# Table of Contents

**EXECUTIVE SUMMARY .....X**

**1 INTRODUCTION..... 1.1**

1.1 Project Overview ..... 1.1

1.2 Intended Uses and Purpose of the EIR ..... 1.2

1.3 Lead and Responsible Agencies ..... 1.3

1.3.1 Lead Agency ..... 1.3

1.3.2 Responsible Agencies ..... 1.3

1.4 Scoping of Environmental Issues ..... 1.4

1.4.1 Notice of Preparation and Scoping Meeting ..... 1.4

1.4.2 Public Review of the Draft EIR ..... 1.5

1.4.3 Responses to Comments Document and Final EIR ..... 1.6

1.4.4 Mitigation Monitoring and Reporting Program ..... 1.6

1.5 Document Organization ..... 1.6

**2 PROJECT DESCRIPTION..... 2.1**

2.1 Project Location, Zoning, and Surrounding Land Uses ..... 2.1

2.1.1 Project Location ..... 2.1

2.1.2 Project Site History ..... 2.1

2.1.3 Project Site Zoning and Surrounding Land Uses ..... 2.4

2.2 Project Purpose and Objectives ..... 2.4

2.3 Proposed Project Characteristics ..... 2.6

2.3.1 Site Access ..... 2.9

2.3.2 Supporting Infrastructure ..... 2.10

2.4 Demolition Activities ..... 2.11

2.5 Project Construction and Staging ..... 2.11

2.6 Facilities Operation and Maintenance ..... 2.14

2.7 Project Approvals ..... 2.14

**3 IMPACTS FOUND NOT TO BE SIGNIFICANT..... 3.1**

**4 ENVIRONMENTAL SETTING, IMPACTS, AND MITIGATION MEASURES..... 4.1**

4.1 Aesthetics ..... 4.2

4.1.1 Existing Conditions ..... 4.2

4.1.2 Regulatory Setting ..... 4.4

4.1.3 Impacts Analysis ..... 4.5

4.2 Air Quality ..... 4.8

4.2.1 Existing Conditions ..... 4.8

4.2.2 Regulatory Setting ..... 4.16

4.2.3 Impacts Analysis ..... 4.22

4.3 Biological Resources ..... 4.31

4.3.1 Existing Conditions ..... 4.31

4.3.2 Regulatory Setting ..... 4.33

4.3.3 Impacts Analysis ..... 4.36

4.4 Cultural Resources ..... 4.38

4.4.1 Existing Conditions ..... 4.39

4.4.2 Regulatory Setting ..... 4.43

4.4.3 Impacts Analysis ..... 4.46

4.5 Geology and Soils ..... 4.53

4.5.1 Existing Conditions ..... 4.53

4.5.2 Regulatory Setting ..... 4.55

4.5.3 Impacts Analysis..... 4.58

4.6 Greenhouse Gas ..... 4.65

4.6.1 Existing Conditions ..... 4.65

4.6.2 Regulatory Setting ..... 4.69

4.6.3 Impacts Analysis..... 4.73

4.7 Hazards and Hazardous Materials ..... 4.79

4.7.1 Existing Conditions ..... 4.79

4.7.2 Regulatory Setting ..... 4.79

4.7.3 Impacts Analysis..... 4.83

4.8 Hydrology and Water Quality ..... 4.85

4.8.1 Existing Conditions ..... 4.86

4.8.2 Regulatory Setting ..... 4.88

4.8.3 Impacts Analysis..... 4.92

4.9 Noise..... 4.97

4.9.1 Existing Conditions ..... 4.97

4.9.2 Regulatory Setting ..... 4.104

4.9.3 Impacts Analysis..... 4.111

4.10 Transportation ..... 4.119

4.10.1 Existing Conditions ..... 4.119

4.10.2 Regulatory Setting ..... 4.121

4.10.3 Impacts Analysis..... 4.122

4.11 Tribal Cultural Resources ..... 4.125

4.11.1 Existing Conditions ..... 4.126

4.11.2 Regulatory Setting ..... 4.128

4.11.3 Impacts Analysis..... 4.129

**5 CUMULATIVE IMPACTS ..... 5.1**

5.1 Introduction..... 5.1

5.2 Cumulative Context ..... 5.2

5.3 Projects Contributing to Potential Cumulative Impacts ..... 5.3

5.4 Analysis of Cumulative Impacts ..... 5.3

**6 OTHER CEQA REQUIREMENTS ..... 6.1**

6.1 Growth-Inducing Impacts..... 6.1

6.1.1 Introduction to Growth-Inducing Impacts..... 6.1

6.1.2 Growth-Inducing Impacts of the Proposed Project..... 6.1

6.2 Significant and Unavoidable Impacts ..... 6.2

6.2.1 Project-Level Significant and Unavoidable impacts ..... 6.2

6.2.2 Cumulatively Significant and Unavoidable Impacts ..... 6.2

**7 ALTERNATIVES..... 7.1**

7.1 CEQA Requirements for Alternatives Analysis ..... 7.1

7.2 Project Objectives..... 7.2

7.3 Project Significant Impacts ..... 7.3

7.4 Alternatives Considered but Rejected for Detailed Analysis in this EIR ..... 7.3

7.4.1 Lease of Another Location Alternative ..... 7.4

7.4.2 Existing Courthouse Rehabilitation Alternative ..... 7.5

7.4.3 Alternative Site Location..... 7.5

7.4.4 Adaptive Reuse Alternative ..... 7.6  
 7.5 Alternatives Analyzed in this EIR ..... 7.7  
 7.5.1 No Project Alternative ..... 7.8  
 7.5.2 Reduced Scope of Proposed Courthouse Alternative ..... 7.10  
 7.6 Environmentally Superior Alternative ..... 7.16

# Executive Summary

## Introduction

This Environmental Impact Report (EIR) is prepared in accordance with the California Environmental Quality Act (CEQA) to inform decision makers, representatives of affected and responsible agencies, the public, and other interested parties of the potential environmental effects that may result from implementation of the Sixth Appellate District Courthouse (Project). This document is prepared in conformance with CEQA (California Public Resources Code Section 21000, et seq.) and the CEQA Guidelines (California Code of Regulations, Title 14 Section 15000, et seq.).

As required by CEQA Guidelines Section 15123(a), “[a]n EIR shall contain a brief summary of the proposed action and its consequences.” This executive summary includes (1) a summary description of the proposed Project, (2) a synopsis of environmental impacts (including significant and unavoidable impacts; if any) and recommended mitigation measures (Table ES-1), (3) an identification of the alternatives evaluated, (4) a discussion of the areas of controversy associated with the proposed Project, and (5) a summary of issues to be resolved including the choice among alternatives and whether or how to mitigate significant effects.

## Project Summary

### Project Description

The Project consists of the demolition of an existing building and the construction of a new courthouse with onsite parking for the Sixth Appellate District of the Court of Appeal in a more practical and accessible infill location. Since it was established in 1984, the Sixth Appellate District of the Court of Appeal (Sixth Appellate District), has operated out of 43,758 square feet (SF) of the Comerica Bank Building, located at 333 West Santa Clara Street within downtown San Jose pursuant to a lease. In 2006, the Sixth Appellate District’s lease that was managed by the California Department of General Services was assigned to the Judicial Council of California (Judicial Council). The current lease expires in January 2029 and has a final extension option through January 2034 (Moore, Ruble, Yudell, May 18, 2022).

The Sixth Appellate District’s current space on the 10th and 11th floors of the Comerica Bank Building includes one courtroom with support spaces, justice chambers, attorney offices, mediation operations, clerk operations, a law library, and court administration. This space is not contiguous and is distributed between the two floors. Additionally, there is no onsite parking available for any court user including the public and court staff. Only a small number of spaces are available for the justices and the court executive officer. Parking for the public and court staff is accommodated offsite through public pay lots and very limited street parking. Approximately 50 onsite parking spaces is estimated to be needed, including 12 secure parking spaces for justices and surface parking for the public, court staff, which cannot be achieved at the current leased property.

The Judicial Council is proposing to build a new Sixth Appellate District Courthouse, at a state-owned asset located at 605 W. El Camino Real, Sunnyvale California 94087 (Site). The Site is situated on W. El Camino Real between Mathilda Avenue and Pastoria Avenue. The Site was previously used by the Superior Court of Santa Clara County for trial court operations (**Figure 2--1 – Site Location**). The State of California, on behalf of the Judicial Council retains ownership of the Site.

Site preparation would include the demolition of an existing 19,994 square foot one-story building with a partial basement as well as an unused shed structure currently within the parking lot. The Project would additionally involve demolition of approximately 19,760 SF of existing paving, full repaving of 4,580 SF of existing drive access road, resurfacing of 9,800 SF of existing parking area, and paving of 13,200 SF of new parking area to build a new courthouse within the 2.03-acre Site (**Figure 2.4-1 – Proposed Demolition**).

The proposed new courthouse would be approximately 50,000 SF up to three stories in height located in the same general footprint as the existing building on the Site. The new courthouse would include one courtroom with support spaces, justice chambers, administrative support and operations areas, a law library, mediation area, public entry and lobby, and a building support area.

## Project Objective

The Judicial Council has identified the following Project objectives to guide the planning for the Project, as well as the analysis included within this EIR:

- Provide a permanent location on state-owned property for the Court of Appeal, Sixth Appellate District.

- Eliminate future lease uncertainties and ongoing expensive and escalating lease costs.

- Provide for the construction of a new facility prior to the Sixth Appellate District's current lease expiration in January 2029.

- Maintain appellate court operations in Santa Clara County, a location familiar to court users, visitors, and the public, and that provides a connection with the Sunnyvale Civic Center.

- Provide a state-owned appellate courthouse, constructed to Judicial Council standards, that is modern, safe, secure, and accessible to the benefit of all court users and staff and enhancing the public's access to justice through relieving the current space shortfall, increasing security, and improving operational efficiency and customer service.

## Required Lead Agency Approvals

As the CEQA lead agency, the Judicial Council has the responsibility for, among other things, preparing and certifying an EIR that addresses the potential environmental impacts of the Project; identifying feasible mitigation measures that could avoid or minimize significant environmental impacts; evaluating a reasonable range of feasible alternatives; adopting findings with regard to each significant environmental impact; providing a statement of overriding considerations for all environmental impacts that cannot be

mitigated to a less than significant level; and adopting a Mitigation Monitoring and Reporting Program (MMRP) to ensure that all required mitigation measures are implemented.

The Judicial Council may approve the Project only after consideration and certification of the Final EIR and making appropriate findings. Because the Judicial Council is the lead agency and is acting as the judicial branch of state government, local government land use planning and zoning regulations would not apply to the Project. However, the Judicial Council has considered local policies and guidelines in the preparation of this EIR.

## Alternatives to the Project

The CEQA Guidelines (Section 15126.6) require that an EIR describe a range of reasonable alternatives to the Project that could feasibly attain the basic objectives of the Project and avoid and/or lessen the environmental effects of the Project. Below is a summary of the alternatives to the Project which are considered in Chapter 7. “Alternatives” of this EIR.

**No Project Alternative:** This alternative proposes retaining the current leased space located at 333 West Santa Clara Street within downtown San Jose. The current lease expires in January 2029 and has a final extension option through January 2034. Beyond this date, neither the appellate court nor the Judicial Council has the capability to ensure the court can remain in its current leased space. Under this alternative, there would be no demolition or new construction; instead, the Judicial Council would continue operating from its current location by signing a new lease for the existing building on the 10th and 11th floors of the Comerica Bank Building.

**Lease of Another Location Alternative:** This alternative proposes entering a new long-term lease at a different location when the current lease expires in January 2029. Under this alternative, the Judicial Council would secure a new lease in a different building that meets the requirements of necessary square footage and court space configuration, ensuring operations can continue without interruption.

**Existing Courthouse Rehabilitation Alternative:** This alternative involves renovating or retrofitting the existing courthouse located at 605 W. El Camino Real, Sunnyvale California 94087. The Site consists of a 19,994 SF one-story building and approximately 45,000 SF of existing parking and surfacing. While the outside structure would remain intact, aside from structural improvements as necessary, the interior would be renovated or retrofitted to accommodate a new interior layout and comply with the requirements of a modern courthouse. With the existing building limited to 19,994 SF, this alternative would also necessitate locating selected court services at a separate location to accommodate for the additional 30,000 SF of space required.

**Reduced Scope of Proposed Courthouse Alternative:** This alternative involves scaling down the Project's scope. This could involve minor or limited demolition, renovating only parts of the Sunnyvale courthouse that require immediate attention, construction of a new supporting

building, deferring certain upgrades or expansions, or implementing more modest design elements.

**Alternative Site Location:** This alternative involves building a new courthouse on a different site. This could include other currently owned state property or purchasing new land and constructing a new courthouse to meet the Sixth Appellate District’s needs.

**Adaptive Reuse Alternative:** This alternative involves repurposing an existing building or structure for the courthouse on a different site, instead of constructing a new courthouse on a different site.

## Environmentally Superior Alternative

From the alternatives evaluated within this EIR, the environmentally superior alternative other than the “proposed Project” and “No Project”, would be the Reduced Scope Alternative.

The Reduced Scope Alternative. As compared to the Project, this alternative was determined to result in slightly increased adverse impacts for air quality and greenhouse gas environmental resource topics. These increases are generally attributed to maintaining operation of two buildings (one existing refurbished [natural gas], and one new [electric]). All other environmental resource topic areas were determined to have a similar level of impact, as compared to the Project described throughout this EIR. Additionally, this alternative would not result in a cumulatively considerable contribution to cumulatively significant impacts that would be significant and unavoidable.

The Reduced Scope Alternative would meet some of the Project objectives. While providing the Sixth Appellate District a permanent home, it does not provide a cohesive layout and use. Needed facilities (one courtroom with support spaces, justice chambers, administrative support and operations areas, a law library, mediation area, public entry and lobby, building support area including a conference room, training room, and breakroom) would be evaluated in relation to available space to determine which could be accommodated, and then split between two buildings. While the Judicial Council would not be required to lease a building, they would need to lease the adjacent parking lot indefinitely. As such, construction of the two buildings would take up the entire 2.0-acre Site and would leave no space for the necessary public and staff parking.

## Summary of Impacts and Mitigation Measures

A summary of the potential environmental impacts of the Project and the measures identified to mitigate these impacts is provided in **Table ES-1** below for each topic addressed within this EIR. **Table ES-1** has been arranged in four columns: the identified impact under each EIR issue area; the level of significance prior to implementation of mitigation; mitigation measures that would avoid or reduce the level of impacts; and the level of significance after implementation of mitigation measures.

Table ES-1. Summary of Impacts and Mitigation Measures

Impacts	Significance before Mitigation	Mitigation Measures	Significance after Mitigation
<b>4.1 Aesthetics</b>			
<b>Impact b.</b> Substantially damage scenic resources including, but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway?	NI	No mitigation measure is required.	NI
<b>Impact d.</b> Create a new source of substantial light or glare which would adversely affect day or nighttime views in the area?	LTS	No mitigation measure is required.	LTS
<b>4.2 Air Quality</b>			
<b>Impact a.</b> Conflict with or obstruct implementation of the applicable air quality plan?	LTS	No mitigation measure is required.	LTS
<b>Impact b.</b> Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard?	LTS	No mitigation measure is required.	LTS
<b>Impact c.</b> Expose sensitive receptors to substantial pollutant concentrations?	LTS	No mitigation measure is required.	LTS
<b>Impact d.</b> Result in other emissions (such as those leading to odors) adversely affecting a substantial number of people?	LTS	No mitigation measure is required.	LTS
<b>4.3 Biological Resources</b>			
<b>Impact a.</b> Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special-status species in local or regional plans, policies, or	PS	<b>BIO-1:</b> If demolition and/or construction (including any tree removal) occurs during the typical nesting season (February 1 through September 1) a pre-construction nesting bird survey will be conducted during the nesting season to document any nests on the Site. Nesting bird surveys will be performed at a minimum of two weeks prior	LTS

Impacts	Significance before Mitigation	Mitigation Measures	Significance after Mitigation
regulations, or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service?		to the start of Project activities. If an active nest is observed, a protective buffer will be established around the nest to avoid any disturbances. During vegetation removal, if an active nest is identified within the Site, a biological monitor may also be required to monitor the nest during Project activities to ensure there are no disturbances to the nesting bird and prevent nest failure.	
<b>Impact e.</b> Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?	PS	<b>BIO-1:</b> If demolition and/or construction (including any tree removal) occurs during the typical nesting season (February 1 through September 1) a pre-construction nesting bird survey will be conducted during the nesting season to document any nests on the Site. Nesting bird surveys will be performed at a minimum of two weeks prior to the start of Project activities. If an active nest is observed, a protective buffer will be established around the nest to avoid any disturbances. During vegetation removal, if an active nest is identified within the Site, a biological monitor may also be required to monitor the nest during Project activities to ensure there are no disturbances to the nesting bird and prevent nest failure.	LTS
<b>4.4 Cultural Resources</b>			
<b>Impact a.</b> Cause a substantial adverse change in the significance of a historical resource pursuant to § 15064.5?	PS	<b>CUL-1:</b> Development of an Archaeological Monitoring Plan and Archaeological Monitoring. <b>CUL-2:</b> Conduct cultural resource sensitivity training. <b>CUL-3:</b> Stop Work if Archaeological Deposits and/or Human Remains Are Encountered During Ground-Disturbing Activities. If archaeological deposits are encountered during Project-related ground disturbance, work in the area (50-foot radius) shall stop immediately and the procedures outlined in the AMP will be implemented. If any human remains are discovered during ground-disturbing activities, there shall be no further excavation or disturbance of the Site, or any nearby area reasonably suspected to overlie adjacent human remains. These remains shall be treated in accordance with existing state laws, including California PRC Section 5097.98 and California Health and Safety Code Section 7050.5	LTS
<b>Impact b.</b>	PS	<b>CUL-1, CUL-2, CUL-3</b>	LTS

Impacts	Significance before Mitigation	Mitigation Measures	Significance after Mitigation
Cause a substantial adverse change in the significance of an archaeological resource pursuant to § 15064.5?			
<b>Impact c.</b> Disturb any human remains, including those interred outside of dedicated cemeteries?	PS	<b>CUL-1, CUL-2, CUL-3</b>	LTS
<b>4.5 Geology and Soils</b>			
<b>Impact a.</b> Directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving: Seismic-related ground failure, including liquefaction?	LTS	No mitigation measure is required.	LTS
<b>Impact b.</b> Result in substantial soil erosion or the loss of topsoil?	LTS	No mitigation measure is required.	LTS
<b>Impact c.</b> Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or offsite landslide, lateral spreading, subsidence, liquefaction or collapse?	LTS	No mitigation measure is required.	LTS
<b>Impact d.</b> Be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial direct or indirect risks to life or property?	LTS	No mitigation measure is required.	LTS
<b>Impact f.</b> Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?	PS	<b>PALEO-1:</b> A qualified paleontologist meeting professional standards as defined by Murphey et al. (2019) will be retained as the designated Project Paleontologist to oversee a paleontological mitigation program. The Project Paleontologist should draft and oversee the implementation of a Paleontological Mitigation Plan that reviews detailed Project plans and develop establishes monitoring plans that provide for paleontological monitoring of earthwork and ground-disturbing activities into undisturbed geologic units with high paleontological	LTS

