation Measures](#) describes measures that can help avoid and minimize impacts to all birds at any location year round. Implementation of these measures is particularly important when birds are most likely to occur in the project area. When birds may be breeding in the area, identifying the locations of any active nests and avoiding their destruction is a very helpful impact minimization measure. To see when birds are most likely to occur and be breeding in your project area, view the Probability of Presence Summary. [Additional measures](#) or [permits](#) may be advisable depending on the type of activity you are conducting and the type of infrastructure or bird species present on your project site.

**What does IPaC use to generate the list of migratory birds that potentially occur in my specified location?**

The Migratory Bird Resource List is comprised of USFWS [Birds of Conservation Concern \(BCC\)](#) and other species that may warrant special attention in your project location.

The migratory bird list generated for your project is derived from data provided by the [Avian Knowledge Network \(AKN\)](#). The AKN data is based on a growing collection of [survey, banding, and citizen science datasets](#) and is queried and filtered to return a list of those birds reported as occurring in the 10km grid cell(s) which your project intersects, and that have been identified as warranting special attention because they are a BCC species in that area, an eagle ([Eagle Act](#) requirements may apply), or a species that has a particular vulnerability to offshore activities or development.

Again, the Migratory Bird Resource list includes only a subset of birds that may occur in your project area. It is not representative of all birds that may occur in your project area. To get a list of all birds potentially present in your project area, please visit the [Rapid Avian Information Locator \(RAIL\) Tool](#).

### **What does IPaC use to generate the probability of presence graphs for the migratory birds potentially occurring in my specified location?**

The probability of presence graphs associated with your migratory bird list are based on data provided by the [Avian Knowledge Network \(AKN\)](#). This data is derived from a growing collection of [survey, banding, and citizen science datasets](#).

Probability of presence data is continuously being updated as new and better information becomes available. To learn more about how the probability of presence graphs are produced and how to interpret them, go to the Probability of Presence Summary and then click on the "Tell me about these graphs" link.

### **How do I know if a bird is breeding, wintering or migrating in my area?**

To see what part of a particular bird's range your project area falls within (i.e. breeding, wintering, migrating or year-round), you may query your location using the [RAIL Tool](#) and look at the range maps provided for birds in your area at the bottom of the profiles provided for each bird in your results. If a bird on your migratory bird species list has a breeding season associated with it, if that bird does occur in your project area, there may be nests present at some point within the timeframe specified. If "Breeds elsewhere" is indicated, then the bird likely does not breed in your project area.

### **What are the levels of concern for migratory birds?**

Migratory birds delivered through IPaC fall into the following distinct categories of concern:

1. "BCC Rangewide" birds are [Birds of Conservation Concern](#) (BCC) that are of concern throughout their range anywhere within the USA (including Hawaii, the Pacific Islands, Puerto Rico, and the Virgin Islands);
2. "BCC - BCR" birds are BCCs that are of concern only in particular Bird Conservation Regions (BCRs) in the continental USA; and
3. "Non-BCC - Vulnerable" birds are not BCC species in your project area, but appear on your list either because of the [Eagle Act](#) requirements (for eagles) or (for non-eagles) potential susceptibilities in offshore areas from certain types of development or activities (e.g. offshore energy development or longline fishing).

Although it is important to try to avoid and minimize impacts to all birds, efforts should be made, in particular, to avoid and minimize impacts to the birds on this list, especially eagles and BCC species of rangewide concern. For more information on conservation measures you can implement to help avoid and minimize migratory bird impacts and requirements for eagles, please see the FAQs for these topics.

### **Details about birds that are potentially affected by offshore projects**

For additional details about the relative occurrence and abundance of both individual bird species and groups of bird species within your project area off the Atlantic Coast, please visit the [Northeast Ocean Data Portal](#). The Portal also offers data and information about other taxa besides birds that may be helpful to you in your project review. Alternately, you may download the bird model results files underlying the portal maps through the [NOAA NCCOS Integrative Statistical Modeling and Predictive Mapping of Marine Bird Distributions and Abundance on the Atlantic Outer Continental Shelf](#) project webpage.

Bird tracking data can also provide additional details about occurrence and habitat use throughout the year, including migration. Models relying on survey data may not include this information. For additional information on marine bird tracking data, see the [Diving Bird Study](#) and the [nanotag studies](#) or contact [Caleb Spiegel](#) or [Pam Loring](#).

### What if I have eagles on my list?

If your project has the potential to disturb or kill eagles, you may need to [obtain a permit](#) to avoid violating the Eagle Act should such impacts occur.

### Proper Interpretation and Use of Your Migratory Bird Report

The migratory bird list generated is not a list of all birds in your project area, only a subset of birds of priority concern. To learn more about how your list is generated, and see options for identifying what other birds may be in your project area, please see the FAQ "What does IPaC use to generate the migratory birds potentially occurring in my specified location". Please be aware this report provides the "probability of presence" of birds within the 10 km grid cell(s) that overlap your project; not your exact project footprint. On the graphs provided, please also look carefully at the survey effort (indicated by the black vertical bar) and for the existence of the "no data" indicator (a red horizontal bar). A high survey effort is the key component. If the survey effort is high, then the probability of presence score can be viewed as more dependable. In contrast, a low survey effort bar or no data bar means a lack of data and, therefore, a lack of certainty about presence of the species. This list is not perfect; it is simply a starting point for identifying what birds of concern have the potential to be in your project area, when they might be there, and if they might be breeding (which means nests might be present). The list helps you know what to look for to confirm presence, and helps guide you in knowing when to implement conservation measures to avoid or minimize potential impacts from your project activities, should presence be confirmed. To learn more about conservation measures, visit the FAQ "Tell me about conservation measures I can implement to avoid or minimize impacts to migratory birds" at the bottom of your migratory bird trust resources page.

## Facilities

### National Wildlife Refuge lands

Any activity proposed on lands managed by the [National Wildlife Refuge](#) system must undergo a 'Compatibility Determination' conducted by the Refuge. Please contact the individual Refuges to discuss any questions or concerns.

There are no refuge lands at this location.

# Fish hatcheries

There are no fish hatcheries at this location.

## Wetlands in the National Wetlands Inventory (NWI)

Impacts to [NWI wetlands](#) and other aquatic habitats may be subject to regulation under Section 404 of the Clean Water Act, or other State/Federal statutes.

For more information please contact the Regulatory Program of the local [U.S. Army Corps of Engineers District](#).

This location did not intersect any wetlands mapped by NWI.

**NOTE:** This initial screening does **not** replace an on-site delineation to determine whether wetlands occur. Additional information on the NWI data is provided below.

### Data limitations

The Service's objective of mapping wetlands and deepwater habitats is to produce reconnaissance level information on the location, type and size of these resources. The maps are prepared from the analysis of high altitude imagery. Wetlands are identified based on vegetation, visible hydrology and geography. A margin of error is inherent in the use of imagery; thus, detailed on-the-ground inspection of any particular site may result in revision of the wetland boundaries or classification established through image analysis.

The accuracy of image interpretation depends on the quality of the imagery, the experience of the image analysts, the amount and quality of the collateral data and the amount of ground truth verification work conducted. Metadata should be consulted to determine the date of the source imagery used and any mapping problems.

Wetlands or other mapped features may have changed since the date of the imagery or field work. There may be occasional differences in polygon boundaries or classifications between the information depicted on the map and the actual conditions on site.

### Data exclusions

Certain wetland habitats are excluded from the National mapping program because of the limitations of aerial imagery as the primary data source used to detect wetlands. These habitats include seagrasses or submerged aquatic vegetation that are found in the intertidal and subtidal zones of estuaries and nearshore coastal waters. Some deepwater reef communities (coral or tubercid worm reefs) have also been excluded from the inventory. These habitats, because of their depth, go undetected by aerial imagery.

**Data precautions**

Federal, state, and local regulatory agencies with jurisdiction over wetlands may define and describe wetlands in a different manner than that used in this inventory. There is no attempt, in either the design or products of this inventory, to define the limits of proprietary jurisdiction of any Federal, state, or local government or to establish the geographical scope of the regulatory programs of government agencies. Persons intending to engage in activities involving modifications within or adjacent to wetland areas should seek the advice of appropriate Federal, state, or local agencies concerning specified agency regulatory programs and proprietary jurisdictions that may affect such activities.

## Appendix E Historic Resource Assessment

The conclusions in the Report titled Historic Resources Assessment for the New Sixth Appellate District Courthouse are Stantec's professional opinion, as of the time of the Report, and concerning the scope described in the Report. The opinions in the document are based on conditions and information existing at the time the scope of work was conducted and do not take into account any subsequent changes. The Report relates solely to the specific project for which Stantec was retained and the stated purpose for which the Report was prepared. The Report is not to be used or relied on for any variation or extension of the project, or for any other project or purpose, and any unauthorized use or reliance is at the recipient's own risk.

Stantec has assumed all information received from Judicial Council of California (Judicial Council) and third parties in the preparation of the Report to be correct. While Stantec has exercised a customary level of judgment or due diligence in the use of such information, Stantec assumes no responsibility for the consequences of any error or omission contained therein. This Report is intended solely for use by the Judicial Council in accordance with Stantec's contract with the Judicial Council. While the Report may be provided by the Judicial Council to applicable authorities having jurisdiction and to other third parties in connection with the Project, Stantec disclaims any legal duty based upon warranty, reliance, or any other theory to any third party, and will not be liable to such third party for any damages or losses of any kind that may result.

# HISTORIC RESOURCES ASSESSMENT OF SUNNYVALE COURTHOUSE FOR THE NEW SIXTH APPELLATE DISTRICT COURTHOUSE PROJECT

Executive Summary  
July 11, 2024

## Executive Summary

Stantec Consulting Services Inc. (Stantec) contracted with the Judicial Council of California (Judicial Council) to conduct a historic resources inventory and assessment of an existing structure on the future site of the New Sixth Appellate District Courthouse in the City of Sunnyvale (City), Santa Clara County, California. The New Sixth Appellate District Courthouse Project (Project) consists of the demolition of an existing building and the construction of a new courthouse with onsite parking for the Sixth Appellate District of the Court of Appeal in a more practical and accessible infill location. Since it was established in 1984, the Sixth Appellate District of the Court of Appeal (Sixth Appellate District), has operated out of 43,758 square feet (SF) of the Comerica Bank Building, located at 333 West Santa Clara Street within downtown San Jose pursuant to a lease. The Sunnyvale Courthouse, constructed in 1967, served as the municipal family court for the City and Santa Clara County overall. The courthouse has undergone a few additions, including the design of the fourth courtroom in the 1980s and the construction of an extended entryway on the primary elevation, as well as general maintenance since its construction. The Sunnyvale Courthouse was eventually vacated in 2016 when all family court services were moved to San Jose. Currently, the Sunnyvale Courthouse building remains vacant. Most interiors of the building have been removed, and the courthouse is largely empty. This inventory and assessment were conducted to provide the Judicial Council with information regarding the cultural resources status of the Sunnyvale Courthouse building in support of planning efforts for the demolition of the Sunnyvale Courthouse and construction of the Project on the parcel.

The Project includes one parcel (APN 165-02-004) located at 605 West El Camino Real, Sunnyvale, California 94087. This inventory and assessment address the criteria of the National Register of Historic Places (NRHP) and California Register of Historical Resources (CRHR) and is intended to comply with Section 15064.5(a)(2) -(3) of the California Environmental Quality Act (CEQA), using the criteria outlined in Section 5024.1 of the California Public Resources Code (PRC). Since the Judicial Council is the lead agency for the Project, and is acting for the State of California, local government land use planning and zoning regulations do not apply to the Project. However, the Judicial Council considers county and/or city policies and guidelines, as appropriate, to determine whether the Project would be consistent with the site's character and surroundings. While not binding on the Judicial Council, guidelines for the recordation of the City Heritage Resources and review of the Sunnyvale Heritage Resources Inventory criteria were also reviewed.

Architectural Historian Rebecca Riggs, who meets the Secretary of the Interior Professional Qualification Standards for Architectural History and History, conducted intensive primary and secondary research to develop an appropriate historic context for the evaluation of the Project. As described in detail in this Report and in the accompanying DPR 523 Form (Appendix A), this study concludes that the Project is recommended not eligible for listing on the NRHP, CRHR, or Sunnyvale Heritage Resources Inventory because of a lack of historical significance. As such, while the building retains overall integrity, it does not meet any of the eligibility criteria for listing in the NRHP, CRHR, or Sunnyvale Heritage Resources Inventory. The property has been evaluated in accordance with Section 15064.5(a)(2)-(3) of CEQA, using the criteria outlined in Section 5024.1 of the PRC and does not appear to be a historical resource for the purposes of CEQA.

# HISTORIC RESOURCES ASSESSMENT OF SUNNYVALE COURTHOUSE FOR THE NEW SIXTH APPELLATE DISTRICT COURTHOUSE PROJECT

Research and Field Methods  
July 11, 2024

## 1.0 Research and Field Methods

Stantec Architectural Historians Rebecca Riggs and Alana Vidmar conducted background research on the development and construction of the New Sixth Appellate District Courthouse Project (Project). Ms. Vidmar conducted preliminary research, which included review of current and historic maps, available drawings, and records on the construction of the Project (all provided by the Judicial Council of California [Judicial Council]). Drawings and records provided by the Judicial Council, as well as historic newspaper articles, confirmed the dates of construction for the Superior Court of California, County of Santa Clara, Sunnyvale Courthouse (Sunnyvale Courthouse) and development history. The Judicial Council indicated that the Sunnyvale Courthouse had not been previously evaluated for historical significance, and this was confirmed by the completion of a records search through the California Historical Resources Information System (CHRIS) at the Northwest Information Center (NWIC).

Ms. Riggs and Ms. Vidmar conducted primary and secondary desktop research to develop a historic context for the evaluation of the Sunnyvale Courthouse. Resources consulted include the City of Sunnyvale Historic Context Statement, historic newspapers, local historic contexts, and other local periodicals that address the development of the region.

Architectural Historian Rebecca Riggs conducted fieldwork on March 21, 2024 (**Figure 1**). The Project Area includes the subject parcel at 605 West El Camino Real, City of Sunnyvale (City), California 94087 (APN 165-02-004; **Figure 2**). Ms. Riggs surveyed the exterior and interior of the Project Area and documented the building with written documentation and photography. While the Sunnyvale Courthouse dates to 1967, there have been modifications, repairs, and alterations made to the building over time. Additional modifications are described in the historic context of this Report and in the Department of Parks and Recreation (DPR) 523 Form located in Appendix A.

# HISTORIC RESOURCES ASSESSMENT OF SUNNYVALE COURTHOUSE FOR THE NEW SIXTH APPELLATE DISTRICT COURTHOUSE PROJECT

Project Description  
July 11, 2024

## 2.0 Project Description

The Project Site (Site) is located at 605 W. El Camino Real (Santa Clara County Assessor's Parcel Number: 165-02-004) in the City of Sunnyvale (City) in Santa Clara County, California. The 2.03-acre Site is situated on the north side of W. El Camino Real between Mathilda Avenue and Pastoria Avenue.

The Site was developed in 1967 with 19,994 square feet (SF), single story building with partial basement and onsite parking. The property is a state-owned asset that was used by the Superior Court of Santa Clara for trial court operations from 1967 until August 12, 2016, when courthouse operations were moved to the Family Justice Center Courthouse located in San Jose, California. The Site is located within the City Civic Center. Surrounding land is predominantly zoned for public facilities and commercial use and is moderately to densely developed with public facilities, shopping centers, hotels, office buildings, and supporting commercial services.

The Project would include the demolition of the existing 19,994 square foot one-story building (Sunnyvale Courthouse) with a partial basement as well as an unused shed structure currently within the parking lot. The Project would additionally involve demolition of approximately 19,760 SF of existing paving, full repaving of 4,580 SF of existing drive access road, resurfacing of 9,800 SF of existing parking area, and paving of 13,200 SF of new parking area. The new courthouse would be approximately 50,000 SF and up to three stories in height located in the same general footprint as the existing building on the Site.

The primary elevation of the existing courthouse fronts El Camino Real, and the rear elevation faces a parking lot (**Photographs 1 and 2**). The existing courthouse was designed around a central, interior atrium, with the east and west elevations designed as mirror images (**Photograph 3**). Two courtrooms are located on either side of the central core of the building, with four total courtrooms in the Sunnyvale Courthouse. There are two primary entrances on either side of the central core of the building, on the north and south elevations. There is one addition to the building: an aluminum siding and flat roof overhang added to the eastern primary entrance. For a detailed description of the interior and exterior of the Sunnyvale Courthouse, as well as detailed photographs, please see the DPR Form located in Appendix A.

Historical Overview  
July 11, 2024

## 3.0 Historical Overview

### 3.1 Non-Native Exploration, Settlement, and the Establishment of Santa Clara County

In 1777, Father Junipero Serra arrived in the present-day San Francisco Bay Area and began establishing Franciscan missions along the California coast. Mission Santa Clara de Asis was the eighth of 21 missions that Serra established throughout California and gave the area its lasting name. In November 1777, San Jose became the first recorded town in the California territory, known as Pueblo de San Jose de Guadalupe. It retained its importance over time and is the largest city in Santa Clara County and the county seat to this day. As Mexican and American settlers continued to migrate to California in the 1810s and 1820s, Mission Santa Clara de Asis was an important resting stop for the portion of the journey from Monterey to San Francisco. However, in 1825, the Mexican government began to sell mission lands off as ranchos and land grants to settlers.<sup>1</sup>

In 1846, the United States and Mexico entered a war over control of land in North America, primarily California and what would become the western coast of the United States. California became a U.S. territory in 1848 at the conclusion of the war; the same year that gold was discovered in Coloma along the American River. By 1850, California became the 31<sup>st</sup> state, and Americans flooded into the new state to try their luck at gold mining and land prospecting. Mission Santa Clara was defunct during the Gold Rush; however, the Catholic bishop of California decided it would be a good location for a school and founded the first college in California, Santa Clara University, on the site of the old mission. Santa Clara County was officially formed in 1850 and was one of the 27 original counties in California. As the Gold Rush dwindled, miners and new settlers to California looked for new places to settle, and from 1850 through the 1880s, towns arose all over Santa Clara County. The town of Sunnyvale was incorporated in 1901 and was one of the last towns incorporated in Santa Clara County. The new town was established on land previously used as orchards and wheat fields. Along with steady population growth, construction of the Southern Pacific Railroad and plentiful agricultural land made the Santa Clara Valley a desirable place to live and work at the turn of the century.<sup>2</sup>

The 20<sup>th</sup> century saw continued advancement for Santa Clara County, from the educational opportunities offered at Stanford University, to Santa Clara County becoming home to one of the most advanced military research and development programs in the country at Naval Air Station (NAS) Sunnyvale, also known as Moffett Federal Airfield. World War II prompted military activity in Santa Clara County, and after the war, most of the scientists and engineers who came to Santa Clara County to help with the war effort stayed in the area in the 1950s, leading to the birth of Silicon Valley and Santa Clara County becoming home to some of the largest advanced technology companies in the world, including Hewlett-Packard,

Intel, and Apple. These companies continued to influence Santa Clara County economics, and Santa Clara County continued to thrive as a technology hub throughout the 21<sup>st</sup> century.<sup>3</sup>

## 3.2 Development of City of Sunnyvale

In 1842, the land encompassing present-day Mountain View and the City was granted to Francisco Estrada as Rancho Pastoria de las Borregas.<sup>4</sup> In 1850, Irish immigrant Martin Murphy, Jr. arrived in the area, purchased a portion of the rancho, and operated it as Bay View Ranch. When the San Francisco and San Jose Railroad was constructed in 1860, they named the stop near Bay View Ranch Murphy Station. As agriculture grew in the area through the 1860s and 1870s, Murphy became an unincorporated town in Santa Clara County. By 1901, Murphy was ready to incorporate, but they were told by the postal service they needed to change their name. The name Sunnyvale was chosen, and through the 1910s and 1920s, rapid development occurred throughout the City.<sup>5</sup>

In 1930, construction began on NAS Sunnyvale, which would serve as the West Coast dirigible base. By 1940, NAS Sunnyvale was not only used as an operational Navy base but also as the Ames Research Center for the National Aeronautics and Space Administration. The onset of World War II set the City on the track to become the technological hub it remains today and was the beginning of its nickname “the heart of Silicon Valley.” The City was a hub of activity during the war, and in the post-war period, the economy and population swelled with the construction of new subdivisions and new technology-based enterprises, like the addition of the Lockheed Martin headquarters and operations facility in 1956.<sup>6</sup>

Throughout the 1950s, the extensive growth in the City led to the undertaking of major rezoning efforts, including the widening of roads and construction by the City and county of new municipal infrastructure. Farmlands within and surrounding the City were impacted. Farmers were displaced, or their farms were divided into smaller sections of land. New subdivisions, schools, shopping centers, highways, parks, and fire stations were built for the growing population. A volunteer civic improvement committee helped the City secure a \$6.8 million bond for some of these improvements and the construction of a new Civic Center.<sup>7</sup>

The rapid growth of the City’s amenities severed the long-standing commercial connection between the City and nearby San Jose. Prior to the development of their own commercial district, City residents relied on the rail connection between the two cities to access retail, events, and Santa Clara County services in San Jose. Construction of new highways and interstates through the South Bay area also made it easier to go outside Santa Clara County or to other neighboring towns for amenities that were not directly

Historical Overview  
July 11, 2024

available in the City. After the development of the City's downtown, residents could meet their commercial needs in the City.<sup>8</sup>

The City's housing development boomed in the 1950s, thanks in large part to real-estate developer Joseph Eichler and his tracts of what are now iconic mid-century modern houses. The development boom continued into the 1960s. This extensive growth was accompanied by political turmoil. Between 1960–1969, the City had eight mayors and four city managers.<sup>9</sup> The cause of this turnover can largely be attributed to the consistent development and rezoning of the City, which led to the loss of almost all the previous agricultural land in the area. The development pressures led to the demolition of many buildings associated with the founding of Murphy and Sunnyvale. As the City grew and changed, many locals were split between encouraging more growth or wanting it to be slowed down; that same infighting was reflected within the City government.<sup>10</sup> While local debates occurred, change continued to surge forward in the form of federal urban renewal grants received by the City in the 1960s, which led to the City Council granting the approval to clear out what they viewed as blighted areas of the City for the construction of a shopping mall, among other businesses. By the late 1960s, the City spent close to \$50 million on upgrades to the downtown core since 1960; new residential development across the City; and municipal buildings, including a new City Hall and a new courthouse.<sup>11</sup>

## 3.3 Sunnyvale Courthouse

The first courthouse in present-day Santa Clara County was a pueblo built in 1783 to uphold colonial Spanish laws. The second courthouse followed soon after in 1798. Both were located in the San Jose area. In 1850, when California became a state, the first county court was built on South First Street in San Jose. A larger county courthouse was built in 1868 in San Jose and remained the primary courthouse in Santa Clara County until 1932, when city governments around Santa Clara County began to construct their own courthouses.<sup>12</sup>

In 1960, the City entered discussions with private developer Hare, Brewer, and Kelley of Palo Alto to purchase land for a new municipal court. The City hoped to purchase one acre of land behind the existing library; the parcel was being sold for \$91,000. The City and the developer had not come to an agreement by August 1960, despite a price drop to \$73,000. The local newspaper reported that the City would consider utilizing public land adjacent to the City Hall at the intersection of West Olive Avenue and South Mathilda Avenue. The City Council still preferred the site next to the library and asked the City Manager Perry Scott to consider further negotiations with Hare, Brewer, and Kelley. One suggestion was to trade the public land for the private land, rather than enter into a purchase agreement.<sup>13</sup>

# HISTORIC RESOURCES ASSESSMENT OF SUNNYVALE COURTHOUSE FOR THE NEW SIXTH APPELLATE DISTRICT COURTHOUSE PROJECT

Historical Overview  
July 11, 2024

The political turmoil of the City in the 1960s and prolonged debate over a location delayed further decision making on a new courthouse until 1964. On April 20, 1964, it was announced that the City intended to build on the old Murphy estate, a 2-acre site at the intersection of Sunnyvale Avenue and Arques Avenue. William W. Hedley, Jr. of San Jose was chosen as the architect for the Sunnyvale Courthouse in April 1964. The Santa Clara County Board of Supervisors was eager to move the Sunnyvale Courthouse project forward because of previous project delays. As a result, Hedley was chosen despite a no vote from Supervisor Ed R. Levin who instead asked for more information on the project.<sup>14</sup> Hedley was a local architect who worked on projects primarily in the San Jose area and went on to design the San Jose Convention Center, which was completed in 1977.<sup>15</sup>

Hedley's plan for the Sunnyvale Avenue and Arques Avenue site was accepted in October that same year. Although the design was more than \$100,000 over budget, the Board approved the design that was said to "reflect Santa Clara County and the dignity of the court." Hedley's plan depicted a single story stucco building that fit with the modest surrounding neighborhood (**Figure 3**).<sup>16</sup> The design encompassed three courtrooms and provided space for a fourth.<sup>17</sup>

Historical Overview  
July 11, 2024

Avenue. The new site was part of the Civic Center complex, as was originally suggested back in 1960. The decision was made by the City Council after plans for the Central Expressway adjacent to the Murphy estate were altered. The expressway alteration would result in less parking available at the Sunnyvale Courthouse Project Site, making it unfit for the courthouse. Hedley's building plans were also reviewed, and it was determined the courthouse building would fit on either site. The Murphy estate would instead be used as a memorial park and cultural heritage museum.<sup>18</sup>

On December 10, 1964, the City Council approved the Civic Center site for the Sunnyvale Courthouse and determined the existing building design was appropriate for the site. Thomas A. Sweeny, acting City Manager, noted the stucco, redwood, and stone building exterior would be similar in appearance to buildings at Foothill College in Los Altos Hills. The potential conflict between Hedley's neighborhood-specific design and the new location did not go unnoticed; however, City officials chose to move forward with the existing design instead of spending more money to redesign the courthouse. Although the design did not match the other buildings in the Civic Center complex, it was a similar design to other civic structures and schools around the City and Northern California at the time.<sup>19</sup>

Gurries Construction Company of San Jose was selected as project contractor in April 1966. The company's low bid of \$504,975 was within 10 percent of the Santa Clara County Board of Supervisor's estimate of \$492,000.<sup>20</sup> Gurries Construction was extremely active in Santa Clara County in the 1950s and 1960s, primarily providing construction for school district projects all around Santa Clara County, including several schools for the Cupertino Elementary School District (now Cupertino Union School District) and at least one school for the Los Gatos Union School District.<sup>21</sup> After the 1960s, there is little information about Gurries Construction and no announcements about the projects they constructed, so it is likely that the company ceased operations in the 1970s.