Impacts	Significance before Mitigation	Mitigation Measures	Significance after Mitigation
		<p>potential to be conducted by a paleontological monitor meeting industry standards (Murphey et al. 2019). This plan should include provisions for worker training, depths and locations for monitoring, monitoring procedures, a fossil discovery plan in the event a fossil is found during construction, including a plan for assessment and treatment, and requirements for final reporting of the results of the mitigation program. The plan should include a review of geotechnical data, if available, to refine the depth at which Pleistocene-aged sediments are present.</p> <p><b>PALEO-2:</b> Full-time paleontological monitoring should be implemented once excavations reach five feet in depth in previously undisturbed sediments across the Project area. The Project Paleontologist may alter the frequency or depth of monitoring based on subsurface conditions.</p> <p><b>PALEO-3:</b> The Project Paleontologist should develop a Worker’s Environmental Awareness Program (WEAP) training outlining the requirements and procedures if inadvertent discovery of fossils is identified during construction, to be delivered by the paleontological monitor. This training shall be provided once to each worker involved in ground-disturbing activities before they begin work and shall be documented in training records submitted to the Judicial Council.</p> <p><b>PALEO-4:</b> In the event fossils are encountered during construction activities, all work must stop in the immediate vicinity of the finds while the paleontological monitor documents the find. The Project Paleontologist shall assess the discovery. Should the Project Paleontologist assess the discovery as meeting criteria of scientific importance to be considered a paleontological resource, the discovery shall be collected and curated in an accredited repository along with all necessary associated data and curation fees.</p>	
<b>4.6 Greenhouse Gas</b>			
<p><b>Impact a.</b> Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the</p>	LTS	No mitigation measure is required.	LTS

Impacts	Significance before Mitigation	Mitigation Measures	Significance after Mitigation
environment?			
<p><b>Impact b.</b> Conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of greenhouse gases?</p>	LTS	No mitigation measure is required.	LTS
<b>4.7 Hazards and Hazardous Materials</b>			
<p><b>Impact a.</b> Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?</p>	PS	<p><b>HAZ-1:</b> Preparation of a Hazardous Materials Management Plan. Structures to be demolished containing asbestos and lead paint shall be appropriately handled prior to demolition at the Site and disposed in accordance with an Asbestos and Lead Paint Management Plan prepared by the contractor and submitted to the Judicial Council for review and approval prior to initiating demolition activities. Prior to demolition of the Site hazardous materials or other universal wastes onsite shall be inventoried, packaged, removed, and disposed of in accordance with a Hazardous Materials Management Plan prepared by the contractor and submitted to the Judicial Council for review and approval prior to initiating demolition activities.</p> <p>Hazardous materials used during construction shall be limited to the quantities required for construction and shall be stored and handled in accordance with regulatory requirements. Utility trucks and refueling trucks operating onsite shall have a spill kit onboard at all times. Small spills of petroleum products or other hazardous materials during construction operations shall be reported to the construction supervisor and a spill response form completed with a description of the type and quantity of the spill accompanied by photographs and a description of the disposition of the spill material. Hazardous spill material shall be disposed according to regulatory requirements. In the event of a large spill of hazardous materials equal to or above reportable quantities federal, state, and applicable local reporting requirements shall be followed.</p> <p><b>HAZ-2:</b> Preparation of a site-specific Health and Safety Plan (HASP) to protect the health and safety of construction workers and the environment. The HASP shall be</p>	LTS

Impacts	Significance before Mitigation	Mitigation Measures	Significance after Mitigation
		<p>prepared in accordance with Title 8 of the CCR State and federal Occupational Safety and Health Association regulations (29 Code of Federal Regulations 1910.120). The HASP shall be made available to construction workers for review prior to starting work at the Site. The HASP shall identify potential hazards (including stained or odorous soils at any location where earth-moving activities would occur within the proposed development area), chemicals of concern (e.g., volatile organic compounds, heavy metals, and gases), personal protective equipment and devices, decontamination procedures, the need for personal or area monitoring, and emergency response procedures. The HASP shall provide direction in the event stained or odorous soil is encountered onsite during construction activities that the Judicial Council shall retain a licensed environmental professional to conduct a Phase II Environmental Site Assessment that includes appropriate soil and/or groundwater analysis, and potential soil vapor analysis. Recommendations contained in the Phase II Environmental Site Assessment to address any contamination that is discovered during the investigation shall be implemented before initiating ground-disturbing activities in these areas. The HASP shall also require notification of the appropriate federal, state, and local agencies if evidence of previously undiscovered soil contamination (e.g., stained soil, odorous groundwater, or groundwater with a surface sheen). Any contaminated areas shall be remediated in accordance with recommendations made by the RWQCB, Department of Toxic Substance Control, the Sunnyvale Department of Public Safety (i.e., designated CUPA), County of Santa Clara Department of Environmental Health, and/or other appropriate federal or state regulatory agencies.</p>	
<p><b>Impact b.</b> Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous</p>	<p>PS</p>	<p><b>HAZ-1, HAZ-2</b></p>	<p>LTS</p>

Impacts	Significance before Mitigation	Mitigation Measures	Significance after Mitigation
materials into the environment?			
<b>4.8 Hydrology and Water Quality</b>			
<b>Impact a.</b> Violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or ground water quality?	LTS	No mitigation measure is required.	LTS
<b>Impact c.</b> Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would: Result in a substantial erosion or siltation on- or offsite;	LTS	No mitigation measure is required.	LTS

<b>4.10 Transportation</b>			
<p><b>Impact a.</b> Conflict with a program, plan, ordinance or policy addressing the circulation system, including transit, roadway, bicycle and pedestrian facilities?</p>	LTS	No mitigation measure is required.	LTS
<p><b>Impact b.</b> Conflict or be inconsistent with CEQA Guidelines § 15064.3, subdivision (b)?</p>	LTS	No mitigation measure is required.	LTS
<b>4.11 Tribal Cultural Resources</b>			
<p><b>Impact a.</b> Would the project cause a substantial adverse change in the significance of a tribal cultural resource, defined in PRC §21074</p>	PS	<p><b>CUL-1, CUL-2, CUL-3:</b> TCR-1: Inadvertent/Unanticipated Tribal Cultural Resources Discovery Protocols. If tribal cultural resources or potential tribal cultural resources are discovered during Project implementation, all activities within a 50-foot radius of the find shall be stopped, the Judicial Council’s Project Manager and Tribal Representative from the Amah Mutsun Tribal Band of Mission San Juan Bautista shall be immediately notified. The Tribal Representative(s) shall evaluate the find(s) within 48-hours and make recommendations to the Judicial Council if it meets the definition of a tribal cultural resource (PRC Section 21074) and follow the procedures below. The qualified archaeologist shall make recommendations to the Judicial Council and the Judicial council will make the determination. Should the Amah Mutsun Tribal Band of Mission San Juan Bautista be unable to evaluate the find(s) within this defined period, only the qualified archaeologist shall make the recommendation.</p> <p>i. If the find(s) does not meet the definition of a tribal cultural resource, a historical resource, or a unique archaeological resource, no further study or protection is necessary prior to resuming Project implementation.</p> <p>ii. If the find(s) does meet the definition of a tribal cultural resource, then it shall be avoided by Project activities and preserved in place, if feasible. The contractor shall implement any measures deemed by the Judicial Council to be necessary and feasible to preserve in place,</p>	LTS

Impacts	Significance before Mitigation	Mitigation Measures	Significance after Mitigation
		avoid, or minimize impacts to the tribal cultural resource. If avoidance is not feasible, as determined by the Judicial Council, the Tribal Representative(s) from the Amah Mutsun Tribal Band of Mission San Juan Bautista, if available, shall make recommendations regarding the culturally appropriate treatment and disposition of such find(s) and significant impacts to such tribal cultural resources shall be mitigated in accordance with the recommendations of the Amah Mutsun Tribal Band of Mission San Juan Bautista prior to resuming construction activities within the 50-foot radius.	

CC = Cumulatively Considerable; LTS = Less than Significant; NI = No Impact; PS = Potentially Significant; SU = Significant and Unavoidable

# 1 Introduction

This Environmental Impact Report (EIR) for the proposed Sixth Appellate District Courthouse Project (Project) has been prepared in accordance with and complies with the California Environmental Quality Act (CEQA) of 1970 as amended (Public Resources Code [PRC] Section 21000 et seq.) and State CEQA Guidelines (California Code of Regulations [CCR], Title 14, Section 15000 et seq.). Per Section 21067 of CEQA and Sections 15367 and 15050 through 15053 of the State CEQA Guidelines, the Judicial Council of California (Judicial Council) is the lead agency under whose authority this document has been prepared. As an informational document, this EIR is intended for use by the Judicial Council decision makers and members of the general public in evaluating the potential environmental effects of the Project.

## 1.1 Project Overview

Since it was established in 1984, the Sixth Appellate District of the Court of Appeal (Sixth Appellate District), has operated out of the Comerica Bank Building, located at 333 West Santa Clara Street within downtown San Jose in Santa Clara County pursuant to a lease. In 2006, the Sixth Appellate District's lease that was managed by the California Department of General Services was assigned to the Judicial Council of California. The current lease for the Sixth Appellate District's 43,758 SF of space on the 10<sup>th</sup> and 11<sup>th</sup> floors of the Comerica Bank Building expires in January 2029 and has a final extension option through January 2034 (Moore, Ruble, Yudell, May 18, 2022).

Santa Clara County is part of the greater Silicon Valley and the epicenter of computer technology and development in the United States. It serves high-technology-oriented companies, such as Apple, Google, Facebook, IBM, Microsoft, Zoom, and Intel Corporation, as well as aerospace industries such as Lockheed and Martin Aerospace. Over recent years, rental rates have increased while vacancy rates have decreased, indicating that the Sixth Appellate District may have difficulty negotiating a new lease at their current location, will need to pay more for the same space, and would have limited options for a new location. Existing operations have been confined to the dictated leased space floor plate such that adjacencies required for effective operations have not been fully realized, space shortfall exists, and anticipated future growth cannot be accommodated. The current leased location also has security vulnerabilities.

The Judicial Council is proposing to build a new Sixth Appellate District Courthouse at a state-owned asset of 2.03-acres located at 605 W. El Camino Real, Sunnyvale, Santa Clara County, California 94087 (Site). The Project consists of the demolition of an existing building and the construction of a new courthouse with onsite parking for the Sixth Appellate District in a more practical and accessible infill location. The Project Site is situated within Santa Clara County Accessor's Parcel Number 165-02-004, which is located north of West El Camino Real between Mathilda Avenue and Pastoria Avenue. Through the implementation of the Project, the Sixth Appellate District will be provided with a permanent facility to operate in, eliminating lease uncertainties and ongoing expensive and escalating lease costs while

remaining within Santa Clara County which is familiar to court users, visitors, and the public that they serve.

## 1.2 Intended Uses and Purpose of the EIR

An EIR is an informational document used by a lead agency (in this case, the Judicial Council) when considering approval of a project. The purpose of an EIR is to provide public agencies and members of the general public with detailed information concerning the environmental effects associated with the implementation of a project, prior to taking action on a project.

An EIR should analyze the environmental consequences of a project, identify ways to reduce or avoid potential environmental effects resulting from the project, and identify alternatives to the Project that are capable of avoiding or reducing impacts. CEQA requires that all state and local government agencies consider the environmental consequences of projects over which they have discretionary authority. This EIR provides information to be used in the planning and decision-making process. It is not the purpose of an EIR to recommend approval or denial of a project.

Prior to approval of the Project, the Judicial Council, as lead agency and the decision-making entity, is required to certify that the EIR has been completed in compliance with CEQA, that the information in this EIR has been considered, and that the EIR reflects the independent judgment of the Judicial Council. CEQA requires decision makers to balance the benefits of a project against its unavoidable environmental consequences. If environmental impacts are identified as significant and unavoidable, the lead agency may still approve the project if it finds that social, economic, legal, technological or other benefits outweigh the unavoidable impacts. The lead agency would then be required to state in writing the specific reasons for approving a project, based on information in the EIR and other information sources in the administrative record. This reasoning is called a “statement of overriding considerations” (PRC section 21081 and State CEQA Guidelines Section 15093). The EIR will be used by the Judicial Council during its consideration and potential approval of the Project.

In addition, the Judicial Council as lead agency must adopt a Mitigation Monitoring and Reporting Program (MMRP) describing the mitigation measures that will avoid or reduce significant effects on the environment (PRC section 21081.6; State CEQA Guidelines Section 15097) if mitigation is necessary. The MMRP is adopted at the time of project approval and is designed to ensure compliance with the project description and mitigation measures of the EIR during and after project implementation. If the Judicial Council decides to approve the Project, it will be responsible for verifying implementation of any MMRP.

The Judicial Council has adopted facilities standards to guide the development of court facilities in California. The Appellate Court Facilities Guidelines (Facilities Guidelines) address physical durability of facilities, design principles, sustainable design, site design, architectural criteria, and many other topics specific to appellate court facilities. The Facilities Guidelines are intended to promote buildings that are functional, durable, maintainable, efficient, and provide long-term value to the public, to the judicial branch, to the courthouse occupants, to the community in which they reside, and to the court users and taxpayers of California and to maximize value to the State of California by balancing the aesthetic,

functional, and security requirements of courthouse design with the budget realities of initial construction costs and the long-term life cycle costs of owning and operating institutional buildings.

Although the Facilities Guidelines have been used by the Judicial Council to inform the public regarding the Judicial Council’s intent for the Project and to inform the analysis included throughout this EIR, there are also design and engineering details, construction documents, and other details that would continue to be developed during and following the preparation of this EIR. One important purpose of this EIR is to provide enough information about the Project to allow responsible agencies, stakeholders, and the public meaningful evaluation of potential environmental impacts, but early enough to allow CEQA to inform later design, engineering, architectural, and construction details.

## 1.3 Lead and Responsible Agencies

### 1.3.1 LEAD AGENCY

In conformance with Sections 15050 and 15367 of the State CEQA Guidelines, the Judicial Council is the “lead agency” for the Project, defined as the “public agency which has the principal responsibility for carrying out or disapproving a project.” The Judicial Council, as lead agency, is responsible for scoping the analysis, preparing the EIR, responding to comments received on the Draft EIR, and all other required aspects of the CEQA process.

### 1.3.2 RESPONSIBLE AGENCIES

Responsible agencies are state and local public agencies other than the lead agency that have authority to carry out or approve a project or that are required to approve a portion of a project for which a lead agency, such as the Judicial Council of California, is preparing or has prepared an EIR. Responsible agencies will have the opportunity to review and provide comments during the public review period.

The following agencies could be required to act as a responsible agency for the Project:

Agency	Permits and Other Approvals
<b>State</b>	
San Francisco Bay Regional Water Quality Control Board	Clean Water Act (CWA) and National Pollutant Discharge Elimination System (NPDES) General Construction Permit/ Stormwater Pollution Prevention Plan (SWPPP).
Office of the State Fire Marshal	Approvals to construct and occupy.
<b>Local</b>	
City of Sunnyvale Department of Public Works, Engineering Division	Encroachment permits, if required.
City of Sunnyvale Department of Public Works, Engineering Division	Water supply and sewer connection; wastewater discharge permit.
City of Sunnyvale Public Safety Department	Fire Department review of emergency access and fire flow.

## 1.4 Scoping of Environmental Issues

CEQA Guidelines sections 15080 to 15097 detail the multiple phases of the CEQA process, many of which include the involvement of the public through notification and comment opportunities. The main steps of this process are described below.

### 1.4.1 NOTICE OF PREPARATION AND SCOPING MEETING

In accordance with the CEQA Guidelines (14CCR 15082[a], 15103, and 15375) a Notice of Preparation (NOP) for this Draft EIR was circulated to inform agencies and the public of the scope and content of the document and to invite comments. The NOP was circulated to the public; State Clearinghouse; responsible, trustee and other relevant local, state, and federal agencies; and to the Santa Clara County Clerk. The public scoping period began on April 9, 2024, and ended on May 9, 2024. The NOP and comments received in response to the NOP are included in **Appendix A**. To provide an additional opportunity for input, the Judicial Council held a public scoping meeting in the City of Sunnyvale on April 17, 2024. The focus of the scoping meeting was to share information about the Project, how to access the Project documents, and how to participate in the public review process. While no members of the public attended the scoping meeting, a recording of the scoping meeting presentation along with Project documents were uploaded to the Judicial Council's website for opportunity to comment. The Judicial Council considered comments submitted in response to the NOP and the scoping meeting recording during the preparation of this Draft EIR.

The following comments were received:

- 04.16.2024 – Native American Heritage Commission. The Native American Heritage Commission (NAHC) provided a letter outlining the requirements of Assembly Bill (AB) 52, including requirements for California Native American tribal consultation, discussion of a project's potential impacts to tribal cultural resources in CEQA documents filed on or after July 1, 2015 (PRC Section 21074), and consideration of feasible mitigation measures and mitigation measures agreed upon during consultation. The letter also outlined the requirements of Senate Bill (SB) 18, which applies to projects that involve the adoption of or amendment to a general plan or specific plan, or the designation or proposed designation of open space on or after March 1, 2005.
- 05.08.2024 – California Department of Transportation – Caltrans District 4. Caltrans provided a letter referencing SB 743 (Transportation Impacts) and the Caltrans Transportation Impact Study Guide, which Caltrans uses to assess Vehicle Miles Traveled (VMT) analysis for land use projects under CEQA. Caltrans encouraged the Project applicant to consider developing and implementing an effective Transportation Demand Management (TDM) Program to reduce VMT and Greenhouse Gas (GHG) emissions from future development in the area; recommended hydrology and construction-related impacts be addressed in the CEQA document; and stated that the Project's fair share contribution, financing, scheduling, implementation responsibilities and lead agency monitoring should be fully discussed for all proposed mitigation measures. In addition, Caltrans recommended the Project applicant consider incorporating multimodal transportation improvements as part of the Project and stated that Caltrans facilities impacted by

the Project must meet American Disabilities Act Standards after project completion. In addition, Caltrans advised that an encroachment permit would be required for work within their right-of-way.

#### **1.4.2 PUBLIC REVIEW OF THE DRAFT EIR**

During the preparation of the EIR and consistent with the requirements of CEQA, a good-faith effort has been made to contact all responsible and trustee agencies; organizations; persons who may have an interest in the Project; and all government agencies, including the Governor's Office of Planning and Research's State Clearinghouse.