Groundbreaking for the Sunnyvale Courthouse occurred on Friday, May 20, 1966. The final design included two finished courtrooms and space for two more, anticipating future growth of the City (**Figures 4 and 5**).<sup>13</sup> The courthouse was completed on time and opened on May 22, 1967. Judges James Duvaras and James B. Scott were the first judges to occupy the newly finished building.<sup>22</sup> Instead of two courtrooms, three courtrooms were completed in the initial construction of the Sunnyvale Courthouse. The fourth courtroom was eventually completed in the 1980s when Santa Clara County took over responsibility of the Sunnyvale Courthouse and began to use it for family court cases countywide.<sup>23</sup>

**Figure 4. Sunnyvale Courthouse Floor Plans Showing Three Completed Courtrooms and One Uncompleted Courtroom**

In 1985, the Santa Clara County Board of Supervisors proposed the demolition of the Superior Court building in San Jose. The Sunnyvale Courthouse would be made obsolete and replaced with a new "Hall of Justice" building in San Jose, expected to cost Santa Clara County \$25.8 million. The county set about looking for funding opportunities. One option considered was the sale of the Sunnyvale Courthouse to a private buyer, which could bring in as much as \$2.7 million for the San Jose project. The Sunnyvale Courthouse was of greater monetary value than smaller courthouses in Los Gatos and Gilroy and was not shared by other county departments as was the case at other courthouses under consideration for sale.<sup>24</sup> The Sunnyvale Courthouse was ultimately not sold and continued operations as the family court for Santa Clara County. Eventually the County Clerk office was also housed in the building and alterations were made to one of the primary entrances in 2004. Use of the Sunnyvale Courthouse continued until its

# HISTORIC RESOURCES ASSESSMENT OF SUNNYVALE COURTHOUSE FOR THE NEW SIXTH APPELLATE DISTRICT COURTHOUSE PROJECT

Regulatory Framework  
July 11, 2024

## 4.0 Regulatory Framework

### 4.1 National Register of Historic Places and California Register of Historical Resources

To be eligible for the NRHP or CRHR, a resource must be determined significant under at least one of the four criteria for evaluation and retain integrity to its period of significance. The criteria for the NRHP and CRHR are paraphrased below:

**Criterion A/1:** Resources that are associated with events that have made a significant contribution to the broad patterns of our history;

**Criterion B/2:** Resources that are associated with the lives of significant persons in our past;

**Criterion C/3:** Resources that embody the distinctive characteristics of a type, period, or method of construction, or that represent the work of a master, or that possess high artistic values, or that represent a significant and distinguishable entity whose components may lack individual distinction;

**Criterion D/4:** Resources that have yielded or may be likely to yield, information important in history or prehistory.

In addition to significance under one or more of the criteria listed above, a resource must possess integrity, defined by seven aspects as follows:

**Location:** the place where the historic property was constructed or the place where the historic event took place.

**Design:** the composition of elements that constitute the form, plan, space, structure, and style of a property.

**Setting:** the physical environment of a historic property that illustrates the character of the place.

**Materials:** the physical elements combined in a particular pattern or configuration.

**Workmanship:** the physical evidence of the crafts of a particular culture or people during any given period of history.

**Feeling:** the quality that a historic property has in evoking the aesthetic or historic sense of a past period of time.

**Association:** the direct link between a property and the event or person for which the property is significant.

# HISTORIC RESOURCES ASSESSMENT OF SUNNYVALE COURTHOUSE FOR THE NEW SIXTH APPELLATE DISTRICT COURTHOUSE PROJECT

Regulatory Framework  
July 11, 2024

NRHP analysis is based upon all pertinent cultural resources guidance and best practices including that of 36 Code of Federal Regulations (CFR) Part 800 and technical bulletins such as *National Register Bulletin 15: How to Apply the National Register Criteria for Evaluation*. California Environmental Quality Act (CEQA) analysis is based on CEQA Guidelines outlined in Section 5024.1 of the California Public Resource Code.<sup>26</sup>

## 4.2 City of Sunnyvale Heritage Preservation Ordinance

The City has their own heritage preservation guidelines, which are outlined in the City's Code of Ordinances for Zoning under Discretionary Permits and Procedures, Chapter 19.96 Heritage Preservation. The guidelines are aimed at protecting the character and history of the City through cultural, historical, and architectural heritage, to safeguard the City's unique cultural heritage, and to facilitate public knowledge and appreciation of the City's history. The guidelines were put in place by the City Council and are upheld by the Heritage Preservation Commission. Criteria for the evaluation and nomination of heritage resources within the City are as follows:

**Criterion A:** It exemplifies or reflects special elements of the City's cultural, social, economic, political, aesthetic engineering, architectural, or natural history;

**Criterion B:** It is identified with persons or events significant in local, state, or national history;

**Criterion C:** It embodies distinctive characteristics of a style, type, period, or method of construction, or is a valuable example of the use of indigenous materials or craftsmanship;

**Criterion D:** It is representative of the work of a notable builder, designer, or architect;

**Criterion E:** It contributes to the significance of an historic area, being a geographically definable area possessing a concentration of historic or scenic properties or thematically related grouping of properties which contribute to each other and are unified aesthetically or by plan or physical development;

**Criterion F:** It has a unique location or singular physical characteristic or is a view or vista representing an established and familiar visual feature of a neighborhood, community, or the City of Sunnyvale;

**Criterion G:** It embodies elements of architectural design, detail, materials, or craftsmanship that represents a significant structural or architectural achievement or innovation;

**Criterion H:** It is similar to other distinctive properties, sites, areas, or objects based on a historic, cultural, or architectural motif;

---

<sup>26</sup> National Park Service, *National Register Bulletin 15: How to Apply the National Register Criteria for Evaluation*, 2002, accessed April 8, 2024, <http://www.nps.gov/nr/publications/bulletins/nrb15/>; California Public Resource Code, "Article 2, Historic Resources," [https://leginfo.ca.gov/faces/codes\\_displaySection.xhtml?lawCode=PRC&sectionNum=5024.1](https://leginfo.ca.gov/faces/codes_displaySection.xhtml?lawCode=PRC&sectionNum=5024.1), accessed April 8, 2024.

# HISTORIC RESOURCES ASSESSMENT OF SUNNYVALE COURTHOUSE FOR THE NEW SIXTH APPELLATE DISTRICT COURTHOUSE PROJECT

Regulatory Framework  
July 11, 2024

**Criterion I:** It reflects significant geographical patterns, including those associated with different eras of settlement and growth, particular transportation modes, or distinctive examples of park or community planning;

**Criterion J:** It is one of the few remaining examples in the City, region, state, or nation possessing distinguishing characteristics of an architectural or historic type or specimen;

**Criterion K:** With respect to a local landmark, it is significant in that the resource materially benefits the historical character of a neighborhood or area, or the resource in its location represents an established and familiar visual feature of the community or City;

**Criterion L:** With respect to a local landmark district, a collective high integrity of the district is essential to the sustained value of the separate individual resources;

**Criterion M:** With respect to a designated landmark and designated landmark district, the heritage resource shall meet Criteria of the National Register of Historical Places, which are incorporated by reference into this chapter.<sup>27</sup>

As previously noted, since the Judicial Council is the lead agency for the Project, and is acting for the State of California, local government land use planning and zoning regulations do not apply to the Project. However, the Judicial Council considers county and/or City policies and guidelines, as appropriate, to determine whether the Project would be consistent with the site's character and surroundings; therefore, analysis of the Sunnyvale Courthouse under the criteria of the City Heritage Preservation Ordinance was completed.

---

<sup>27</sup> City of Sunnyvale, Code of Ordinances, Title 19 Zoning, Discretionary Permits and Procedures, Chapter 19.96 Heritage Preservation, <https://ecode360.com/42733258>, accessed April 9, 2024.

# HISTORIC RESOURCES ASSESSMENT OF SUNNYVALE COURTHOUSE FOR THE NEW SIXTH APPELLATE DISTRICT COURTHOUSE PROJECT

Evaluation  
July 11, 2024

## 5.0 Evaluation

The Sunnyvale Courthouse is recommended not eligible for listing in the NRHP or CRHR under Criterion A or Criterion 1 because it was part of a sweeping urban renewal process during the mid-20<sup>th</sup> century that was seen in cities across California and the United States. In addition, its construction and addition to the Civic Center complex in the City did not make any significant contributions to the development of the City or Santa Clara County. The courthouse was built in 1966-1967 and completed in 1967, with additions made to it in the 1980s and 2000s. Construction of courthouses and other municipal buildings like it, with similar designs, were rapidly constructed throughout the state and country at that time, as a new period of development began following the post-war period. The 1950s and 1960s saw the onset of urban renewal and the streamlining of designs for civic structures, from courthouses and city halls to schools. The City in particular saw at least five decades of extensive development and building, with infrastructure repeatedly designed, developed, and demolished to accommodate the growing city and changing landscape of urban development. The courthouse was built during a period of extensive development in the City, but at least three more periods of continued development followed it. The construction of the Sunnyvale Courthouse did not contribute to any specific area of development in the City, as most court cases were still handled in San Jose, the county seat of Santa Clara County. The Sunnyvale Courthouse building is not eligible as it has not contributed to local, state, or national history in a significant fashion.

There is no evidence that the Sunnyvale Courthouse has an important association with any person or persons who made significant contributions to history at the local, state, or national level. The mid-century courthouse is a combination of popular styles used at the time, designed by local San Jose architect William W. Hedley, Jr. Research did not reveal any notable information on Mr. Hedley and few buildings and designs are attributed to him. There are no significant individuals involved with the approvals at the city level for the construction of the Sunnyvale Courthouse and no notable judges who presided over trials and cases. Extensive research on the Sunnyvale Courthouse did not reveal any notable figures specifically associated with the building design or operation. The Sunnyvale Courthouse is recommended not eligible under NRHP Criterion B and CRHR Criterion 2.

The Sunnyvale Courthouse is recommended not eligible for the NRHP under Criterion C or CRHR Criterion 3 because the building is not an important example of any type, period, or method of construction, and it does not represent the important work of a master architect or engineer. The building is a typical example of mid-century civic architecture, taking design ideas from New Formalism, International, and Post-War Modern architectural styles. It follows common architectural styles used across California for civic buildings, public universities, and even houses in the 1950s and 1960s. Although the building was designed by local San Jose architect William W. Hedley, Jr., research did not reveal any evidence that he was a master architect, and the few other buildings attributed to him are civic buildings around Santa Clara County in similar styles to the Sunnyvale Courthouse. Additionally, one courtroom was left incomplete and not finished until the 1980s, with a distinctly different design, and an addition was made to one of the primary entrances in 2004 with materials not previously used in the

## HISTORIC RESOURCES ASSESSMENT OF SUNNYVALE COURTHOUSE FOR THE NEW SIXTH APPELLATE DISTRICT COURTHOUSE PROJECT

Evaluation  
July 11, 2024

construction of the building. As such, the courthouse does not rise to a level of significance to be eligible under Criterion C or Criterion 3.

The Sunnyvale Courthouse building is not recommended eligible as a source, or likely source, of important information regarding history, building materials, construction techniques, or advancements in architecture or engineering. Such structures are well documented in the historic record and use common construction materials and techniques that would not be deemed significant under NRHP Criterion D or CRHR Criterion 4.

When properties are not eligible for the NRHP or CRHR, integrity discussions are not necessary; however, for the purposes of this Project, the Sunnyvale Courthouse retains its integrity of location, setting, feeling, association, design, materials, and workmanship. Limited changes have been made to the courthouse since 1967, with the largest being the 2004 addition and the 2016 abandonment of the building.

Under the City Heritage Preservation Ordinance, the Sunnyvale Courthouse is not eligible as a heritage resource. Criteria A through D cover the same elements as NRHP and CRHR Criteria A/1 through Criteria C/3. As previously stated, the Sunnyvale Courthouse is not associated with any significant events in the history of the development of the City or any important periods in the City's history. It is not identified with any people significant to the history of the City, and it does not embody any distinctive characteristics of a type or represent the work of a master. While the courthouse is part of the Civic Center complex and surrounded by other municipal buildings, the buildings are from different time periods, have different styles, and some have already been demolished and rebuilt in different architectural styles. Therefore, the Sunnyvale Courthouse building is not eligible under Criterion E.

Under Criterion F, the Sunnyvale Courthouse building does not have a unique location or characteristics that make it part of the visual landscape, as it blends in with the other municipal buildings constructed in the Civic Center complex. Criterion G is similar to Criterion C of the NRHP and Criterion 3 of the CRHR, and the construction of the Sunnyvale Courthouse building does not represent a significant architectural or structural achievement or innovation. While the courthouse building is similar to other municipal buildings constructed during the mid-century period, none of them are distinctive for their historical significance or architectural motifs. Therefore, the Sunnyvale Courthouse building is not eligible under Criterion H.

Construction of the Sunnyvale Courthouse did take place during a period of urban renewal in the City, but its particular construction took place in an already well-developed area, where sporadic development has continued in the following decades, continually changing the appearance of the Project Area and not giving the Project Area an appearance of any one period of development. Therefore, the Sunnyvale Courthouse building is not eligible under Criterion I.

Under Criterion J, the Sunnyvale Courthouse building is not one of the few remaining examples of its style, as there are similar municipal and residential buildings like it across the City, state, and country. The courthouse building does not materially benefit the historic character of the neighborhood; most of the buildings in the neighborhood are new constructions, including buildings in the surrounding Civic

## **HISTORIC RESOURCES ASSESSMENT OF SUNNYVALE COURTHOUSE FOR THE NEW SIXTH APPELLATE DISTRICT COURTHOUSE PROJECT**

Evaluation  
July 11, 2024

Center complex. The Sunnyvale Courthouse building is set back far enough from El Camino Real that it is not a significant visual feature and is therefore not eligible under Criterion K. The Sunnyvale Courthouse building is not within a local landmark district and therefore does not need to be considered under Criterion L. Under Criterion M, the Sunnyvale Courthouse building has been evaluated using the criteria of the NRHP and has been found not eligible.

Preparers' Qualifications  
July 11, 2024

## 6.0 Preparers' Qualifications

Architectural Historian Rebecca Riggs conducted research and fieldwork, developed the DPR 523 Form in Appendix A, and authored this Report. Ms. Riggs received a Master of Arts degree in Public History from California State University, Sacramento, and a Bachelor of Arts degree in History from Monmouth College (IL). Ms. Riggs has six years of experience in cultural resource management and has served as Architectural Historian on a wide range of inventory and evaluation projects across California, Nevada, Alaska, and the Pacific Northwest. Based on her level of experience and education, Ms. Riggs qualifies as an Architectural Historian and Historian under the Secretary of the Interior's Professional Qualification Standards (as defined in 36 CFR Part 61).

The Superior Court of California, County of Santa Clara, Sunnyvale Courthouse (Sunnyvale Courthouse) in Sunnyvale, Santa Clara County, California, APN 165-02-004, on the north side of El Camino Real and to the west of S. Mathilda Avenue.

\*P3a. Description: (Describe resource and its major elements. Include design, materials, condition, alterations, size, setting, and boundaries)

The Sunnyvale Courthouse is on a 2.03-acre parcel of land fronting El Camino Real. There are no ancillary buildings or structures on the parcel. The courthouse site is within the Sunnyvale Civic Center, an assemblage of parcels that includes local municipal buildings like the Sunnyvale City Hall, public library, and police department. The former Sunnyvale Courthouse was designed around a central, interior atrium, with the east and west elevations designed as mirror images. On either side of the central core of the building, there are two courtrooms, with four total courtrooms in the courthouse. There are two primary entrances on either side of the central core of the building (south elevation; **Photograph 1**). There is one addition to the building, which is the aluminum siding and flat roof overhang added to the eastern primary entrance (see Continuation Sheet).

This intensive survey and evaluation find that the former Sunnyvale Courthouse does not appear to meet the criteria for listing in the National Register of Historic Places (NRHP) or the California Register of Historical Resources (CRHR) because of a lack of historical significance. While the building retains overall integrity, it does not meet any of the eligibility criteria for listing in the NRHP or CRHR. The property has been evaluated in accordance with Section 15064.5(a)(2)-(3) of the California Environmental Quality Act Guidelines (CEQA), using the criteria outlined in Section 5024.1 of the California Public Resources Code and does not appear to be a historical resource for the purposes of CEQA (see continuation sheet).

## CONTINUATION SHEET

Property Name: Sunnyvale Courthouse

Page 3 of 24

### P3a. Description (Continued):

The exterior of the Sunnyvale Courthouse building exhibits aspects of both International and New Formalism design, both of which were prevalent from the 1950s through the 1970s in municipal and commercial architecture. The Sunnyvale Courthouse building is a perfect rectangle, with two wings constructed around a central atrium. The building is composed of a combination of board-form concrete, brick, and wood and has an overall flat roof, with four mansard roof sections over the location of each courtroom (**Photograph 2**). Each mansard component is clad in board-and-batten wood sheathing. The flat roof has an overhang that is supported by wood beams and round, evenly spaced concrete columns (**Photograph 3**). The central core of the building has four entrances, two that front El Camino Real and two on the rear elevation (north) that front the parking area. The primary entrances were previously identical with concrete columns forming a partially uncovered breezeways to the entrances (**Photograph 4**); however, the eastern primary entrance was enclosed with aluminum siding, windows, and flat roof extension at some point. It was also given an elevated flat roof extension (**Photograph 5**). The rear entrances are identical, both with wide concrete steps up to the glazed doors, with concrete columns forming uncovered breezeways up to the entrances (**Photographs 6, 7, and 8**). Each entrance on the primary and rear elevations has a globe streetlamp. The primary and rear elevations both have lettering on the building that says, "Superior Court Sunnyvale Courthouse" (**Photograph 9**). There are also three signs along the lawn and foliage facing El Camino Real that say, "Superior Court Sunnyvale Courthouse." There are exterior courtyards on the east and west elevations of the courthouse located along the back of the four judge's chambers and surrounded by brick walls and access gates (**Photographs 10 and 11**).

The interior of the courthouse is designed around the central section of the building, which has a centralized interior atrium (**Photograph 12**). The concrete support columns featured around the entire exterior of the building are also used as supports through the central core of the building and around the atrium (**Photograph 13**). The central part of the building previously held the County Clerk's Office, general office, meeting rooms, storage closets, and public restrooms (**Photograph 14**). All of these were situated around the atrium, which is framed by floor to ceiling windows between the concrete columns. There is a glazed door into the uncovered atrium. There are four courtrooms in the courthouse, two on each side of the atrium. Courtroom A and Courtroom B are located on the east side of the atrium, and Courtroom C and Courtroom D are located on the west side of the atrium. There are also four sets of judge's chambers, two sets of jury rooms and four sets of holding areas for defendants (**Photographs 15, 16, and 17**). Courtrooms B, C, and D are identical rooms and were all designed at the same time. Courtroom A was built with the rest of the courthouse, but the room was not immediately utilized, and interior design occurred later.

Courtrooms B, C, and D all have a separated double entryway with wood doors with a designated public sitting area separated from the jury box and judge's bench by a low wooden wall (**Photograph 18**). The courtroom ceiling has a central, square, louvered light fixture and acoustic (popcorn) ceiling. The upper edge of the wall has a canopy that goes all the way around the room and assists in obscuring the entrances on either side of the courtroom, one for the defendant holding area and one for a jury room or antechamber (**Photograph 19**). The judge's bench is on a raised platform above a designated court reporter desk. The bench and desk are wood, and there is also a wooden witness stand on raised platform. The raised platform continues along one edge of each courtroom and holds the jury box. Behind the judge's bench, the wall has wood paneling created by strips of wood, which obscure two openings. One is the door to the judge's

## CONTINUATION SHEET

Property Name: Sunnyvale Courthouse

Page 4 of 24

chambers, and the other is a hidden display board and extendable chalkboard (**Photograph 20**). Each courtroom, including Courtroom A, also has a large seal of the State of California behind the judge's bench. Each judge's chambers have built-in bookshelves and stairs down into the room, as well as a private bathroom (**Photograph 14**). The jury rooms and antechambers are completely empty aside from chalkboards mounted on the walls (**Photographs 15 and 16**).

Courtroom A was designed later and is the same size as the other three courtrooms, with noticeable differences in the ceiling and overall design of the room (**Photograph 21**). Instead of the louvered light fixture that the other three courtrooms have, Courtroom A has a dropped ceiling and no canopy around the edge of the room. As a result, the entrances for the defendant holding area and antechamber are visible. The courtroom seating is arranged the same and located behind a low wooden wall. The judge's bench is much smaller than the other courtrooms and is directly between the witness stand and the court reporter's desk, all of which are composed of the same wood used in the other courtrooms (**Photograph 22**). The judge's chambers and the other accessory rooms around Courtroom A are the same design as those for Courtrooms B, C, and D. The floors in the courthouse are a combination of tile and carpeting, and the interior walls mirror the exterior walls and are a combination of concrete, brick, and wood paneling.

### **B10. Significance (Continued):**

#### **Historic Context**

##### **Non-Native Exploration, Settlement, and the Establishment of Santa Clara County**

In 1777, Father Junipero Serra arrived in the present-day San Francisco Bay Area and began establishing Franciscan missions along the California coast. Mission Santa Clara de Asis was the eighth of 21 missions that Serra established throughout California and gave the area its lasting name. In November 1777, San Jose became the first recorded town in the California territory, known as Pueblo de San Jose de Guadalupe. It retained its importance over time and is the largest city in Santa Clara County and the county seat to this day. As Mexican and American settlers continued to migrate to California in the 1810s and 1820s, Mission Santa Clara de Asis was an important resting stop for the portion of the journey from Monterey to San Francisco, although in 1825 the Mexican government began to sell mission lands off as ranchos and land grants to settlers.<sup>1</sup>

In 1846, the United State and Mexico entered a war over control of land in North America, primarily California and what would become the western coast of the United States. California became a U.S. territory in 1848 at the conclusion of the war, the same year that gold was discovered in Coloma along the American River. By 1850, California became the 31<sup>st</sup> state and Americans were flooding into the new state to try their luck at gold mining and land prospecting. Mission Santa Clara was defunct during the Gold Rush; however, the Catholic bishop of California decided it would be a good location for a school and founded the first college in California, Santa Clara University, on the site of the old mission. Santa Clara County was officially formed in 1850 and was one of the 27 original counties in California. As the Gold Rush dwindled, miners and new settlers to California looked for new places to settle and from 1850 through the 1880s, towns sprang up all over Santa Clara County. The town of Sunnyvale was incorporated in 1901 and was one of the last towns incorporated in Santa Clara County. The new town was established on land previously used as

## CONTINUATION SHEET

Property Name: Sunnyvale Courthouse

Page 5 of 24

orchards and wheat fields. Along with steady population growth, construction of the Southern Pacific Railroad (SPRR) and plentiful agricultural land made the Santa Clara Valley a desirable place to live and work at the turn of the century.<sup>2</sup>

The 20<sup>th</sup> century saw continued advancement for Santa Clara County, from the educational opportunities offered at Stanford University, to the county becoming home to one of the most advanced military research and development programs in the country at Naval Air Station Sunnyvale (NAS Sunnyvale, also known as Moffett Federal Airfield). World War II prompted military activity in the county and after the war, most of the scientists and engineers who came to the county to help with the war effort stayed in the area in the 1950s, leading to the birth of Silicon Valley and Santa Clara County becoming home to some of the largest advanced technology companies in the world, including Hewlett-Packard, Intel, and Apple. Into the 21<sup>st</sup> century, these companies continued to influence the county economics and Santa Clara County continued to thrive as a technology hub.<sup>3</sup>

### Development of Sunnyvale

In 1842, the land encompassing present-day Mountain View and Sunnyvale was granted to Francisco Estrada as Rancho Pastoria de las Borregas.<sup>4</sup> In 1850, Irish immigrant Martin Murphy, Jr. arrived in the area and purchased a portion of the rancho and operated it as Bay View Ranch. When the San Francisco and San Jose Railroad was constructed through the area in 1860, they named the stop near Bay View Ranch as Murphy Station. As agriculture grew in the area through the 1860s and 1870s, Murphy became an unincorporated town in Santa Clara County. By 1901, Murphy was ready to incorporate, but they were told by the postal service that they needed to change their name. The name Sunnyvale was chosen and through the 1910s and 1920s, rapid development occurred throughout the City.<sup>5</sup>

In 1930, construction began on NAS Sunnyvale, which would serve as the West Coast dirigible base. By 1940, NAS Sunnyvale was not only used as an operational Navy base, but also as the Ames Research Center for the National Aeronautics and Space Administration (NASA). The onset of World War II set Sunnyvale on the track to become the technological hub it remains today and was the beginning of its nickname “the heart of Silicon Valley.” Sunnyvale was a hub of activity during the war and in the post-war period, the economy and population increased, with the construction of new subdivisions and new technology-based enterprises, like the addition of the Lockheed Martin headquarters and operations facility in 1956.<sup>6</sup>

Throughout the 1950s, the extensive growth in Sunnyvale led to the undertaking of major rezoning efforts, including the widening of roads and construction by the city and county of new municipal infrastructure. Farmlands within and surrounding the City were impacted. Farmers were displaced, or their farms were divided into smaller sections of land. New subdivisions, schools, shopping centers, highways, parks, and

Property Name: Sunnyvale Courthouse

Page 6 of 24

fire stations were built for the growing population. A volunteer civic improvement committee helped the City secure a \$6.8 million bond for some of these improvements and the construction of a new Civic Center.<sup>7</sup>

The rapid growth of Sunnyvale's amenities severed the long-standing commercial connection between Sunnyvale and nearby San Jose. Prior to the development of their own commercial district, Sunnyvale residents relied on the rail connection between the two cities to access retail, events, and Santa Clara County services in San Jose. Construction of new highways and interstates through the South Bay area also made it easier to go outside the county or to other neighboring towns for amenities that were not directly available in Sunnyvale. After the development of Sunnyvale's downtown, residents could meet their commercial needs in Sunnyvale.<sup>8</sup>

Sunnyvale's housing development boomed in the 1950s, thanks in large part to real-estate developer Joseph Eichler and his tracts of what are now iconic mid-century modern houses. The development boom continued into the 1960s. This extensive growth was accompanied by political turmoil. Between 1960–1969 Sunnyvale had 8 mayors and 4 city managers.<sup>9</sup> The cause of this turnover can largely be attributed to the consistent development and rezoning of Sunnyvale, which led to the loss of almost all the previous agricultural land in the area. The development pressures led to the demolition of many buildings associated with the founding of Murphy and Sunnyvale. As the City grew and changed, many locals were split between encouraging more growth or wanting it to be slowed down; that same infighting was reflected within the city government.<sup>10</sup> While local debates raged, change continued to surge forward in the form of federal urban renewal grants received by the city in the 1960s, which led to the City Council granting the approval to clear out what they viewed as blighted areas of the City for the construction of a shopping mall, among other things. By the late 1960s, the City of Sunnyvale spent close to \$50 million on upgrades to the downtown core since 1960: new residential development across the city; and municipal buildings, including a new City Hall and a new courthouse.<sup>11</sup>

### Sunnyvale Courthouse

The first courthouse in present-day Santa Clara County was a pueblo built in 1783 to uphold colonial Spanish laws. The second courthouse followed soon after in 1798. Both were in the San Jose area. In 1850, when California became a state, the first county court was built on South First Street in San Jose. A larger county courthouse was built in 1868 in San Jose and remained the primary courthouse in Santa Clara County until 1932, when city governments around the county began to construct their own courthouses.<sup>12</sup>

In 1960, the City of Sunnyvale entered discussions with private developer Hare, Brewer and Kelley of Palo Alto to purchase land for a new municipal court. The City hoped to purchase one acre of land behind the existing library; the parcel was being sold for \$91,000. The City and the developer had not come to an agreement by August, despite a price drop to \$73,000. It was at that time the local newspaper reported that

the City would consider utilizing public land adjacent to the City Hall at the intersection of West Olive Avenue and South Mathilda Avenue. The City Council still preferred the site next to the library and asked the City Manager Perry Scott to consider further negotiations with Hare, Brewer and Kelley. One suggestion was to trade the public land for the private land, rather than enter into a purchase agreement.<sup>13</sup>

The political turmoil of Sunnyvale in the 1960s, and prolonged debate over a location, delayed further decision making on a new courthouse until 1964. On April 20, 1964, it was finally announced that the City intended to build on the old Murphy estate, a 2-acre site at the intersection of Sunnyvale Avenue and Arques Avenue. William W. Hedley, Jr. of San Jose was chosen as the architect for the project in April 1964. The Santa Clara County Board of Supervisors was eager to move the project forward because of previous project delays. As a result, Hedley was chosen despite a no vote from Supervisor Ed R. Levin who instead asked for more information on the project.<sup>14</sup> Hedley was a local architect who worked on projects primarily in the San Jose area and went on to design the San Jose Convention Center, which was completed in 1977.<sup>15</sup>

Hedley's plan for the Sunnyvale Avenue and Arques Avenue site was accepted in October that same year. Although the design was more than \$100,000 over budget, the Board approved the design that was said to "reflect the county and the dignity of the court." Hedley's plan depicted a single-story stucco building that fit with the modest surrounding neighborhood (**Figure 1**).<sup>16</sup> The design encompassed three courtrooms and provided space for a fourth.<sup>17</sup>

## CONTINUATION SHEET

Property Name: Sunnyvale Courthouse

Page 8 of 24

**Figure 1.** Hedley's sketch of the former Sunnyvale Courthouse fronting Arques Avenue at Sunnyvale Avenue, 1964.<sup>18</sup>

A month later, in November 1964, the location of the municipal courthouse was changed. The new location was 3.06 acres at the northwest corner of the intersection of El Camino Real and Mathilda Avenue. The new site was part of the Civic Center complex, as was originally suggested back in 1960. The decision was made by the City Council after plans for the Central Expressway adjacent to the Murphy estate were altered. The expressway alteration would result in less parking available at the site, making it unfit for the courthouse. Hedley's building plans were also reviewed, and it was determined the courthouse building would fit on either site. The Murphy estate would instead be used as a memorial park and cultural heritage museum.<sup>19</sup>

On December 10, 1964, the City Council approved the Civic Center site for the courthouse, and determined the existing building design was appropriate for the site. Thomas A. Sweeny, acting City Manager, noted the stucco, redwood, and stone building exterior would be similar in appearance to buildings at Foothill College in Los Altos Hills. The potential conflict between Hedley's neighborhood-specific design and the new location did not go unnoticed; however, city officials chose to move forward with the existing design instead of spending more money to redesign the courthouse. Although the design did not match the other buildings in the Civic Center complex, it was a similar design to other civic structures and schools around Sunnyvale and Northern California at the time.<sup>20</sup>

Gurries Construction Company of San Jose was selected as project contractor in April 1966. The company's low bid of \$504,975 was within 10 percent of the Santa Clara County Board of Supervisor's estimate of

Page 9 of 24

\$492,000.<sup>21</sup> Gurries Construction was extremely active in Santa Clara County in the 1950s and 1960s, primarily providing construction for school district projects all around the county, including several schools for the Cupertino Elementary School District (now Cupertino Union School District) and at least one school for the Los Gatos Union School District.<sup>22</sup> After the 1960s, there is little information about Gurries Construction and no more announcements about projects they constructed, so it is likely that the company ceased operations in the 1970s.