The Judicial Council filed a Notice of Completion with the State Clearinghouse, indicating that this Draft EIR has been completed and is available for review. A Notice of Availability of the EIR has been published concurrently with the distribution of this document. This Draft EIR will be circulated for a 45-day public review and comment period, commencing on Wednesday, July 17, 2024, and concluding at 5:00 p.m. on Friday, August 30, 2024. In addition, a public meeting will be held on Thursday July 25, 2024, from 4:30 p.m. to 6:00 p.m. at the following location: Sunnyvale City Hall, 456 W. Olive Ave., Sunnyvale, CA 94086. Information related to the Draft EIR, including an overview of the Project, environmental analysis, and how to review and comment on the Draft EIR will be provided at the meeting.

During this review period, comments from the public, organizations, and agencies regarding environmental issues identified within the EIR and the EIR's accuracy and completeness may be submitted in writing to the lead agency contact below, either via hard copy or via email:

Kim Bobic, Senior Project Manager  
 Judicial Council of California; Facilities Services  
 455 Golden Gate Avenue, San Francisco, CA 94102-3688  
 Phone: 805-249-0911  
 Email: [Kim.Bobic-T@jud.ca.gov](mailto:Kim.Bobic-T@jud.ca.gov)

The Draft EIR is available for review online at: <https://www.courts.ca.gov/76092.htm>

Technical appendices not included online are available upon request (at the attention of Kim Bobic, Senior Project Manager, see address and email above).

Hard copies of the Draft EIR and technical appendices are available for review at:

Judicial Council of California, 3rd Floor Reception Desk  
 455 Golden Gate Avenue, San Francisco, CA 94102-3688  
 By appointment only during regular business hours: 8:00 a.m. through 4:30 p.m.

Sunnyvale Public Library  
 665 W. Olive Avenue, Sunnyvale, CA 94086  
 Regular business hours (varies by weekday)

### 1.4.3 RESPONSES TO COMMENTS DOCUMENT AND FINAL EIR

The Judicial Council will prepare a Response to Comments document upon completion of the public review and comment period for the Draft EIR. This document will address comments received on the Draft EIR as well as identify any text revisions to the Draft EIR as a result of those responses or other changes initiated by the Judicial Council. This Response to Comments document, together with the Draft EIR will constitute the Final EIR. The Judicial Council will consider the adequacy of the Final EIR in accordance with the requirements of CEQA when it considers the Project during a public meeting.

The Judicial Council must certify the Final EIR before deciding to approve the Project. Prior to approval of the Project that would have a significant environmental impact, CEQA requires the adoption of certain findings (PRC section 21081; CEQA Guidelines sections 15091 through 15093). If the Final EIR identifies significant adverse impacts that cannot be mitigated to less than significant levels, findings must include a statement of overriding considerations for those impacts (CEQA Guidelines Section 15093(b)).

### 1.4.4 MITIGATION MONITORING AND REPORTING PROGRAM

Throughout this EIR, mitigation measures have been recommended in a format that will facilitate the preparation of an MMRP. If required under CEQA (see CEQA Guidelines Section 15097), an MMRP will be prepared at the time of certification of the Final EIR for the Project and will identify the specific timing and roles and responsibilities for implementation of adopted mitigation measures if the Project is approved.

## 1.5 Document Organization

The principal objective of CEQA is that the environmental review process be a public one. To meet this objective, the EIR must inform members of the public, decision makers, and technically oriented reviewers of the physical impacts associated with the Project.

The content and organization of this Draft EIR are designed to meet the requirements of CEQA, the State CEQA Guidelines, as well as to present issues, analyses, mitigation, and other information in a logical and understandable way. A description of the organization of this Draft EIR and the content of each section is provided in the following.

- **Chapter ES, “Executive Summary,”** provides a summary of the Project description and objectives, the Lead Agency and their responsibility, a summary of alternatives considered, and proposed mitigation measures.
- **Chapter 1, “Introduction,”** describes the Project overview, intended uses and purpose of the EIR, scoping of environmental issues, and type of EIR organization.
- **Chapter 2, “Project Description,”** describes the Project location, zoning, and surrounding land uses, Project characteristics, demolition, construction and staging, and operation of Project, and approvals needed.

- **Chapter 3, “Impacts Found Not to Be Significant,”** presents a brief discussion of the environmental resources within the Initial Study found to have no or less than significant impact and were therefore not brought forward for additional analysis within the Draft EIR.
- **Chapter 4, “Environmental Setting, Impacts, and Mitigation Measures,”** describes the approach to the environmental impact analysis and contains individual sections that reflect the CEQA Appendix G recommended environmental resource areas and describe existing conditions, detail the regulatory framework, and assess the potential environmental impacts of the Project. When the analysis identifies potentially significant effects, mitigation measures are presented to lessen the impacts. Implementing these measures would reduce potentially significant impacts to less than significant levels wherever feasible.
- **Chapter 5, “Cumulative Impacts,”** describes the cumulatively significant impacts, if any, considering the incremental effect of implementing the Project in combination with the impacts of adopted projections from general plan, specific plan, other regional planning document, or a certified EIRs for such a planning document. This cumulative analysis uses the “projections” approach to identify the cumulative setting.
- **Chapter 6, “Other CEQA Requirements,”** describes the growth-inducing impacts and significant and unavoidable environmental impacts of the Project, as well as the significant irreversible environmental changes that would result from Project implementation.
- **Chapter 7, “Alternatives,”** describes a reasonable range of alternatives to the Project, evaluates the extent to which those alternatives could substantially lessen the Project’s significant impacts while attaining most of the Project objectives, and compares the effects of the alternatives to those of the Project. This section also identifies the environmentally superior alternative, as required by CEQA.
- **Chapter 8, “References,”** lists the sources of information cited throughout the Draft EIR.
- **Chapter 9, “Preparers,”** lists the individuals who contributed to preparation of the Draft EIR.
- **Appendices,** provide background and technical information to support analysis of this Draft EIR.

## 2 Project Description

This chapter presents a description of the Project, including the proposed location; site history, zoning, and surrounding land uses; purpose and objectives; and the elements of the Project.

### 2.1 Project Location, Zoning, and Surrounding Land Uses

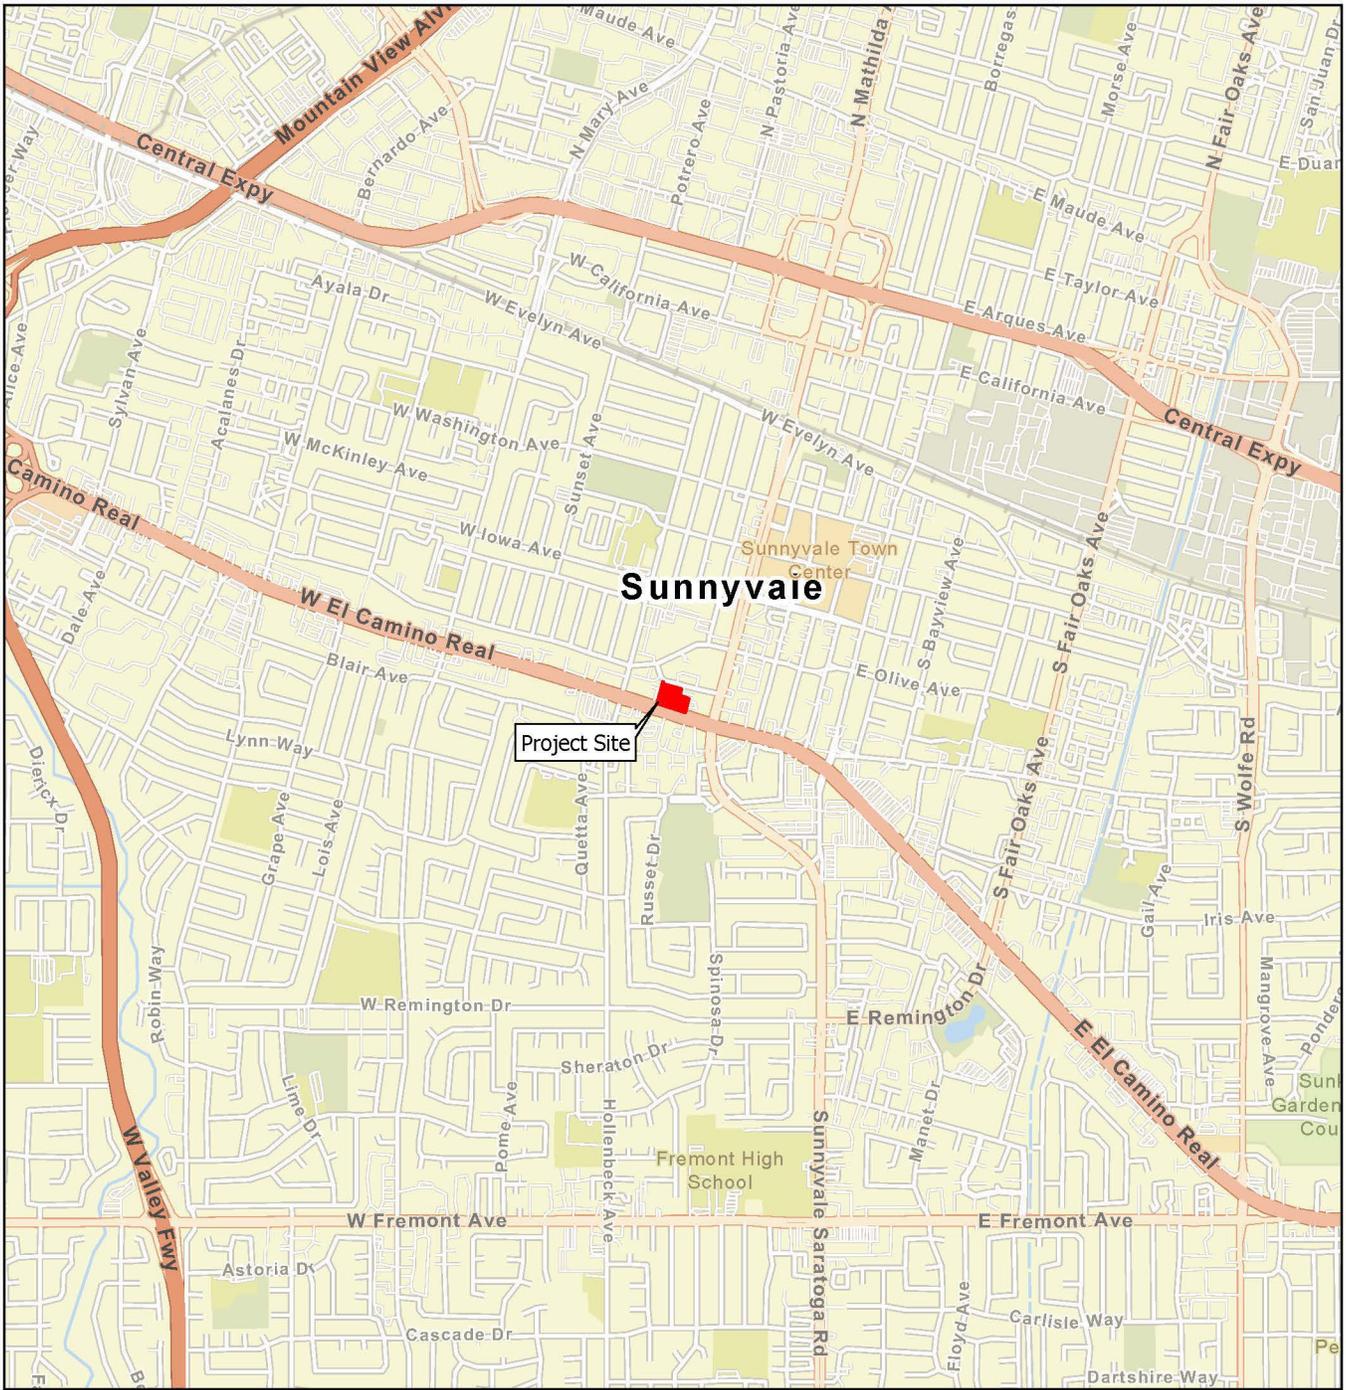

#### 2.1.1 PROJECT LOCATION

The Site is located at 605 W. El Camino Real (Santa Clara County Assessor's Parcel Number [APN]: 165-02-004) in the City of Sunnyvale (City) in Santa Clara County, California (**Figure 2.1-1**). The 2.03-acre Site is situated on the north side of W. El Camino Real between Mathilda Avenue and Pastoria Avenue (**Figure 2.1-2**).

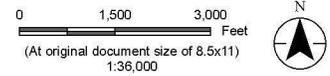

#### 2.1.2 PROJECT SITE HISTORY

The Site was developed in 1967 with a 19,994 SF, single-story building with partial basement and onsite parking. The property is a state-owned asset that was used by the Superior Court of Santa Clara County for trial court operations from 1967 until August 12, 2016, when courthouse operations were moved to the Family Justice Center Courthouse located in San Jose, California. The State of California, on behalf of the Judicial Council, retains ownership of the Site. The existing building has remained vacant since that time, is in poor overall condition, and has surpassed its useful life.

### 2.1.3 PROJECT SITE ZONING AND SURROUNDING LAND USES

The Judicial Council, as the state agency, is not subject to local land use regulations<sup>1</sup>. However, the Judicial Council considers county and/or city policies and guidelines, as appropriate to determine whether the Project would be consistent with the Site's character and surroundings. The Site is located within the El Camino Real Specific Plan (ECRSP) area. The ECRSP identifies the Site as located in the "Civic Center Node" and within the Land Use Classification of El Camino Real Public Facility. Land uses within this area include civic centers and governmental uses which are consistent with the Project type (City of Sunnyvale 2022). The Site has a zoning designation of El Camino Real – Public Facilities (ECR-PF) District. The ECR-PF zoning district is reserved for the construction, use and occupancy of governmental, public utility and educational buildings and facilities, and other uses compatible with the public character of the district and does not permit residential development.

The Site is located within the City of Sunnyvale Civic Center (**Figure 2.1-2**). The Site currently retains a vacant building and parking area, with mature trees along the west and south perimeter of the property. Surrounding land is predominantly zoned for public facilities and commercial use and is moderately to densely developed with public facilities, shopping centers, hotels, office buildings, and supporting commercial services. Residential uses are located nearby on secondary streets. This neighborhood and its infrastructure are suburban.

Land immediately north and west of the Site consist of government offices and a parking lot is located immediately to the east. The City Hall and City Hall Annex are located immediately north of the Site, with the Sunnyvale Public Library located farther to the north across Olive Avenue. Sunnyvale Public Safety Services is located directly west of the Site. Commercial businesses are located to the south of the Site across El Camino Real, which include a hotel and restaurants. Nearby public transportation and roadway infrastructure connects this area to the surrounding facilities and neighborhoods and to the regional transportation network via the Sunnyvale Transit Center.

The City's Master Plan for the Civic Center was approved in September of 2018, and features the construction of three new facilities on the northern half of the Civic Center: City Hall, Public Safety Emergency Operations Center Addition (which both opened in March 2023), and a library (currently in the conceptual design phase). While the Judicial Council is not subject to the City's Specific Plan or other local land use regulations, the Project is consistent with the Specific Plan. Additional plans for surrounding land uses include the development of new civic plazas, an outdoor amphitheater, and pedestrian and bicycle enhancements to Olive and Mathilda Avenues.

## 2.2 Project Purpose and Objectives

Since it was established in 1984 and for almost 40 years, the Sixth Appellate District has operated out of leased facilities in a commercial building (Comerica Bank Building) at 333 West Santa Clara Street in downtown San Jose, Santa Clara County, California. The Sixth Appellate District currently operates out of

---

<sup>1</sup> A state agency is immune from local regulations unless the Legislature expressly waives immunity in a statute or the California Constitution. (*City of Malibu v. Santa Monica Mountains Conservancy* (2002) 98 Cal.App.4<sup>th</sup> 1379, 1384.

43,758 SF of leased space on the 10th and 11th floors of the Comerica Bank Building. The current leased space includes one courtroom with support spaces, justice chambers, attorney offices, mediation operations, clerk operations, a law library, and court administration. There is no onsite parking available for any court user including the public and court staff.

In 2006, the Sixth Appellate District's lease that was managed by the Department of General Services was assigned to the Judicial Council. The current lease, last executed in May 2012, has utilized multiple lease extension options over the years. The current lease expires in January 2029 and has one final option for a five-year extension through January 2034. There is no guarantee that a new lease can be negotiated or that the space will be available thereafter. Should it be determined that the Sixth Appellate District is unable to continue leasing at this current location beyond January 2034, an alternative space would need to be identified, secured, and improved for the court's use prior to the current lease expiration.

The uncertainty of having to continue leasing space for its operations and remain reliant on the availability of affordable private property office space within its operating budget has been very challenging. Santa Clara County is part of the greater Silicon Valley and the epicenter of computer technology and development in the United States. It serves high-technology-oriented companies, such as Apple, Google, Facebook, IBM, Microsoft, Zoom, and Intel Corporation, as well as aerospace industries such as Lockheed and Martin Aerospace. Over the last year, rental rates have increased while vacancy rates have decreased, suggesting that the Sixth Appellate District may have difficulty negotiating a new lease at its current location and will need to pay more while having limited options for a new location.

As a public agency, competing in a consistently high-demand rental market with private companies that have resources to pay top dollar for leased space is and has been an ongoing concern for the Judicial Council. Without a permanent state-owned facility to operate in, the Sixth Appellate District will continue to be vulnerable to rental market conditions and escalating costs. These factors impact its ability to ensure its operations can continue in an appropriate location and space that provides public access to justice.

In addition, in its current location, the Sixth Appellate District's operations have been confined to the dictated leased space floor plate such that adjacencies required for effective operations have not been fully realized, space shortfall exists, and anticipated future growth cannot be accommodated. For example, only a small number of parking spaces are available for the justices and the court executive officer. Parking for the public and court staff is accommodated offsite through public pay lots and very limited street parking. Approximately 50 onsite parking spaces are estimated to be needed, including 12 secure parking spaces for justices and surface parking for the public, court staff, which cannot be achieved at the current leased property. The current Sixth Appellate District Court location also has security vulnerabilities.

The purpose of the Project is to provide a permanent location for the Sixth Appellate District Courthouse to ensure its operations can continue in an appropriate location and space that provides public access to justice while eliminating future lease uncertainties and ongoing expensive, escalating lease costs.

CEQA Guidelines Section 15214(b) requires that the Project Description contain a clearly written statement of objective, including the underlying purpose of the Project. The Judicial Council has identified the following objectives for the Project:

1. Provide a permanent location on state-owned property for the Court of Appeal, Sixth Appellate District.
2. Eliminate future lease uncertainties and ongoing expensive and escalating lease costs.
3. Provide for the construction of a new facility prior to the Sixth Appellate District's current lease expiration in January 2029.
4. Maintain appellate court operations in Santa Clara County, a location familiar to court users, visitors, and the public and that provides a connection with the Sunnyvale Civic Center.
5. Provide a state-owned appellate courthouse, constructed to Judicial Council standards, that is modern, safe, secure and accessible to the benefit of all court users and staff and enhancing the public's access to justice through relieving the current space shortfall, increasing security, and improving operational efficiency and customer service.