Groundbreaking for the Sunnyvale Courthouse was held on Friday, May 20, 1966. The final design included two finished courtrooms and space for two more, anticipating future growth of the city (**Figures 2 and 3**).<sup>13</sup> The courthouse was completed on time, and opened on May 22, 1967. Judges James Duvaras and James B. Scott were the first judges to occupy the newly finished building.<sup>23</sup> Instead of two courtrooms, three courtrooms were completed in the initial construction of the courthouse. The fourth courtroom was eventually completed in the 1980s when the county took over responsibility of the Sunnyvale Courthouse and began to use it for family court cases countywide.<sup>24</sup>

In 1985, the Santa Clara County Board of Supervisors proposed the demolition of the Superior Court building in San Jose. The Sunnyvale Courthouse would be made obsolete and replaced with a new “Hall of Justice” building in San Jose, expected to cost the county \$25.8 million. The county set about looking for funding opportunities. One option considered was the sale of the Sunnyvale Courthouse to a private buyer, which could bring in as much as \$2.7 million for the San Jose project. The Sunnyvale courthouse was of greater monetary value than smaller courthouses in Los Gatos and Gilroy and was not shared by other county departments as was the case at other courthouses, which made it a valuable asset as a courthouse dedicated solely to trial space.<sup>26</sup> The courthouse was ultimately not sold and continued operations as the family court for the county. Eventually the County Clerk office was also housed in the building and alterations were made to one of the primary entrances in 2004. Use of the courthouse continued until its

## Evaluation

The Sunnyvale Courthouse is recommended not eligible for listing in the NRHP or CRHR under Criterion A or Criterion 1 because it was part of a sweeping urban renewal process during the mid-20<sup>th</sup> century that was seen in cities across California and the United States. In addition, its construction and addition to the Civic Center complex in Sunnyvale did not make any significant contributions to the development of Sunnyvale or Santa Clara County. The courthouse was built in 1966-1967 and completed in 1967, with additions made to it in the 1980s and 2000s. Construction of courthouses and other municipal buildings like it, with similar designs, were rapidly constructed throughout the state and country at that time, as a new period of development began following the post-war period. The 1950s and 1960s saw the onset of urban renewal and

## CONTINUATION SHEET

Property Name: Sunnyvale Courthouse

Page 12 of 24

the streamlining of designs for civic structures, from courthouses and city halls to schools. Sunnyvale in particular saw at least five decades of extensive development and building, with infrastructure repeatedly designed, developed, and demolished to accommodate the growing city and changing landscape of urban development. The courthouse was built during a period of extensive development in Sunnyvale, but at least three more periods of continued development followed it. The construction of the courthouse did not contribute to any specific area of development in Sunnyvale, as most court cases were still handled in San Jose, the county seat of Santa Clara County. The Sunnyvale Courthouse building is not eligible as it has not contributed to local, state, or national history in a significant fashion.

There is no evidence that the Sunnyvale Courthouse has an important association with any person or persons who made significant contributions to history at the local, state, or national level. The mid-century courthouse is a combination of popular styles used at the time, designed by local San Jose architect William W. Hedley, Jr. Research did not reveal any notable information on Mr. Hedley and few buildings and designs are attributed to him. There are no significant individuals involved with the approvals at the city level for the construction of the courthouse and no notable judges who presided over trials and cases at the Sunnyvale Courthouse. Extensive research on the Sunnyvale Courthouse did not reveal any notable figures specifically associated with the courthouse design or operation. The Sunnyvale Courthouse is recommended not eligible under NRHP Criterion B and CRHR Criterion 2.

The Sunnyvale Courthouse is recommended not eligible for the NRHP under Criterion C or CRHR Criterion 3 because the courthouse is not an important example of any type, period, or method of construction, and it does not represent the important work of a master architect or engineer. The building is a typical example of mid-century civic architecture, taking design ideas from New Formalism, International, and Post-War Modern architectural styles. It follows common architectural styles used across California for civic buildings, public universities, and even houses in the 1950s and 1960s. Although the courthouse was designed by local San Jose architect William W. Hedley, Jr., research did not reveal any evidence that he was a master architect, and the few other buildings attributed to him are civic buildings around Santa Clara County in similar styles to the Sunnyvale Courthouse. Additionally, one courtroom was left incomplete and not finished until the 1980s, with a distinctly different design, and an addition was made to one of the primary entrances in 2004 with materials not previously used in the construction of the building. As such, the courthouse does not rise to a level of significance to be eligible under Criterion C or Criterion 3.

The Sunnyvale Courthouse is not recommended eligible as a source, or likely source, of important information regarding history, building materials, construction techniques, or advancements in architecture or engineering. Such structures are well documented in the historic record and use common construction materials and techniques that would not be deemed significant under NRHP Criterion D or CRHR Criterion 4.

When properties are not eligible for the NRHP or CRHR, integrity discussions are not necessary; however, for the purposes of this project, Sunnyvale Courthouse retains its integrity of location, setting, feeling, association, design, materials, and workmanship. Limited changes have been made to the courthouse since 1967, with the largest being the 2004 addition and the 2016 abandonment of the building.

## Appendix F Paleontological Resources Assessment

The conclusions in the Report titled Paleontological Resources Assessment for the New Sixth Appellate District Courthouse Project are Stantec's professional opinion, as of the time of the Report, and concerning the scope described in the Report. The opinions in the document are based on conditions and information existing at the time the scope of work was conducted and do not take into account any subsequent changes. The Report relates solely to the specific Project for which Stantec was retained and the stated purpose for which the Report was prepared. The Report is not to be used or relied on for any variation or extension of the Project, or for any other project or purpose, and any unauthorized use or reliance is at the recipient's own risk.

Stantec has assumed all information received from Judicial Council of California (Judicial Council) and third parties in the preparation of the Report to be correct. While Stantec has exercised a customary level of judgment or due diligence in the use of such information, Stantec assumes no responsibility for the consequences of any error or omission contained therein. This Report is intended solely for use by the Judicial Council in accordance with Stantec's contract with the Judicial Council. While the Report may be provided by the Judicial Council to applicable authorities having jurisdiction and to other third parties in connection with the Project, Stantec disclaims any legal duty based upon warranty, reliance or any other theory to any third party, and will not be liable to such third party for any damages or losses of any kind that may result.

# PALEONTOLOGICAL RESOURCES ASSESSMENT FOR THE NEW SIXTH APPELLATE DISTRICT COURTHOUSE PROJECT

Executive Summary  
July 11, 2024

## Executive Summary

Stantec Consulting Services Inc. (Stantec) conducted a paleontological resources assessment on behalf of the Judicial Council of California (Judicial Council) for the New Sixth Appellate District Courthouse Project (Project) on portions of approximately 2.03 acres of land located at 605 West El Camino Real in the City of Sunnyvale (City), California. This paleontological study was conducted in support of the California Environmental Quality Act (CEQA) review process for the demolition of an existing building and the subsequent construction of a new courthouse with additional parking.

The Project is subject to compliance with CEQA requirements regarding the Project's potential impacts on paleontological resources. The lead agency for this Project is the Judicial Council. As part of CEQA compliance, a paleontological resources assessment was conducted to assess potential impacts of the Project on paleontological resources.

This paleontological resources assessment consisted of an analysis of existing data including a review of the most recent geologic mapping, relevant scientific literature, and the online collections of the University of California Museum of Paleontology. This research was used to assign paleontological potential rankings of the Society of Vertebrate Paleontology (2010) to the geologic units present in the Project Site (Site), either at the surface or in the subsurface. Following this, Project plans were reviewed to identify any potential impacts on paleontological resources and develop appropriate mitigation recommendations to reduce potential impacts to less-than-significant.

The results of this study show that young stream alluvium, with low-to-high paleontological potential, is present at the surface of the Site and older Pleistocene-aged alluvium, with high paleontological potential possibly present in the subsurface as shallow as five feet below ground surface. Should Project-related activities encounter paleontological resources, the damage or destruction of those resources would constitute an adverse impact under CEQA. To avoid impacts on paleontological resources, Stantec recommends a qualified paleontologist meeting professional standards as defined by Murphey et al. (2019) be retained as the designated Project Paleontologist to oversee a paleontological mitigation program. Stantec recommends the mitigation program consist of the following activities for this Project:

- The Project Paleontologist should develop and oversee the implementation of a Paleontological Mitigation Plan tailored to the Project plans that provides for paleontological monitoring of earthwork and ground-disturbing activities into undisturbed geologic units with high paleontological potential to be conducted by a paleontological monitor meeting industry standards (Murphey et al. 2019). This plan should include provisions for worker training, depths and locations for monitoring, monitoring procedures, a fossil discovery plan in the event a fossil is found during construction, including a plan for assessment and treatment, and requirements for final reporting of the results of the mitigation program. The plan should include a review of geotechnical data, if available, to refine the depth at which Pleistocene-aged sediments are present.

# PALEONTOLOGICAL RESOURCES ASSESSMENT FOR THE NEW SIXTH APPELLATE DISTRICT COURTHOUSE PROJECT

Executive Summary  
July 11, 2024

- Full-time paleontological monitoring should be implemented once excavations reach five feet in depth within the Site. The Project Paleontologist may alter the frequency or depth of monitoring based on subsurface conditions.
- Development of a Worker's Environmental Awareness Program training is recommended outlining the requirements and procedures if inadvertent discovery of fossils is identified during construction to be delivered by the paleontological monitor. This training shall be provided once to each worker involved in ground-disturbing activities before they begin work and shall be documented in training records submitted to the Judicial Council.
- In the event that fossils are encountered during construction activities, all work must stop in a safe radius of the find, typically 50 feet, while the paleontological monitor documents the find. The Project Paleontologist shall assess the find. Should the Project Paleontologist assess the find as meeting criteria of scientific importance to be considered a paleontological resource, the find shall be collected and curated in an accredited repository along with all necessary associated data and curation fees.

Based on the findings in this Report and the implementation of the above mitigation recommendations, the Project should not cause an adverse impact on paleontological resources. Therefore, additional paleontological resource studies are not recommended or required at this time. Changes to the Project plans or Site from those assessed in this Report will require additional assessment for impacts on paleontological resources.

# PALEONTOLOGICAL RESOURCES ASSESSMENT FOR THE NEW SIXTH APPELLATE DISTRICT COURTHOUSE PROJECT

Glossary  
July 11, 2024

## Glossary

Paleontological Monitor	An individual who has academic training (B.S., B.A., M.A., or M.S.) with an emphasis in paleontology or demonstrated equivalent experience (a minimum of two years of cumulative professional or nonprofessional work in laboratory preparation, curation, or field work related to paleontology, as well as documented self-taught knowledge of the discipline of paleontology). [Murphey et al. 2019]
Paleontological Monitoring	Full-time observation of construction activities in high potential geologic units by a paleontological monitor, under supervision of the Project Paleontologist.
Paleontological Resource	Fossils and fossiliferous deposits, here defined as consisting of identifiable vertebrate fossils, large or small, uncommon invertebrate, plant, and trace fossils, and other data that provide taphonomic, taxonomic, phylogenetic, paleoecologic, stratigraphic, and/or biochronologic information. Paleontological resources are considered to be older than recorded human history and/or older than middle Holocene (i.e., older than about 5,000 radiocarbon years) [Society of Vertebrate Paleontology 2010]
Project Paleontologist	Someone with an advanced academic degree (M.A., M.S. or Ph.D.) with an emphasis in paleontology or demonstrated equivalent professional experience (e.g., minimum of 3 years [or 75 projects] of project experience with paleontological mitigation is considered equivalent to a graduate degree), in combination with 2 years (or 50 projects) of demonstrated professional experience and competency with paleontological resource mitigation projects at the level of field supervisor. [Murphey et al. 2019]
Spot check	A short inspection of excavations and subsurface conditions conducted by the paleontological monitor in order to confirm excavations are impacting low potential geologic units.

# PALEONTOLOGICAL RESOURCES ASSESSMENT FOR THE NEW SIXTH APPELLATE DISTRICT COURTHOUSE PROJECT

Introduction  
July 11, 2024

## 1.0 Introduction

Stantec Consulting Services Inc. (Stantec) conducted a paleontological resources assessment on behalf of the Judicial Council of California (Judicial Council) for the New Sixth Appellate District Courthouse Project (Project) on portions of approximately 2.03 acres of land in the City of Sunnyvale (City), in Santa Clara County, California. This paleontological study was conducted in support of the California Environmental Quality Act (CEQA) review process for the demolition of an existing building and the subsequent construction of a new courthouse and additional parking.

The Project is subject to compliance with CEQA requirements regarding the Project's potential impacts on paleontological resources. The lead agency for the Project is the Judicial Council. As part of CEQA compliance, a paleontological resources assessment was conducted to assess potential impacts of the Project on paleontological resources.

## 1.1 Project Description

The Project consists of the demolition of the former Superior Court of California, County of Santa Clara, Sunnyvale Courthouse (Sunnyvale Courthouse) and the construction of a new courthouse with additional parking to locate the Sixth Appellate District of the Court of Appeal in a more practical and accessible infill location. Project Site (Site) preparation would include the demolition of the existing 19,994 square foot one-story Sunnyvale Courthouse building and its partial basement as well as an unused shed structure currently within the parking lot. The Project would additionally involve demolition of approximately 19,760 square feet (SF) of existing paving, full repaving of 4,580 SF of existing drive access road, resurfacing of 9,800 SF of existing parking area, and paving of 13,200 SF of new parking area within the 2.03-acre Site.

The new courthouse would be approximately 50,000 SF and up to three stories in height located in the same general footprint as the existing building on the Site. The new courthouse would include one courtroom with support spaces, justice chambers, administrative and operations areas, a law library, mediation area, lobby, public entry, and building support. The Project would include approximately 50 onsite parking spaces, including 12 secure parking spaces for justices with canopies with solar power generation capability and surface parking spaces for the public and staff.

Construction is planned to begin December of 2025 through September of 2028. Construction laydown yards and temporary workspaces are contained within the existing footprint of the Site. Construction would involve grading for site preparation of building foundations and utilities from depths of five feet to 10 feet below ground surface (bgs). Over-excavation to a depth of three feet below subgrade is recommended for existing below-grade structural elements that require removal (Rutherford + Chekene 2024). Excavations of or beyond 10 feet in depth are anticipated for removal of the current basement for the removal of the basement footings. Grading would generally be followed by building construction, paving, planting, and finishing. As established in the geotechnical report prepared for the Project, the new building can be supported on a shallow foundation system with a minimum width of two feet and minimum embedment of two feet into undisturbed alluvium (Rutherford + Chekene 2024).

# PALEONTOLOGICAL RESOURCES ASSESSMENT FOR THE NEW SIXTH APPELLATE DISTRICT COURTHOUSE PROJECT

Introduction  
July 11, 2024

## 1.2 Project Location

The Site is located at 605 West El Camino Real in the City (Figure 1). Specifically, the Site is bound to the south by West El Camino Real, to the west by Mathilda Avenue, to the east by South Pastoria Avenue, and to the south by West Olive Avenue. The Site is approximately 2.03 acres and is located on Santa Clara County Assessor's Parcel Number 165-02-004. The Site is located in portions of Section 36, Township 06 South, Range 02 West, as depicted on the Cupertino, California United States Geological Survey (USGS) 7.5-minute series topographic quadrangle (Figure 2).

## 1.3 Paleontological Resources

Fossils are any evidence of ancient life. This includes the remains of the body of an organism, such as bones, skin impressions, shell, or leaves, as well as traces of an organism's activity, such as footprints or burrows, called trace fossils. In addition to the fossils themselves, geologic context is an important component of a fossils' scientific importance and includes the stratigraphic placement of the fossil as well as the lithology of the rock to assess paleoecologic setting, depositional environment, and taphonomy. Fossils are protected by federal, state, and local regulations as nonrenewable natural resources.

While CEQA does not define the term "paleontological resource" or provide a significance threshold for paleontological resources, the standards of the Society of Vertebrate Paleontology (SVP) (2010) are often used in the absence of a legal definition of significance. The SVP defines paleontological resources as:

*identifiable vertebrate fossils, large or small, uncommon invertebrate, plant, and trace fossils, and other data that provide taphonomic, taxonomic, phylogenetic, paleoecologic, stratigraphic, and/or biochronologic information. Paleontological resources are considered to be older than recorded human history and/or older than middle Holocene (i.e., older than about 5,000 radiocarbon years). (SVP 2010: 11).*

Furthermore, the Paleontological Resources Preservation Act (PRPA) defines paleontological resources in a federal context as:

*any fossilized remains, traces, or imprints of organisms, preserved in or on the earth's crust, that are of paleontological interest and that provide information about the history of life on earth, except that the term does not include— (A) any materials associated with an archaeological resource (as defined in section 3(1) of the Archaeological Resources Protection Act of 1979 (16 United States Code [USC] 470bb[1]); or (B) any cultural item (as defined in section 2 of the Native American Graves Protection and Repatriation Act [25 USC 3001]). (PRPA Sec. 6301).*

# PALEONTOLOGICAL RESOURCES ASSESSMENT FOR THE NEW SIXTH APPELLATE DISTRICT COURTHOUSE PROJECT

Introduction  
July 11, 2024

Using these definitions, the concept of scientific importance is included in the definition of paleontological resources; thus, not all fossils are considered paleontological resources.

It should be noted that scientific importance varies with factors including geologic unit, geographic area, and the current state of scientific research, and may also vary between different agencies (Murphey et al. 2019). Numerous paleontological studies have developed criteria for the assessment of scientific importance for fossil discoveries (e.g., Eisentraut and Cooper 2002; Murphey et al. 2019; Murphey and Daitch 2007; Scott and Springer 2003). In general, these studies assess fossils as scientifically important, and are therefore considered paleontological resources, if one or more of the following criteria apply:

- The fossils provide information on the evolutionary relationships and developmental trends among organisms, living or extinct.
- The fossils provide data useful in determining the age(s) of the rock unit or sedimentary stratum, including data important in determining the depositional history of the region and the timing of geologic events, through biochronology or biostratigraphy and the correlation with isotopic dating.
- The fossils provide ecological data, such as the development of biological communities, the interaction between paleobotanical and paleozoological biotas, or the biogeography of lineages.
- The fossils demonstrate unusual or spectacular circumstances in the history of life.
- The fossils provide information on the preservational pathways of paleontological resources, including taphonomy, diagenesis, or preservational biases in the fossil record.
- The fossils are in short supply and/or in danger of being depleted or destroyed by the elements, vandalism, or commercial exploitation, and are not found in other geographic locations.
- The fossils inform our understanding of anthropogenic affects to global environments or climate.

A geologic unit known to contain paleontological resources is considered sensitive to adverse impacts if there is a high probability that earth-moving or ground-disturbing activities in that rock unit will either disturb or destroy the resource directly or indirectly. This definition of sensitivity differs fundamentally from the definition for archaeological resources as follows:

*It is extremely important to distinguish between archaeological and paleontological (fossil) resource sites when defining the sensitivity of rock units. The boundaries of archaeological sites define the areal extent of the resource. Paleontological sites, however, indicate that the containing sedimentary rock unit or formation is fossiliferous. The limits of the entire rock formation, both areal and stratigraphic, therefore define the scope of the paleontological potential in each case. (SVP 2010: 2).*

Many archaeological sites contain features that are visually detectable on the surface. In contrast, fossils are often contained within surficial sediments or bedrock and are therefore not observable or detectable unless exposed by erosion or human activity.

# PALEONTOLOGICAL RESOURCES ASSESSMENT FOR THE NEW SIXTH APPELLATE DISTRICT COURTHOUSE PROJECT

Introduction  
July 11, 2024

This concept of paleontological resources affords a means of establishing a significance threshold for what constitutes an adverse impact on paleontological resources under CEQA: the damage or destruction of a paleontological resource, or a fossil or collection of fossils with scientific importance, constitutes a significant adverse impact. The damage or destruction of fossils without scientific importance would not constitute a significant adverse impact.

In summary, in the absence of observable fossils on the surface, paleontologists must assess the potential of geologic units as a whole to yield paleontological resources based on their known potential to produce such resources elsewhere. Monitoring by experienced paleontologists greatly increases the probability that fossils will be recognized if they are discovered during ground-disturbing activities and that, if these remains are scientifically important, successful mitigation and salvage efforts may be undertaken to prevent significant adverse impacts on these resources.

# **PALEONTOLOGICAL RESOURCES ASSESSMENT FOR THE NEW SIXTH APPELLATE DISTRICT COURTHOUSE PROJECT**

Regulatory Framework  
July 11, 2024

## **2.0 Regulatory Framework**

California has enacted multiple laws and regulations that provide for the protection of paleontological resources. This investigation was conducted to meet these requirements regarding paleontological resources. The Judicial Council is not subject to local government regulations regarding land use and planning.

### **2.1 State of California**

#### **2.1.1 CALIFORNIA ENVIRONMENTAL QUALITY ACT**

CEQA (Public Resources Code [PRC] Sections 21000 et seq) requires that before approving most discretionary projects, the lead agency must identify and examine any significant adverse environmental effects that may result from activities associated with such projects. As updated in 2016, CEQA separates the consideration of paleontological resources from cultural resources (PRC Section 21083.09). The Appendix G checklist (Title 14, Division 6, Chapter 3, California Code of Regulations 15000 et seq.) requires an answer to the question: “Will the proposed project directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?” This study is designed to answer this question.

#### **2.1.2 PUBLIC RESOURCES CODE**

The PRC Chapter 1.7, Section 5097, includes additional state-level requirements for the assessment and management of paleontological resources. This statute requires reasonable mitigation of adverse impacts on paleontological resources resulting from development on state lands, defines the removal of paleontological sites or features from state lands as a misdemeanor, and prohibits the removal of any paleontological site or feature from state lands without permission of the applicable jurisdictional agency.

# PALEONTOLOGICAL RESOURCES ASSESSMENT FOR THE NEW SIXTH APPELLATE DISTRICT COURTHOUSE PROJECT

Professional Standards  
July 11, 2024

## 3.0 Professional Standards

The SVP (2010) and a number of scientific studies (Eisentraut and Cooper 2002; Murphey et al. 2019; Scott and Springer 2003) have developed guidelines for professional qualifications, conducting paleontological assessments, and developing mitigation measures for the protection of paleontological resources. These guidelines are broadly similar, and include the use of museum records searches, scientific literature reviews, and, in some cases, field surveys to assess the potential of an area to preserve paleontological resources. Should that potential be high, accepted mitigation actions include paleontological monitoring, data recordation standards, collection and curation of paleontological resources and associated data, and in some cases screening of sediment for microfossils. This study has been conducted in accordance with these guidelines and the recommendations provided herein meet these standards.

# PALEONTOLOGICAL RESOURCES ASSESSMENT FOR THE NEW SIXTH APPELLATE DISTRICT COURTHOUSE PROJECT

Geologic Setting  
July 11, 2024

## 4.0 Geologic Setting

The Site is in the Coast Ranges geomorphic province. The Coast Ranges consist of relatively young (3.5 million years old) northwest-trending mountain ranges and valleys that run along the Pacific coast from Santa Barbara to the Klamath Mountains, coincident with the Pacific-North American plate boundary (Page et al. 1998). The province is divided into two subprovinces: the ranges south of San Francisco Bay and the ranges north of the bay. This subdivision coincides with the northern ranges located east of the San Andreas Fault zone and the southern ranges mostly to the west of the San Andreas Fault zone (Norris and Webb 1990). The southern Coast Ranges are lower in elevation with less rainfall than the northern Coast Ranges, and consequently have less vegetation.

The Coast Ranges preserve a thick sequence of sedimentary strata dating back to the Mesozoic (approximately 251 million years ago) overlying granitic and metamorphic bedrock (Norris and Webb 1990). These sedimentary rocks have a rich fossil history in central California, recording the filling of offshore basins dating to the Mesozoic followed by the progressively shallowing sea and the emergence of terrestrial environments in the Pliocene and Pleistocene (Page et al. 1998). Although elevations are moderate within the Coast Ranges, the relief of these mountains is often considerable, with peaks rising around 1,000 meters just a few kilometers from the coast (Norris and Webb 1990).

Locally, the Site is in the Santa Clara Valley, a primarily flat alluvial plain extending southwards from the San Francisco Bay, between the Santa Cruz Mountains in the east and the Diablo Range in the west (Langenheim et al. 2015). The valley is bound by a complex array of right-lateral strike-slip faults and range-front thrust and reverse faults, including the San Andreas Fault on the western margin, offset on which has played a significant role in the development of the valley, starting in the early to middle Miocene, as much as 23 million years ago (Langenheim et al. 2015; Stanley et al. 2002). The valley is a subsiding alluvial basin, with the upper layers filled with Holocene-aged alluvium that is inset into and overlaps older, late Pleistocene-aged fans that have accumulated in the most recent stage of basin development over the past 1 to 1.5 million years (Langenheim et al. 2015). These alluvial sediments have accumulated to a depth of 1,300 feet in the center of the valley, thinning toward the edges of the valley (Stanley et al. 2002). Older terrestrial sediments of the Santa Clara Formation underlie the alluvium, which are in turn underlain by progressively older, stratigraphically unconformable, marine units from the Pliocene, Miocene, and Jurassic, for a total sedimentary thickness of over 1.8 miles (Stanley et al. 2002).

# PALEONTOLOGICAL RESOURCES ASSESSMENT FOR THE NEW SIXTH APPELLATE DISTRICT COURTHOUSE PROJECT

Methodology  
July 11, 2024

## 5.0 Methodology

The paleontological resource assessment reported herein consisted of an analysis of existing data incorporating a review of the scientific literature, geologic mapping, and the online database of the University of California Museum of Paleontology (UCMP).

To assess if paleontological resources are likely to be encountered in any given area, the paleontological potential of the geologic units present in the area is assessed. Paleontological potential of a geologic unit consists of both (a) the potential for yielding abundant vertebrate fossils or for yielding scientifically important fossils, large or small, vertebrate, invertebrate, plant, or trace fossils and (b) the importance of recovered evidence for new and important taxonomic, phylogenetic, paleoecologic, taphonomic, biochronologic, or stratigraphic data (SVP 2010). Unlike archaeological resources that often have a limited aerial extent, paleontological resources may occur throughout a geologic unit, and so paleontological potential is assessed for the unit as a whole. Provided below is the methodology used by the current study to assess the potential of the Project to impact paleontological resources.

The paleontological assessment presented here was conducted by Stantec Principal Paleontologist Alyssa Bell, Ph.D. Geographic Information System (GIS) maps and figures were drafted by GIS Technician Michael Deseo, B.S. This Report was authored by Dr. Bell with the assistance of Paleontologist Matthew Cline, M.S. and peer reviewed by Senior Paleontologist Russell Shapiro, Ph.D. Stantec's work in support of the Project was managed by Principal Environmental Planner, Lindsay Anshen, M.A., who coordinated all work and provided quality assurance and control.

### 5.1 Analysis of Existing Data

In order to assess the paleontological potential of the Site, the most recent geologic mapping of the Site and vicinity was consulted to identify geologic units present at the surface or likely present in the subsurface (Dibblee and Minch 2007a, 2007b). A records search was requested from the Natural History Museum of Los Angeles County; however, they indicated via email that their collections do not cover the Site. A records search was requested from the UCMP (2024b), who indicated via email that there are no records within the Site; however, there are other records within the City, as referenced by Maguire and Holroyd (2016). In addition to a formal records search, a review of UCMP's online database was conducted. This database does not provide precise locality data, with sites identified by county, but sometimes data is included that allows more precise location to be inferred. Stantec also conducted a review of the scientific literature to assess the history of the geologic units mapped as present at the surface or likely present in the subsurface of the Site for preserving paleontological resources.

### 5.2 Paleontological Resources Assessment

The results of the analysis of existing data were used to assign the paleontological potential rankings of the SVP (2010) to the geologic units likely present in the Site. These rankings are designed to inform the development of appropriate mitigation actions for the protection of paleontological resources and are

# PALEONTOLOGICAL RESOURCES ASSESSMENT FOR THE NEW SIXTH APPELLATE DISTRICT COURTHOUSE PROJECT

Methodology  
July 11, 2024

widely accepted as industry standards in paleontological mitigation (Murphey et al. 2019; Scott and Springer 2003). These rankings are as follows:

**High Potential.** Rock units from which vertebrate or scientifically important invertebrate, plant, or trace fossils have been recovered are considered to have a high potential for containing additional paleontological resources. Rock units classified as having high potential for producing paleontological resources include, but are not limited to, sedimentary formations that are temporally or lithologically suitable for the preservation of fossils (e. g., middle Holocene and older, fine-grained fluvial sandstones, argillaceous and carbonate-rich paleosols, cross-bedded point bar sandstones, fine-grained marine sandstones), some volcanoclastic formations (e.g., ashes or tephra), and some low-grade metamorphic rocks.

**Low Potential.** Rock units that are poorly represented by fossil specimens in institutional collections or based on general scientific consensus, only preserve fossils in rare circumstances (e. g., basalt flows or Recent colluvium) have low paleontological potential.

**No Potential.** Some rock units have no potential to contain fossils, for instance high-grade metamorphic rocks (such as gneisses and schists) and plutonic igneous rocks (such as granites and diorites).

**Undetermined Potential.** Rock units for which little information is available in the literature or museum records concerning their paleontological content, geologic age, and depositional environment are considered to have undetermined potential. Further study and field work is necessary to determine if these rock units have high or low potential to contain paleontological resources.

Following the assessment of paleontological potential, an impacts assessment was conducted comparing planned Project activities in terms of locations, depths, and ground disturbance methods with mapped geologic units. Where potential adverse impacts from Project activities were identified, mitigation recommendations were developed to reduce those impacts to less-than-significant.

## 5.3 Paleontological Impacts Assessment

Impacts on paleontological resources can be classified as direct, indirect, or cumulative. Impacts can also be considered as adverse impacts or as positive impacts. Direct adverse impacts on paleontological resources are the result of damage or destruction of these nonrenewable resources by ground-disturbing actions including construction activities. Therefore, in areas that contain paleontologically sensitive geologic units, ground disturbance has the potential to adversely impact paleontological resources by damaging or destroying them and rendering them permanently unavailable to science and society. Positive direct impacts, however, may result when paleontological resources are identified during construction and appropriately documented and salvaged for curation in an appropriate repository, thus ensuring the specimens are protected for future study and education.

# PALEONTOLOGICAL RESOURCES ASSESSMENT FOR THE NEW SIXTH APPELLATE DISTRICT COURTHOUSE PROJECT

Methodology  
July 11, 2024

Indirect impacts typically include those effects that result from the continuing implementation of management decisions and resulting activities, including normal ongoing operations of facilities constructed within a given Site. One example stems from the construction of new roads and trails in areas that were previously less accessible. This increases public access and therefore increases the likelihood of the loss of paleontological resources through vandalism and unlawful collecting, thus constituting an example of an adverse indirect impact. Another example would be human activities that increase erosion, which can cause indirect impacts on surface and subsurface fossils as the result of exposure, transport, weathering, and loss of the fossil.

Cumulative adverse impacts can result from incrementally minor but collectively significant actions taking place over time. The incremental loss of paleontological resources over time from construction-related surface disturbance at a single project, or vandalism and unlawful collection of a particular locality, could contribute to a significant cumulative adverse impact, as these individual adverse impacts accumulate over time into a larger number of lost resources and the associated irretrievable loss of scientific information.

The impact assessment conducted here takes into consideration planned Project activities in terms of aerial and subsurface extents, including the possibility of subsurface geologic units having a different paleontological potential than surficial units. For example, younger surficial sediments (e.g., alluvium, lacustrine, eolian) have low potential to preserve paleontological resources due to their age; yet sediments increase in age with depth and so these surficial deposits often overly older units that have high paleontological potential. In areas with this underlying geologic setting, surficial work may be of low risk for impacting paleontological resources while activities that require excavations below the depth of the surficial deposits would be at greater risk of impacting paleontological resources. For this reason, the impact assessment takes into consideration both the surface and subsurface geology and is tailored to Project activities.

Results  
July 11, 2024

**Young stream alluvium (Qa.2 in Figure 3).** Young stream alluvial sediments are mapped across the surface of the Site (Dibblee and Minch 2007a). These sediments consist of alluvial gravel, sand, silt, and clay in fan deposits (Dibblee and Minch 2007a). These sediments are relatively young in age, dating from the Holocene to the Recent, and are likely underlain by older alluvial sediments.

Given their relatively recent age in the upper layers, they are unlikely to preserve paleontological resources in the shallow upper layers of the unit, but as the threshold for biological remains to be considered as fossils is at 5,000 years in age, or mid-Holocene, the deeper layers of this unit may preserve fossils (SVP 2010).

The records of the UCMP (2024a) include 13 localities in Santa Clara County from Holocene-aged deposits that are likely similar to those mapped in the Site. Available data on these localities is limited, with most not including specimen data. These localities primarily preserved invertebrate fossils, with one locality preserving pollen samples (UCMP 2024a). Specimen data is available for one of these localities, which indicates a gastropod was collected (UCMP 2024a). Depths for these localities are not included in the database. Of note is the occurrence of intermixing of Holocene and Pleistocene-aged fossils in older surficial sediments, including in the San Francisco region, such that detailed age constraint is difficult, with early Holocene and late Pleistocene localities preserving similar fauna (Tomiya et al. 2011).

**Older alluvium** (not mapped in Figure 3). Older alluvium may be present in the subsurface of the Site at an unknown depth. This unit is mapped at the surface approximately 2.6 miles southwest of the Site (Dibblee and Minch 2007a). Older alluvium dates to the late Pleistocene and is similar to younger alluvium in composition, but is typically more compacted, and represents remnant terrace deposits in the Santa Clara Valley (Dibblee and Minch 2007a).

Pleistocene-aged alluvium is known for preserving a wide variety of Ice Age plants and animals in the San Francisco Bay region (Stirton 1939; Savage 1951; Tomiya et al. 2011; Wolff 1973, 1975). A review of the scientific literature reports numerous Pleistocene-aged fossil localities have been reported from the Santa Clara Valley, the first of which was reported in 1907 (Branner et al. 1909; Hay 1927; Jefferson 1991). These localities have been compiled and discussed in detail by Maguire and Holroyd (2016), who determined that 210 fossil specimens have been recorded from 12 localities in the Santa Clara Valley (Table 1). The fossils from these localities now reside in the collections of the UCMP; the Children's Discovery Museum of San Jose, California; the USGS collections in Denver, Colorado; and the Yale Peabody Museum in New Haven, Connecticut (Maguire and Holroyd 2016). The closest of these to the Site were discovered in the City, where two localities are documented preserving mammoth, bison, camel, horse, bear, and gopher fossils (Maguire and Holroyd 2016). Other localities are documented in San Jose, Mountain View, Palo Alto, and Milpitas (Maguire and Holroyd 2016). While depth is unknown for many of these localities, depths of 2 feet to 32 feet bgs are reported for the others (Maguire and Holroyd 2016). In addition to the localities summarized in Table 1, the literature indicates other localities have been reported, including a mastodon tooth, mammoth tusk, and camel specimen found at depths of 7 feet to 33 feet bgs (Jefferson 1991; Hay 1927), but exact locations for these could not be pinpointed beyond being in Santa Clara Valley (Maguire and Holroyd 2016).

Results  
July 11, 2024

**Table 1. Pleistocene-Aged Fossil Localities from the Santa Clara Valley, as Compiled by Maguire and Holroyd (2016)**

Locality Number	Description of Location	Depth	Taxa
USGS M1218	The City, intersection of Briton Avenue and Taylor Avenue, approximately 1.4 miles northwest of the Site.	Not reported	Bison, camel, horse, bear, gopher.
UCMP V91128	The City, about 100 meters northwest of the intersection of Oakmead Parkway and Lakeside Drive, and southeast of the I-101 and Lawrence Expressway interchange, approximately 2.8 miles northeast of the Site.	9 feet bgs	Mammoth
USGS M1218A	The City, exact location unknown, near M1218, likely approximately 4.5 miles northwest of the Site.	Not reported	Squirrel, horse, camel, gopher.
UCMP V99597	San Jose, California, in the Guadalupe River just south of the San Jose International Airport and the West Trimble Road overpass, approximately 5.7 miles northeast of the Site.	Tusks exposed at surface, within an 11-foot stream cut below the surrounding ground surface.	Mammoth
UCMP V99891	San Jose, California, 20 to 40 feet downstream (south) of UCMP V99597, approximately 5.7 miles northeast of the Site.	Not reported	Horse, antelope, camel, bison, sloth, a member of the elephant family, and other indeterminate mammals.
YPM VP 45538	San Jose, California, more precise location unknown.	Not reported	Horse
USGS M1227	Mountain View, California, Mountain View landfill, approximately 4.5 miles northwest of the Site.	32 feet bgs	Sloth, mammoth, horse, camel, basin, deer, and a variety of rodents and other small mammals.
UCMP V90003	Palo Alto, California, recovered from construction of the Molecular Medicine Building at Stanford University, approximately 8.5 miles northeast of the Site.	22 feet bgs	Bison
USGS M1203	Palo Alto, California, Alma Street underpass at Page Mill Road, approximately 6.6 miles northeast of the Site.	Not reported	Horse (mammoth, camel)
USGS M1202	Paleo Alto, California, Veterans Hospital, Matadero Creek near M1202, approximately 5.9 miles northwest of the Site.	Not reported	Horse, sloth, mammoth, antelope, cat, mud snail.
USGS M1001	Paleo Alto, California, Matadero Creek near M1202, approximately 5.9 miles northwest of the Site.	Not reported	Artiodactyl, rabbit/hare, pack rat, squirrel, mouse, reptiles.
UCMP V4916	Milpitas, California, Jackson Ranch, approximately 7.1 miles northwest of the Site.	2 feet bgs	Bison

# PALEONTOLOGICAL RESOURCES ASSESSMENT FOR THE NEW SIXTH APPELLATE DISTRICT COURTHOUSE PROJECT

Results  
July 11, 2024

## 6.2 Paleontological Potential of Geologic Units in the Site

In order to assess the potential of the geologic units present at the surface or in the subsurface to preserve paleontological resources, Stantec conducted an analysis of existing data, as described above. These investigations were used to assign the paleontological potential rankings of the SVP (2010) to the geologic units present within the Site, both at the surface and in the subsurface. The results of this assessment are described below for the geologic units in the Site (Table 2).

**Young stream alluvium.** The young stream alluvium present in the Site dates to the Holocene, which ranges from the present to 11,700 years old. As defined by the SVP (2010), fossils are over 5,000 years in age, corresponding to the middle part of the Holocene. Therefore, the alluvial sediments in the Site are too young at the surface to preserve paleontological resources; however, these sediments increase in age with depth, and so may preserve fossils in the subsurface. The analysis of existing data conducted here identified fossil localities in the UCMP from sediments consistent with this depositional model, and so this unit is assessed as having low-to-high paleontological potential, increasing in depth. Additionally, these sediments likely overlie older alluvial deposits (Maguire and Holroyd 2016).

**Older alluvium.** Older alluvium, which dates to the Pleistocene, is likely present in the shallow subsurface of the Site, as evidenced by the proximity of outcrops in the Santa Clara Valley and the documentation of fossil localities discovered in the subsurface in areas mapped as Holocene-aged alluvium. As indicated by the analysis of existing data, Pleistocene-aged alluvium has a rich fossil record in the Santa Clara Valley, including in the City, and so these sediments are assessed here as having high paleontological potential. The exact depth at which this unit is present in the subsurface is unknown. Of particular relevance to this Project is the discovery of fossil localities as shallow as two feet bgs to the northwest of the Site, and nine feet bgs in the City, near the Site. This indicates the depth of younger alluvium is shallow, and these high potential sediments are typically quite close to the surface in the Santa Clara Valley (Maguire and Holroyd 2016).

**Table 2. Paleontological Potential of the Geologic Units in the Site**

Geologic Unit	Age	Occurrence in Site	Paleontological Potential*
Young stream alluvium	Recent to Holocene	Surface	Low-to-high, increasing with depth
Older alluvium	Pleistocene	Subsurface	High

Note:

\*Ranking based on the SVP (2010) classifications

## 6.3 Potential Impacts on Paleontological Resources from Project Activities

The Project plans to demolish an existing building within the Site prior to the construction of a new courthouse. Over-excavation to a depth of three feet below subgrade is recommended for existing below-grade structural elements that require removal (Rutherford + Chekene 2024). Excavations of or beyond 10 feet in depth are anticipated for removal of the current basement for the removal of the basement footings.

# PALEONTOLOGICAL RESOURCES ASSESSMENT FOR THE NEW SIXTH APPELLATE DISTRICT COURTHOUSE PROJECT

Results

July 11, 2024

The construction of the new courthouse will entail ground disturbance consisting of grading for building foundations and utilities. As established in the preliminary geotechnical report prepared for the Project, the new building can be supported on a shallow foundation system with a minimum width of 2 feet and minimum embedment of 2 feet into undisturbed alluvium, estimated to be present at depths of 2 feet to 5 feet bgs, underlying artificial fill (Rutherford + Chekene 2024). Similar depths are recommended for retaining wall footings (Rutherford + Chekene 2024). Across the Site, stripping of at least 6 inches to 9 inches, with a minimum of 12 inches if subgrade stabilization is required, is recommended in areas of new improvements that are currently unpaved (Rutherford + Chekene 2024). Grading for new pedestrian walks and the plaza, fencing, and secured parking is anticipated to require cuts with a 2:1 or flatter horizontal to vertical ratio (Rutherford + Chekene 2024).

Of these activities, those that involve ground disturbance into middle Holocene or older alluvial sediments may pose direct impacts to fossils. While the exact depth for these high potential sediments is unknown, depths as shallow as 2 feet bgs are known to yield fossils in the Santa Clara Valley, with multiple localities known from depths of 9 feet and greater. Therefore, a reasonable estimate of the depth at which older alluvial sediments may be encountered is 5 feet bgs. While one locality was documented at 2 feet bgs, this is near Milpitas, with the closer localities to the City consistently deeper. Furthermore, artificial fill is documented at the Site at depths of 2 feet to 5 feet bgs (Rutherford + Chekene 2024). It is not anticipated that the Project would pose indirect adverse impacts on paleontological resources, as the final Project will not entail increased exposure or erosion of native sediments beyond the duration of the ground disturbance described above. Should direct impacts occur, they would contribute to cumulative impacts in the region, such as the collective loss of nonrenewable paleontological resources across the Santa Clara Valley or greater San Francisco region over time.

# PALEONTOLOGICAL RESOURCES ASSESSMENT FOR THE NEW SIXTH APPELLATE DISTRICT COURTHOUSE PROJECT

Recommendations and Management Considerations  
July 11, 2024

## 7.0 Recommendations and Management Considerations

Of the activities planned for the Project, grading and trenching, when in excess of five feet bgs; may impact paleontological resources. Other Project activities, such as surficial grading, paving, and landscaping are not anticipated to reach five feet in depth and so are unlikely to impact paleontological resources. The demolition of the Sunnyvale Courthouse is anticipated to involve over-excavation for removal of the current basement footings, which would also constitute ground disturbance into previously undisturbed depths of greater than five feet bgs and may impact paleontological resources.

Should paleontological resources be encountered during construction, their damage or destruction would constitute a direct adverse impact. Therefore, Stantec has developed recommendations for mitigation of Project activities that risk impacting paleontological resources in order to reduce potential impacts to less-than-significant. The ability to apply mitigation is tied to the nature of the ground-disturbing activity. Paleontological monitoring is the most common mitigation tool, during which a trained paleontologist observes construction activities and halts construction temporarily to inspect the exposed sediments. If fossils are observed, the paleontologist will recognize them and stop work so that they can be assessed and, if found to meet significance criteria, salvage them for conservation and curation in a museum.

Construction monitoring therefore requires a paleontologist to be able to observe either cuts into the ground, such as the sidewalls of trenches or a graded ground surface, or to observe spoils piles, such as from drilling or trenching. As the methods of ground disturbance planned for this Project produce cuts, spoils, or, in some cases, both, they are ideal targets of construction monitoring as a successful means of reducing potential impacts on paleontological resources to a less-than-significant level. These recommendations are summarized in Table 3 below.

**Table 3. Summary of Recommendations**

Project Activity	Dimensions	Method of Ground Disturbance	Mitigation Action
Demolition	Area of current buildings; 10 feet or more depth	Excavations	Full-time paleontological monitoring once depths of five feet bgs are reached in previously undisturbed sediments.
Surface preparation	Cuts of a 2:1 ratio	Grading	Full-time paleontological monitoring if depths of five feet bgs are reached in previously undisturbed sediments.
Utilities	Approximately five feet or under in depth	Trenching, back-hoe	Full-time paleontological monitoring if depths of five feet bgs are reached in previously undisturbed sediments.
Foundations	At least two feet in depth	Unknown	None
Crosswalks, plaza, parking, fencing, landscaping	Up to 12 inches depth	Grading	None

Key:  
bgs = below ground surface

# PALEONTOLOGICAL RESOURCES ASSESSMENT FOR THE NEW SIXTH APPELLATE DISTRICT COURTHOUSE PROJECT

Summary  
July 11, 2024

## 8.0 Summary

The paleontological resources assessment described herein reviewed geologic mapping, the scientific literature, and the online collections of the UCMP to assess the potential of the geologic units in the Site to preserve paleontological resources. The results of this assessment show that young stream alluvium, with low-to-high paleontological potential, is present at the surface of the Site and older Pleistocene-aged alluvium, with high paleontological potential, is possibly present in the subsurface as shallowly as five feet bgs.

Project activities that may exceed five feet bgs and thereby potentially impact paleontological resources in the subsurface include grading, trenching, drilled piles, and foundation tie downs. Should Project-related activities encounter scientifically important paleontological resources, the damage or destruction of those resources would constitute a significant adverse impact under CEQA. In order to avoid impacts on paleontological resources, Stantec recommends a qualified paleontologist meeting professional standards as defined by Murphey et al. (2019) be retained as the designated Project Paleontologist to oversee a paleontological mitigation program. Stantec recommends the following mitigation activities for the Project, as part of the mitigation program:

- The Project Paleontologist should develop and oversee the implementation of a Paleontological Mitigation Plan tailored to the Project plans that provides for paleontological monitoring of earthwork and ground-disturbing activities into undisturbed geologic units with high paleontological potential to be conducted by a paleontological monitor meeting industry standards (Murphey et al. 2019). This plan should include provisions for worker training, depths and locations for monitoring, monitoring procedures, a fossil discovery plan in the event a fossil is found during construction, including a plan for assessment and treatment, and requirements for final reporting of the results of the mitigation program. The plan should include a review of geotechnical data, if available, to refine the depth at which Pleistocene-aged sediments are present.
- Full-time paleontological monitoring should be implemented once excavations reach five feet in depth across the Site. The Project Paleontologist may alter the frequency or depth of monitoring based on subsurface conditions.
- Development of a Worker's Environmental Awareness Program training is recommended outlining the requirements and procedures if inadvertent discovery of fossils is identified during construction, to be delivered by the paleontological monitor. This training shall be provided once to each worker involved in ground-disturbing activities before they begin work and shall be documented in training records submitted to the Judicial Council.
- In the event that fossils are encountered during construction activities, all work must stop in a safe radius of the discovery, typically 50 feet, while the paleontological monitor documents the discovery. The Project Paleontologist shall assess the discovery. Should the Project Paleontologist assess the discovery as meeting criteria of scientific importance to be considered a paleontological resource, the

## **PALEONTOLOGICAL RESOURCES ASSESSMENT FOR THE NEW SIXTH APPELLATE DISTRICT COURTHOUSE PROJECT**

Summary  
July 11, 2024

discovery shall be collected and curated in an accredited repository along with all necessary associated data and curation fees.

Based on the findings in this Report and the implementation of the above mitigation recommendations, the Project should not cause a significant adverse impact on paleontological resources. Therefore, no additional paleontological resource studies are recommended or required at this time. Changes to the Project plans or Site from those assessed in this Report will require additional assessment for impacts on paleontological resources.

## **Appendix G Phase I Environmental Site Assessment**

# Sign-off Sheet and Signatures of Environmental Professionals

This document entitled Phase I Environment Site Assessment was prepared by Stantec Consulting Services Inc. ("Stantec") for the account of the Judicial Council of California ("JCC," the "Client" and "User"). Any reliance on this document by any third party is strictly prohibited. Any use which a third party makes of this document is the responsibility of such third party. Such third party agrees that Stantec shall not be responsible for costs or damages of any kind, if any, suffered by it or any other third party as a result of decisions made or actions taken based on this document.

All information, conclusions, and recommendations provided by Stantec in this document regarding the Phase I ESA have been prepared under the supervision of and reviewed by the professionals whose signatures appear below.

I declare that, to the best of my professional knowledge and belief, I meet the definition of Environmental Professional as defined in § 312.10 of Title 40 of the Code of Federal Regulations, Part 312, (40 CFR 312). I have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the property. I have developed and performed all the appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

## **1.0 EXECUTIVE SUMMARY**

Stantec Consulting Services Inc. (Stantec) has completed a Phase I Environmental Site Assessment (ESA) report of the property consisting of approximately 2.1-acres located at 605 West El Camino Real, in the City of Sunnyvale, Santa Clara County, California (the “Subject Property”), on behalf of Judicial Council of California (“JCC”, the “Client”). The work was performed according to Stantec’s proposal dated October 3, 2023 and accepted by the Client on October 19, 2023. JCC (the “User”) has been designated as the User of the report. Stantec understands that the intended use of the Phase I ESA is for due diligence in support of property redevelopment.

The Phase I ESA was conducted in conformance with the requirements of ASTM International (ASTM) Designations E1527-21, and All Appropriate Inquiry (AAI) as defined by the United States Environmental Protection Agency (USEPA) in Title 40 of the Code of Federal Regulations, Part 312 (40 CFR 312), except as may have been modified by the scope of work, and terms and conditions, requested by the Client. Any exceptions to, or deletions from, the ASTM or AAI practice are described in Section 2.3.

The following table summarizes general Subject Property information. A Subject Property location map is provided as Figure 1, and a map illustrating the Subject Property and vicinity is provided as Figure 2. Photographs taken during the site reconnaissance visit are provided in Appendix A.