The Judicial Council's proposed courthouse design would be required to conform to the Appellate Court Facilities Guidelines (Judicial Council 2002) and guiding principles of the Judicial Council that include:

- Court buildings shall reflect the dignity of the law and the stability of the judicial system.
- Court buildings shall be responsive to local context, geography, climate, and setting.
- Court buildings shall be a reflection of the importance of the activities within the courthouse, with adequate spaces that are planned and designed to be adaptable with changes in judicial practice.
- Court buildings shall be designed and constructed in consideration of the economics of its operation and maintenance.
- Court buildings shall provide a sustainable, healthy, safe, and accessible environment.
- Court buildings shall be designed and constructed utilizing technical excellence in building systems.

### 2.3 Proposed Project Characteristics

The Judicial Council is proposing to construct and operate a new courthouse for the Sixth Appellate District on 2.03-acres of state-owned land located at 605 W. El Camino Real in the City. The Project would include the demolition of an existing 19,994 square foot one-story building with a partial basement as well as an unused shed structure currently within the parking lot. The Project would additionally involve demolition of approximately 19,760 SF of existing paving, full repaving of 4,580 SF of existing drive access road, resurfacing of 9,800 SF of existing parking area, and paving of 13,200 SF of new parking area.

The proposed new courthouse would be approximately 50,000 SF and up to three stories in height located in the same general footprint as the existing building on the Site (**Figure 2.3-1**). The new courthouse would include one courtroom with support spaces, justice chambers, administrative support and operations areas, a law library, mediation area, public entry and lobby, and a building support area including a conference room, training room, and breakroom. The new courthouse would be staffed by approximately 78 full-time employees and six part-time employees daily. However, it is not expected that all employees would be onsite at the same time as the Judicial Council would utilize Transportation Management Strategies including work from home, hybrid in-person workplace models, and increased use of virtual meetings and remote appearances during oral arguments. The Project would be expected to decrease the current impact on available parking locally by adding onsite parking for a portion of the court staff and members of the public who use the court facility.

V:\185806291\JudicialCouncilCA\_Sunnyvale\03\_data\gis\_cad\gisPro\Court\_of\_Appeals\_6thDist\_2023\1220.aprx Revised: 2024-06-17 By: mdeseo

Judicial Council of California  
 Court of Appeals New Sixth Appellate District

**Figure No.**  
 2.3-1  
**Title**

**Proposed Courthouse Layout**

The Project would include approximately 50 total onsite parking spaces, including 12 secure parking spaces for justices with canopies with solar power generation capability and surface parking spaces for the public and staff. In accordance with the Supplemental 2022 California Green Building Code (CALGreen) Building Standards Code (Tier 2), 17 of the parking spaces would be electrical vehicle-capable and of these six would have an electrical vehicle charging station (EVCS).

The Project would implement sustainable elements throughout its design, construction, and operation and maintenance. The Project would be designed for sustainability and, at a minimum, to the standards of a Leadership in Energy and Environmental Design (LEED) Silver certified rating. The Project is anticipated to result in an increase of approximately 4,640 SF of paved/impervious surfaces within the Site as compared to the existing facility.

The Site includes mature trees located at the west and south perimeter of the property where a 25-foot vehicle setback naturally occurs. Trees line the west side of the Site, providing shade and privacy. On the east side of the property, two groups of three trees are centered with the existing building. The building is currently fronted on El Camino Real, where there are asymmetrical tree groupings from the existing courthouse entrance. Mature trees onsite and landscaping within the easterly existing parking lots would be retained to the extent feasible; however, for the purpose of the EIR analysis, it is assumed that existing mature trees would be removed as part of the Project. The Project would incorporate California Native and climate-appropriate, drought-tolerant plants and trees in landscape areas around the courthouse consistent with the Judicial Council's Water Conservation Policy of June 2015.

### **2.3.1 SITE ACCESS**

Nearby roadway infrastructure and public transportation connects the Site to the surrounding facilities, neighborhoods, and region ensuring public accessibility to the new courthouse. The Site is less than 2.5 miles east of the California State Route 85 (CA-SR-85) and southeast of CA-SR-237. The United States (US)-101 and US-237 highways are also located within three miles of the Site. Regional access to the Site is provided by CA-SR-85, El Camino Real/State Route (SR-82), Central Expressway (G6), and Lawrence Expressway (G2).

Access to the new courthouse parking area would be within the existing footprint. Vehicle and pedestrian access to the Site would be provided from the existing entrance off El Camino Real. Access into the secured parking lot would be controlled for use by justices, court executive staff, and California Highway Patrol (CHP) vehicles only. Service deliveries would access the facility through a loading/receiving area via the Site's primary access drive and by way of an easement across the adjacent property owned by the City.

The Site is well served by Valley Transportation Authority (VTA) bus stops with connections to Caltrain from the Sunnyvale Transit Center, which is situated seven blocks to the northeast of the Site (an approximately 18-minute walk and six-minute drive). Three VTA bus stops are located approximately 0.1-mile from the Site on El Camino Real at South Mathilda Avenue to the east; El Camino Real at South Pastoria Avenue to the west; and West Olive Avenue at All America Way to the northwest. The Sunnyvale Caltrain station is located four blocks from the Site on Mathilda Avenue and West Evelyn Avenue (an approximately 15-minute walk).

### 2.3.2 SUPPORTING INFRASTRUCTURE

The Site is served by existing utilities that would be expanded to support operation of the Project. Utility needs of the Project would not substantially differ from those currently available at the Site.

#### 2.3.2.1 Stormwater Drainage

Stormwater within the existing facility flows via surface sheet flow to existing localized gutters and local storm drains. Under the Project, stormwater would be managed through storm water catchment, treatment, dispersal, and area drainage systems. The Project would implement standard Low Impact Development (LID) design criteria to manage stormwater runoff and protect water quality of nearby waterbodies by reducing the discharge of pollutants found in stormwater resulting from the proposed development to the maximum extent practicable, and by reducing increased flows from impervious surfaces that could cause erosion and degrade habitat. The Project would implement stormwater drainage that is designed to mitigate post-development flows to a level that is no greater than existing conditions.

#### 2.3.2.2 Potable and Recycled Water

The City currently provides domestic water service to the Site and would continue to provide services to the new courthouse facility. The Project would include connection to the existing water mains for domestic and fire water service and rely upon existing City fire hydrants. Onsite pipelines for water supply, such as pipelines required for landscape irrigation, would also be installed at the time of construction. The City does not have recycled water service available to the Site; therefore, recycled water is not anticipated for use as part of the Project.

#### 2.3.2.3 Wastewater

The City currently provides wastewater treatment services to the Site and would continue to provide services to the new courthouse facility. The Project would include connection to the City's existing sewer lines located in All America Way similarly to the existing courthouse building and would be conveyed through the City's wastewater collection system to the Donald M. Somers Water Pollution Control Plant (WPCP). The Project does not include the construction or use of septic tanks or alternative wastewater disposal systems.

#### 2.3.2.4 Electricity

Electrical service to the Project area is provided by Pacific Gas & Electric Company (PG&E), via underground lines located within El Camino Real. PG&E provides electric service to approximately 16 million people throughout a 70,000-square mile service area in northern and central California. The Project would include connection to the existing electrical lines located in El Camino Real similarly to the existing courthouse building. The Project would include emergency power generators. In addition, photovoltaic panels would be located on the parking canopy within the secured parking area.

### 2.3.2.5 Natural Gas

Natural gas service and equipment will not be provided to or included in the Project. Existing natural gas infrastructure within the Site would be capped and removed during demolition and construction.

## 2.4 Demolition Activities

The existing courthouse was built in 1967 and has the potential for the presence of asbestos-containing materials and lead-based paint. Materials, including hazardous materials, associated with Project demolition would be handled, transported, and disposed of in accordance with applicable federal, state, and local regulations and would be disposed of at an approved facility. Site preparation for the Project would require the demolition of the existing 19,994 square foot one-story building with a partial basement as well as an unused shed structure currently located in the parking lot. The Project would additionally involve demolition of 19,760 SF of existing paving, full repaving of 4,580 SF of existing drive access road, resurfacing of 9,800 SF of existing parking area, and paving of 13,200 SF of new parking area within the 2.03-acre Site (**Figure 2.4-1**). Demolition activities are expected to take approximately 90 days, including abatement of hazardous materials.

## 2.5 Project Construction and Staging

Construction is planned to occur over 34 months and is anticipated to start in December 2025 with construction completed by September 2028. Construction laydown areas and temporary workspaces are proposed to be located within the existing footprint of the Site. Construction will be phased to align with the Office of the State Fire Marshal's permitting guidelines and the Judicial Council Building Official's requirements. Phase 1 construction (civil, grading, utilities, and foundations) is anticipated to start in December 2025 and be completed by May 2026. Phase 2 construction (structure, building and finish site work) is anticipated to start in December 2026 with construction completed by September 2028. Site work (paving, landscape irrigation, and planting) would occur during the last four to six months of construction. Up to 12 construction workers per day would be anticipated during construction activities.

Depending on the final layout and depth of proposed building foundations, site preparation may disturb areas beyond what have been previously disturbed. It is not anticipated that sidewalks or roadways would be closed to pedestrian or vehicular traffic during construction. Traffic control may be required for a short period of time during material off-loading but would not require road closure.

Equipment types and use assumptions by Project construction phase are provided in **Table 2.5-1**.

Table 2.5-1. Construction Phasing and Equipment List

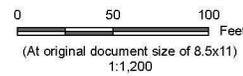

Phase	Work Days	Equipment Type	Number	Vehicle Trips Per Day (one-way)	
				Workers Trips	Haul/ Vendor Trips
<b>Phase I Construction</b>					
Demolition	90	Tractor/loader/backhoe	3	23	6 haul
		Rubber-tired dozer	1		
		Concrete saw	1		
		Wet vacuum pumps	4		
Site Preparation	20	Tractor/loader/backhoe	1	8	2 vendor
		Grader	1		
		Scraper	1		
Grading	20	Tractor/loader/backhoe	2	10	2 vendor
		Rubber-tired dozer	1		
		Grader	1		
<b>Phase 2 Construction</b>					
Building Construction	440	Crane	1	16	8 vendor
		Forklift	2		
		Gen Set	1		
		Tractor/loader/backhoe	1		
		Welder	3		
Paving	10	Tractor/loader/backhoe	1	15	-
		Paver	1		
		Paving equipment	1		
		Rollers	2		
		Cement and mortar mixer	1		
Architectural Coating	25	Air compressor	1	3	-

Construction equipment and activities would involve access via multiple routes depending on the activities (e.g., material and equipment source(s), material or equipment point of origin). The following SRs and major and minor arterial roads may be utilized by construction equipment and vehicles: Interstate -280 (I - 280, US-101, CA-SR-85, Lawrence Expressway, Evelyn Avenue, El Camino Real, and S. Mathilda Avenue.

## 2.6 Facilities Operation and Maintenance

Operation and maintenance of the new courthouse would include courthouse proceedings including oral arguments (held the first and second weeks of the month on Tuesdays and Thursdays with up to eight cases per day), in-person mediation (held on non-oral argument days with up to two per quarter), conferences, Clerk services, public record viewing, security services for justices and personnel, community/educational outreach programs (approximately two times per year), vehicle trips to and from the courthouse, energy and water usage, waste generation, and building and landscaping maintenance.

The Project is anticipated to result in approximately 135 average vehicle trips per day, with approximately 19 trips occurring during the morning peak hours and 18 trips during the afternoon/evening peak hours.

Long-term operations would result in energy and water usage and would generate wastewater. Operational energy consumption would be associated with electricity required to run various appliances and equipment, including space and water heaters, air conditioners, ventilation equipment, lights, and other electronic devices. No natural gas equipment or appliances would be used for the Project. Water usage during operation of the Project is anticipated to be approximately 2,450 gallons per day (637,000 gallons per year assuming 260 working days) associated with potable water for the building and approximately 790 gallons per day (288,275<sup>2</sup> gallons per year assuming 365 days per year) associated with potable water for maintaining landscaping. The facility is anticipated to generate approximately 1,960 gallons per day of wastewater. Existing utilities would be expanded to support operation of the Project. Utility needs of the Project are not anticipated to substantially differ from the previous use or from those currently available on the Site.

## 2.7 Project Approvals

Since the Judicial Council is the lead agency for the Project and is acting for the State of California, local government land use planning and zoning regulations do not apply to the Project. However, the Judicial Council considers county and/or city policies and guidelines as appropriate to determine whether the Project would be consistent with the Site's character and surroundings.

The Judicial Council is responsible for certifying the CEQA document and approving the Project.

The Project would disturb an area greater than one acre. Therefore, a NPDES permit from the San Francisco Bay Regional Water Quality Control Board (RWQCB) and preparation of a SWPPP will be required.

---

<sup>2</sup> Totals include rounding.

### 3 Impacts Found Not to be Significant

Based on the findings of the Initial Study, which is included as **Appendix B**, the following potential environmental impacts were determined to not be significant or the analysis concluded the Project would have no impact.

Issues	Less than Significant Impact	No Impact
<b>Aesthetics</b>		
a. Have a substantial adverse effect on a scenic vista?		<b>X</b>
<p>Scenic vistas are generally described in two ways: panoramic views (i.e., visual access to a large geographic area for which the field of view can be wide and extend into the distance), and focal views (i.e., visual access to a particular object, scene, or feature of interest). The Project Site is within the ECR-PF at 605 West El Camino Real, Sunnyvale, California, 94087, between Mathilda Avenue and Pastoria Avenue. The Site has a flat topography with an existing single-story courthouse building with a partial basement. The proposed new courthouse would be constructed as a 50,000 SF up to three story facility. The facility would be equipped with one courtroom with support spaces, justice chambers, administrative and operations areas, law library, mediation, lobby, and public entry, and building support within the same general footprint. The Project would be compatible with the existing public character of the district. Thus, there would be no impact, and this issue will not be further evaluated in this EIR, consistent with CEQA Guidelines Section 15063 (c)(3).</p>		
b. Substantially damage scenic resources including, but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway?		<b>X</b>
<p>According to Caltrans' "California Scenic Highway Mapping System," there are no state scenic highways located adjacent to, or within view of, the Site. The Site is currently developed and contains no unique geologic features. However, protected mature trees which are considered a scenic resource exist along the perimeter of the property. Existing mature trees are generally located at the perimeter of the state-owned property, where a 25-foot vehicle setback would naturally occur. Additionally, a line of trees on the west and two groups of trees on the east would be retained to provide shade, privacy, and frame the courthouse entrance. Therefore, with retention of the mature trees, no impact would occur to the scenic resources. This issue will not be further evaluated in this EIR, consistent with CEQA Guidelines Section 15063 (c)(3).</p> <p>It was determined after the submittal of the Initial Study that removal of mature trees at the Site may be required. While the Initial Study determined that there would be no impacts to scenic resources including, but not limited to trees, rock outcroppings, and historic buildings within a state scenic highway, the Project was updated for the potential removal of mature trees. Removal of these mature trees does not change this evaluation as there are no state scenic highways located adjacent to, or within view of, the Site. Therefore, there would be no impact.</p>		
c. In nonurbanized areas, substantially degrade the existing visual character or quality of public views of the site and its surroundings? (Public views are those that are experienced from publicly accessible vantage point). If the project is in an urbanized area, would the project conflict with applicable zoning and other regulations governing scenic quality?	<b>X</b>	
<p>The Site is within a heavily urbanized area and involves the replacement of the current single-story Sunnyvale Courthouse building that has surpassed its useful life with a new up to three story Sixth Appellate District Courthouse. While the taller structure would be introducing new visual elements, the construction of the Project complements the beautification and modernization goals of the Sunnyvale Civic Center Master Plan. One such goal includes replacing outdated one-story structures connected with outdoor circulation with efficient, multi-story, sustainably designed new facilities. Though the Judicial Council is not required to abide by local zoning ordinance, the proposed Project is considered a Public Facility which would be consistent with the City of Sunnyvale's zoning code. The public nature of the building requires it to be readily accessible, easy to identify, attractive and</p>		

### 3 Impacts Found Not to be Significant

Issues	Less than Significant Impact	No Impact
<p>representative of the communities' values and aspirations. The Project is consistent with applicable local policies guiding the City's overall visual resources and aesthetics as outlined in the Community Character and Land Use Transportation chapters of the City of Sunnyvale's General Plan. Additionally, the ECRSP identifies the Project Site as located in the 'Civic Center Node' and within the Land Use Classification of El Camino Real Public Facility. Land uses within this area include civic centers and governmental uses which are consistent with the Project type. Therefore, the impacts would be less than significant, and the issue will not be further evaluated in this EIR, consistent with CEQA Guidelines Section 15063 (c)(3).</p>		
<p><b>Agriculture and Forestry Resources</b></p>		
<p>a. Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?</p>		<p><b>X</b></p>
<p>The California Department of Conservation, Farmland Mapping, and Monitoring Program compiles Important Farmland maps pursuant to the provisions of Section 65570 of the California Government Code. These maps utilize data from the United States Department of Agriculture (USDA), Natural Resource Conservation Service (NRCS) soil survey, and current land use information using eight (8) mapping categories and represent an inventory of agricultural resources within Santa Clara County. The maps depict currently urbanized lands and a qualitative sequence of agricultural destinations. Maps and statistics are produced using a process that integrates aerial photo interpretation, field mapping, a computerized mapping system, and public review. Mapping of farmland categories is conducted every two years.</p> <p>Based on the above-noted desktop resources, there is no existing prime farmland, unique farmland, or farmland of statewide importance within or adjacent to the Site and no agricultural activities take place on the Site. The Site is surrounded by land developed for commercial, public, and residential uses. Therefore, no impact would occur. This issue will not be further evaluated in this EIR, consistent with CEQA Guidelines Section 15063 (c)(3).</p>		
<p>b. Conflict with existing zoning for agricultural use, or a Williamson Act contract?</p>		<p><b>X</b></p>
<p>Williamson Act contracts restrict land development of contract lands. The contracts typically limit land use in contract lands to agriculture, recreation, and open space, unless otherwise stated in the contract. Per the ECRSP zoning map, the Site has a zoning designation of P-F (Public Facilities), which is not set aside for agricultural uses. According to the City's zoning map, there are no lands with agricultural zoning designations within the City's limits (Sunnyvale 2023). According to the County of Santa Clara's map of Williamson Act properties, there are no lands under the Williams Act contract in the vicinity of the Site (SCC Planning 2023). Because the Site is not part of a Williamson Act contract, no impacts associated with this issue would occur with development of the Project. This issue will not be further evaluated in the EIR consistent with CEQA Guidelines Section 15063 (c)(3).</p>		
<p>c. Conflict with existing zoning for, or cause rezoning of, forest land (as defined in PRC Section 12220(g)), timberland (as defined by PRC Section 4526), or timberland zoned Timberland Production (as defined by Government Code Section 51104(g))?</p>		<p><b>X</b></p>
<p>According to the City's zoning map, there is no existing zoning of forest land or timberland in the City (Sunnyvale 2023). Therefore, no impacts to these resources would occur as a result of the Project. This issue will not be further evaluated in the EIR consistent with CEQA Guidelines Section 15063 (c)(3).</p>		
<p>d. Result in the loss of forest land or conversion of forest land to non-forest use?</p>		<p><b>X</b></p>
<p>There is no existing zoning of forest land within the City. No forest land would be converted to non-forest use under the Project. Therefore, no impacts would occur as a result of the Project. This issue will not be further evaluated in the EIR consistent with CEQA Guidelines Section 15063 (c)(3).</p>		
<p>e. Involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland, to non-agricultural use or conversion of forest land to non-forest use?</p>		<p><b>X</b></p>