**PHASE I ENVIRONMENTAL SITE ASSESSMENT  
605 WEST EL CAMINO REAL, SUNNYVALE, SANTA CLARA COUNTY, CA  
APN: 165-02-004**

<b>Subject Property Summary</b>	
<b>Subject Property Address</b>	605 West El Camino Real, Sunnyvale, Santa Clara County, California 94087.
<b>Assessor's Parcel Number(s) (APN)</b>	One parcel identified by the Santa Clara County Assessor's Office website as Assessor Parcel Number (APN) 165-02-004.
<b>Subject Property Size</b>	Approximately 2.1-acres.
<b>Subject Property Location Description</b>	The Subject Property is located at 605 West El Camino Real in the City of Sunnyvale. At the time of the site visit, the Subject Property contained an unoccupied former courthouse consisting of an approximately 22,800 sf one-story municipal building with a basement and associated paved parking and landscaped areas. Adjacent site use consists of municipal (north, east, and west) and commercial (south).
<b>Current Subject Property Use</b>	The Subject Property is currently unoccupied.
<b>Former Subject Property Use</b>	The Subject Property was formerly used as the Sunnyvale Superior Courthouse.
<b>Adjacent Site Use</b>	Adjacent site use is primarily commercial and municipal.
<b>Estimated Date of First Construction</b>	According to historical records, the Subject Property was first developed for rural residential (likely single-family home) and agricultural use (orchard) prior to 1939 and was used for these purposes until at least 1956. The Subject Property was developed into its current configuration with a municipal building between 1963 and 1968.
<b>Findings</b>	
The following sections summarize recognized environmental conditions (RECs), historical RECs (HRECs), controlled RECs (CRECs), and business environmental risks (BERs) associated with the	
<b>RECs</b>	Stantec did not identify evidence of any RECs associated with the Subject Property.
<b>CRECs</b>	Stantec did not identify evidence of any controlled recognized environmental conditions (CRECs) associated with the Subject Property.

**PHASE I ENVIRONMENTAL SITE ASSESSMENT  
605 WEST EL CAMINO REAL, SUNNYVALE, SANTA CLARA COUNTY, CA  
APN: 165-02-004**

<p><b>HRECs</b></p>	<p>Stantec identified the following evidence of HRECs associated with the Subject Property.</p> <ul style="list-style-type: none"> <li>• A closed leaking underground storage tank (LUST) case pertaining to gasoline-impacted soil is associated with the south-southwestern-adjacent site (located at 666 West El Camino Real). According to closure documentation available on the State Water Resources Control Board's (SWRCB) Geotracker website, three underground storage tanks (USTs; two 1,000-gallon gasoline USTs and one 550-gallon waste oil UST) were removed from the site with associated piping and impacted soil was over-excavated in June of 1990. Groundwater was considered unlikely to be affected by the release due to its estimated depth in the vicinity (greater than 50 ft below grade) and therefore the San Francisco Bay Regional water Quality Control Board (Water Board) granted closure status in 1997. Based on the proximity and upgradient hydrologic position of this site with respect to the Subject Property and the closed regulatory status of the case, this site constitutes a HREC. No additional assessment is recommended.</li> <li>• A closed LUST case pertaining to gasoline-impacted groundwater is associated with a site located approximately 270 ft southwest (estimated to be upgradient) of the Subject Property). Based on case records available on the Geotracker website, residual concentrations of petroleum hydrocarbons (as documented in the most recent available groundwater monitoring report for the site, dated August 29, 2008) were below laboratory reporting limits (LRLs), with the exception of methyl tertiary-butyl ether (MTBE) in downgradient well MW9 (located adjacent to the northeast corner of the intersection of West El Camino Real and Hollenbeck Avenue) which contained 0.54 parts per billion (ppb) and onsite well MW7, which contained 0.77 ppb MTBE. Case closure documentation also indicates that concentrations of total petroleum hydrocarbons (TPH) as gasoline (TPHg), TPH as diesel (TPHd), benzene, toluene, ethylbenzene, and xylenes (collectively BTEX) also remain in site soil. Based on the proximity and upgradient hydrologic position of the site with respect to the Subject Property, the residual petroleum hydrocarbon impacts left in site soil, and the residual concentrations of MTBE remaining in downgradient groundwater wells at the time of case closure, as well as the closed regulatory status of the case, this site constitutes a HREC. No additional assessment is recommended.</li> </ul>
<p><b>BERs</b></p>	<p>Stantec did not identify evidence of any BERs associated with the Subject Property.</p>

**PHASE I ENVIRONMENTAL SITE ASSESSMENT**  
**605 WEST EL CAMINO REAL, SUNNYVALE, SANTA CLARA COUNTY, CA**  
**APN: 165-02-004**

<p><b>Findings of Note &amp; De Minimis Conditions</b></p>	<p>Findings of note that do not represent RECs, HRECs, or CRECs are summarized below:</p> <ul style="list-style-type: none"><li>• According to historical documents, the Subject Property was first developed prior to 1939 and the current Subject Property building was constructed between 1963 and 1968. Asbestos and lead-based paint were commonly used construction materials during these periods. The existing Subject Property building and shallow site soil may contain these hazardous construction materials from demolition of historical Subject Property structures and weathering of current and former structures over time. Users of the Subject Property should consider the potential presence of regulated building materials and hazardous compounds in the existing Subject Property structure and shallow site soil and the possible presence of such compounds should be managed appropriately during future reuse. This does not constitute a REC.</li><li>• According to historical aerial photographs, the Subject Property and surrounding areas were intermittently used for agricultural purposes between at least 1939 and 1956. Based on this historical agricultural use, there is potential that agricultural chemicals such as organochlorine pesticides (OCPs), chlorinated herbicides, and fertilizers were used on the Subject Property and adjacent areas, and near-surface soils may contain these compounds resulting from direct onsite application, or from surface runoff from adjacent sites. The potential presence of these compounds in shallow site soil should be managed appropriately particularly with planned future use of the Subject Property including subsurface disturbance.</li></ul>
--	---

The preceding summary is intended for informational purposes only. Reading the full body of this report is recommended.

## **2.0 INTRODUCTION**

The objective of this Phase I ESA was to perform AAI into the past ownership and uses of the Subject Property consistent with good commercial or customary practice as outlined by ASTM International (ASTM) in *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process*, Designation E1527-21 and the AAI requirements". AAI is the process for evaluating a property's environmental conditions for the purpose of qualifying for landowner liability protections under the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) following final rule of Part 312 of Title 40, Code of Federal Regulations (40 CFR Part 312). The purpose of this Phase I ESA was to identify, to the extent feasible, adverse environmental conditions including recognized environmental conditions ("RECs") of the Subject Property.

The ASTM E1527-21 standard indicates that the goal of the Phase I ESA is to identify RECs, including "HRECs", and "CRECs" that may exist at a property. The term "recognized environmental conditions" means the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property:

1. The presence of hazardous substances or petroleum products in, on, or at the Subject Property due to a release to the environment;
2. The likely presence of hazardous substances or petroleum products in, on, or at the Subject Property due to a release or likely release to the environment; or
3. The presence of hazardous substances or petroleum products in, on, or at the Subject Property under conditions that pose a material threat of a future release to the environment.

ASTM defines a "HREC" as a previous release of hazardous substances or petroleum products affecting the Subject Property that has been addressed to the satisfaction of the applicable regulatory authority and meets current unrestricted use criteria established by a regulatory authority, without subjecting the property to any controls (e.g., activity and use limitations or other property use limitations). An HREC is not a REC.

ASTM defines a "CREC" as a REC resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (e.g., as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority), but with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (e.g., property use restrictions, activity and use limitations, institutional controls, or engineering controls).

A vapor encroachment condition is defined in ASTM E2600 - 22 *Standard Guide for Vapor Encroachment Screening on Property Involved in Real Estate Transactions* as the presence or likely presence of contaminants of concern (COC) vapors in the vadose zone of the Property caused by the release of vapors from contaminated soil and/or groundwater either on or near the Property. A vapor encroachment concern (VEC) exists when there is known COC contamination in, at or on the Property, such as may be the case when COC-contaminated groundwater exists in the subsurface beneath the Property. A determination that a VEC does not exist is appropriate, for example, when subsurface sampling has

**PHASE I ENVIRONMENTAL SITE ASSESSMENT  
605 WEST EL CAMINO REAL, SUNNYVALE, SANTA CLARA COUNTY, CA  
APN: 165-02-004**

confirmed that COCs are not present. A potential vapor encroachment condition exists when conditions suggest that it is possible for COCs to be present at the Property, but subsurface sampling has not been performed.

As defined by ASTM, RECs can include hazardous substances or petroleum products present under conditions in compliance with laws if that presence represents a material threat of future release. The release of hazardous substances or petroleum products is, however, not a REC if that presence is a *de minimis* condition. *De minimis* conditions are minor releases that generally do not present a material risk to human health and would not likely be subject to enforcement action if brought to the attention of governmental agencies.

ASTM also considers the potential for a BER, defined as a risk which can have a material environmental or environmentally driven impact on the business associated with the current or planned use of the Subject Property, not necessarily limited to those environmental issues required to be investigated by the ASTM standard. Consideration of BERs may involve addressing one or more ASTM non-scope considerations.

This Phase I ESA was conducted in accordance with our proposal to JCC dated October 3, 2022 and authorized on October 19, 2023. The scope of work conducted during this Phase I ESA consisted of a visual reconnaissance of the Subject Property, interviews with key individuals, and review of reasonably ascertainable documents. The scope of work did not include an assessment for environmental regulatory compliance of any facility ever operated at the Subject Property (past or present), or sampling and analyzing of environmental media. Stantec was not contracted to perform an independent evaluation of the purchase or lease price of the Subject Property and its relationship to current fair market value. The conclusions presented in this Phase I ESA report are professional opinions based on data described herein. The opinions are subject to the limitations described in Section 2.3.

ASTM E1527-21 notes that the availability of record information varies from source to source. The User or Environmental Professional (EP) is not obligated to identify, obtain, or review every possible source that might exist with respect to a property. Instead, ASTM identifies record information that is reasonably ascertainable from standard sources. "Reasonably ascertainable" means:

1. Information that is publicly available;
2. Information that is obtainable from its source within reasonable time and cost constraints; and
3. Information that is practicably reviewable.

## **2.1 SUBJECT PROPERTY DESCRIPTION**

The Subject Property consists of one parcel comprising approximately 2.1-acres, is located at 605 West El Camino Real, in the City of Sunnyvale, Santa Clara County, California, and identified by the Santa Clara County Assessor's Office website as Assessor Parcel Numbers (APN) 165-02-004. The Subject Property is located in a mixed-use area and according to historical records, the Subject Property was historically used for rural residential and agricultural purposes (orchard) between at least 1939 to 1956. The Subject Property was developed into its current configuration with a municipal building between 1963

**PHASE I ENVIRONMENTAL SITE ASSESSMENT  
605 WEST EL CAMINO REAL, SUNNYVALE, SANTA CLARA COUNTY, CA  
APN: 165-02-004**

and 1968. At the time of the site visit, the Subject Property contained an unoccupied former courthouse consisting of an approximately 22,800 sf one-story municipal building with a basement and associated paved parking and landscaped areas. Adjacent site use consists of municipal (north, east, and west) and commercial (south).

A Subject Property Location Map is provided as Figure 1. A Subject Property Vicinity Map illustrating the main features of the Subject Property and vicinity is provided as Figure 2. Photographs taken during the site reconnaissance visit are provided in Appendix A.

## **2.2 SPECIAL TERMS, CONDITIONS, AND ADDITIONAL ASSUMPTIONS**

There were no special terms, conditions, or additional assumptions associated with this Phase I ESA.

## **2.3 EXCEPTIONS AND LIMITING CONDITIONS**

This report documents work that was performed in accordance with generally accepted professional standards at the time and location in which the services were provided and given the schedule and budget constraints established by the Client. No other representations, warranties, or guarantees are made concerning the accuracy or completeness of the data or conclusions contained within this report, including no assurance that this work has uncovered all potential and actual liabilities and conditions associated with the Subject Property.

This report provides an evaluation of selected environmental conditions associated with the Subject Property that was assessed at the time the work was conducted and is based on information obtained by and/or provided to Stantec at that time. There are no assurances regarding the accuracy and completeness of this information received from others.

Conclusions made within this report consist of Stantec's professional opinion as of the time of the writing of this report and are based solely on the scope of work described in the report, the limited data available, and the results of the work. They are not a certification of the Subject Property's environmental condition.

Stantec did not obtain historical records that document the Subject Property history in 5-year intervals, and this resulted in data gaps. Although this represents data gaps, these data gaps are not considered to impact the EPs ability to identify RECs unless stated as such. Based on the information obtained during the course of this ESA and general knowledge of development at and near the Subject Property, the absence of this information did not affect the ability of the EPs to identify RECs, HRECs, CRECs, or *de minimis* conditions.

This report has been prepared for the exclusive use of the Client identified herein and any use of or reliance on this report by any third party is prohibited, except as may be consented to in writing by Stantec or as required by law. The provision of any such consent is at Stantec's sole and unfettered discretion and will only be authorized pursuant to the conditions of Stantec's standard form reliance letter. Stantec assumes no responsibility for losses, damages, liabilities, or claims, howsoever arising, from third party use of this report.

**PHASE I ENVIRONMENTAL SITE ASSESSMENT  
605 WEST EL CAMINO REAL, SUNNYVALE, SANTA CLARA COUNTY, CA  
APN: 165-02-004**

Project specific limiting conditions are provided in Section 2.2.

The locations of any utilities, buildings and structures, and Subject Property boundaries illustrated in or described within this report, if any, including pole lines, conduits, water mains, sewers and other surface or subsurface utilities and structures, are not guaranteed. Before starting site work, the exact location of all such utilities and structures must be confirmed by the Client and the party performing the work, and Stantec assumes no liability resulting from damage to such utilities and structures.

The conclusions are based on the conditions encountered at the Subject Property by Stantec at the time the work was conducted.

As the purpose of this report is to identify Subject Property conditions which may pose an environmental risk; the identification of non-environmental risks to structures or people on the Subject Property is beyond the scope of this assessment.

The findings, observations, and conclusions expressed by Stantec in this report are not an opinion concerning the compliance of any past or present owner or operator of the Subject Property which is the subject of this report with any Federal, state, provincial or local law or regulation.

This report presents professional opinions and findings of a scientific and technical nature. It does not and shall not be construed to offer a legal opinion or representations as to the requirements of, nor compliance with, environmental laws, rules, regulations, or policies of Federal, state, provincial or local governmental agencies. It is recommended that issues raised by the report should be reviewed for the Client by its legal counsel.

Stantec specifically disclaims any responsibility to update the conclusions in this report if new or different information later becomes available or if the conditions or activities on the Subject Property subsequently change.

## **2.4 PERSONNEL QUALIFICATIONS**

This Phase I ESA was conducted by, or under the supervision of, an individual that meets the ASTM definition of an EP. The credentials of the EP and other key Stantec personnel involved in conducting this Phase I ESA are provided in Appendix B.

### **3.0 USER-PROVIDED INFORMATION**

ASTM E1527-21 describes responsibilities of the User to complete certain tasks in connection with the performance of “All Appropriate Inquiries” into the Subject Property. The ASTM standard requires that the EP request information from the User on the results of those tasks because that information can assist in the identification of RECs, CRECs, HRECs, or *de minimis* conditions in connection with the Subject Property. Towards that end, Stantec requested that the User provide the following documents and information:

<b>Description of Information</b>	<b>Provided (Yes / No)</b>	<b>Description and/or Key Findings</b>
User Questionnaire and/or Interview	Yes	The User Questionnaire was completed by Hilda Iorga, Facilities Supervisor, Judicial Council of California (“Client” and “User” of this report). The User indicated that past use of the Subject Property was as a courthouse, which was built in 1967. The User also referenced a historical Phase I ESA (Tetra Tech EM, Inc., 2008) pertaining to past uses of the Subject Property prior to 1967. The historical Phase I ESA identified agricultural use (specifically, orchards) prior to the more recent site use as a courthouse.
Environmental Liens or Activity and Use Limitations (AUL)	No	Environmental Liens or AUL documents were not provided for review.
Previous Environmental Permits or Reports Provided by User	Yes	The User provided a historical Phase I ESA report pertaining to the Subject Property titled ‘ <i>Final Phase I Environmental Site Assessment, Sunnyvale Courthouse Site, 605 West El Camino Real, Sunnyvale, Santa Clara County, California</i> ’ prepared by Tetra Tech EM, Inc. (Tetra Tech) and dated August 8, 2008. Stantec reviewed the findings from this report as part of this Phase I ESA.
Purpose of the Phase I ESA	Yes	The intended use of the Phase I ESA is due diligence in support of property redevelopment for continued municipal use.

A copy of the completed User Questionnaire (dated November 2, 2023) is provided in Appendix C.

## **4.0 RECORDS REVIEW**

The objective of consulting historical sources of information is to develop the history of the Subject Property and surrounding area and evaluate if past uses may have resulted in RECs. Physical setting records are evaluated to determine if the physical setting may have contributed to adverse environmental conditions in connection with the Subject Property. During the review of historical records, Stantec attempted to identify uses of the Subject Property from the present to the first developed use of the Subject Property. Stantec’s research included the reasonably ascertainable and useful records described in this section.

### **4.1 PHYSICAL SETTING**

A summary of the physical setting of the Subject Property is provided in the table below with additional details in the following subsections.

<b>Topography:</b>	According to the USGS Cupertino, California topographic map, the Subject Property is approximately 127-feet above mean sea level (amsl) with a regional topographic gradient that is generally toward the north-northeast (EDR, 2023).
<b>Soil/Bedrock Data:</b>	According to information provided in the Physical Setting Source Summary section of the environmental database report (EDR, 2023a), the United States Department of Agriculture – Soil Conservation Service (USDA-SCS) identifies the soils beneath the Subject Property as primarily Botella clay loam. The Botella soil series is characterized as non-hydric, moderately well and well-drained soil with moderate infiltration rates and a moderate corrosion potential for uncoated steel.
<b>Estimated Depth to Groundwater/ Estimated Direction of Gradient:</b>	Site-specific groundwater investigations were not conducted during this ESA; however, according to information available on the SWRCB Geotracker website for a nearby site (696 West El Camino Real, approximately 300 feet southwest of the Subject Property), groundwater flow in the vicinity is generally toward the north-northeast (ETIC Engineering, 2008).

NOTE: Site-specific groundwater flow direction and depth can only be determined by conducting site-specific testing, which Stantec has not conducted.

#### **4.1.1 Subject Property Topography and Surface Water Flow**

The Subject Property is located at approximately 127-feet above mean sea level (feet amsl). Based on topography of the area, storm water from the Subject Property is expected to flow toward the north-northeast.

#### **4.1.2 Regional and Subject Property Geology**

The Property is located within the Coast Ranges Geomorphic Province comprised of north-west trending mountain ranges and valleys (California Geological Survey, 2002). These mountain ranges and valleys are oriented subparallel to the San Andreas Fault, bound to the east by the Great Valley Geomorphic

**PHASE I ENVIRONMENTAL SITE ASSESSMENT  
605 WEST EL CAMINO REAL, SUNNYVALE, SANTA CLARA COUNTY, CA  
APN: 165-02-004**

Province, and to the west by the Pacific Ocean. The Coast Ranges are comprised of thick Mesozoic and Cenozoic sedimentary strata, and the northern and southern ranges are separated by the San Francisco Bay, which lies within in a depression between the northern and southern ranges. The northern Coast Ranges are composed primarily of the Franciscan Complex and the eastern border of the province is comprised of strike-ridges and valleys that lie within Upper Mesozoic strata (California Geological Survey, 2002).

### **4.1.3 Regional and Subject Property Hydrogeology**

The Property is located within the Santa Clara Subbasin of the Santa Clara Valley Groundwater Basin. This groundwater basin lies in a structural trough that runs parallel to the northwest-trending Coast Ranges and is bound to the east by the Diablo Range, to the west by the Santa Cruz Mountains, and the basin extends from the northern border of Santa Clara County to the groundwater divide near Morgan Hill (DWR, 2004). The basin is drained to the north to San Francisco Bay, including Coyote Creek, the Guadalupe River and Los Gatos Creek. The primary hydrologic units within the Santa Clara Subbasin include unconsolidated to semi-consolidated continental deposits of Pliocene to Holocene age. Two geologic units comprise these deposits: the Santa Clara Formation (Plio-Pleistocene age) and younger alluvium (Pleistocene to Holocene age; DWR, 1975). The Subbasin recharges primarily by infiltration from streambeds in upland areas, and direct precipitation (DWR, 2004). Groundwater levels in the area historically decreased through the first half of the 20th Century, until the mid-1960s when importation from the Hetch Hetchy and South Bay Aqueducts and the initiation of an artificial recharge program began, and as a result, groundwater levels have generally increased since 1965 (Fio and Leighton, 1995).

As noted in Section 4.1, site-specific groundwater investigations were not conducted during this ESA; however, according to information available on the SWRCB Geotracker website for a nearby site (696 West El Camino Real, approximately 300 feet southwest of the Subject Property), groundwater flow in the vicinity is generally toward the north-northeast (ETIC Engineering, 2008).

## **4.2 FEDERAL, STATE AND TRIBAL ENVIRONMENTAL RECORDS**

A regulatory agency database search report was obtained from Environment Data Resources (EDR), a third party environmental database search firm. A complete copy of the database search report, including the date the report was prepared, the date the information was last updated, and the definition of databases searched, is provided in Appendix C.

Stantec evaluated the information listed within the database relative to potential impact to the Subject Property, assessing the potential for impacts based in part on the physical setting. As part of this process, inferences have been made regarding the likely groundwater flow direction at or near the Subject Property. As described in Sections 4.1 and 4.1.3, the inferred shallow groundwater flow direction is estimated to be generally toward the north-northeast. Observations about the Subject Property and adjoining properties made during the Subject Property reconnaissance are provided in more detail in Section 5.

#### **4.2.1 Listings for Subject Property**

The Subject Property was identified in the environmental database report with various listings pertaining to the regulated generation, storage, handling and/or transport of hazardous materials/waste. These hazardous materials/waste related listings are associated with the regulated disposal of waste categories including solids or sludges with halogenated organic compounds (in 1992), other organic solids (in 2001), and asbestos-containing waste (in 1999, 2010, 2011). These listings do not constitute a REC.

#### **4.2.2 Listings for Adjoining and Nearby Sites with Potential to Impact Subject Property**

Stantec assessed data presented in the environmental agency database search report to evaluate the potential for conditions on adjoining and nearby sites to pose a REC, CREC, or HREC for the Subject Property. The evaluation included an opinion of the potential for contamination by hazardous substances or petroleum products to migrate to the Subject Property from an adjoining or nearby site, including by vapor migration or encroachment (i.e., potential for a VEC).

Based on this evaluation, the following individual facilities were identified as the most likely potential sources of impact to the Subject Property. The basis for why/why not each of the following listed databases constitutes a REC for the Subject Property is also provided. A copy of the complete EDR Radius Map Report (EDR, 2023a) is provided in Appendix D.

<b>Listed Facility Name/Address</b>	<b>Database Listing(s)</b>	<b>Distance/Direction from Subject Property</b>	<b>REC (Yes/No)</b>

This site is included in the environmental database report with listings pertaining to the regulated generation, storage, handling and/or transport of hazardous materials/waste, as well as the presence of one 12,000-gallon, single-walled, fiberglass, UST containing diesel fuel which was reportedly installed in 1984. No environmental cases or evidence of a material release were identified in connection with this site; therefore, these listings do not constitute a REC.

A closed LUST case pertaining to gasoline-impacted soil is associated with this site. According to closure documentation available on the SWRCB Geotracker website, three USTs (two 1,000-gallon gasoline USTs and one 550-gallon waste oil UST) were removed from the site with associated piping and impacted soil was over-excavated in June of 1990. Groundwater was considered unlikely to be affected by the release due to its estimated depth in the vicinity (greater than 50 ft below grade) and therefore the San Francisco Bay Regional water Quality Control Board (Water Board) granted closure status in 1997. Based on the proximity and upgradient hydrologic position of this site with respect to the Subject Property and the closed regulatory status of the case, this site constitutes a HREC.			
Sunnyvale Chevrolet 660 West El Camino Real Sunnyvale, California	RCRA-SQG HWTS HAZNET NPDES CIWQS	Adjacent to the south (estimated to be up-to cross-gradient) from the Subject Property.	No
These listings pertain to the regulated generation, storage, handling and/or transport of hazardous materials/waste, likely associated with the operation of a car dealership in this location. No evidence of a material release, or associated environmental cases were identified in connection with this site, therefore these listings do not constitute a REC.

A closed LUST case pertaining to gasoline-impacted groundwater is associated with this location. Based on case records available on the Geotracker website, residual concentrations of petroleum hydrocarbons (as documented in the most recent available groundwater monitoring report for the site, dated August 29, 2008) were below LRLs, with the exception of MTBE in downgradient well MW9 (located adjacent to the northeast corner of the intersection of West El Camino Real and Hollenbeck Avenue) which contained 0.54 parts per billion (ppb) and onsite well MW7, which contained 0.77 ppb MTBE. Case closure documentation also indicates that concentrations of TPH as gasoline (TPHg), TPH as diesel (TPHd), benzene, toluene, ethylbenzene, and xylenes (collectively BTEX) also remain in site soil. Based on the proximity and upgradient hydrologic position of the site with respect to the Subject Property, the residual petroleum hydrocarbon impacts left in site soil, and the residual concentrations of MTBE remaining in downgradient groundwater wells at the time of case closure, as well as the closed regulatory status of the case, this site constitutes a HREC.

<p>A closed LUST case pertaining to gasoline-impacted groundwater, soil and soil vapor is associated with this location. According to closure documentation available on the Geotracker website, soil cleanup goals were developed for the site using attenuation models. The SCVWD granted the site closure based on the reduction of hydrocarbon mass after SVE, results from confirmation soil sampling that suggested that much of the remaining hydrocarbon mass was localized to a silty clay layer at approximately 35 ft below grade, and the absence of reported concentrations of hydrocarbons from a downgradient well. The SCVWD also noted that contamination remaining in site soil could result in the formation of a residual groundwater plume beneath the site, but that they believed this contamination would not pose a 'significant threat' to the groundwater resource. Based on the hydrologic position of this site with respect to the Subject Property and the age and regulatory status of this case, this site does not constitute a REC.</p>

<p>An open environmental cleanup case pertaining to tetrachloroethylene (PCE) impacted soil and vapor is associated with this site which was formerly operated as a dry-cleaning facility. According to site history information available on the Geotracker website, impacted soil was over-excavated and removed from the site as part of redevelopment activities. The site has since been redeveloped into apartments over commercial spaces, townhouses, and a hotel. A sub-slab depressurization system was installed beneath the site and a <i>Vapor Intrusion Mitigation (VIM) System Completion Report</i> (dated November 28, 2022) was submitted. Prior to installation of the VIM system, PCE concentrations in soil vapor at the site were elevated (up to 10,000 micrograms per cubic meter [<math>\mu\text{g}/\text{m}^3</math>]) across the site. According to recent case records, a soil vapor assessment work plan has been conditionally approved by the Water Board (in August 2023). Based on the current status of this case (redeveloped into mixed-use buildings with residential over commercial units, with approval of remedial measures by local agencies; the case appears to be open only pending post-remedial vapor sampling), and the hydrologic position with respect to the Subject Property, this site does not constitute a REC or VEC.</p>

This site is the location of an ongoing USEPA National Priorities List (NPL) or 'Superfund' site. According to site background information available on the USEPA Superfund website, the 75-acre Westinghouse Electric Corporation (Sunnyvale Plant) site is the former location of an electrical transformer manufacturing facility. Manufacturing of steam generators, marine propulsion systems and missile launching systems for the Department of Defense currently takes place on the site. Groundwater contamination resulted from a storage tank leaking polychlorinated biphenyls (PCBs) and from localized spills. Following initial actions to protect human health and the environment, the site's long-term cleanup is ongoing. Based on the distance and hydrologic of this site with respect to the Subject Property, it does not constitute a REC.			

The remaining listings in the database search report, including listings of Orphan Sites, provided in Appendix C do not constitute a REC for the Subject Property based on the distance from the Subject Property, nature of the listing, regulatory status, and/or hydrologic position of the site with respect to the Subject Property.

### 4.3 LOCAL/REGIONAL ENVIRONMENTAL RECORDS

Stantec checked the following sources to obtain information pertaining to Subject Property use and/or indications of RECs in connection with the Subject Property:

#### 4.3.1 Local Health Department

Agency Name, Contact Information, Date	Finding
Santa Clara County Department of Environmental Health (SCCDEH) Via web portal: <a href="https://cepascc-ca.nextrequest.com/">https://cepascc-ca.nextrequest.com/</a>	A written request subject to the Freedom of Information Act (FOIA) was submitted to the SCCDEH requesting files pertaining to the Subject Property. The information requested included permits to operate, the current or former presence of above ground storage tanks, below ground storage tanks, hazardous materials/waste storage, disposal, or release, or notices of violation or infraction pertaining to environmental issues and/or hazardous materials at the Subject Property.  An email response was received on November 30, 2023, which indicated that no responsive records were identified for the Subject Property.

#### 4.3.2 Fire Department

Agency Name, Contact Information, Date	Finding
City of Sunnyvale Fire Department Via City Clerk's Office web portal: <a href="https://sunnyvale.dynamics365portals.us/public-records/">https://sunnyvale.dynamics365portals.us/public-records/</a> Email contact: <a href="mailto:fireprevention@sunnyvale.ca.gov">fireprevention@sunnyvale.ca.gov</a>	A written request subject to FOIA was submitted to the Sunnyvale Fire Department (via the City Clerk's Office) requesting files pertaining to the Subject Property. The information requested included any above ground storage tanks, below ground storage tanks, hazardous materials/waste storage, disposal, or release, permits to operate, or notices of violation or infraction pertaining to environmental issues and/or hazardous materials associated with the Subject Property.  An email response was received on December 5, 2023, which included documentation pertaining to annual fire inspection reports (dated 2013 and 2015), a notice of violation issued by the Sunnyvale Department of Public Safety (Dated December 13, 2013) citing missing annual fire alarm testing documentation. This violation was cleared upon reinspection on February 17, 2014. City-provided records also included a fire prevention and hazardous materials consolidated permit (effective 12/13/2013 through 12/13/2018) for 'fire code-regulated operations'.

#### 4.3.3 City Clerk's Office

Agency Name, Contact Information, Date	Findings
City of Sunnyvale Via City Clerk's Office web portal:	A written request subject to FOIA was submitted to the Sunnyvale City Clerk's Office requesting files pertaining to the Subject Property. The information requested included any above ground storage tanks, below

This violation was cleared upon reinspection on February 17, 2014. City-provided records also included a fire prevention and hazardous materials consolidated permit (effective 12/13/2013 through 12/13/2018) for 'fire code-regulated operations'.</p>

**4.3.4 Local/Regional Pollution Control Agency Department Records**

Agency Name, Contact Information, Date	Findings
Department of Toxic Substances Control (DTSC) Envirostor Website: <a href="https://www.envirostor.dtsc.ca.gov/">https://www.envirostor.dtsc.ca.gov/</a>	Stantec searched the DTSC Envirostor website for records pertaining to the Subject Property. No records were identified pertaining to the Subject Property.

**4.3.5 Local/Regional Water Quality Agency Records**

Agency Name, Contact Information, Date	Findings
SWRCB San Francisco Bay Region Via Geotracker Website: <a href="https://geotracker.waterboards.ca.gov/">https://geotracker.waterboards.ca.gov/</a>	Stantec searched the SWRCB Geotracker website for records pertaining to the Subject Property. No records were identified pertaining to the Subject Property.

**4.3.6 Local/Regional Air Quality Management District Records**

Agency Name, Contact Information, Date	Findings
Bay Area Air Quality Management District (BAAQMD) Via web portal: <a href="https://baagportal.publicrecordstracker.com/public-records-list/public-records-list-create/">https://baagportal.publicrecordstracker.com/public-records-list/public-records-list-create/</a>	<p>A written request subject to the FOIA was submitted to the BAAQMD requesting records pertaining to the Subject Property. Requested records included permits to operate, emissions permits, emissions inventory statements, health risk assessments, site inspection reports, source test reports, complaint investigation reports, notices of violation, enforcement actions, and asbestos notifications/records.</p> <p>An email response was received on December 8, 2023, indicating that no records were found for the Subject Property.</p>

## 4.4 HISTORICAL RECORDS REVIEW

### 4.4.1 Land Title Records/Deeds

Land title records, deeds, environmental liens, and activity and use limitation documentation was not provided by the User, and public records were not searched by Stantec.

### 4.4.2 Aerial Photographs

Stantec reviewed historical aerial photographs provided by EDR. The general type of activity on a property and land use changes can often be discerned from the type and layout of structures visible in the photographs. However, specific elements of a facility's operation usually cannot be discerned from aerial photographs alone. The Subject Property was developed with a rural residential structure on the western portion of the site by at least 1939 and the remainder of the Subject Property was planted with orchard trees by this time. Several small structures were added to the southeastern portion of the site by 1956. These features remained on the Subject Property until 1963, when the residential structure formerly located on the western portion of the site and the orchard trees were cleared. Several small structures remained on the southeastern portion of the Subject Property. No RECs were identified from Stantec's review of historical aerial images.

A summary of Stantec's findings from review of the EDR Aerial Photo Decade Package for the Subject Property (EDR, 2023b; a copy is included in Appendix E) is provided in the following table. All images were scaled to 1" = 500'.

Year	Observations				
	Onsite	Adjacent (North)	Adjacent (East)	Adjacent (South)	Adjacent (West)
1939 1948 1950	The Subject Property is bound to the south by a road arranged into a similar configuration to El Camino Real. A rural residential structure is visible on the western portion of the site and the remainder is planted with orchard trees. Several structures that appear to be residential are visible on the southeasternmost portion of the parcel.		Orchard		
1956	The central and eastern portions of the Subject Property appear to have been cleared of orchard	Orchard	Orchard trees. Partially developed with commercial structures to	Partially developed with what appear to be commercial structures and	Orchard, and commercial structure.

	Onsite	Adjacent (North)	Adjacent (East)	Adjacent (South)	Adjacent (West)
			visible in this image.		Subject Property on western side.
1998 2006 2009 2012	Similar in land use and configuration to previous photograph.				
2016 2020	Similar in land use and configuration to previous photograph.			Portions of this site have been redeveloped into the current configuration since the last image.	Similar in land use and configuration to previous photograph.

#### **4.4.3 City Directories**

Stantec retained EDR to research available reverse city directories for the Subject Property, in approximately five-year intervals. The Subject Property address (605 West El Camino Real) was included in the report and was listed as occupied by the County Clerk, County Municipal Court, Santa Clara County Courts, State of California, Sunnyvale Courthouse, or similar name (1968, 1975, 1992, 1995, 2000, 2001, 2010, 2014, 2017, 2020).

When included in the report, adjacent sites were listed as occupied by other municipal agencies, various commercial and retail businesses, and restaurants.

No RECs were identified from Stantec’s review of city directory listings. A copy of the complete EDR City Directory Report for the Subject Property (EDR, 2023c) is included in Appendix E.

#### **4.4.4 Historical Fire Insurance Maps**

Fire insurance maps were developed for use by insurance companies to depict facilities, properties, and their uses for many locations throughout the United States. These maps provide information on the history of prior land use and are useful in assessing whether there may be potential environmental contamination on or near the Subject Property. These maps, which have been periodically updated since the late 19th century, often provide valuable insight into historical Subject Property and adjoining and nearby property uses.

Stantec requested fire insurance maps from EDR; however, no coverage exists for the Subject Property. The Sanborn® Map Search Report indicating “no coverage” is presented in Appendix D.

#### 4.4.5 Historical Topographic Maps

Stantec reviewed historical USGS 7.5-minute topographic maps (scale 1:24,000) of the Cupertino, California Quadrangle, 15-minute topographic maps of the Palo Alto, California Quadrangle (scale 1:50,000 and 1:62,500), and 30-minute topographic maps (1:125,000) of the Santa Cruz, California Quadrangle to help identify past property usage and areas of potential environmental concern.

No RECs were identified from Stantec’s review of historical topographic maps of the Subject Property and adjacent areas. A summary of Stantec’s findings from review of the EDR Historical Topo Map Report (EDR, 2023e) is provided in the following table. A copy is of the complete EDR Topographic Map Report is included in Appendix E.

Year	Observations				
	Onsite	Adjacent (North)	Adjacent (East)	Adjacent (South)	Adjacent (West)
1897 1899 1902	The Subject Property and adjacent sites are depicted as vacant with several small (likely residential) structures depicted in the outlying areas. A rail line is depicted approximately 0.5-mile north of the Subject Property, generally arranged in an east-west configuration.				
1943 1947	The Subject Property is bound to the south by El Camino Real. A (likely) rural residential structure is depicted on the western side of the site.	Largely vacant, with some small structures depicted.			Vacant
1948 1953	The Subject Property is depicted with green dots indicating the presence of orchard trees. The structure depicted on the western side of the parcel in the previous map is also depicted here. A second small structure is depicted on the eastern side of the Subject Property.	Orchard	Orchard, followed by pink shading, indicating dense development.	Orchard, with several small structures.	Orchard, with one small structure and a road depicted to the west.
1961	The Subject Property is depicted as bound to the north by a road arranged in a similar configuration to All American Drive and is shaded red indicating development. Specific site features are not depicted on this map.	This site is developed with municipal buildings and is labeled as ‘City Hall.’	Shaded red indicating development. Specific site features are not depicted on this map.	El Camino Real, followed by orchard.	Shaded red indicating development. Specific site features are not depicted on this map.
1968 1973	The Subject Property is depicted with a large structure on the western and central portion of the parcel.	Similar in depiction to the previous map.		Most of the orchards depicted south of El Camino Real on the 1961 map are not depicted on these maps.	Similar in depiction to the previous map.

**PHASE I ENVIRONMENTAL SITE ASSESSMENT  
605 WEST EL CAMINO REAL, SUNNYVALE, SANTA CLARA COUNTY, CA  
APN: 165-02-004**

Year	Observations				
	Onsite	Adjacent (North)	Adjacent (East)	Adjacent (South)	Adjacent (West)
1980	Similar in depiction to the previous map.			This site has been partially developed since the 1973 map and is now depicted with several commercial structures.	Railroad tracks followed by vacant land.
1995	Similar in depiction to the previous map. The site is shaded grey indicating development.	An additional structure is depicted in this area.	Similar in depiction to the previous map.	Additional commercial development is depicted in this area.	A municipal structure is depicted in here.
1997	The Subject Property and adjacent sites are not covered by this map.				
2012 2015 2018 2021	The current road configurations are depicted in the Subject Property vicinity. Specific property detail is depicted on these maps.				

#### 4.4.6 Other Historical Sources

The California Department of Conservation Geologic Energy Management Division (CalGEM, formerly, the Division of Oil, Gas, and Geothermal Resources [DOGGR]) website (<https://www.conservation.ca.gov/calgem/Pages/WellFinder.aspx>) was searched to identify the potential existence of oil and gas production wells within the vicinity of the Subject Property. There are no active, dry, plugged, or abandoned oil wells mapped on the Subject Property or adjacent sites.

The National Pipeline Mapping System Public Viewer (<https://pvnpm.phmsa.dot.gov/PublicViewer/>) was searched to identify the potential existence of subsurface pipelines within the vicinity of the Property. No pipelines are mapped transecting the Subject Property or adjacent sites.

## **5.0 SITE RECONNAISSANCE**

A visit to the Property and its vicinity was conducted by Miriam Cohen on November 3, 2023. Stantec was accompanied during the Subject Property visit by a representative of Judicial Council of California (Client and User). Stantec made observations of the Subject Property, safely accessible building interior areas, and site vicinity during the visit. Figure 2 provides information about the Subject Property and adjoining sites, and photographs taken during the Subject Property visit are included in Appendix A.

### **5.1 SITE RECONNAISSANCE METHODOLOGY**

The site reconnaissance focused on observation of current conditions and observable indications of past uses and conditions of the Subject Property that may indicate the presence of REC. The reconnaissance of the Property was conducted on foot and Stantec utilized the following methodology to observe the Subject Property:

- Traverse the outer Subject Property boundary.
- Traverse transects across the Subject Property.
- Traverse the periphery of structures on the Subject Property.
- Visually observe accessible, unoccupied areas of the Subject Property expected to be used by occupants or the public, maintenance and repair areas, and utility areas.

There were no weather-related Subject Property access restrictions encountered during the site reconnaissance visit.

### **5.2 GENERAL DESCRIPTION**

<b>Property and Area Description:</b>	The Subject Property consists of an unoccupied courthouse associated parking and landscaped areas and comprises approximately 89,200 square feet (sf). Adjacent site use consists of municipal (north, east, and west) and commercial (south).
<b>Property Operations:</b>	Currently unoccupied, previously used as a courthouse.
<b>Structures, Roads, Other Improvements:</b>	The primary Subject Property structure is an approximately 22,800 sf one-story courthouse with a basement and associated paved parking and landscaped areas.
<b>Property Size (acres):</b>	Approximately two acres.
<b>Estimated % of Property Covered by Buildings and/or Pavement:</b>	Approximately 75%.
<b>Observed Current Property Use/Operations:</b>	The Subject Property is not currently in use.
<b>Observed Evidence of Past Property Use(s):</b>	Most recent past use was as the Sunnyvale Superior Courthouse.

<b>Sewage Disposal Method (and age):</b>	Municipal sewer service.
<b>Potable Water Source:</b>	Municipal water supply.
<b>Electric Utility:</b>	Pacific Gas & Electric Company (PG&E).

### 5.3 HAZARDOUS SUBSTANCES AND PETROLEUM PRODUCTS

The following table summarizes Stantec's observations during the Property reconnaissance.

Observations	Description/Location
<b>Hazardous Substances and Petroleum Products as Defined by CERCLA 42 U.S.C. § 9601(14):</b>	None were identified on the Subject Property. The eastern-adjacent site contains a paved parking area and municipal fueling station which includes two dispensers and what appear to be three USTs. A 55-gallon drum was observed adjacent to the dispensers that was labeled as "Used Spill." Three additional 55-gallon drums (unlabeled) were identified approximately 50 feet west of the fueling station (between fueling station and Subject Property).
<b>Drums (≥ 5 gallons):</b>	In addition to the four drums identified on the eastern-adjacent site (described above), a blue, poly drum was identified in the basement electrical room which contained several unused absorbent socks.
<b>Strong, Pungent, or Noxious Odors:</b>	None observed.
<b>Pools of Liquid:</b>	None observed.
<b>Unidentified Substance Containers:</b>	In the outdoor basement area, there is a five-gallon bucket with a degraded label by the sewage pump which has an unknown substance in it. Additionally, there are two large white plastic containers next to the air conditioner in the basement with unknown contents. One of them is labeled "inhibitor" with permanent marker.
<b>PCB-Containing Equipment:</b>	Fluorescent lighting was observed throughout Subject Property building interiors. PCBs were historically used in fluorescent lighting ballasts, and it is possible that the Subject Property building contains these compounds.
<b>Other Observed Evidence of Hazardous Substances or Petroleum Products:</b>	Several insulated pipes were observed in the basement that were labeled as containing asbestos.

### 5.4 INTERIOR OBSERVATIONS

Stantec made the following observations during the Subject Property reconnaissance of the building interiors at the Property and/or identified the following information during the interview or records review portions of the assessment:

Observations	Description
<b>Heating/Cooling Method</b>	Exterior-mounted heat pumps and pad-mounted air conditioning units.
<b>Surface Stains or Corrosion</b>	Widespread surficial staining and corrosion of piping were noted in the basement utility rooms. The outdoor basement area housing the cooling tower and sump has extensive staining on the northern and eastern cement walls adjacent to the cooling tower. There is also some visible staining on the floor of this room. A thick layer of dirt covers some areas of the floor of the outdoor basement area that has fallen through the grated ceiling (grate is located at street level). Staining was also identified leading to a floor drain in the basement mechanical room (adjacent to stairs) and around a drain in the basement electrical room. Limited surficial staining was observed on the main level of the courthouse.
<b>Floor Drains or Sumps</b>	The floor drain in the basement electrical room is rusted and corroded. There are two floor drains in the outdoor basement area which are caked with dirt and plant debris (beneath the metal ceiling grate). The drain adjacent to the basement stairs is also somewhat rusted and a stain was observed running to the drain from the basement mechanical room.
<b>Other Interior Observations</b>	A dumbwaiter was identified adjacent to the basement stairs which is operated by a system of rope pullies and has no associated hydraulic system.

## 5.5 EXTERIOR OBSERVATIONS

Stantec made the following observations during the site reconnaissance of exterior areas of the Property and/or identified the following information during the interview or records review portions of the assessment:

Observations	Description
<b>Onsite Pits, Ponds, or Lagoons:</b>	None observed.
<b>Stained Soil or Pavement:</b>	Various areas of oil-stained pavement and/or concrete were observed in the surrounding parking areas, consistent with incidental leaks from automobiles.
<b>Stressed Vegetation:</b>	None observed.
<b>Waste Streams and Waste Collection Areas:</b>	None observed.
<b>Solid Waste Disposal:</b>	None observed.
<b>Potential Areas of Fill Placement:</b>	None observed.
<b>Wastewater:</b>	None observed.
<b>Stormwater:</b>	Stormwater is routed into the local municipal storm drain system or percolates into unpaved portions of the Subject Property.
<b>Wells:</b>	None observed.
<b>Septic Systems:</b>	None observed.
<b>Other Exterior Observations:</b>	Heat pumps were identified at four corners of the building exterior. A pad-mounted transformer and an air conditioning system were

Observations	Description
	identified on the south side of the building adjacent to the main entrance fronting El Camino Real.

## 5.6 UNDERGROUND STORAGE TANKS/STRUCTURES

<b>Existing USTs:</b>	None observed.
<b>Former USTs:</b>	None.
<b>Other Underground Structures:</b>	None.

## 5.7 ABOVEGROUND STORAGE TANKS

<b>Existing ASTs:</b>	None observed.
<b>Former ASTs:</b>	None.

## 5.8 ADJOINING PROPERTIES

### 5.8.1 Current Uses of Adjoining Properties

As viewed from the Property and/or from public rights-of-way, Stantec made the following observations about use and activities on adjoining properties:

<b>NORTH</b>	456 W Olive Avenue – Sunnyvale City Hall (municipal site use).
<b>SOUTH</b>	660 E El Camino Real – Courtyard by Marriott (commercial site use).
<b>EAST</b>	520 All America Way – Parking lot and fueling station – (municipal site use).
<b>WEST</b>	700 All America Way – Sunnyvale Police Department – (municipal site use).

### 5.8.2 Observed Evidence of Past Uses of Adjoining Properties

Observations of adjoining properties providing indications of past use and activities, if any, are described below.

<b>NORTH</b>	Municipal since at least 1991, based on review of Google Earth imagery.
<b>SOUTH</b>	Commercial since at least 1991, based on review of Google Earth imagery.
<b>EAST</b>	Municipal since at least 1991, based on review of Google Earth imagery.
<b>WEST</b>	Municipal since at least 1991, based on review of Google Earth imagery.

### **5.8.3 Pits, Ponds, or Lagoons on Adjoining Properties**

As viewed from the Property and/or from public rights-of-way, Stantec made the following observations about the presence of pits, ponds, and lagoons on adjoining properties:

<b>NORTH</b>	None observed.
<b>SOUTH</b>	None observed.
<b>EAST</b>	None observed.
<b>WEST</b>	None observed.

### **5.9 OBSERVED PHYSICAL SETTING**

<b>Topography of the Property and Surrounding Area:</b>	The topography is relatively flat throughout the property. The elevation ranges from approximately 122' to 127' above sea level.
---	--

## 6.0 INTERVIEWS

The User identified Jeff Hancock, Chief Engineer, as the key site manager for the Subject Property.

Name and Contact Information	Relationship to Subject Property	Key findings:
Jeff Hancock <a href="mailto:jeff.hancock@veolia.com">jeff.hancock@veolia.com</a>	Facilities Manager	<p>Mr. Hancock indicated that he has approximately 14 years of knowledge of the Subject Property, which is currently an unoccupied courthouse, prior to which the Subject Property served as the Sunnyvale Superior Courthouse. He also presented information on the following conditions:</p> <ul style="list-style-type: none"> <li>• He is not aware of USTs or any wells on the Subject Property.</li> <li>• Mr. Hancock indicated that he is not aware of any of the following:               <ul style="list-style-type: none"> <li>○ Any spills or leaks of hazardous substances or petroleum products or other environmental incidents on the Subject Property.</li> <li>○ Any government agency enforcement actions, investigations, citations, notices of violation, or active or threatened litigation pertaining to environmental issues at the Subject Property.</li> <li>○ Concerns or complaints expressed by occupants or neighbors of the Subject Property pertaining to environmental issues.</li> <li>○ Spills of hazardous substances or petroleum products, or other environmental incidents or concerns at adjoining or nearby properties.</li> </ul> </li> </ul>

## **7.0 EVALUATION**

This section provides a summary overview of or Findings, Opinions, and Conclusions.

### **7.1 FINDINGS, OPINIONS AND CONCLUSIONS**

Information gathered from interviews, reviews of existing data, and an inspection was evaluated to determine if RECs are present in connection with the Subject Property. Based on this information, Stantec made the following findings and developed the following opinions.

We have performed a Phase I ESA in conformance with the scope and limitations of ASTM Practice ASTM E1527-21 of the Subject Property. Any exceptions to, or deletions from, this practice will be described in Section 2.3 of the final report. This assessment has revealed the following evidence of RECs, HRECs, CRECs, VECs, or BERs.

- A closed LUST case pertaining to gasoline-impacted soil is associated with the south-southwestern-adjacent site (located at 666 West El Camino Real). According to closure documentation available on the SWRCB Geotracker website, three USTs; two 1,000-gallon gasoline USTs and one 550-gallon waste oil UST) were removed from the site with associated piping and impacted soil was over-excavated in June of 1990. Groundwater was considered unlikely to be affected by the release due to its estimated depth in the vicinity (greater than 50 ft below grade) and therefore the San Francisco Bay Regional water Quality Control Board (Water Board) granted closure status in 1997. Based on the proximity and upgradient hydrologic position of this site with respect to the Subject Property and the closed regulatory status of the case, this site constitutes a HREC. No additional assessment is recommended.
- A closed LUST case pertaining to gasoline-impacted groundwater is associated with a site located approximately 270 ft southwest (estimated to be upgradient) of the Subject Property). Based on case records available on the Geotracker website, residual concentrations of petroleum hydrocarbons (as documented in the most recent available groundwater monitoring report for the site, dated August 29, 2008) were below LRLs, with the exception of MTBE in downgradient well MW9 (located adjacent to the northeast corner of the intersection of West El Camino Real and Hollenbeck Avenue) which contained 0.54 parts per billion (ppb) and onsite well MW7, which contained 0.77 ppb MTBE. Case closure documentation also indicates that concentrations of TPH as gasoline (TPHg), TPH as diesel (TPHd), benzene, toluene, ethylbenzene, and xylenes (collectively BTEX) also remain in site soil. Based on the proximity and upgradient hydrologic position of the site with respect to the Subject Property, the residual petroleum hydrocarbon impacts left in site soil, and the residual concentrations of MTBE remaining in downgradient groundwater wells at the time of case closure, as well as the closed regulatory status of the case, this site constitutes a HREC. No additional assessment is recommended.

Findings that do not represent RECs, HRECs, CRECs, VECs or BERs, but may require evaluation or action are summarized below:

- According to historical documents, the Subject Property was first developed prior to 1939 and the current Subject Property building was constructed between 1963 and 1968. Asbestos and lead-

**PHASE I ENVIRONMENTAL SITE ASSESSMENT  
605 WEST EL CAMINO REAL, SUNNYVALE, SANTA CLARA COUNTY, CA  
APN: 165-02-004**

based paint were commonly used construction materials during these periods. The existing Subject Property building and shallow site soil may contain these hazardous construction materials from demolition of historical Subject Property structures and weathering of current and former structures over time. Users of the Subject Property should consider the potential presence of regulated building materials and hazardous compounds in the existing Subject Property structure and shallow site soil and the possible presence of such compounds should be managed appropriately during future reuse. This does not constitute a REC.

- According to historical aerial photographs, the Subject Property and surrounding areas were intermittently used for agricultural purposes between at least 1939 and 1956. Based on this historical agricultural use, there is potential that agricultural chemicals such as OCPs, chlorinated herbicides, and fertilizers were used on the Subject Property and adjacent areas, and near-surface soils may contain these compounds resulting from direct onsite application, or from surface runoff from adjacent sites. The potential presence of these compounds in shallow site soil should be managed appropriately particularly with planned future use of the Subject Property including subsurface disturbance.

## 7.2 DATA GAPS

The Federal AAI final rule [40 CFR 312.10(a)] and ASTM E1527-21 identifies a “data gap” as the lack or inability to obtain information required by the standards and practices of the rule despite good faith efforts by the EP or the User.

Any data gaps resulting from the Phase I ESA described in this report are listed and discussed below.

<b>Gap</b>	<b>Discussion</b>
<b>Deletions or Exceptions from Scope of Work Referenced in Section 1.4:</b>	None
<b>Weather-Related Restrictions to Site Reconnaissance:</b>	None
<b>Facility Access Restrictions to Site Reconnaissance:</b>	None
<b>Other Site Reconnaissance Restrictions:</b>	None
<b>Data Gaps from Environmental Records Review:</b>	None
<b>Data Gaps from Historical Records Review:</b>	None
<b>Data Gaps from Interviews:</b>	None
<b>Other Data Gaps:</b>	None

## Appendix A PHOTOGRAPHS OF THE SUBJECT PROPERTY AND VICINITY

**Photo #1** View of typical office space inside Subject Property building.

**Photo #2** View of dumbwaiter located in the southwest corner of Subject Property building. The dumbwaiter appears to be controlled manually by ropes and contains no hydraulics.