### 3 Impacts Found Not to be Significant

Issues	Less than Significant Impact	No Impact
<p>There is no farmland in the vicinity of or on the Site. The Project would not result in conversion of farmland to non-agricultural uses. No impacts are expected to occur as a result of this Project. This issue will not be further evaluated in the EIR consistent with CEQA Guidelines Section 15063 (c)(3).</p>		
<p><b>Biological Resources</b></p>		
<p>b. Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service?</p>		<p><b>X</b></p>
<p>The Site and surrounding area do not contain any riparian habitat or other sensitive natural communities identified in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife (CDFW) or the U.S. Fish and Wildlife Service (USFWS). Therefore, the Project would not impact a riparian habitat or other sensitive natural communities. This issue will not be further evaluated in the EIR consistent with CEQA Guidelines Section 15063 (c)(3).</p>		
<p>c. Have a substantial adverse effect on state or federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?</p>		<p><b>X</b></p>
<p>There are no wetlands located within or in the vicinity of the Site. A review of the National Wetlands Inventory Wetlands Mapper and National Hydrography Dataset indicated no wetlands have been previously documented on or adjacent to the Project Site. Therefore, the Project would not impact federally protected wetlands as defined by Section 404 of the CWA. This issue will not be further evaluated in the EIR consistent with CEQA Guidelines Section 15063 (c)(3).</p>		
<p>d. Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?</p>		<p><b>X</b></p>
<p>The Site contains an existing building, maintained lawns and ornamental vegetation, and paved parking areas and walkways and is surrounded by similar urban uses. There are no wildlife corridors or wildlife nursery sites present on the Site and wildlife species are unlikely to use the Site as a migratory corridor due to the urban nature of the surrounding areas. There are no rivers, creeks, or other waterways capable of supporting fish species present on the Site. As a result, the Project would have no impact on the movement of any resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors. Therefore, this issue will not be further evaluated in the EIR consistent with CEQA Guidelines Section 15063 (c)(3).</p>		
<p>e. Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?</p>	<p><b>X</b></p>	
<p>The Project would occur on developed land with poor quality habitat to support biological resources. Mature trees exist within the Site along the west and south perimeters of the property, including a line of trees on the west and two groups of trees on the east of the existing courthouse entrance. Chapter 13.16 of the City of Sunnyvale Municipal Code (SMC) requires a permit for maintenance or removal of trees on streets and property within public rights-of-way, and on other property under the ownership and control of the City (except for parks and golf courses). Chapter 19.94 of the SMC requires a protected tree removal permit prior to removal of any protected tree from private property in any zoning district, or from any City owned golf course or park. As the Site is currently zoned as Public Facilities and is not a City owned golf course or park, it would not fall under this tree preservation ordinance. Although the Judicial Council is not subject to the SMC, project design will take these trees into consideration.</p> <p>Under the ECRSP MMRP, if ground-disturbing activities and vegetation removal occur within the nesting bird season (generally February to August) a pre-construction clearance survey for nesting birds is required and appropriate buffers are to be established if active nests are found. A survey for nesting native birds will be conducted if construction will occur during the nesting season, and the Judicial Council will follow appropriate avoidance and mitigation protocols. The Project would have a less than significant impact. This issue will not be further evaluated in the EIR consistent with CEQA Guidelines Section 15063 (c)(3).</p>		

### 3 Impacts Found Not to be Significant

Issues	Less than Significant Impact	No Impact
It was determined after the submittal of the Initial Study that removal of trees at the Site, may be required, and therefore this impact category was brought forward to the Draft EIR for additional analysis in section 4.3.3.2.		
f. Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan?		<b>X</b>
There is no habitat conservation plan or natural community conservation plan in the City. Therefore, implementation of the Project would not conflict with any habitat conservation or natural community conservation plans. This issue will not be further evaluated in the EIR consistent with CEQA Guidelines Section 15063 (c)(3).		
<b>Energy</b>		
a. Result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation?	<b>X</b>	
<p>Energy use associated with a project typically includes fuel (e.g., gasoline and diesel), electricity, and natural gas. Sources of this use include construction-related vehicle and equipment energy use, transportation energy use from people traveling to and from a project site during operation and operational facility energy use. Energy use during construction would occur within two general categories: fuel use by vehicles and other equipment to conduct construction activities and fuel use from vehicles used by workers commuting to and from the construction Site. There are no known conditions in the Project that would require nonstandard equipment or construction practices that would increase fuel-energy consumption above typical equipment fuel consumption rates. Construction activities would be temporary and would adhere to all construction Best Management Practices (BMPs). Furthermore, the Judicial Council intends to comply with the All-Electric Building standard within the Energy Code for the City.</p> <p>Operational energy consumption would be associated with electricity to run various appliances and equipment, including space and water heaters, air conditioners, ventilation equipment, lights, and numerous other electronic devices. The Project area is served by PG&amp;E. PG&amp;E provides natural gas and electric service to approximately 16 million people throughout a 70,000-square mile service area in northern and central California. The Project's electricity demand would be nominal compared to overall demand in the service area. Therefore, the projected electrical demand would not significantly impact PG&amp;E's level of service.</p> <p>Project construction and operation would not result in the wasteful, inefficient, or unnecessary consumption of energy resources, and impacts would be less than significant. This issue will not be further evaluated in the EIR consistent with CEQA Guidelines Section 15063 (c)(3).</p>		
b. Conflict with or obstruct a state or local plan for renewable energy or energy efficiency?	<b>X</b>	
<p>The applicable state plans that address renewable energy and energy efficiency include CALGreen which is found in the California Energy Code (Title 24, Part 11 of the CCR). CALGreen is the first in the nation state-mandated green building code. The code places emphasis on energy efficiency. The Project would be required to meet the energy requirements of 2022 CALGreen and the 2022 California Energy Code and would benefit from the efficiencies associated with these regulations as they relate to building heating, ventilating, and air conditioning mechanical systems, water heating systems, and lighting.</p> <p>The City of Sunnyvale Climate Action Plan describes renewable and efficient energy initiatives in its Climate Action Playbook. One strategy includes electrifying municipal buildings upon rebuild or significant remodel in the Civic Center. Additionally, the "Energy Code for the City of Sunnyvale" (Ord. 3168-20 § 1) requires that a building constructed after January 1, 2021, is required to comply with the All-Electric Building standard. The All-Electric Building standard helps achieve the local all-electric movement with the update of municipal buildings and facilities. The Project would be required to meet the mandatory energy requirements of 2022 CALGreen and the 2022 California Energy Code. Additionally, the Project would be consistent with the City of Sunnyvale Climate Action Plan. Therefore, the Project would not conflict with or obstruct a state or local plan for renewable energy or energy efficiency, and impacts would be less than significant. This issue will not be further evaluated in the EIR consistent with CEQA Guidelines Section 15066 (c)(3).6</p>		
<b>Geology and Soils</b>		

### 3 Impacts Found Not to be Significant

Issues	Less than Significant Impact	No Impact
<p>a. Directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving:</p> <p>i. Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map, issued by the State Geologist for the area or based on other substantial evidence of a known fault? Refer to Division of Mines and Geology Special Publication 42.</p>		X
<p>The Alquist-Priolo Earthquake Fault Zoning Act mitigates fault-rupture hazards by prohibiting the location of structures for human occupancy across the trace of an active fault. The Alquist-Priolo Earthquake Fault Zoning Act requires the State Geologist to delineate "Earthquake Fault Zones" along faults that are "sufficiently active" and "well-defined." The boundary of an "Earthquake Fault Zone" is generally 500 feet from major active faults and from 200 to 300 feet from well-defined minor faults. These maps are distributed to all affected cities, counties, and state agencies for their use in developing planning policies and controlling renovation or new construction. The Site is not identified as being within an Alquist-Priolo Earthquake Fault Zone (California Department of Conservation [DOC] 2021). The nearest Alquist-Priolo Earthquake Fault Zone is the Mindego Hill Fault Zone and San Andreas Fault both located approximately eight miles to the southwest of the Site. As such, no fault-rupture impact would result from the implementation of this Project. This issue will not be further evaluated in the EIR consistent with CEQA Guidelines Section 15063 (c)(3).</p>		
<p>ii. Strong seismic ground shaking?</p>	X	
<p>Like all of northern California, the Site has and would continue to be subject to ground shaking generated from activity on local and regional faults. As identified above, the Site is not within an earthquake fault zone. The Site has the potential to be subject to seismic ground shaking and failure during a major earthquake along the San Andreas Fault, located eight miles to the southwest (DOC 2021). The intensity of the ground shaking would depend on the distance to the epicenter and the geology of the areas between the epicenter and the Site. In accordance with the California Building Code (CCR, Title 24), seismic structure design requirements would be based on the Seismic Design Category (SDC) for the proposed structures, which is based on the occupancy category for the structure and on the level of expected soil modified seismic ground motion. Compliance with the seismic design requirements specified by the California Building Standards Code (CBC) would reduce the potential impacts from seismic ground shaking and ground failure on building occupants and structures to a less than significant level. This issue will not be further evaluated in the EIR consistent with CEQA Guidelines Section 15063 (c)(3).</p>		
<p>iii. Landslides?</p>	X	
<p>According to the United States Geological Survey Map, the area contains no major landforms, is relatively flat, and contains no potential for landslides (USGS 2023). The nearest landform is the Rancho San Antonio County Parks and Open Space area located approximately 3.9 miles to the southwest. Additionally, a review of the State of California Seismic Hazards Zones (2021) – Cupertino Quadrangle Map indicates that the Site is not located within an "Earthquake-Induced Landslides" zone, which is defined as an area where previous occurrence of landslide movement or local topographic, geological, geotechnical, and subsurface water conditions indicate a potential for permanent ground displacement such that mitigation as defined in PRC Section 2693(c) would be required. The nearest Earthquake-Induced Landslide zone is located approximately 3.8 miles to the southwest. Impacts associated with landslides are anticipated to be less than significant. This issue will not be further evaluated in the EIR consistent with CEQA Guidelines Section 15063 (c)(3).</p>		
<p>e. Have soils incapable of adequately supporting the use of septic tanks or alternative wastewater disposal systems where sewers are not available for the disposal of waste water?</p>		X
<p>The Project would connect to the City's existing wastewater system and would not require the construction and use of septic tanks or alternative wastewater disposal system. Therefore, the Project would have no impact. This issue will not be further evaluated in the EIR consistent with CEQA Guidelines Section 15063 (c)(3).</p>		

### 3 Impacts Found Not to be Significant

Issues	Less than Significant Impact	No Impact
<b>Hazards and Hazardous Materials</b>		
c. Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?	<b>X</b>	
The nearest school to the Site is Little Tree Montessori International School of Sunnyvale, located approximately 0.24 mile to the northwest. Although Little Tree Montessori is located within one-quarter mile of the Site, operation of the Project would not emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste. Construction associated with the Project would result in low amounts of hazardous emissions from construction equipment and activities; however, these low-level emissions would be temporary impacts and not likely to traverse the quarter mile distance to Little Tree Montessori. Therefore, the Project impact would be less than significant. This impact will not be further evaluated in the EIR consistent with CEQA Guidelines Section 15063 (c)(3).		
d. Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code § 65962.5 and, as a result, would it create a significant hazard to the public or the environment?		<b>X</b>
The Site is not located on a list of hazardous materials sites compiled pursuant to Government Code § 65962.5. The nearest hazardous waste site is the Sunnyvale Fuel Dock (T0608598524), located 500 feet to the northeast of the Site (State Water Resources Control Board [SWRCB] 2023). This Site is a Clean-Up Site for gasoline contaminants and was designated as Case Closed on December 21, 1990. Therefore, the Project would have no impact. This impact will not be further evaluated in the EIR consistent with CEQA Guidelines Section 15063 (c)(3).		
e. For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard or excessive noise for people residing or working in the project area?		<b>X</b>
The Site is not located within an airport land use plan or within two miles of a public or private use airport. The closest airport to the Site is Moffat Federal Airfield, located approximately 2.5 miles to the northeast of the Site. Given that the Project is not located within an airport land use plan or within two miles of an existing airport, the Project would not result in a safety hazard for Judicial Council employees or patrons. The Project would not result in a safety hazard or excessive noise for people residing or working in the Site. Therefore, the Project would have no impact. This impact will not be further evaluated in the EIR consistent with CEQA Guidelines Section 15063 (c)(3).		
f. Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?	<b>X</b>	
The Project would be designed, constructed, and maintained in accordance with applicable standards, resulting in the provision of adequate vehicular access that would provide for adequate emergency access and evacuation. Construction activities that may temporarily restrict vehicular traffic would be required to implement adequate and appropriate standards to facilitate the passage of persons and vehicles through/around any required road closures. Adherence to these standards would reduce potential impacts related to this issue to a less than significant level. This impact will not be further evaluated in the EIR consistent with CEQA Guidelines Section 15063 (c)(3).		
g. Expose people or structures, either directly or indirectly, to a significant risk of loss, injury or death involving wildland fires?		<b>X</b>
The Site is not located within the wildfire hazard zone as specified by the California Department of Forestry and Fire Protection (CalFIRE) Fire Hazard Severity Zone (FHSZ) Viewer (CalFIRE 2023). Areas surrounding the Site consist of urban development with minimal ground cover or vegetation. Because of lack of abundant vegetation and the amount of commercial and residential development within the vicinity of the Site, onsite and adjacent areas do not have the capability to support a wildfire. Therefore, the Project does not have the potential to expose people		

### 3 Impacts Found Not to be Significant

Issues	Less than Significant Impact	No Impact
or structures to a significant risk of loss, injury or death involving wildland fires. No impact would occur; this impact will not be further evaluated in the EIR consistent with CEQA Guidelines Section 15063 (c)(3).		
<b>Hydrology and Water Quality</b>		
b. Substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin?	<b>X</b>	
The Project includes the demolition of the existing single-story courthouse and a portion of the existing parking area, and construction of a new up to three story courthouse within the same general footprint, including new parking. The Project is not expected to create significantly more paved/impervious surfaces than existing conditions. The Project will cover a very minor portion of the local groundwater recharge area and will be used in a manner similar to its current use. Therefore, the Project is not expected to deplete groundwater supplies or interfere substantially with groundwater recharge and would have no impact. This issue will not be further evaluated in the EIR consistent with CEQA Guidelines Section 15063 (c)(3).		
c. Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would:  ii. Substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or offsite;	<b>X</b>	
The Project would result in comparable amounts of impervious surfaces to the existing conditions. Currently, stormwater flows via surface sheet flow to existing localized gutters and local storm drains. Because the Project will result in a similar use to that which is existing onsite, operation of the Project would not substantially alter the existing drainage pattern of the Site or area or substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or offsite. Project construction does not include a component with the potential to increase surface runoff in a manner that would result in on- or offsite flooding. Additionally, a SWPPP will be prepared and implemented during Project construction to reduce surface runoff. No impact related to this issue is anticipated to occur. This issue will not be further evaluated in the EIR consistent with CEQA Guidelines Section 15063 (c)(3).		
iv. Impede or redirect flood flows?		<b>X</b>
The Project is not within a 100-year flood hazard area as identified on the Flood Insurance Rate Map (Panel 06085C0206H, effective 5/18/2009) (Federal Emergency Management Agency [FEMA] 2023). The Project proposes to construct a courthouse and associated parking area within the same general footprint as the existing courthouse and parking area and does not involve any substantial changes to the existing grade of the Site. Because the Site is not located within a 100-year flood hazard zone and the resulting use of the Site will be similar to its current use, no impact related to this issue is anticipated to occur. This issue will not be further evaluated in the EIR consistent with CEQA Guidelines Section 15063 (c)(3).		
d. In flood hazard, tsunami, or seiche zones, risk release of pollutants due to project inundation?		<b>X</b>
A tsunami is a series of waves generated in a body of water by a pulsating or abrupt disturbance that vertically displaces water. Seiches are oscillations in enclosed bodies of water that are caused by a number of factors, most often wind or seismic activity. There are no bodies of water near the Site that would be subject to a seiches or tsunami. Due to the relatively flat topography in the vicinity of the Site and the lack of nearby major landforms, it is unlikely that a mudflow would impact the Site. No impacts are anticipated from inundation, seiche, tsunami, or mud flow. These issues will not be further evaluated in the EIR consistent with CEQA Guidelines Section 15063 (c)(3).		
<b>Land Use</b>		
a. Physically divide an established community?		<b>X</b>

### 3 Impacts Found Not to be Significant

Issues	Less than Significant Impact	No Impact
<p>The Project involves demolishing the existing courthouse facility and replacing it with a new up to 3-story courthouse facility. The Site is within the Public Facilities zoned Civic Center with no existing residential uses located on the property. The Project would not entail the displacement of any residential uses, or the use of any land designated for residential uses. Therefore, the Project would have no impact and would not disrupt or physically divide an established community. The issue will not be further evaluated in the EIR consistent with CEQA Guidelines Section 15063 (c)(3).</p>		
<p>b. Cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect?</p>		<b>X</b>
<p>The Project is consistent with the surrounding development and does not conflict with the adopted plans for the purpose of avoiding or mitigating an environmental effect. Chapter 4 of the ECRSP covers land use and development standards within the plan area and notes only a few of the included land use policies are applicable to the future redevelopment of sites within the ECR-PF zoning district, in which the Project is located. The Project is consistent with applicable land use policies in the ECRSP such as Land Use-Policy4 (LU-P4) requiring pedestrian-oriented building design with strategically designed publicly accessible areas, LU-P6 encouraging development at the maximum intensities allowable in order to maximize the provision of neighborhood-serving amenities, and LU-P8 aimed at maximizing development intensities (while protecting nearby lower intensity land uses) as one tool to support transit usage. Additionally, according to the ECRSP, the Site does not fall within an area with 'daylight plane' requirements, which refer to height limitations used to define the building envelope within which new structures or additions must be contained, are applicable.</p> <p>The Project is within Santa Clara County, which is one of the nine San Francisco Bay Area counties covered by the Plan Bay Area 2050. The Plan Bay Area 2050 is an integrated transportation and land use/housing strategy adopted in 2021 by the Metropolitan Transportation Commission and the Executive Board of the Association of Bay Area Governments. The Project would be consistent with applicable land use policies outlined in the Plan Bay Area 2050 such as Environmental Strategies 3 and 5, which aim to support electrification and resilient power system upgrades in all public and commercial buildings and to maintain urban growth boundaries by focusing new development within existing urban footprints, respectively.</p> <p>Chapter 19.36 of the SMC pertains specifically to the ECRSP District wherein the Site is located and contains no policies or regulations which would conflict with the Project. Per Section 19.36.060 of the SMC, as a facility used by government agencies for government purposes, the Project is a permitted use in the ECR-PF zoning district. The Project is a permitted use in the Public Facilities zone and is not anticipated to conflict with any applicable land use plan, policy, or regulation. Therefore, the Project would have no impact related to this issue. This issue will not be further evaluated in the EIR consistent with CEQA Guidelines Section 15063 (c)(3).</p>		
<b>Mineral Resources</b>		
<p>a. Result in the loss of availability of a known mineral resource that would be a value to the region and the residents of the state?</p>		<b>X</b>
<p>According to California Department of Conservation's report <i>Update of Mineral Land Classification: Aggregate Minerals in the South San Francisco Bay Production-Consumption Region</i> (1996) no minerals or aggregate resources of statewide importance are located within the City. The Site is located within a substantially urbanized area and is not designated in the City's General Plan, the ECRSP, or the zoning code for any extractive use. No mineral resource extraction, recovery, or processing activities are underway on or adjacent to the Site. Implementation of the Project would therefore have no impact on the availability of known mineral resources in the Project vicinity currently available for extraction. This issue will not be further evaluated in the EIR consistent with CEQA Guidelines Section 15063 (c)(3).</p>		
<p>b. Result in the loss of availability of a locally important mineral resource recovery site delineated on a local general plan, specific plan or other land use plan?</p>		<b>X</b>