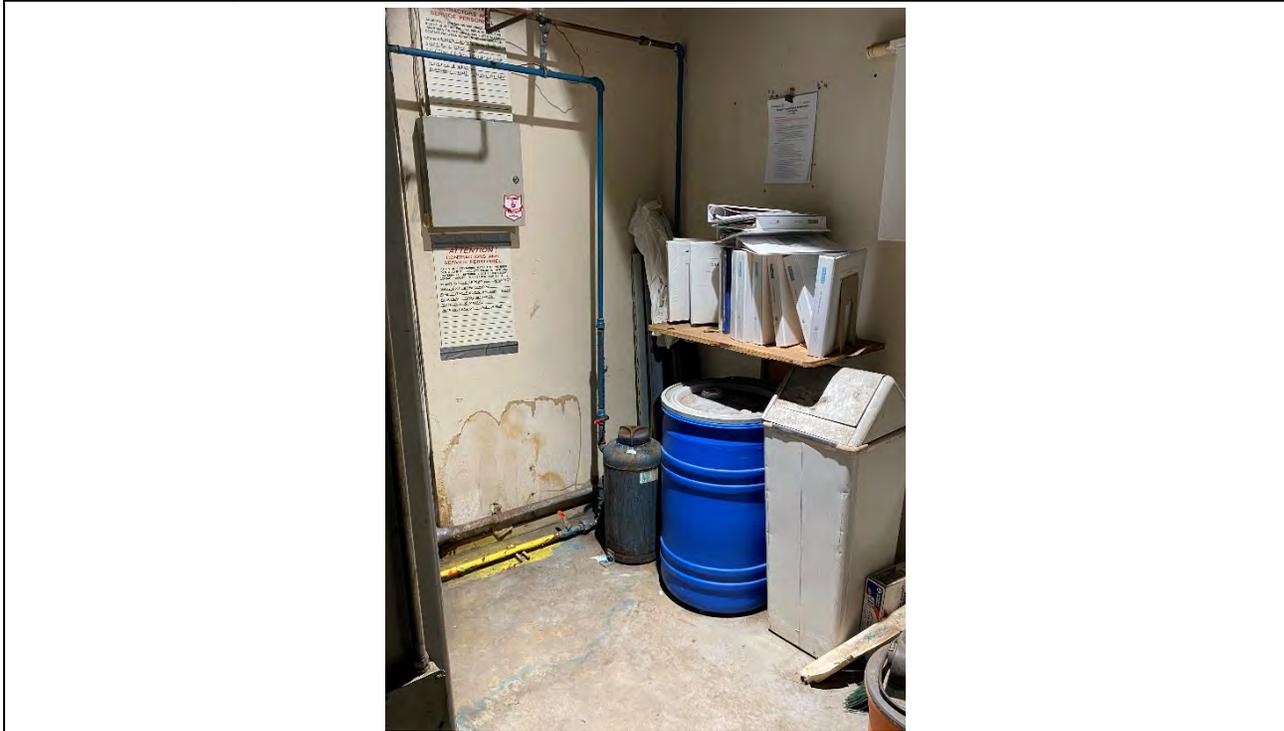

**Photo #3** View (looking northeast) of basement mechanical room (southern portion of Subject Property building) housing the HVAC system.

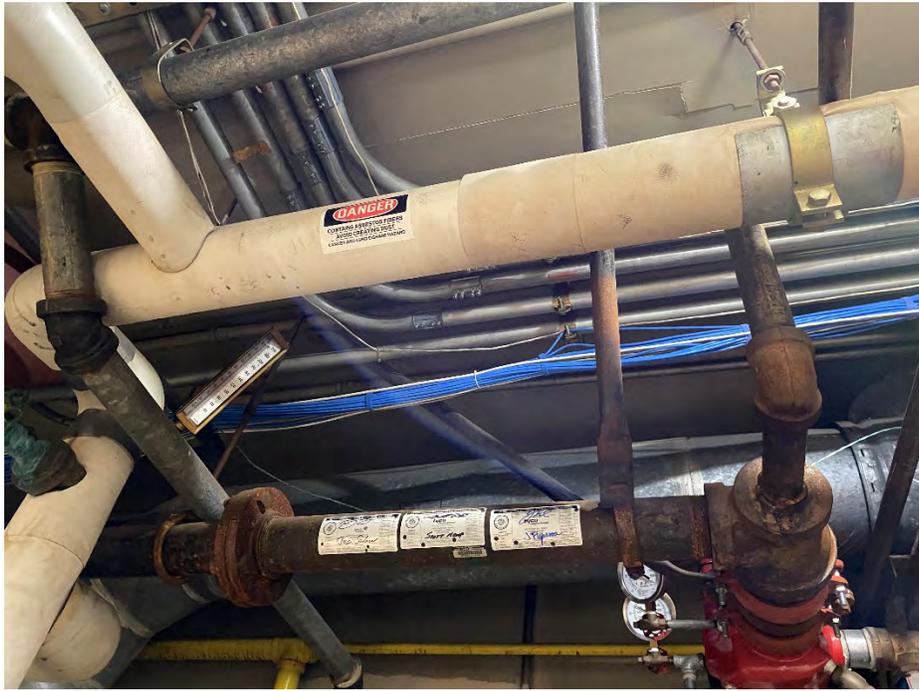

**Photo #4** Alternate view (looking southeast) of basement mechanical room. Note rusted piping and two white poly containers (contents unknown) visible at left of frame.

**Photo #5** View (looking southwest) of basement electrical room (located west of the mechanical room) which contains an electrical board and water heater. Note the rusted/corroded floor drain with evidence of staining.

**Photo #6** View (looking northwest) of a rusted metal metal container (contents unknown) and a plastic drum containing clean absorbent socks in the basement electrical room. The metal container is connected to rusted piping leading to the drain.

**Photo #7** View of rusted piping and insulated piping labeled as containing asbestos, identified in the basement electrical room.

**Photo #8** View (facing southwest) of a rusted floor drain located adjacent to the basement stairs. Surficial staining was identified which appears to originate from the basement mechanical room.

**Photo #9** View (looking southwest) of the underground sewage pump located in the outdoor basement-level area located south of the basement electrical and mechanical rooms. This sub-grade area is covered at street level with a metal grate located west of the main entrance to the building. Note evidence of surface staining.

**Photo #10** Five-gallon bucket with a deteriorated and illegible label (contents unknown) located adjacent to the sub-grade sewage pump.

**Photo #11** View (facing southeast) of the cooling tower which is also housed in the outdoor basement area. The eastern cement wall of the area (visible at left of frame) is heavily stained and surface staining was also noted adjacent to the cooling tower and sewage pump (right of frame).

**Photo #12** Alternate view (facing northeast) of staining on the northern cement wall of the outdoor basement area adjacent to the cooling tower.

**Photo #13** View of floor drain in the center of the outdoor basement area. The rusted grate is clogged with soil and plant debris and staining is visible around the grate.

**Photo #14** Staining on the floor of an interior room located on the east side of the Subject Property building.

**Photo #15** View (facing southwest) of roof-mounted HVAC system installed on Subject Property building.

**Photo #16** View of one of four heat pumps located on the exterior of the Subject Property building (one at each of the four corners).

**Photo #17** View (facing northeast) of north side of the Subject Property building, from the roof.

**Photo #18** View (facing northeast) of pad-mounted transformer located on south side of the building exterior.

**Photo #19** View (facing northwest) of pad-mounted air conditioner adjacent to the transformer (identified in Photo #18) on the south side of Subject Property building.

**Photo #20** View (facing northeast) of the metal grate covering the outdoor sub-grade basement area which houses the cooling tower and sewer pump. The windows in the top right of the photo lead to the main entrance area.

**Photo #21** View of the south-facing main entrance to the Subject Property building. In the foreground of the image a storm drain is visible in the parking lot. Bollards protect a water meter just west of the entrance.

**Photo #22** View (facing southeast) of the municipally-owned and operated gas station located in the parking lot immediately east of the Subject Property (this fueling station is located offsite of the Subject Property). Two pumps were identified as well as a drum labeled "USED SPILL." Surface staining was identified on the concrete in various areas at the fueling station.

**Photo #23** View (facing south) of fill ports for two of at least three underground storage tanks associated with the fueling station located on the eastern-adjacent site. An unlabeled poly container is visible adjacent to the brick building.

**Photo #24** View (facing east) of three unlabeled 55-gallon drums located west of the fueling station.

## Appendix B STANTEC RESUMES

---

Corinne is an Associate Scientist in the Environmental Services practice and provides technical support for a variety of clients including land developers, medical organizations, government contractors, major technology companies, and municipalities. Her expertise includes Phase 1 Environmental Site Assessments (ESAs), remediation planning and implementation, environmental compliance monitoring, technical report writing, and data analysis and interpretation. Her Phase 1 ESA experience includes assessment of commercial and industrial sites, office parks, retail gasoline stations, residential parcels, and undeveloped land. Corinne has experience implementing environmental remediation techniques including in-situ chemical oxidation (persulfate, permanganate, ozone, Fenton's reagent, peroxide) and enhanced bioremediation (nutrient and oxygen addition, as well as commercially prepared electron donors/acceptors) and bioaugmentation (addition of commercially available bacterial cultures).

## EDUCATION

PhD, Agronomy (Soil Microbiology), Purdue University, West Lafayette, Indiana, 2007

MS, Agronomy (Soil Microbiology), Purdue University, West Lafayette, Indiana, 2001

BS, Environmental and Resource Science (with minors in Geology and Soil Science), University of California, Davis, 1999

## PROJECT EXPERIENCE

### USEPA Brownfield Grant Program

Various Clients, Northern California (Associate Scientist) 2018-Present

Corinne supports management and implementation of USEPA Brownfield grants for multiple municipal clients in Northern California. Corinne has completed due diligence assessments (Phase I ESAs) at a variety of sites including residential properties, industrial facilities, and commercial buildings. Findings have typically been used to scope additional hazardous materials and environmental contamination assessments, tailored to support the redevelopment objectives of each specific project. Corinne also supports budget tracking and area-wide assessment and planning.

### Due Diligence Assessment

Various Clients, California (Associate Scientist), 2016 - Present

Corinne has completed over 50 due diligence site assessments (Phase I ESAs) for a variety of clients including medical providers, residential and commercial land developers, renewable energy providers, and municipalities. Phase I ESAs are completed in accordance with ASTM E1527-13, and frequently include additional scope items designed to add additional value to the evaluation, as determined by specific details of each project.

### Environmental Site Assessments and Remediation

Varian Medical Systems, Palo Alto, California (Associate Scientist), Ongoing

Corinne provides technical support for an enhanced in-situ bioremediation program that uses carbon substrate and dechlorinating bacteria to promote anaerobic degradation of chlorinated solvents in groundwater aquifers beneath a former manufacturing facility. Her role consists of coordination and evaluation of periodic monitoring of groundwater and soil vapor at the site, and preparation of technical reports and proposals, and for continued treatment.

# Corinne Ackerman <sup>PhD</sup>

Associate Scientist · 15 Years of Experience

---

## **Mangan Gun Range, Sacramento, California (Associate Scientist), 2017-2018**

Corinne provided technical support for the investigation and remediation of lead dust originating from an indoor gun range in Sacramento, California. Her role consisted of data management, statistical analysis and interpretation, and technical report preparation.

## **The Vale Project, Sunnyvale, California (Associate Scientist), 2016-Present**

Corinne provided technical support for environmental activities related to residential redevelopment of an active Superfund site in Sunnyvale, California. As part of these activities, Stantec developed a vapor management plan to provide future owners and occupants with a resource for understanding risks associated with potential intrusion of volatile vapors from underlying groundwater. Stantec designed a vapor mitigation plan to confirm the effectiveness of sub-slab vapor barriers installed beneath future buildings and will carry out sub-slab vapor sampling during several phases of construction. Corinne's role consists of coordination of ongoing vapor sampling activities, compilation and interpretation of resulting data, and reporting.

## **Soil and Groundwater Remediation Systems Confidential Client\* (Environmental Scientist)**

Corinne provided technical and client support for a treatability study that compared ozone and activated persulfate for the destruction of petroleum and chlorinated solvents in soil and groundwater. Impacted soil was within the unsaturated zone, and therefore column tests were conducted to evaluate treatment with ozone. Chemical oxidation using sodium persulfate was evaluated using site soil and groundwater to compare the efficacy of unactivated persulfate and alkaline activated persulfate for treatment of chlorinated solvents.

## **Wastewater**

### **Confidential Client\***

Corinne developed and implemented traditional microbiological capabilities for an existing treatability lab for the evaluation of a novel method of wastewater sterilization. Corinne also provided staff training in aseptic technique, preparation and maintenance of cell cultures, and sterilization and safe-handling procedures.

## **Regulatory Advice and Consultation**

### **Various Sites\* (Environmental Scientist)**

Corinne has project management experience providing direct client support to develop customized scopes of work for treatability testing to meet specific site and regulatory concerns as well as budgetary requirements. Corinne has provided technical support for the collection, interpretation and evaluation of study data, and prepared project deliverables detailing findings. Corinne has overseen a variety of treatability tests including both in-situ chemical oxidation (ISCO) and enhanced in-situ bioremediation. ISCO tests have assessed the ability of ozone, persulfate, permanganate, or Fenton's reagent to destroy various contaminants including petroleum hydrocarbons, volatile organic compounds, and chlorinated solvents. To provide dosing estimates, testing included evaluation of contaminant removal, measurement of ozone, persulfate, or permanganate demand of soil, hydrogen peroxide or Fenton's reagent longevity in soil and groundwater, assessment of the effect of treatment on secondary water quality parameters. Post-treatment studies assessed of the ability of hexavalent chromium formed by in-situ chemical oxidation to attenuate within the treatment zone (once oxidation ceased) and downgradient of the treatment zone, to determine whether Cr(VI) was anticipated to migrate out of the treatment zone.

---

Neil is a Senior Geologist within the Environmental Services practice and supports brownfield development clients across Northern California and serves as a subject matter expert for site investigation. He is a California-registered geologist with 20 years' experience in due diligence assessments (Phase I and II), site assessment design and implementation, geologic and hydrogeologic characterization, remediation planning and implementation, human health risk assessment and management, and development and implementation of in-situ bioremediation programs. Currently, Neil serves as Project Manager for implementing EPA Brownfield grants in Richmond, Lodi, and Santa Rosa, California. Neil has successfully managed environmental investigation projects for large utility providers, major technology companies, and land developers, with an emphasis on collaborative relationships with regulatory and public stakeholders to ensure achievement of project objectives.

## EDUCATION

BS, Geology, San Francisco State University, San Francisco, California, 1998

## REGISTRATIONS

Professional Geologist #8503, State of California

## PROJECT EXPERIENCE

### EPA Brownfield Grant Management City of Richmond, California (Project Manager), 2018-Present

Neil manages implementation of a \$400,000 EPA Brownfield grant for the City of Richmond, California. The focus of the City's grant is the revitalization of underutilized and/or abandoned residential properties within five underserved neighborhoods, working in partnership with the Richmond Community Foundation (RCF), a local non-profit entity. Stantec assisted the City with evaluating available inventory, performing community outreach, and submitting appropriate work plans to the EPA. To date, Stantec has performed nine Phase I environmental site assessments and two hazardous materials assessments on abandoned properties prior to their purchase and redevelopment for residential housing by the RCF. This infill of affordable housing fills a critical need in the City.

### Santa Rosa Community Development Commission, Santa Rosa, California (Project Manager), 2018-Present

Neil manages implementation of a \$392,000 EPA Brownfield grant for the Sonoma County Community Development Commission in Santa Rosa, California. The focus of the City's grant is assessment of a mile-long travel corridor containing over 70 brownfield sites, with the goal of improving the livability of the neighborhood and facilitating and attracting economic investment. Stantec assisted the commission with evaluating inventory along the focus corridor and completing community outreach exercises. Stantec is in the process of completing Phase I site assessments for 15 contiguous properties in the core of the focus area, with the goal of redeveloping the properties for residential housing. Following historically destructive wildfires in 2017, the City of Santa Rosa lost nearly 3,000 homes, further exacerbating a need for residential housing in Santa Rosa. The coalition development project has the potential to be transformative for the neighborhood and for addressing local needs for housing.

### City of Lodi, California (Project Manager), 2018- Present

Neil manages implementation of a \$400,000 EPA Brownfield grant for the City of Lodi, California. The focus of the City's grant is performing assessment, cleanup planning, and community outreach activities for brownfield sites in five focus areas in the downtown, heavy rail, and highway corridors. Stantec has assisted the City with inventory and outreach activities and completed

\* denotes projects completed with other firms

---

multiple Phase I site assessments facilitating sale and reuse of target properties. Stantec completed a Phase I site assessment incorporating five parcels targeted for purchase and redevelopment to facilitate expansion of a regional science museum. Stantec subsequently scoped completion of a hazardous materials survey and limited soil assessment to define the building demolition costs and determine any needed soil handling procedures. The museum project is a significant infill project for the City's downtown area that will likely increase investment in the area.

### **Brownfield Remediation and Redevelopment Sacramento Railyards Project, Sacramento, California (Task Manager), Ongoing**

Neil was a key member of the Stantec team performing environmental characterization and subsequent soil removal on an 18-acre property in the Sacramento Railyard brownfield redevelopment site. Site investigation activities consisted of characterization of soil and groundwater chemical conditions attributed to historical site operations; characterization of soil vapor conditions and assessment of potential human health risk under proposed re-use of the site as a hospital; and targeted removal of impacted soils. Work was performed with oversight from the Department of Toxic Substances Control and the California Regional Water Quality Control Board, and completion of the project benefitted from significant stakeholder involvement with regulatory and municipal entities.

### **Restoration, Remediation and Redevelopment Alameda 2 Redevelopment, Alameda, California (Project Manager), 2016**

Neil managed site investigation and remediation activities at a residential redevelopment site in Alameda, California. The project objective was obtaining unrestricted site use status for a former warehouse and manufacturing facility. Investigation activities consisted of defining the

lateral and vertical extent of chlorinated solvents in soil and soil gas; establishing cleanup objectives protective of residential site use, including potential vapor intrusion exposure; and completing soil remediation to achieve those objectives. The work was performed under a Voluntary Cleanup Agreement with the California Department of Toxic Substances Control, and Neil worked closely with the DTSC to complete a Preliminary Endangerment Report justifying unrestricted site use. The PEA was approved, allowing site redevelopment to move forward.

### **The Vale Project, Sunnyvale, California (Project Manager), Ongoing**

Neil managed environmental activities related to residential redevelopment of an active Superfund site in Sunnyvale, California. On behalf of Stantec's client, Neil's team decommissioned and replaced the existing groundwater extraction and treatment system in coordination with redevelopment plans; oversaw removal and onsite burial of pesticide-impacted soils; remediated a former retail gasoline station for reuse as a public park; and developed a vapor management plan to allow future owners and occupants with a resource for understanding risks associated with potential intrusion of volatile vapors from underlying groundwater. Stantec designed a vapor mitigation plan to confirm the effectiveness of sub-slab vapor barriers installed beneath future buildings and will carry out sub-slab vapor sampling during several phases of construction.

### **Environmental Site Assessments Regional Utility Provider Substation, Fresno, California (Project Manager), 2008**

Neil managed the assessment and remediation at a former utility provider substation in Fresno, California. Historical investigations indicated chemical impacts to shallow soils from metals, petroleum hydrocarbons, PCBs, and polyaromatic hydrocarbons. Investigation and remediation activities were completed under a voluntary

*\* denotes projects completed with other firms*

---

cleanup agreement with the California Department of Toxic Substances Control, with the ultimate goal of certifying the site for unrestricted use. Stantec completed a Preliminary Endangerment Assessment that included a human health risk assessment and site-specific cleanup goals for constituents of concern. Following DTSC approval, Stantec prepared a Removal Action Work Plan recommending site-wide excavation of soils to approximately 1.5 feet. The DTSC approved the cleanup goals and the remedial approach, and excavation was completed in June 2009. During the remediation phase, Neil worked closely with PG&E and the DTSC as dynamic field conditions arose which required variations from the proposed scope of work. This relationship, consisting of daily site visits from DTSC staff and frequent discussion of field conditions and analytical data, was crucial in ensuring ultimate regulatory approval of the remediation and certification of the site for unrestricted use.

PHASE I ENVIRONMENTAL SITE ASSESSMENT  
605 WEST EL CAMINO REAL, SUNNYVALE, SANTA CLARA COUNTY, CA  
APN: 165-02-004

## Appendix C USER-PROVIDED DOCUMENTS

5. Activity and Land Use Limitations. Are you aware of any activity and use limitations, such as engineering controls, land use restrictions, or institutional controls that are in place at the property and/or have been filed or recorded as applicable to the property as a result of environmental contamination, investigation, cleanup, or related matters?  
\_\_\_\_\_ Yes                      X \_\_\_\_\_ No

If yes, describe or attach details of the limitations \_\_\_\_\_  
\_\_\_\_\_

6. Specialized Knowledge or Experience. As the User of this ESA, do you have any specialized knowledge or experience related to the property or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the property or an adjoining property, such that you would have specialized knowledge about chemicals and processes used by this type of business?  
\_\_\_\_\_ Yes                      X \_\_\_\_\_ No

If yes, describe or attach details of your specialized knowledge or experience \_\_\_\_\_  
\_\_\_\_\_

7. Relationship of Purchase Price to Fair Market Value of Property. Does the purchase price being paid for this property reasonably reflect the fair market value of the property? If you conclude that there is a difference, do you have any reason to believe that the reduced purchase price may be related to contamination known or believed to be present at the property?

\_\_\_\_\_ Yes, I have reason to believe that the purchase price for the property has been reduced in comparison with the fair market value due to contamination known or believed to be present at the property?

\_\_\_\_\_ No, I have no reason to believe that the purchase price for the property has been reduced in comparison with the fair market value due to contamination known or believed to be present at the property?

X \_\_\_\_\_ Not applicable. User is not involved in a purchase or sale of the property.

8. Commonly Known or Reasonably Ascertainable Information. Are you aware of commonly known or reasonably ascertainable information about the property that would help the Environmental Professional to identify conditions indicative of releases or threatened releases of hazardous substances or petroleum products? For example:

Do you know the past uses of the property?  
X \_\_\_\_\_ Yes (describe) Courthouse, built in 1967. See 2008 Phase I ESA for prior land uses  
\_\_\_\_\_ No

Do you know of chemicals, hazardous substances or petroleum products that are present or once were present at the property?  
\_\_\_\_\_ Yes (describe) \_\_\_\_\_  
X \_\_\_\_\_ No

Do you know of spills or other releases of chemicals, hazardous substances or petroleum products that have taken place at the property?  
\_\_\_\_\_ Yes (describe) \_\_\_\_\_  
X \_\_\_\_\_ No

Do you know of any environmental cleanups that have taken place at the property?

Yes (describe) \_\_\_\_\_

No

9. The Degree of Obviousness of Contamination. E1527-05 and the federal AAI rule (40 CFR 312.31) require that the Phase I ESA consider the degree of obviousness of the presence or likely presence of contamination at the property, and the ability to detect the contamination by appropriate investigation. Based on your knowledge and experience related to the property, are there any *obvious* indicators that point to the presence or likely presence of contamination at the property?

Yes (describe) \_\_\_\_\_

No

10. Availability of Previous Environmental Reports. Are you aware of previous environmental site assessment reports, other environmental reports, documents, correspondence, etc. concerning the property and its environmental condition?

Yes (please identify and provide copies, if available) \_\_\_\_\_

2008 Phase I ESA

No

## EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E1527 - 21), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E2247 - 16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E1528 - 22) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

## SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

## STANDARD ENVIRONMENTAL RECORDS

### ***Lists of Federal NPL (Superfund) sites***

NPL: Also known as Superfund, the National Priority List database is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund program. The source of this database is the U.S. EPA.

A review of the NPL list, as provided by EDR, and dated 09/19/2023 has revealed that there is 1 NPL site within approximately 1 mile of the target property.

<u>Equal/Higher Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>
<b><i>WESTINGHOUSE ELEC CO</i></b> Cerclis ID:: 900956 EPA Id: CAD001864081	<b><i>401 E HENDY AVE</i></b>	<b><i>NE 1/2 - 1 (0.764 mi.)</i></b>	<b><i>0</i></b>	<b><i>16</i></b>

### ***Lists of Federal CERCLA sites with NFRAP***

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 09/19/2023 has revealed that there is 1 SEMS-ARCHIVE site within approximately 0.5 miles of the target property.

## EXECUTIVE SUMMARY

Site ID: 0902638  
EPA Id: CAT000614115

### ***Lists of Federal RCRA generators***

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 07/24/2023 has revealed that there are 9 RCRA-SQG sites within approximately 0.25 miles of the target property.

### ***Lists of state- and tribal hazardous waste facilities***

CA ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where

## EXECUTIVE SUMMARY

environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the CA ENVIROSTOR list, as provided by EDR, and dated 07/24/2023 has revealed that there are 3 CA ENVIROSTOR sites within approximately 1 mile of the target property.

### ***Lists of state and tribal leaking storage tanks***

CA LUST: Leaking Underground Storage Tank (LUST) Sites included in GeoTracker. GeoTracker is the Water Boards data management system for sites that impact, or have the potential to impact, water quality in California, with emphasis on groundwater.

A review of the CA LUST list, as provided by EDR, has revealed that there are 26 CA LUST sites within approximately 0.5 miles of the target property.

CA CPS-SLIC: Cleanup Program Sites (CPS; also known as Site Cleanups [SC] and formerly known as Spills, Leaks, Investigations, and Cleanups [SLIC] sites) included in GeoTracker. GeoTracker is the Water Boards data management system for sites that impact, or have the potential to impact, water quality in California, with emphasis on groundwater.

A review of the CA CPS-SLIC list, as provided by EDR, has revealed that there are 5 CA CPS-SLIC sites within approximately 0.5 miles of the target property.

### ***Lists of state and tribal registered storage tanks***

CA UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the State Water Resources Control Board's Hazardous Substance Storage Container Database.

A review of the CA UST list, as provided by EDR, has revealed that there are 9 CA UST sites within approximately 0.25 miles of the target property.

## EXECUTIVE SUMMARY

### **Local Lists of Registered Storage Tanks**

CA SWEEPS UST: Statewide Environmental Evaluation and Planning System. This underground storage tank listing was updated and maintained by a company contacted by the SWRCB in the early 1990's. The listing is no longer updated or maintained. The local agency is the contact for more information on a site on the SWEEPS list.

A review of the CA SWEEPS UST list, as provided by EDR, and dated 06/01/1994 has revealed that there are 9 CA SWEEPS UST sites within approximately 0.25 miles of the target property.

### Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 07/24/2023 has revealed that there are 29 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

PFAS ECHO: Regulators and the public have expressed interest in knowing which regulated entities may be using PFAS. EPA has developed a dataset from various sources that show which industries may be handling PFAS. Approximately 120,000 facilities subject to federal environmental programs have operated or currently operate in industry sectors with processes that may involve handling and/or release of PFAS.

A review of the PFAS ECHO list, as provided by EDR, and dated 07/05/2023 has revealed that there is 1 PFAS ECHO site within approximately 0.25 miles of the target property.

CA CUPA Listings: A listing of sites included in the county's Certified Unified Program Agency database. California's Secretary for Environmental Protection established the unified hazardous materials and hazardous waste regulatory program as required by chapter 6.11 of the California Health and Safety Code. The Unified Program consolidates the administration, permits, inspections, and enforcement activities.

A review of the CA CUPA Listings list, as provided by EDR, has revealed that there are 13 CA CUPA Listings sites within approximately 0.25 miles of the target property.

### EDR HIGH RISK HISTORICAL RECORDS

#### ***EDR Exclusive Records***

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 8 EDR Hist Auto sites within approximately 0.125 miles of the target property.

Summary Details:

Conditions at proposal October 15, 1984): Westinghouse Electric Corp. formerly manufactured electrical transformers at a plant covering 75 acres in Sunnyvale, Santa Clara County, California. The facility is surrounded by residential, industrial, and business areas. Monitoring wells on the site are contaminated with PCBs and dichloro-, trichloro-, and tetrachlorobene, according to analyses conducted by a consultant to Westinghouse. Contamination is believed to have resulted from a leaking PCB storage tank and from local spills. About 300,000 people depend on ground water within 3 miles of the site as a source of drinking water. Westinghouse has removed the leaking tanks and is working with the California Regional Water Quality Control Board (CRWQCB) to determine the extent of soil and ground water contamination. This is one of 19 sites in the South Bay Area of San Francisco. Facilities at these sites have used a variety of toxic chemicals, primarily chlorinated organic solvents, which contaminate a common ground water basin. Although these sites are listed separately, EPA intends to apply an area-wide approach to the problem as well as take specific action as necessary. Status June 10, 1986): In July 1985, CRWQCB issued Waste Discharge Requirements to the company for interim measures and a remedial investigation. The requirements are the board's legal mechanism for regulating activities at facilities under its jurisdiction. CRWQCB, in conjunction with EPA and the California Department of Health Services, is considering various response actions at the site.

Citation: HSC 6.5 25123.3(h)(1) - California Health and Safety Code, Chapter 6.5, Section(s) 25123.3(h)(1)

Violation Description: Failure to send hazardous waste offsite for treatment, storage, or disposal within 180 days (or 270 days if waste is transported over 200 miles) for a generator who generates less than 1000 kilogram per month if all of the following conditions are met: (1) The quantity of hazardous waste accumulated onsite never exceeds 6,000 kilograms. (2) The generator complies with the requirements of 40 Code of Federal Regulations section 262.34(d), (e) and (f). (3) The generator does not hold acutely hazardous waste or extremely hazardous waste in an amount greater than one kilogram for more than 90 days.

Violation Notes: Owner/Operator is a small quantity generator and failed to send hazardous waste offsite for treatment, storage, or disposal within 180 days (or 270 days if waste is transported over 200 miles), or has failed to comply with the conditions of CCR 66262.34(d) and has stored hazardous waste over 90 days.

Chapter 16, Section(s) 2712(b)(1)(G)  
Violation Description: Failure to comply with one or more of the following overfill  
prevention equipment requirements: Alert the transfer operator when  
the tank is 90 percent full by restricting the flow into the tank or  
triggering an audible and visual alarm; or Restrict delivery of flow  
to the tank at least 30 minutes before the tank overfills, provided  
the restriction occurs when the tank is filled to no more than 95  
percent of capacity; and activate an audible alarm at least five  
minutes before the tank overfills; or Provide positive shut-off of  
flow to the tank when the tank is filled to no more than 95 percent of  
capacity; or Provide positive shut-off of flow to the tank so that  
none of the fittings located on the top of the tank are exposed to  
product due to overfilling. Install/retrofit overfill prevention  
equipment that does not use flow restrictors on vent piping to meet  
overfill prevention equipment requirements when the overfill  
prevention equipment is installed, repaired, or replaced on and after  
October 1, 2018. For USTs installed before October 1, 2018, perform an  
inspection by October 13, 2018 and every 36 months thereafter. For  
USTs installed on and after October 1, 2018, perform an inspection at  
installation and every 36 months thereafter. Inspected within 30 days  
after a repair to the overfill prevention equipment. Inspected using  
an applicable manufacturer guidelines, industry codes, engineering  
standards, or a method approved by a professional engineer. Inspected  
by a certified UST service technician. Maintain records of overfill  
prevention equipment inspection for 36 months.  
Violation Notes: Returned to compliance on 11/04/2019. Failure to comply with one or  
more of the following overfill prevention equipment requirements: 1.  
Alert the transfer operator when the tank is 90 percent full by  
restricting the flow into the tank or triggering an audible and visual  
alarm; or 2. Restrict delivery of flow to the tank at least 30 minutes  
before the tank overfills, provided the restriction occurs when the

Eval Notes: On site to perform inspection/investigation on waste oil underground tank and oil/water clarifier system. Met with Public Works Superintendent, Jim Burch, and his crew to test the following (facing El Camino Real): 1. Does the ~2-inch pipe in oil/water clarifier drain into the waste oil underground tank? Water hose was placed in pipe and turned on. Water was confirmed to be draining into the waste oil underground tank by observing from the drop tube. 2. When the oil/water clarifier system is full, does the water go into the storm water or sewer system? A dye test was performed on oil/water clarifier system. The oil/water clarifier system was filled with water and a green dye was added and was found to be releasing into the storm drain running along Pastoria Avenue.

**Environmental Interest/Information System:**

THE EMISSION INVENTORY SYSTEM (EIS) MAINTAINS AN INVENTORY OF LARGE STATIONARY SOURCES AND VOLUNTARILY-REPORTED SMALLER SOURCES OF AIR POINT POLLUTANT EMITTERS. IT CONTAINS INFORMATION ABOUT FACILITY SITES AND THEIR PHYSICAL LOCATION, EMISSIONS UNITS, EMISSIONS PROCESSES, RELEASE POINTS, CONTROL APPROACHES, AND REGULATIONS. FACILITY INVENTORY DATA ARE KEPT SEPARATE FROM THE EMISSIONS DATA AND HAVE STABLE IDENTIFIERS TO IMPROVE CONTINUITY FROM YEAR TO YEAR AND TO HELP IDENTIFY DUPLICATE OR MISSING FACILITIES

The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS), EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), and Toxic Release Inventory (TRI).

**Hazardous Waste Summary:**

Waste Code: D001  
Waste Description: Ignitable Waste

Waste Code: D002  
Waste Description: Corrosive Waste

Waste Code: D039  
Waste Description: Tetrachloroethylene

Waste Code: F001  
Waste Description: The Following Spent Halogenated Solvents Used In Degreasing: Tetrachloroethylene, Trichloroethylene, Methylene Chloride, 1,1,1-Trichloroethane, Carbon Tetrachloride And Chlorinated Fluorocarbons; All Spent Solvent Mixtures/Blends Used In Degreasing Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Halogenated Solvents Or Those Solvents Listed In F002, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Waste Code: F005  
Waste Description: The Following Spent Nonhalogenated Solvents: Toluene, Methyl Ethyl Ketone, Carbon Disulfide, Isobutanol, Pyridine, Benzene, 2-Ethoxyethanol, And 2-Nitropropane; All Spent Solvent Mixtures/Blends Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Nonhalogenated Solvents Or Those Solvents Listed In F001, F002, Or F004; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Environmental Interest/Information System:

The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Violation Program: UST  
Violation Source: CERS,

Site ID: 105842  
Site Name: CITY HALL FUEL DOCS  
Violation Date: 10-11-2019  
Citation: HSC 6.7 25284.2 - California Health and Safety Code, Chapter 6.7, Section(s) 25284.2

Violation Description: "Failure to meet one or more of the following requirements: Install or maintain a liquid-tight spill container. Have a minimum capacity of five gallons. Have a functional drain valve or other method for the removal of liquid from the spill container. Be resistant to galvanic corrosion. Perform a tightness test at installation, every 12 months thereafter, or within 30 days after a repair to the spill container. Tested using applicable manufacturer guidelines, industry codes, engineering standards, or a method approved by a professional engineer. Tested by a certified UST service technician. Maintain records of spill containment testing for 36 months. "

Violation Notes: Returned to compliance on 04/27/2020. Failure to meet one or more of the following requirements: 2. Have a minimum capacity of five gallons.

Violation Date: 10-25-2021  
Citation: HSC 6.7 25284.2 - California Health and Safety Code, Chapter 6.7, Section(s) 25284.2

Violation Description: "Failure to meet one or more of the following requirements: Install or maintain a liquid-tight spill container. Have a minimum capacity of five gallons. Have a functional drain valve or other method for the removal of liquid from the spill container. Be resistant to galvanic corrosion. Perform a tightness test at installation, every 12 months thereafter, or within 30 days after a repair to the spill container. Tested using applicable manufacturer guidelines, industry codes, engineering standards, or a method approved by a professional engineer. Tested by a certified UST service technician. Maintain records of spill containment testing for 36 months. "

Violation Notes: Returned to compliance on 10/25/2021. Spill bucket of Tank 1 Gasoline failed leak test. Cap was replaced and retested and passed.

Eval General Type: Compliance Evaluation Inspection  
Eval Date: 11-11-2022  
Violations Found: Yes  
Eval Type: Routine done by local agency  
Eval Notes: No physical inspection was conducted on site. Open violations are all administrative. City contracted UST company, TEC Accutite, has obtained a permit to replace float and chain assembly with standalone sensors for both UDC 1/2 and 3/4. However, still waiting on parts. Failure of the float and chain in UDC 3/4 would normally result in shut down of dispenser until it is fixed. Due to the dispenser being used by Sunnyvale Department of Public Safety, it is currently being left operational but still needs to be repaired or replaced within the

Environmental Interest/Information System:

The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

**Environmental Interest/Information System:**

The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

 CA Enviroscreen 4 Score: 30-35%  
 Military DOD Site: No  
 Facility Project Subtype: Not reported  
 RWQCB Region: SAN FRANCISCO BAY RWQCB (REGION 2)  
 Site History: Soil beneath the site has been contaminated with perchloroethene, a solvent used in dry cleaning. PCE levels in soil vapor beneath the dry cleaner tenant space are high. A sub-slab depressurization system was installed at the former dry cleaner to eliminate the potential for vapor intrusion (PCE vapors entering the overlying building through cracks in the foundation). Contaminated soil has been excavated and removed. The site has since been redeveloped into apartments with commercial space underneath, townhouses, and a hotel. A vapor intrusion mitigation system completion report for the townhouses and hotel was never submitted.

Environmental Interest/Information System:

THE EMISSION INVENTORY SYSTEM (EIS) MAINTAINS AN INVENTORY OF LARGE STATIONARY SOURCES AND VOLUNTARILY-REPORTED SMALLER SOURCES OF AIR POINT POLLUTANT EMITTERS. IT CONTAINS INFORMATION ABOUT FACILITY SITES AND THEIR PHYSICAL LOCATION, EMISSIONS UNITS, EMISSIONS PROCESSES, RELEASE POINTS, CONTROL APPROACHES, AND REGULATIONS. FACILITY INVENTORY DATA ARE KEPT SEPARATE FROM THE EMISSIONS DATA AND HAVE STABLE IDENTIFIERS TO IMPROVE CONTINUITY FROM YEAR TO YEAR AND TO HELP IDENTIFY DUPLICATE OR MISSING FACILITIES

The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS), EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), and Toxic Release Inventory (TRI).

The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

[Click Here for FRS Facility Detail Report:](#)

Environmental Interest/Information System:

THE EMISSION INVENTORY SYSTEM (EIS) MAINTAINS AN INVENTORY OF LARGE STATIONARY SOURCES AND VOLUNTARILY-REPORTED SMALLER SOURCES OF AIR POINT POLLUTANT EMITTERS. IT CONTAINS INFORMATION ABOUT FACILITY SITES AND THEIR PHYSICAL LOCATION, EMISSIONS UNITS, EMISSIONS PROCESSES, RELEASE POINTS, CONTROL APPROACHES, AND REGULATIONS. FACILITY INVENTORY DATA ARE KEPT SEPARATE FROM THE EMISSIONS DATA AND HAVE STABLE IDENTIFIERS TO IMPROVE CONTINUITY FROM YEAR TO YEAR AND TO HELP IDENTIFY DUPLICATE OR MISSING FACILITIES

The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Environmental Interest/Information System:  
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

[Click this hyperlink](#) while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

**Environmental Interest/Information System:**

The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS), EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), and Toxic Release Inventory (TRI).  
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the

Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

The National Pollutant Discharge Elimination System (NPDES) module of the Integrated Compliance Information System (ICIS). Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

California's Hazardous Waste Tracking System Data Mart (HWTS-DATAMART) provides information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

Violation Source: CERS,

Site ID: 77288  
Site Name: Toyota of Sunnyvale  
Violation Date: 05-27-2020  
Citation: HSC 6.67 25270.4.5(a) - California Health and Safety Code, Chapter 6.67, Section(s) 25270.4.5(a)

Violation Description: Failure to implement the SPCC Plan.

Violation Notes: Returned to compliance on 06/25/2020. Monthly and annual inspections as outlined in the SPCC plan have not been carried out.

Violation Division: Sunnyvale Department of Public Safety  
Violation Program: APSA  
Violation Source: CERS,

Site ID: 77288  
Site Name: Toyota of Sunnyvale  
Violation Date: 06-06-2016  
Citation: 22 CCR 15 66265.173 - California Code of Regulations, Title 22, Chapter 15, Section(s) 66265.173

Violation Description: Failure to meet the following container management requirements: (a) A container holding hazardous waste must always be closed during storage, except when it is necessary to add or remove waste. (b) A container holding hazardous waste must not be opened, handled, or stored in a manner which may rupture the container or cause it to leak.

Violation Notes: Returned to compliance on 06/28/2016. Drained used filter containers in the SAP shop were not covered.

**Environmental Interest/Information System:**

The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

RWQCB Region: SAN FRANCISCO BAY RWQCB (REGION 2)  
Site History: 2009 In May, 6 hydraulic lifts and an underground storage tank (UST) were removed from the site. The UST was reported to have contained hydraulic oil. Soil samples (HL1 through HL5 and HL7) were collected beneath the hydraulic lifts at depths of 6.5-9.5 feet below the ground surface. None of these samples were reported to contain Polychlorinated Biphenyls (PCBs) above the laboratory reporting limit. Sample HL1 (7 ft bgs) was reported to contain 85 parts per million (ppm) Total Petroleum Hydrocarbons as Diesel (TPHd) and 210 ppm Hydrocarbon Oil Range Organics (HORO). TPH as Gasoline (TPHg), Fuel Oxygenates (FOs) and Volatile Organic Compounds (VOCs) were not reported to be present above the laboratory reporting limits. Additional excavation was conducted in June in this area and sample HL1-2 was collected from 9.5 ft bgs and was reported to contain 3,500 ppm TPHd and 4,700 ppm HORO. In August, additional soil was removed and sample HL1-3 was collected at 11.5 ft bgs and reported to contain 3.3 ppm TPHd and HORO was not present above the laboratory reporting limit. Sample HL7 (6.5 ft bgs) was reported to contain 900 ppm TPHd and 2,700 ppm HORO. TPHg, FOs and VOCs were not reported to be present above the laboratory reporting limits. Additional excavation was conducted in June in this area and sample HL7-2 was collected from 11.5 ft bgs and was reported to contain 410 ppm TPHd and 750 ppm HORO. In August, additional soil was removed and sample HL703 was collected at 12 ft bgs and reported to contain 570 ppm TPHd and 1,500 ppm HORO. 2 soil samples (T1 and D1) were collected from beneath the UST. Sample T1 was collected from the bottom of the excavation at approximately 5 ft bgs and D1 was collected from stained soil within the excavation at 8 ft bgs. Additional soil was removed in the area of sample D1 from the excavation and sample BD1 was collected from 10 ft bgs. Sample D1 was reported to have the maximum concentrations of 4.3 ppm TPHg, 15,000 ppm TPHd, 32,000 ppm HORO, 0.360 ppm Acetone, 0.180 ppm 1,2,4-Trimethylbenzene, 2.8 ppm PCB 1248, 2.8 ppm PCB-1260, and very low concentrations of other VOCs. Benzene and FOs were not reported to be present above the laboratory reporting limits. Sample BD1 was reported to contain 84 ppm TPHd, 210 ppm HORO, and 0.062 ppm PCB-1260. All other Constituents of Concern (COCs) were not reported to be present above the laboratory reporting limits. Additional excavation was conducted in June and sample BD1-2 was collected from

12.5 ft bgs and reported to contain 10 ppm TPHd. HORO was not reported to be present above the laboratory reporting limit. In September, a boring (SB2) was advanced to 60 ft bgs within the HL7 excavation. The boring was allowed to site for 3 hours and groundwater did not enter the boring. Soil samples were analyzed from 14 and 16 ft bgs. The 14 foot sample was reported to contain 22 ppm TPHd and 88 ppm HORO and the 16 foot sample was not reported to have either constituent present above the laboratory reporting limits. Additional soil was removed from the HL7 excavation and sample HL7-4 was collected from 16 ft bgs and was reported to contain 71 ppm TPHd and 97 ppm HORO.

Eligibility:	Eligible
Has Projects:	Yes
NPL Status:	Not reported
Project Required:	Yes
Feature Description:	The site was used as a bivouac area for the army. from February to October 1943. The U.S. constructed buildings required for housing troops to include barracks, latrines, shower facilities, and a mess hall. The army personnel participated in routine military training to include physical training, drill, and classroom work and housed staff and command vehicles of the II Armored Corps. After WWII, the site reverted back to city of Sunnyvale.
Latitude:	37.37694444
Longitude:	-122.04055556
FUDS Detail as of Jan 2015:	
Fiscal Year:	2013
Federal Facility ID:	CA9799F8637
RAB:	Not reported
NPL Status:	Not Listed
Description:	The site is located in Washington Park in Sunnyvale, Santa Clara County, California. The City of Sunnyvale currently owns the land and has converted it into a city park known as Washington Park, a senior citizens center, a school, and a residential area. Military munitions were produced or demilitarized at this location and therefore may present an explosive hazard.
History:	The site was used as a bivouac area for the army. from February to October 1943. The U.S. constructed buildings required for housing troops to include barracks, latrines, shower facilities, and a mess hall. The army personnel participated in routine military training to include physical training, drill, and classroom work and housed staff and command vehicles of the II Armored Corps. After WWII, the site reverted back to city of Sunnyvale.

regulated businesses and over 130 local agencies in electronically collecting and reporting significant hazardous materials, hazardous waste and compliance and enforcement data as mandated by California law. Under oversight by Cal/EPA, certified local governing agencies (Unified Program Agencies - UPAs) consolidate, coordinate and provide consistent regulatory activities for six state and federal environmental programs.

The Used Oil Recycling System (UORS) is managed by the California Integrated Waste Management Board (CIWMB). The CIWMB helps communities establish and promote convenient collection opportunities for used oil and used oil filters.

The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS), EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), and Toxic Release Inventory (TRI).

The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

development, review and approval of a RAP and for oversight/monitoring of cleanup efforts, and will seek to recover all actual costs from the responsible party. The RP will pay all costs associated with RI/FS and cleanup activities.

**Site Description:** The Westinghouse Electric Corporation site consists of office buildings, manufacturing facilities, a parking area and some open areas. It encompasses approximately 75 acres of land. From 1947 to 1964, Westinghouse operated a production and repair plant for electrical apparatus which contained polychlorinated biphenyl (PCB) fluids.

**Hazardous Waste Desc:** Soil and ground water are contaminated with polychlorinated biphenyls (PCBs) as a result of the manufacturing of electrical equipment. High levels of PCBs have been found in soils near a PCB-storage tank, and at shallower depths throughout open areas. The contamination extends to boundary fence lines and to backyards of the residences and other properties along the west boundary. Ground water is also contaminated near the PCB-storage tank.

**Threat To Public Health & Env:** The contaminated soil and ground water represent a potential health threat to workers at the site and to residents of adjacent properties if they are exposed to this material.

**Site Activity Status:** In November, 1984, PCB-contaminated soil was removed from neighboring properties and along the boundary fence lines. In September, 1985, PCB-contaminated soil was removed from storage yards on the Westinghouse property. Lead agency responsibility has been transferred from the RWQCB to the EPA. The RP entered into a consent decree with the EPA in August, 1988. Currently, a remedial investigation and feasibility study is being conducted which will address the remaining PCB-contaminated soil near the old storage tank. Additional borings and ground water monitoring wells will be installed.

Completed Area Name: PROJECT WIDE  
Completed Sub Area Name: Not reported  
Completed Document Type: Land Use Restriction Monitoring Report  
Completed Date: 01/27/2014  
Comments: An annual inspection was performed on behalf of the property owner to verify compliance with the restrictions of the Land Use Covenant. No evidence of recent construction, excavation, grading or major modifications were observed on the property during the inspection.

Completed Area Name: PROJECT WIDE  
Completed Sub Area Name: Not reported  
Completed Document Type: Consent Order  
Completed Date: 08/30/1988  
Comments: Not reported

Completed Area Name: PROJECT WIDE  
Completed Sub Area Name: Not reported  
Completed Document Type: Correspondence  
Completed Date: 12/09/2021  
Comments: DTSC received notification of transfer of title of real property located at 555 East California Avenue, Sunnyvale, California, which is subject to a land use covenant.

Completed Area Name: PROJECT WIDE  
Completed Sub Area Name: Not reported  
Completed Document Type: Record of Decision w/ESD  
Completed Date: 03/30/1997  
Comments: This Explanation of Significant Differences modifies the 1991 Record of Decision to allow the change of disposal method for PCBs.

Completed Area Name: PROJECT WIDE  
Completed Sub Area Name: Not reported  
Completed Document Type: Land Use Restriction Monitoring Report  
Completed Date: 07/16/2018  
Comments: AllWest Environmental, Inc. conducted an inspection on June 20, 2018 to verify compliance with the restrictions and requirements of the Land Use Covenant. AllWest did not observe any evidence of recent construction, excavation, grading, drilling, soil disturbance, or major modifications during the inspection, and determined through interviews with Property owner and tenant representatives that there has not been any change from commercial office and light industrial use of the Property to land uses restricted by the Land Use Covenant.

Completed Area Name: PROJECT WIDE  
Completed Sub Area Name: Not reported  
Completed Document Type: Unilateral Order (I/SE, RAO, CAO, EPA AO)  
Completed Date: 09/29/1993  
Comments: The Administrative Order directs Westinghouse to perform the remedial design described in the 1991 Record of Decision and to perform the remedial action.

Completed Area Name: PROJECT WIDE  
Completed Sub Area Name: Not reported  
Completed Document Type: Remedial Investigation Report  
Completed Date: 10/04/2006

Completed Area Name: PROJECT WIDE  
Completed Sub Area Name: Not reported  
Completed Document Type: Remedial Action Completion Report  
Completed Date: 03/19/2017  
Comments: The Report documents soil remediation to address locations where soil less than 8 feet deep had concentrations of polychlorinated biphenyls greater than 25 milligrams per kilogram, the cleanup standard identified by the Record of Decision approved by the U.S. Environmental Protection Agency for the site; A total of 2,351 tons of soil was excavated and disposed at permitted, off-site facilities.

Completed Area Name: PROJECT WIDE  
Completed Sub Area Name: Not reported  
Completed Document Type: 5 Year Review Reports  
Completed Date: 08/23/2016  
Comments: The United States Environmental Protection Agency, Region 9, approved the Fourth Five-Year Review Report and made the determination that the remedy at the Site currently protects human health and the environment because exposure pathways that could result in unacceptable risks are being controlled. However, in order for the remedy to be protective in the long-term, the planned Land Use Covenants for the main portion of the Site need to be recorded, the source of elevated polychlorinated biphenyls outside the Westinghouse property need to be investigated, and a groundwater remediation system evaluation needs to be conducted.

Completed Area Name: PROJECT WIDE  
Completed Sub Area Name: Not reported  
Completed Document Type: Correspondence  
Completed Date: 07/31/2014  
Comments: Letter from Sycamore Lake Partners, LLC, to DTSC providing notification of sale of property at 555 East California Avenue (the former North Parking Lot, East Area) to Gray Area 555, LLC.

Completed Area Name: PROJECT WIDE  
Completed Sub Area Name: Not reported  
Completed Document Type: Correspondence

Completed Document Type: Payment Agreement  
Completed Date: 12/04/2014  
Comments: Gray Area 555, LLC, the current owner of the 555 East California Avenue property (North Parking Lot, East Area) signed a letter agreement to reimburse DTSC's costs for amending the Land Use Covenant to change the age for the school age restriction from 21 to 18.

Completed Area Name: PROJECT WIDE  
Completed Sub Area Name: Not reported  
Completed Document Type: Land Use Restriction - Amendment  
Completed Date: 05/21/2015  
Comments: The Amendment changes the age specified in the restriction on schools in the Land Use Covenant that was recorded on August 8, 2013 from age 21 to 18.

Completed Area Name: PROJECT WIDE  
Completed Sub Area Name: Not reported  
Completed Document Type: 5 Year Review Reports  
Completed Date: 10/04/2006  
Comments: The U.S. Environmental Protection Agency finalized the Second Five-Year Review Report for the Site. Surface cracks that were visibly evident on the capping system at the Site were identified as an issue; however, it was noted that it was not affecting the protectiveness of the remedy, but could in the future. Continual cap inspections on a routine basis and repair of areas showing signs of deterioration were recommended. The Five-Year Review Report concluded that the remedy at the Site currently protects human health and the environment because routine cap inspections are conducted, groundwater extraction and treatment continues, and access controls are in place. However, in order for the remedy to be protective in the long-term, deed restrictions, as required by the 1991 Record of Decision should be completed for the Site.

Background Info: The Westinghouse Electric Corporation site consists of office buildings, manufacturing facilities, a parking area and some open areas. It encompasses approximately 75 acres of land. From 1947 to 1964, Westinghouse operated a production and repair plant for electrical apparatus which contained polychlorinated biphenyl (PCB) fluids as a coolant. Soil and groundwater are contaminated with PCBs as a result of the manufacturing of electrical equipment. High levels of PCBs have been found in soils near a PCB-storage tank, and at shallower depths throughout open areas. The contamination extends to boundary fence lines and to backyards of the residences and other properties along the west boundary. Groundwater is also contaminated near the PCB-storage tank. The project was listed on the Federal Superfund List and U.S. EPA is the lead agency.

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

**Number of Days to Update:** Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

## **STANDARD ENVIRONMENTAL RECORDS**

### ***Lists of Federal NPL (Superfund) sites***

#### **NPL: National Priority List**

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

#### **Proposed NPL: Proposed National Priority List Sites**

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 09/19/2023	Source: EPA
Date Data Arrived at EDR: 10/03/2023	Telephone: N/A
Date Made Active in Reports: 10/19/2023	Last EDR Contact: 11/01/2023

	Data Release Frequency: Quarterly

#### **NPL LIENS: Federal Superfund Liens**

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

## ***Lists of Federal Delisted NPL sites***

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

## ***Lists of Federal sites subject to CERCLA removals and CERCLA orders***

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 06/23/2023

Next Scheduled EDR Contact: 01/08/2024  
Data Release Frequency: Varies

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly known as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Data Release Frequency: Quarterly

## ***Lists of Federal CERCLA sites with NFRAP***

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

Date of Government Version: 09/19/2023	Source: EPA
Date Data Arrived at EDR: 10/03/2023	Telephone: 800-424-9346

## ***Lists of Federal RCRA facilities undergoing Corrective Action***

CORRACTS: Corrective Action Report

CORRACTS identifies hazardous waste handlers with RCRA corrective action activity.

Date of Government Version: 07/24/2023	Source: EPA
Date Data Arrived at EDR: 07/31/2023	Telephone: 800-424-9346
Date Made Active in Reports: 08/14/2023	Last EDR Contact: 09/20/2023
Number of Days to Update: 14	Next Scheduled EDR Contact: 01/01/2024
	Data Release Frequency: Quarterly

## ***Lists of Federal RCRA TSD facilities***

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Date of Government Version: 07/24/2023	Source: Environmental Protection Agency
Date Data Arrived at EDR: 07/31/2023	Telephone: (415) 495-8895
Date Made Active in Reports: 08/14/2023	Last EDR Contact: 09/20/2023
Number of Days to Update: 14	Next Scheduled EDR Contact: 01/01/2024
	Data Release Frequency: Quarterly

## ***Lists of Federal RCRA generators***

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.