### 3 Impacts Found Not to be Significant

Issues	Less than Significant Impact	No Impact
<p>The Site is located within a substantially urbanized area surrounded by similarly urbanized uses, limiting its potential for mineral resource conservation or extraction. Additionally, the Site is not classified as an area of locally important mineral resource recovery. As such, no impact related to this issue would occur. This issue will not be further evaluated in the EIR consistent with CEQA Guidelines Section 15063 (c)(3).</p>		
<b>Noise</b>		
<p>c. For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?</p>		<b>X</b>
<p>The Site is located approximately 2.50 miles southeast of the Moffett Federal Airfield Airport. The City is within the boundaries of The Moffett Federal Airfield Comprehensive Land Use Plan (CLUP). However, per The Moffett Federal Airfield CLUP, the Site is located outside of the Moffett Federal Airfield Airport Influence Area (AIA). As such, the Site is not located within the noise, safety, or height restriction zones delineated in the CLUP. There are no private airstrips located within the vicinity of the Project. Therefore, no impacts to excessive airport-related noise levels or excessive private airstrip-related noise levels in the vicinity of the Project Site would occur. This issue will not be further evaluated in the EIR consistent with CEQA Guidelines Section 15063 (c)(3).</p>		
<b>Population and Housing</b>		
<p>a. Induce substantial unplanned population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure)?</p>		<b>X</b>
<p>The Project involves the relocation of the Sixth Appellate District Courthouse from its leased office building to the site of the existing vacant Sunnyvale Courthouse. It would not create new housing or businesses, nor would it extend any roadway infrastructure. Relocation of jobs is not expected to create an increase in the need for housing, as the relocation of the court is less than 12 miles from the existing Sixth Appellate District Courthouse. Therefore, the Project would not have impacts related to population growth. This issue will not be further evaluated in the EIR consistent with CEQA Guidelines Section 15063 (c)(3).</p>		
<p>b. Displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere?</p>		<b>X</b>
<p>The Project would not result in the removal or demolition of any residential units because there are no existing residential units on the property. The Project would not entail the displacement of any residential uses, or the use of any land designated for residential uses. Additionally, the Project would not have impacts relating to the displacement of people. Therefore, no impacts would occur, and this issue will not be further evaluated in the EIR consistent with CEQA Guidelines Section 15063 (c)(3).</p>		
<b>Public Services</b>		
<p>a. Result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times, or other performance objectives for any of the public services:</p> <p style="padding-left: 20px;">i. Fire protection?</p>		<b>X</b>
<p>The City is served by the Department of Public Safety which is one of the few fully integrated police and fire departments in America. Public Safety Officers are cross-trained as police officers, firefighters and emergency medical technicians (EMTs). The Civic Center Master Plan details the construction of the Public Safety Headquarters which include an Emergency Operations Center in Phase 1 of the Civic Center updates. This center would provide onsite emergency services to the Project once in operation. The current nearest fire station is the</p>		

### 3 Impacts Found Not to be Significant

Issues	Less than Significant Impact	No Impact
<p>Sunnyvale Fire Department located at 700 All America Way, within the Civic Center. The Project would comply with all Fire Department standards and policies and would not result in the need for any new facilities to maintain performance objectives for fire protection. Therefore, there would be no impact and the issue will not be further evaluated in the EIR consistent with CEQA Guidelines Section 15063 (c)(3).</p>		
<p>ii. Police protection?</p>		<p><b>X</b></p>
<p>The City Police Department is co-located with the Fire Department at 700 All America Way, Sunnyvale, in the Civic Center. Existing law enforcement service in the area would adequately meet the demand for police protection services under the Project. Constructing and operating the new courthouse would not require additional services beyond those currently provided. The existing Sixth Appellate District Courthouse is served by both the CHP, which provides security within the courthouse, and private security, which supplements CHP security inside and outside of the courthouse. Relocation of the courthouse within Santa Clara County will not have an impact on CHP or security protection for court officers, employees, and citizens. Therefore, the Project would have no impact. This issue will not be further evaluated in the EIR consistent with CEQA Guidelines Section 15063 (c)(3).</p>		
<p>iii. Schools?</p>		<p><b>X</b></p>
<p>The Project involves the relocation of the Sixth Appellate District to a new permanent courthouse location and would not result in any population increases or shifts in population. The Project would not include any introduced residential population and therefore, the Project would have no impact on local schools. This issue will not be further evaluated in the EIR consistent with CEQA Guidelines Section 15063 (c)(3).</p>		
<p>iv. Parks?</p>		<p><b>X</b></p>
<p>The Project would not entail the construction of residential or commercial uses that would result in an increase in park usage or meet the need for additional parks. Therefore, the Project would have no impact. This issue will not be further evaluated in the EIR consistent with CEQA Guidelines Section 15063 (c)(3).</p>		
<p>v. Other public facilities?</p>		<p><b>X</b></p>
<p>The Project is not anticipated to adversely affect the City's overall ability to provide services Citywide; including school and library services, nor would it create any significant increase in demand for such services. Therefore, the Project would have no impact. This issue will not be further evaluated in the EIR consistent with CEQA Guidelines Section 15063 (c)(3).</p>		
<p><b>Recreation</b></p>		
<p>a. Would the project increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?</p>		<p><b>X</b></p>
<p>The Project would not entail the construction of residential or commercial uses that would result in an increased use of area parks or recreation facilities. There are no increases to the use of existing neighborhood or regional parks or other recreation facilities such that substantial physical deterioration of the facility would occur or be accelerated. Therefore, no impacts related to the physical deterioration of a park associated with the Project would occur. This issue will not be further evaluated in the EIR consistent with CEQA Guidelines Section 15063 (c)(3).</p>		
<p>b. Does the project include recreational facilities or require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment?</p>		<p><b>X</b></p>
<p>The Project involves the construction and redevelopment of new courthouse facilities and parking area. The Project does not include the construction of recreational facilities either on or off the Project property. Therefore, the Project would have no impacts. This issue will not be further evaluated in the EIR consistent with CEQA Guidelines Section 15063 (c)(3).</p>		

### 3 Impacts Found Not to be Significant

Issues	Less than Significant Impact	No Impact
<b>Transportation</b>		
c. Substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?		<b>X</b>
The Project would be constructed in the existing boundaries of the current Sunnyvale Courthouse facility. Roadway improvements in and around the Site have not changed and would continue to be consistent with all local requirements for street widths, corner radii, intersection control, and design standards tailored specifically to site access requirements. Therefore, the Project will have no impact. This issue will not be further evaluated in the EIR consistent with CEQA Guidelines Section 15063 (c)(3).		
d. Result in inadequate emergency access?		<b>X</b>
The Project's emergency access would not change in design from the existing access. The Project would be required to be designed, constructed, and maintained to provide for adequate emergency access and evacuation. Construction activities, which may temporarily restrict vehicular traffic, would be required to implement adequate and appropriate measures to facilitate the passage of persons and vehicles through/around any required road closures. A less than significant impact related to this issue would occur. This issue will not be further evaluated in the EIR consistent with CEQA Guidelines Section 15063 (c)(3).		
<b>Utilities and Service Systems</b>		
a. Require or result in the relocation or construction of new or expanded water, wastewater treatment or storm water drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects?	<b>X</b>	
The Site is served by existing utilities that will be expanded to support the operation of the new building. The Project would redevelop an existing courthouse facility and utility needs would not substantially differ from those currently available on the Site. Additionally, according to the ECRSP, it has been determined existing public utilities are generally able to accommodate growth within the plan area with minimal changes to infrastructure. The Project will not require substantial construction or relocation of utilities and a less than significant impact associated with this issue would occur. This issue will not be further evaluated in the EIR consistent with CEQA Guidelines Section 15063 (c)(3).		
b. Have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry and multiple dry years?	<b>X</b>	
The Site was utilized as the Sunnyvale Courthouse up until 2016. Water needs for the new courthouse facilities are not anticipated to be substantially greater than that of the previous use and would be nominal given the overall level of development in the surrounding areas. According to the Environmental Management chapter of the City's General Plan, the City has adequate supply commitments and facilities to consistently fulfill the anticipated water requirements of residents and businesses for the foreseeable future. There are sufficient water supplies available to serve the Project from existing entitlements. A less than significant impact associated with this issue would occur. This issue will not be further evaluated in the EIR consistent with CEQA Guidelines Section 15063 (c)(3).		
c. Result in a determination by the wastewater treatment provider, which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?	<b>X</b>	
The City of Sunnyvale currently provides wastewater treatment services to the Site and would continue to provide services to the new courthouse facility. According to the ECRSP, wastewater to the plan area, and therefore the Project Site, is conveyed through the City's wastewater collection system to the Donald M. Somers WPCP. The WPCP has a permitted dry weather flow capacity of 29.5 million gallons per day (MGD) with a 40 MGD peak wet weather flow capacity (City of Sunnyvale 2020). The City anticipates approximately 15 MGD for plant influent over the next 25 years (City of Sunnyvale 2020). The Project is anticipated to generate less than 1,960 gallons per day (0.0016 MGD) of wastewater. The City		

### 3 Impacts Found Not to be Significant

Issues	Less than Significant Impact	No Impact
<p>currently provides wastewater treatment services to the Site and would continue to provide services to the new courthouse facility. The Project would include connection to the City's existing sewer lines and would be conveyed through the City's wastewater collection system to the Donald M. Somers WPCP. The Project does not include the construction or use of septic tanks or alternative wastewater disposal systems. The increase in wastewater to the WPCP from the Project would be approximately 0.005 percent of the facility's permitted dry weather flow capacity and approximately 0.004 percent of the peak wet weather flow capacity. As such, increased wastewater generation resulting from the Project would not have a significant impact on WPCP's capacity to service its existing commitments and it would be anticipated that the City would determine that the WPCP has adequate capacity to serve the Project's projected demand in addition to the provider's existing commitments. Therefore, operational impacts of the Project would be less than significant. This issue will not be further evaluated in the EIR consistent with CEQA Guidelines Section 15063 (c)(3).</p>		
<p>d. Generate solid waste in excess of state or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals?</p>	X	
<p>Solid waste generation may increase during the demolition and construction phase of the Project. The Project would involve demolition of the existing single-story courthouse building and approximately 46,000 SF of existing parking and surfacing, which would generate demolition waste such as asphalt, concrete, and scrap metal. Demolition would generate waste such as asphalt, concrete, and scrap metal. Similar to existing conditions on the Site, waste generated by operation of the new courthouse and associated facilities would be properly managed and/or disposed of in compliance with applicable federal, state, and local statutes and regulations related to solid and hazardous waste management. The amount of waste disposed would remain similar to existing conditions and additional capacity would not be required. Therefore, operational impacts of the Project would be less than significant. This issue will not be further evaluated in the EIR consistent with CEQA Guidelines Section 15063 (c)(3).</p> <p>Demolition and paving specifications finalized after the publishing of the Initial Study are as follows; Site preparation would require the demolition of the existing 19,994 square foot one-story building with a partial basement as well as an unused shed structure currently within the parking lot. It would additionally involve demolition of 19,760 SF of existing paving, full repaving of 4,580 SF of existing drive access road, resurfacing of 9,800 SF of existing parking area, and paving of 13,200 SF of new parking area to build a new courthouse within the 2.03-acre Site. While these numbers are updated, the waste generated by paving and resurfacing will be equal to or less than the amount analyzed in the Initial Study and therefore do not change the impact of the Project as waste generation would be similar and properly managed.</p>		
<p>e. Comply with federal, state, and local management and reduction statutes and regulations related to solid waste?</p>	X	
<p>Solid waste generated during construction would be disposed of in accordance with applicable statutes and regulations. Solid waste generated during operation of the new courthouse will be disposed of in a manner similar to that of the current site, which is in compliance with all federal, state, and local statutes and regulations. Adequate solid waste storage areas will be incorporated at the Site and waste will be stored in a manner consistent with applicable federal, state, and local statutes and regulations. Solid waste collection vehicles will be given adequate access to the designated waste storage areas for disposal. Therefore, the Project would follow applicable federal, state, and local statutes and regulations related to solid waste and impacts would be less than significant. This issue will not be further evaluated in the EIR consistent with CEQA Guidelines Section 15063 (c)(3).</p>		
<b>Wildfire</b>		
<p>a. Substantially impair an adopted emergency response plan or emergency evacuation plan?</p>	X	
<p>The Site is in an existing developed area with close access to major roadways that would allow for emergency evacuation. It is additionally located adjacent to Public Safety departments for easy accessibility to emergency responses. Therefore, the Project would not impair implementation of, or physically interfere with emergency</p>		

### 3 Impacts Found Not to be Significant

Issues	Less than Significant Impact	No Impact
response and impacts would be less than significant. This issue will not be further evaluated in the EIR consistent with CEQA Guidelines Section 15063 (c)(3).		
b. Due to slope, prevailing winds, and other factors, exacerbate wildfire risks, and thereby expose project occupants to pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire?	<b>X</b>	
As shown on the California Department of Forestry and Fire Protection Hazard Severity Zones Map, the Site is not located within land mapped as a FHSZ. The Project would be developed in a part of the City that is generally flat and is mostly surrounded by existing development. The Project consists of the demolition of the Sunnyvale Courthouse facility and construction of a new courthouse in its general footprint and does not propose any design elements that would exacerbate risks. It also would not expose Project occupants to pollutant concentrations from a wildfire or the uncontrolled spread of wildfire. Therefore, the Project impacts would be less than significant and will not be further evaluated in the EIR consistent with CEQA Guidelines Section 15063 (c)(3).		
c. Require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment?	<b>X</b>	
The Project does not involve the installation of roads, fuel breaks, power lines, or other associated infrastructure that may exacerbate fire risk. The Site will be served by existing utilities and therefore, the Project would not create new fire risk. The Project would have less than significant impacts and the issue will not be further evaluated in the EIR consistent with CEQA Guidelines Section 15063 (c)(3).		
d. Expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes?		<b>X</b>
The Project is not located near a hillslope or in an area subject to downstream flooding or landslides. As such, the Project does not include any design elements that would expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes. Therefore, the Project would have no impact and the issue will not be evaluated further in the EIR consistent with CEQA Guidelines Section 15063 (c)(3).		

## 4 Environmental Setting, Impacts, and Mitigation Measures

This Project is evaluated based upon its effect on the following 12 categories of environmental resources. The Initial Study identified that the Project has the potential to effect the environmental resources listed below, and therefore this Draft EIR includes additional analysis of those potential effects.

- Aesthetics
- Air Quality
- Biological Resources
- Cultural Resources
- Geology and Soils
- Greenhouse Gas
- Hazards and Hazardous Materials
- Hydrology and Water Quality
- Noise
- Transportation
- Tribal Cultural Resources
- Cumulative

A detailed analysis of environmental impacts will be presented for each resource area (listed above) utilizing the model Environmental Checklist Form found in Appendix G of the CEQA Guidelines Section 15063(f). Impacts to the environment for demolition, construction, and operation of the Project will be assessed and described, and the level of significance of impacts will be measured against criteria that have been established by regulation, accepted standards, or other definable criteria.

Each environmental resource area is reviewed by analyzing a series of questions (i.e., Environmental Checklist Form) regarding level of impact posed by the Project. Substantiation is provided to justify each determination. One of four following conclusions is then provided as a determination of the Project's potential effect on each of the major environmental resources.

**No Impact.** A finding of no impact is made when it is clear from the analysis that the Project would not affect the environment.

**Less than Significant Impact.** A finding of a less than significant impact is made when it is clear from the analysis that a Project would cause no substantial adverse change in the environment and no mitigation is required.

**Less than Significant Impact with Mitigation Incorporated.** A finding of a less than significant impact with mitigation incorporated is made when it is clear from the analysis that a Project would cause no substantial adverse change in the environment when mitigation measures are successfully implemented by the Project proponent. In this case, the Project proponent would be responsible for implementing measures identified in an MMRP.

**Potentially Significant Impact.** A finding of a potentially significant impact is made when the analysis concludes that the Project could cause a substantially adverse change in the environment for one or more of the environmental resources assessed in the checklist.

**Significant and Unavoidable Impact.** A finding of a significant and unavoidable impact is one that would result in a substantial or potentially substantial adverse effect on the environment, and that could not be reduced to a less than -significant level even with feasible mitigation measures incorporated. Under CEQA, a project with significant and unavoidable impacts may proceed, but the lead agency is required to prepare a “statement of overriding considerations” in accordance with CEQA Guidelines Section 15093, explaining why specific economic, legal, social, technological, or other benefits, including region-wide or statewide environmental benefits, of a proposed Project outweigh the unavoidable adverse environmental effects.

### 4.1 Aesthetics

This section provides a description of the existing viewsheds, visual character, and visual quality of the Site and surrounding Project area. The term “Project area” refers to all areas where the Project may be visible, including areas in the vicinity of the Site and further away from the Site. This section also discusses existing scenic roadways and existing light and glare in the Project area.

#### 4.1.1 EXISTING CONDITIONS

##### Visual Resource Evaluation Concepts and Terminology

Aesthetic resources consist of the objects (artificial and natural, moving, and stationary) and features (e.g., landforms and waterbodies) that are visible in a landscape. These resources add to or detract from the visual appeal of the landscape. A visual change can be perceived by an individual or group as either positive or negative, depending on a variety of factors or conditions (e.g., type of viewer, sensitivity to visual change, distance from the visual change, or seasonal conditions).

Visual character is a description of the landscape components and is defined by the relationships between the existing visible natural and built landscape features. These relationships are considered in terms of dominance, scale, diversity, and continuity. Visual character-defining resources and features include landforms, vegetation, buildings, transportation facilities, open space, water bodies, geologic features, historic structures, downtown skylines, and apparent upkeep and maintenance of property. The

## 4 Environmental Setting, Impacts, and Mitigation Measures

basic elements that comprise the visual character of landscape features are form, line, color, and texture. The landscape's appearance is described in terms of the dominance of each element.

Viewer groups within the Project area include residents, business employees, and recreationists. Sensitivity to visual change varies among viewer types. Sensitivity to views, along with the degree of Project visibility or visual exposure, affects the viewer response. Generally, residents and recreationists are considered as highly sensitive viewers. Viewers are defined by their relationship to the Project area, their visual preferences, and their sensitivity to changes associated with the Project improvements. Visual preferences, or what viewers like and dislike about the Project area's visual character, factor into an area's visual quality. Visual quality serves as the baseline for determining the degree of visual impacts and whether a Project's visual impacts would be adverse, beneficial, or neutral. The viewer's distance from landscape elements plays an important role in the determination of an area's visual quality. Landscape elements are considered higher or lower in visual importance based on their proximity to the viewer. Generally, the closer a resource is to the viewer, the more dominant, and therefore visually important, it is to the viewer.

Visual quality is an assessment of the composition of the character-defining features of the landscape. Visual quality is determined by evaluating the viewshed characteristics in terms of vividness, intactness, and unity (which are defined below). Visual quality is rated as low, moderate, or high. Several sets of criteria have been developed for defining and evaluating visual quality. The criteria developed by the Federal Highway Administration (FHWA) (FHWA 1988) and the U.S. Forest Service (USFS) (USFS 1995), which are used in this analysis, include the concepts of vividness, intactness, and unity. According to these criteria, none of these is itself equivalent to visual quality; all three must be considered high to indicate high-quality visual resources. These terms are defined below.

- "Vividness" is the visual power or memorability of landscape components as they combine in striking and distinctive visual patterns.
- "Intactness" is the visual integrity of the natural and human-built landscape and its freedom from encroaching elements.
- "Unity" is the visual coherence and compositional harmony of the landscape considered as a whole.

### Existing Visual Character and Quality

The 2.03-acre Site is currently developed, is within a heavily urbanized area, and has a flat topography. The Site includes an existing single-story courthouse building and an approximately 45,000 SF parking lot. The parking lot also contains an unused structure. Overhead lighting is present at the front and back of the existing courthouse and in the existing parking lot.

Mature trees are considered a scenic resource and exist along the perimeter of the Site, where a 25-foot vehicle setback naturally occurs. Trees line the west side of the Site, providing shade and privacy. On the inner east side of the property, two groups of three trees are centered with the building. The building is fronted on El Camino Real, where asymmetrical tree groupings frame the existing courthouse entrance.

## 4 Environmental Setting, Impacts, and Mitigation Measures

The Site is within the ECR-PF zoning district, at 605 West El Camino Real, Sunnyvale, California, 94087, between Mathilda Avenue and Pastoria Avenue. The Sunnyvale Civic Center occupies the ECR-PF. The Sunnyvale Civic Center Master Plan features the construction of a new library, Public Safety Headquarters, and City Hall (**Figure 2.1-2**). These new facilities were constructed within the northern half of the Civic Center, while the Site is in the southern half. The Sunnyvale Civic Center Master Plan would also create new civic plazas, outdoor amphitheater, and pedestrian and bicycle enhancements to Olive and Mathilda Avenues.

### Scenic Highways

According to the California Department of Transportation “California Scenic Highway Mapping System,” there are no state scenic highways located adjacent to, or within view of, the Site.

### Existing Light and Glare

The Site is in a well-lit urban portion of the City with surrounding ambient lighting sources. Overhead nighttime lighting is located at the front and back of the existing courthouse and the existing parking lot.

## 4.1.2 REGULATORY SETTING

### Judicial Council Appellate Court Facilities Guidelines

The Judicial Council's proposed courthouse design would be required to conform to the Appellate Court Facilities Guidelines (Judicial Council 2002) and guiding principles of the Judicial Council that include:

- Court buildings shall reflect the dignity of the law and the stability of the judicial system.
- Court buildings shall be responsive to local context, geography, climate, and setting.
- Court buildings shall be a reflection of the importance of the activities within the courthouse, with adequate spaces that are planned and designed to be adaptable with changes in judicial practice.
- Court buildings shall be designed and constructed in consideration of the economics of its operation and maintenance.
- Court buildings shall provide a sustainable, healthy, safe, and accessible environment.
- Court buildings shall be designed and constructed utilizing technical excellence in building systems.

The Appellate Guidelines include specific requirements related to specific functional components that make up an appellate court facility. These general guidelines address how the building blocks fit together and are linked, the environmental conditions, and siting requirements of the court facility and the inclusion of public spaces and plazas to reflect the local community it serves.

## 4 Environmental Setting, Impacts, and Mitigation Measures

The Project will be designed and constructed for sustainability and to achieve LEED Silver certification rating or higher and compliance with the current versions of CALGreen (CCR Title 24, Part 11) and California Energy Code (CCR Title 24, Part 6).

### **Federal**

There are no federal plans, policies, regulations, or ordinances related to aesthetics that apply to the Project.

### **State**

Since there are no state scenic highways located adjacent to, or within view of, the Site, the state Scenic Highway Program does not apply to the Project. No other state plans, policies, regulations, or ordinances related to aesthetics apply to the Project.

### **Local**

There are no regional or local plans, policies, regulations, or ordinances related to aesthetics that apply to the Project.

## **4.1.3 IMPACTS ANALYSIS**

### **4.1.3.1 Methodology**

The aesthetic value of an area is a measure of the variety and contrast of the Project area's visual features, the character and quality of those features, and the scope and scale of the scene, combined with the anticipated viewer response. The analysis of aesthetics impacts for this Project uses a qualitative approach for characterizing and evaluating the visual resources of the surrounding areas that could be affected by the Project. This approach was based on the following three steps:

- a. An objective inventory of the visual features or visual resources that comprise the landscape.
- b. An assessment of the character and quality of the visual resources in the context of the overall character of the regional visual landscape.
- c. Consideration of the importance to viewers, or sensitivity of the viewers, to the identified visual resources in the landscape.

The above factors were considered along with the Project elements that would be visible during Project operation, which include the proposed new courthouse, proposed lighting system, and new parking area, and the type and duration of anticipated construction and demolition activities.

### **4.1.3.2 Thresholds of Significance**

Based on Appendix G of the CEQA Guidelines, the Project would have a significant impact related to aesthetics if it would:

### **b. Substantially damage scenic resources including, but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway?**

#### **Demolition, Construction, and Operation**

It was determined after the submittal of the Initial Study that removal of mature trees at the Site may be required. While the Initial Study determined that there would be no impacts to scenic resources including, but not limited to trees, rock outcroppings, and historic buildings within a state scenic highway, the Project was updated for the potential removal of mature trees. Removal of these mature trees does not change this evaluation as there are no state scenic highways located adjacent to, or within view of, the Site. Therefore, there would be no impact.

#### **Level of Significance Before Mitigation**

No Impact.

#### **Mitigation Measures**

No mitigation required.

#### **Level of Significance After Mitigation**

No Impact.

### **d. Create a new source of substantial light or glare which would adversely affect day or nighttime views in the area?**

The Site is located within a well-lit urban portion of the City with surrounding ambient lighting sources. Overhead lighting is present at the front and back of the existing courthouse and in the existing parking lot. The Sunnyvale Civic Center Master Plan would create new civic plazas, outdoor amphitheater, and pedestrian and bicycle enhancements to Olive and Mathilda Avenues. The Sunnyvale Civic Center Master Plan also features the new construction of the City Hall, Public Safety Emergency Operations Center Addition, and library in northern half of the Sunnyvale Civic Center. The following Judicial Council lighting strategies will be utilized.

- Light-emitting diode (LED) lighting will be utilized and fluorescent, incandescent, halogen, induction, and high- and low-pressure sodium lighting sources will not. Exterior and interior illumination levels will be consistent with the current IES Lighting Handbook and comply with California Energy Code, Title 24. Exterior lighting must not contribute to light pollution or trespass by emitting light beyond the property. Glare and unwanted light for neighbors must be minimized. The LEED standards for Building Design and Construction (Sustainable Sites credit category: Light Pollution Reduction) must be used as a guideline for developing the exterior lighting plan, along with the code-required light pollution reduction measures in the CALGreen Code. Furthermore, Designers should consider specifying LED light fixtures compliant with the International Dark-Sky Association requirements—specifically, a correlated color temperature of 3,000 kelvin.

## 4 Environmental Setting, Impacts, and Mitigation Measures

- Outdoor lighting shall have photo sensors or an astronomical time clock for control.
- Exterior luminaires should be specified to minimize the opportunity for vandalism. For example, in-grade landscape lighting with vandal-resistant hardware is preferred over above-grade adjustable landscape accent lights.
- Light bollards are not recommended because of potential damage and maintenance issues.
- Light fixtures shall be provided for all flagpoles.
- Exterior lighting levels shall be reduced rather than turned off during nighttime hours of inactive periods in compliance with CALGreen. Lighting required for emergency lighting or nighttime security shall be exempt.
- Provide a comprehensive nighttime security lighting scheme, to be discussed with the Judicial Council's Emergency Planning and Security Coordination unit and coordinated with the architectural design team, to satisfy both security needs and the architectural design intent establishing the nighttime civic presence of the facility.
- Provide a written lighting control intent narrative that explains the lighting control systems in common language, for client review and response during each design phase, and revised for submittal as part of the contract documents.

### Demolition and Construction

Demolition and Construction would typically be limited to between the hours of seven a.m. and six p.m., Monday through Friday. Saturday demolition and construction would typically be between eight a.m. and five p.m. No demolition or construction activity would occur on Sunday or state holidays when state offices are closed. It is possible that some pouring of concrete for large foundations due to the need to have one continuous pour may be conducted outside these typical construction hours. Smaller foundations would be poured during normal work hours. Task-specific lighting would be used to the extent practical while complying with worker safety regulations. Lighting consisting of maximum 15-foot high pole mounted floodlight with appropriate visors and glare shields angling 45 degrees below the horizon would be provided for nighttime safety lighting.

### Operation

All structures constructed for the Project would be treated such that their colors/finishes minimize visual intrusion, glare, and contrast by blending with the existing and remaining facilities within the Project area.

The existing facilities on the Site are currently illuminated day and night to ensure safe operating conditions for the Judicial Council's employees. The proposed lighting system for the Site would be comparable with that of the existing facility and would be consistent with existing industrial and urbanized nighttime lighting conditions. Lighting would be designed and installed to illuminate the Site and minimize spillover illumination. Furthermore, lighting installed for the Project would comply with the Judicial Council's lighting strategies described above. Therefore, impacts from Project operation related to

emitting a new source of light and glare, which would adversely affect day or nighttime views in the area, would be less than significant.

### **Level of Significance Before Mitigation**

Less than Significant Impact.

### **Mitigation Measures**

No mitigation required.

### **Level of Significance After Mitigation**

Less than Significant Impact.

## **4.2 Air Quality**

The following discussion is based on the Air Quality and Greenhouse Gas Impact Assessment prepared for the Project and included as **Appendix C** to this EIR.

### **4.2.1 EXISTING CONDITIONS**

The Site is within the San Francisco Bay Area Air Basin (SFBAAB) which is under the jurisdiction of the Bay Area Air Quality Management District (BAAQMD). The SFBAAB encompasses all of Alameda, Contra Costa, Marin, Napa, San Francisco, San Mateo, and Santa Clara counties, the southern portion of Sonoma, and the southwestern portion of Solano County. Air quality in this area is determined by natural factors including topography, meteorology, and climate, in addition to the presence of existing air pollution sources and ambient conditions.

#### **Climate and Meteorology**

Climate and meteorology are important considerations for air quality. Local dispersion and regional transport of air pollutants directly relate to prevailing meteorological factors. Wind directions and speeds, and vertical temperature structure (inversions) are the primary determinants of transport and dispersion effects.

The SFBAAB is characterized by complex terrain, consisting of coastal mountain ranges, inland valleys, and bays, which distort normal wind flow patterns. The Coast Range splits resulting in a western coast gap (i.e., Golden Gate) and an eastern coast gap (i.e., Carquinez Strait), which allows air to flow in and out of the SFBAAB and the Central Valley.

The climate is dominated by the strength and location of a semi-permanent, subtropical high-pressure cell. During the summer, the Pacific high-pressure cell is centered over the northeastern Pacific Ocean resulting in stable meteorological conditions and a steady northwesterly wind flow. This high-pressure cell keeps storms from affecting the California coast. Hence, the SFBAAB experiences little precipitation in the summer months. Winds tend to blow on shore out of the north/northwest. Upwelling of cold ocean

## 4 Environmental Setting, Impacts, and Mitigation Measures

water from below to the surface because of the northwesterly flow produces a band of cold water off the California coast. The cool and moisture-laden air approaching the coast from the Pacific Ocean is further cooled by the presence of the cold water band resulting in condensation and the presence of fog and stratus clouds along the northern California coast.

In the winter, the Pacific high-pressure cell weakens and shifts southward resulting in wind flow offshore, the absence of upwelling, and the occurrence of storms. Weak inversions coupled with moderate winds result in a low air pollution potential.

### Criteria Air Pollutants

Criteria air pollutants include ozone (O<sub>3</sub>), carbon monoxide (CO), nitrogen dioxide (NO<sub>2</sub>), sulfur dioxide (SO<sub>2</sub>), particulate matter (PM) measured both in units of smaller than 2.5 microns in diameter (PM<sub>2.5</sub>) and in units smaller than 10 microns in diameter (PM<sub>10</sub>), and lead (Pb).

**Ozone.** Most ground-level O<sub>3</sub> is formed as a result of complex photochemical reactions in the atmosphere between reactive organic gases (ROG), nitrogen oxides (NO<sub>x</sub>), and oxygen. ROG and NO<sub>x</sub> are considered precursors to the formation of O<sub>3</sub>, a highly reactive gas that can damage lung tissue and affect respiratory function. O<sub>3</sub> can damage the respiratory tract, causing inflammation and irritation, and it can induce symptoms, such as coughing, chest tightness, shortness of breath, and worsening of asthmatic symptoms. O<sub>3</sub> in sufficient doses increases the permeability of lung cells, rendering them more susceptible to toxins and microorganisms. Exposure to high concentrations of O<sub>3</sub> (above the current ambient air quality standard) leads to lung inflammation, lung tissue damage, and a reduction in the amount of air inhaled into the lungs. Health effects include potential increased susceptibility to respiratory infections and reduced ability to exercise. Health effects are more severe in people with asthma and other respiratory ailments. People who work or play outdoors are at a greater risk for harmful health effects from O<sub>3</sub>. Children and adolescents are also at greater risk because they are more likely than adults to spend time engaged in vigorous activities. While O<sub>3</sub> in the lower atmosphere is considered a damaging air pollutant, O<sub>3</sub> in the upper atmosphere is beneficial, as it protects earth from harmful ultraviolet radiation. However, atmospheric processes preclude ground-level O<sub>3</sub> from reaching the upper atmosphere (United States Environmental Protection Agency [USEPA] 2024a).

**Carbon Monoxide.** CO is a colorless, odorless, poisonous gas produced by the incomplete combustion of fossil fuels. Elevated levels of CO can result in harmful health effects, especially for the young and elderly, and can also contribute to global climate change (USEPA 2024a). When inhaled, CO enters the bloodstream and binds more readily to hemoglobin, the oxygen-carrying protein in blood, than oxygen, thereby reducing the oxygen-carrying capacity of blood and reducing oxygen delivery to organs and tissues. The health threat from CO is most serious for those who suffer from cardiovascular disease. Healthy individuals are also affected, but only at higher levels of exposure. Exposure to CO can cause chest pain, headaches, and reduced mental alertness. At high concentrations, CO can cause heart difficulties in people with chronic diseases and can impair mental abilities. Exposure to elevated CO levels is associated with visual impairment, reduced work capacity, reduced manual dexterity, poor learning ability, difficulty performing complex tasks, and, with prolonged enclosed exposure, death.

## 4 Environmental Setting, Impacts, and Mitigation Measures

**Nitrogen Dioxide.** NO<sub>2</sub> is a brownish, highly reactive gas primarily produced as a result of the burning of fossil fuels. NO<sub>2</sub> can also lead to the formation of O<sub>3</sub> in the lower atmosphere. NO<sub>2</sub> can cause respiratory ailments, especially in the young and elderly, and can lead to degradations in the health of aquatic and terrestrial ecosystems (USEPA 2024a). Direct inhalation of NO<sub>2</sub> can cause a wide range of health effects, including irritation of the lungs, lung damage, and lowered resistance to respiratory infections, such as influenza. Short-term exposures (e.g., less than 3 hours) to low levels of NO<sub>2</sub> may lead to changes in airway responsiveness and lung function in individuals with preexisting respiratory illnesses. These exposures may also increase respiratory illnesses in children. Long-term exposures to NO<sub>2</sub> may lead to increased susceptibility to respiratory infection and may cause irreversible lung damage. Other health effects associated with NO<sub>2</sub> include an increase in the incidence of chronic bronchitis and lung irritation.

**Sulfur Dioxide.** SO<sub>2</sub> is primarily emitted from the combustion of coal and oil by steel mills, pulp and paper mills, and non-ferrous smelters. High concentrations of SO<sub>2</sub> can aggravate existing respiratory and cardiovascular diseases in asthmatics and others who suffer from emphysema or bronchitis. High concentrations of SO<sub>2</sub> can result in temporary breathing impairment for asthmatic children and adults who are active outdoors. Health effects from exposure to emissions of SO<sub>2</sub> include aggravation of lung diseases, especially bronchitis, and constricting of breathing passages, especially in asthmatics and people involved in moderate to heavy exercise. Short-term exposures of individuals to elevated SO<sub>2</sub> levels during moderate activity may result in health effects, including breathing difficulties that can be accompanied by symptoms, such as wheezing, chest tightness, or shortness of breath. Other health effects that have been associated with longer-term exposures to high concentrations of SO<sub>2</sub>, in conjunction with high levels of PM, include aggravation of existing cardiovascular disease, respiratory illness, and alterations in the lungs' defenses. SO<sub>2</sub> also contributes to acid rain, which in turn, can lead to the acidification of lakes and streams (USEPA 2024a).

**Particulate Matter.** Airborne PM is not a single pollutant, but rather is a mixture of many chemical species. PM is a complex mixture of solids and aerosols composed of small droplets of liquid, dry solid fragments, and solid cores with liquid coatings. Particles vary widely in size, shape, and chemical composition; and they may contain inorganic ions, metallic compounds, elemental carbon, organic compounds, and compounds from Earth's crust. Particles are defined by their diameter for air quality regulatory purposes. PM<sub>10</sub> are inhalable into the lungs and can induce adverse health effects. PM<sub>2.5</sub>, also called fine particulate matter, constitutes a portion of PM<sub>10</sub>. Emissions from combustion of gasoline, oil, diesel fuel, or wood produce much of the PM<sub>2.5</sub> pollution found in outdoor air and a significant proportion of PM<sub>10</sub>. PM<sub>10</sub> also includes dust from construction sites, landfills and agriculture, wildfires and brush or waste burning, industrial sources, wind-blown dust from open lands, pollen, and fragments of bacteria.

PM may be either directly emitted from sources (primarily particles) or formed in the atmosphere through chemical reactions of gases (secondary particles) such as SO<sub>2</sub>, NO<sub>x</sub>, and certain organic compounds (USEPA 2024a).

PM<sub>10</sub> and PM<sub>2.5</sub> particles are small enough—about one-seventh the thickness of a human hair or smaller—to be inhaled and lodged in the deepest parts of the lung, where they evade the respiratory system's natural defenses and can be trapped in the nose, throat, and upper respiratory tract. Health effects from exposure to PM<sub>10</sub> and PM<sub>2.5</sub> occur when the body reacts to these foreign particles. Acute and

## 4 Environmental Setting, Impacts, and Mitigation Measures

chronic health effects associated with high particulate levels include the aggravation of chronic respiratory diseases; heart and lung disease; and coughing, bronchitis, and respiratory illnesses in children. Recent mortality studies have shown a statistically significant direct association between mortality and daily concentrations of PM in the air. PM<sub>10</sub> and PM<sub>2.5</sub> can aggravate respiratory disease and cause lung damage, cancer, and premature death. Sensitive populations, including children, the elderly, exercising adults, and those suffering from chronic lung disease, such as asthma or bronchitis, are especially vulnerable to the effects of PM. Of greatest concern are recent studies that link PM exposure to the premature death of people who already have heart and lung disease, especially the elderly. Acidic PM can also damage humanmade materials and is a major cause of reduced visibility in many parts of the United States. Non-health-related effects include reduced visibility and soiling of buildings.

**Lead.** Sources of Pb include pipes, fuel, and paint, although the use of Pb in these materials has declined dramatically over the years. Historically, the main source of Pb was automobile emissions. Pb can be inhaled directly or ingested by consuming Pb-contaminated food, water, or dust. Fetuses and children are most susceptible to Pb poisoning, which can result in heart disease and nervous system damage. Through regulations, the USEPA has gradually reduced the Pb content of gasoline. This program has essentially eliminated violations of the Pb standard in urban areas except those areas with Pb point sources. Exposure to Pb occurs mainly through inhalation of air and ingestion of Pb in food, water, soil, or dust. It accumulates in the blood, bones, and soft tissues and can adversely affect the kidneys, liver, nervous system, and other organs. Excessive exposure to Pb may cause neurological impairments, such as seizures, mental retardation, and behavioral disorders. Even at low doses, Pb exposure is associated with damage to the nervous systems of fetuses and young children, resulting in learning deficits and lowered IQ. Recent studies also show that Pb may be a factor in high blood pressure and subsequent heart disease. Pb can also be deposited on the leaves of plants, presenting a hazard to grazing animals and humans through ingestion (USEPA 2024b).

### Ambient Air Quality Standards and Attainment Status

The USEPA and California Air Resources Board (CARB) designate air basins where ambient air quality standards are exceeded as “non-attainment” areas. If standards are met, the area is designated as an “attainment” area. If there is inadequate or inconclusive data to make a definitive attainment designation, they are considered “unclassified.” National non-attainment areas are further designated as marginal, moderate, serious, severe, or extreme as a function of deviation from standards. Attainment status is based on the National Ambient Air Quality Standards (NAAQS) and the California Ambient Air Quality Standards (CAAQS). Each standard has a different definition, or “form” of what constitutes attainment, based on specific air quality statistics. For example, the federal 8-hour CO standard is not to be exceeded more than once per year; therefore, an area is in attainment of the CO standard if no more than one 8-hour ambient air monitoring value exceeds the threshold per year. In contrast, the federal annual standard for PM<sub>2.5</sub> is met if the 3-year average of the annual average PM<sub>2.5</sub> concentration is less than or equal to the standard.

The Federal Clean Air Act (FCAA) identifies two types of NAAQS. Primary standards provide public health protection, including protecting the health of sensitive populations such as asthmatics, children, and the elderly. Secondary standards provide public welfare protection, including protection against

#### 4 Environmental Setting, Impacts, and Mitigation Measures

decreased visibility and damage to animals, crops, vegetation, and buildings (USEPA 2024a). The CAAQS are equal to or more stringent than the NAAQS and include pollutants for which national standards do not exist. **Table 4.2-1** presents the applicable NAAQS and CAAQS. The BAAQMD is designated as non-attainment for federal and state ozone and PM<sub>2.5</sub> as well as state PM<sub>10</sub> (BAAQMD 2017). The BAAQMD is in attainment or unclassified for all other NAAQS and CAAQS.

**Table 4.2-1. California and National Ambient Air Quality Standards**

Pollutant	Averaging Time	California Standards <sup>1</sup>	National Standards <sup>2</sup>	
			Primary	Secondary
Ozone (O <sub>3</sub> )	8-hour	0.070 ppm (137 µg/m <sup>3</sup> )	0.070 ppm (137 µg/m <sup>3</sup> )	Same as Primary Standards
	1-hour	0.09 ppm (180 µg/m <sup>3</sup> )	--	
Carbon monoxide (CO)	8-hour	9.0 ppm (10 mg/m <sup>3</sup> )	9 ppm (10 mg/m <sup>3</sup> )	--
	1-hour	20 ppm (23 mg/m <sup>3</sup> )	35 ppm (40 mg/m <sup>3</sup> )	
Nitrogen dioxide (NO <sub>2</sub> )	Annual arithmetic mean	0.030 ppm (57 µg/m <sup>3</sup> )	0.053 ppm (100 µg/m <sup>3</sup> )	Same as Primary Standard
	1-hour	0.18 ppm (339 µg/m <sup>3</sup> )	100 ppb (188 µg/m <sup>3</sup> )	
Sulfur dioxide (SO <sub>2</sub> )	Annual arithmetic mean	--	0.030 ppm (80 µg/m <sup>3</sup> )	--
	24-hour	0.04 ppm (105 µg/m <sup>3</sup> )	0.14 ppm (80 µg/m <sup>3</sup> )	--
	3-hour	--	--	0.5 ppm (1300 µg/m <sup>3</sup> )
	1-hour	0.25 ppm (655 µg/m <sup>3</sup> )	--	--
Respirable Particulate Matter Smaller than 10 Microns in Diameter (PM <sub>10</sub> )	Annual arithmetic mean	20 µg/m <sup>3</sup>	--	Same as Primary Standards
	24-hour	50 µg/m <sup>3</sup>	150 µg/m <sup>3</sup>	
Respirable Particulate Matter Smaller than 2.5 Microns in Diameter (PM <sub>2.5</sub> ) <sup>3</sup>	Annual arithmetic mean	12 µg/m <sup>3</sup>	9.0 µg/m <sup>3</sup>	15 µg/m <sup>3</sup>
	24-hour	No separate standard	35 µg/m <sup>3</sup>	Same as Primary Standards
Sulfates	24-hour	25 µg/m <sup>3</sup>	--	--
Lead (Pb)	30-day average	1.5 µg/m <sup>3</sup>	--	--
	Calendar quarter	--	1.5 µg/m <sup>3</sup>	Same as Primary Standard
	Rolling 3-month average	--	0.15 µg/m <sup>3</sup>	

## 4 Environmental Setting, Impacts, and Mitigation Measures

Pollutant	Averaging Time	California Standards <sup>1</sup>	National Standards <sup>2</sup>	
			Primary	Secondary
Hydrogen sulfide (H <sub>2</sub> S)	1-hour	0.03 ppm (42 µg/m <sup>3</sup> )	--	--
Vinyl chloride (chloroethene)	24-hour	0.01 ppm (26 µg/m <sup>3</sup> )	--	--
Visibility reducing particles	8-hour	In 1989, the Air Resources Board converted the general statewide 10-mile visibility standard to instrumental equivalents, which are extinction of 0.23 per kilometer	--	--

-- = no standard established; µg/m<sup>3</sup> = micrograms per cubic meter; mg/m<sup>3</sup> = milligrams per cubic meter; ppm = parts per million

Notes:

1. CO, SO<sub>2</sub> (1- and 24-hour), NO<sub>2</sub>, O<sub>3</sub>, PM<sub>10</sub>, and visibility reducing particles standards are not to be exceeded.
2. Not to be exceeded more than once a year except for annual standards.
3. On February 7, 2024, the USEPA issued a pre-publication version of the Final Rule to lower the primary annual NAAQS for PM<sub>2.5</sub> from 12.0 µg/m<sup>3</sup> to 9.0 µg/m<sup>3</sup> (USEPA 2024d).

Sources: CARB 2016, USEPA 2024d

### Ambient Air Quality

Local air quality can be evaluated by reviewing relevant air pollution concentrations near the Site. **Table 4.2-2** summarizes published monitoring data from the San Jose – Jackson Street Monitoring Station, located at 158B Jackson Street in San Jose, California, for the years 2020 to 2022 from CARB’s Air Quality Data Statistics (CARB 2024a). The San Jose – Jackson Street Monitoring Station monitors ambient O<sub>3</sub>, NO<sub>2</sub>, PM<sub>10</sub>, and PM<sub>2.5</sub>.

**Table 4.2-2. San Jose – Jackson Street Monitoring Station Data**

Air Pollutant	Averaging Time	Item	2020	2021	2022
Ozone (ppm)	1 Hour	Maximum Measured Concentration	0.106	0.098	0.090
		Number of days over National Standard	0	0	0
		Number of days over State Standard	1	3	0
	8 Hour	Maximum Measured Concentration	0.085	0.084	0.074
		Number of days over National Standard	2	4	1
		Number of days over State Standard	2	4	1
Nitrogen Dioxide (ppb)	1-Hour	Maximum Measured Concentration	51.9	47.8	46.8
		Number of days over National Standard	0	0	0
		Number of days over State Standard	0	0	0
		Annual Average Concentration	9	8	9
PM <sub>10</sub> (ug/m <sup>3</sup> )	24-Hour	Maximum Measured Concentration	134.9	42.8	41.1
		Number of days over National Standard	0	0	0
		Number of days over State Standard	10	0	0
		Annual Average Concentration	24.6	19.6	20.5

## 4 Environmental Setting, Impacts, and Mitigation Measures

Air Pollutant	Averaging Time	Item	2020	2021	2022
PM <sub>2.5</sub> (ug/m <sup>3</sup> )	24-Hour	Maximum Measured Concentration	120.5	38.1	36.2
		Number of days over National Standard	12	1	2

### Odors

Typically, odors are regarded as an annoyance rather than a health hazard. However, manifestations of a person’s reaction to foul odors can range from the psychological (i.e., irritation, anger, or anxiety) to the physiological (i.e., circulatory and respiratory effects, nausea, vomiting, and headache).

The ability to detect odors varies considerably among the population and is subjective. Some individuals can smell very minute quantities of specific substances; others have varying sensitivities to odors; and people may have different reactions to the same odor (e.g., bakery, gasoline). It is important to note that an unfamiliar odor is more easily detected and is more likely to cause complaints than a familiar one. This is because of the phenomenon known as odor fatigue, in which a person can become desensitized to almost any odor and recognition only occurs with an alteration in the intensity.

Quality and intensity are two properties present in any odor. The quality of an odor indicates the nature of the smell experience, e.g., a description of flowery or sweet. Intensity refers to the strength of the odor and depends on the odorant concentration in the air. When an odorous sample is progressively diluted, the odorant concentration decreases, the odor intensity weakens, and it eventually becomes so low that the detection or recognition of the odor is quite difficult. At some point during dilution, the concentration of the odorant drops below a human’s detection threshold.

Neither the state nor the federal governments have adopted rules or regulations for the control of odor sources. Potential odors would be subject to BAAQMD Regulation 7, Odorous Substances (BAAQMD 1982).

### Toxic Air Contaminants

Toxic air contaminants (TACs) are air pollutants that may cause or contribute to an increase in mortality or serious illness, or which may pose a hazard to human health. TACs are usually present in minute quantities in the ambient air; but due to their high toxicity, they may pose a threat to public health even at very low concentrations. Because there is no threshold level below which adverse health impacts are not expected to occur, TACs differ from criteria pollutants for which acceptable levels of exposure can be determined and for which state and federal governments have set ambient air quality standards. TACs, therefore, are not considered “criteria pollutants” under either the FCAA or the California Clean Air Act (CCAA) and are not subject to NAAQS or CAAQS ambient air quality standards. Instead, USEPA and CARB regulate hazardous air pollutants (HAPs) and TACs, respectively, through statutes and regulations that generally require the use of the maximum or best available control technology to limit emissions. In conjunction with air district rules, these federal and state statutes and regulations establish the regulatory

## 4 Environmental Setting, Impacts, and Mitigation Measures

framework for TACs. At the national level, USEPA has established national emission standards for hazardous air pollutants (NESHAP) in accordance with the requirements of the FCAA and subsequent amendments. These are technology-based, source-specific regulations that limit allowable emissions of HAPs.

The following provides a summary of the primary TACs of concern within the State of California and related health effects.

### **Asbestos**

Asbestos is the name given to a number of naturally occurring fibrous silicate minerals with useful properties such as thermal insulation, chemical and thermal stability, and high tensile strength. The three most common types of asbestos are chrysotile, amosite, and crocidolite. Chrysotile, also known as white asbestos, is the most common type of asbestos found in buildings. Chrysotile makes up approximately 90 to 95 percent of all asbestos contained in buildings in the United States. Exposure to asbestos fibers may result in health issues such as lung cancer, mesothelioma (a rare cancer of the thin membranes lining the lungs, chest, and abdominal cavity), and asbestosis (a non-cancerous lung disease that causes scarring of the lungs). Exposure to asbestos can occur during demolition or remodeling of buildings constructed prior to 1977 when it was banned for use in buildings. Exposure to naturally occurring asbestos (NOA) can occur during soil disturbing activities in areas with deposits present (USEPA 2024c).

### **Diesel Particulate Matter**

Diesel particulate matter (DPM) was identified as a TAC by CARB in August 1998. DPM is emitted from both mobile and stationary sources. Mobile sources include on-road vehicles (trucks, buses, etc.), off-road vehicles and equipment (locomotives, tractors, cargo handling equipment, construction equipment, etc.), marine vessels (recreational watercraft, commercial harbor craft, and ocean-going vessels), and transport refrigeration units. Stationary sources include stationary engines used in emergency-standby generators, prime generators, and agricultural irrigation pumps, as well as portable equipment such as portable generators and pumps (Office of Environmental Health Hazard Assessment [OEHHA] 2001).

DPM is typically composed of carbon particles (“soot”, also called black carbon) and numerous organic compounds, including over 40 known cancer-causing organic substances. Examples of these chemicals include polycyclic aromatic hydrocarbons, benzene, formaldehyde, acetaldehyde, acrolein, and 1,3-butadiene. Diesel exhaust also contains gaseous pollutants, including ROG and NO<sub>x</sub>. NO<sub>x</sub> emissions from diesel engines are important because they can undergo chemical reactions in the atmosphere leading to formation of PM<sub>2.5</sub> and O<sub>3</sub>.

In California, diesel exhaust particles have been identified as a carcinogen accounting for an estimated 70 percent of the total known cancer risks in California. DPM is estimated to increase statewide cancer risk by 520 cancers per million residents exposed over an estimated 70-year lifetime. Non-cancer health effects associated with exposure to DPM include premature death, exacerbated chronic heart and lung disease, including asthma, and decreased lung function in children. Short-term exposure to diesel exhaust can also have immediate health effects. Diesel exhaust can irritate the eyes, nose, throat, and lungs, and it can cause coughs, headaches, lightheadedness, and nausea. In studies with human

## 4 Environmental Setting, Impacts, and Mitigation Measures

volunteers, diesel exhaust particles made people with allergies more susceptible to the materials to which they are allergic, such as dust and pollen. Exposure to diesel exhaust also causes inflammation in the lungs, which may aggravate chronic respiratory symptoms and increase the frequency or intensity of asthma attacks (CARB 2024b).

Individuals most vulnerable to non-cancer health effects of DPM are children, whose lungs are still developing, the elderly, who often have chronic health problems, and people with emphysema, asthma, and chronic heart and lung disease (CARB 2024b). In addition to its health effects, DPM significantly contributes to haze and reduced visibility.

### Sensitive Receptors

Some land uses are considered more sensitive to air pollution than others due to the types of population groups or activities involved. Sensitive population groups include children, the elderly, the acutely ill, and the chronically ill, especially those with cardiovascular diseases. Examples of sensitive receptors include hospitals, residences, convalescent facilities, and schools. The nearest sensitive receptors to the Site include the residential units to the west of the Site, across South Pastoria Avenue, and to the south, across El Camino Real. The closest units are approximately 350 feet from the Site's southern boundary. The Courtyard Sunnyvale Mountain View hotel is located approximately 230 feet south of the Site as well, however, the hotel is not anticipated to have long-term residents that would be exposed to TACs for an extended period of time from the Project and as a result, hotel guests were not included within the health risk assessment provided below.

### 4.2.2 REGULATORY SETTING

The agencies with regulatory authority over air emissions in the Project area are the USEPA, the CARB, and the BAAQMD. Each of these jurisdictions develops rules, regulations, and policies to attain the goals or directives imposed upon them through legislation. Although USEPA regulations may not be superseded, both state and local regulations may be more stringent. The Judicial Council is not generally subject to regional or local regulations, including those established by the BAAQMD, except to the extent the regulations are implementing delegated state and federal authority that is applicable to the Judicial Council.

#### Federal

##### U.S. Environmental Protection Agency

At the federal level, the USEPA has been charged with implementing national air quality programs. The USEPA's air quality mandates are drawn primarily from the FCAA, which was enacted in 1970. Congress substantially amended the FCAA in 1977 and again in 1990.

##### Federal Clean Air Act

The FCAA required USEPA to establish NAAQS and set deadlines for their attainment. Two types of NAAQS have been established: primary standards, which protect public health, and secondary standards,

## 4 Environmental Setting, Impacts, and Mitigation Measures

which protect public welfare from non-health-related adverse effects, such as visibility restrictions. NAAQS are summarized in **Table 4.2-1**.

### National Emission Standards for Hazardous Air Pollutants

Pursuant to the FCAA of 1970, USEPA established the NESHAP. These are technology-based source-specific regulations that limit allowable emissions of HAPs. These sources include asbestos-containing building materials (ACBMs). NESHAPs include requirements pertaining to the inspection, notification, handling, and disposal of ACBMs associated with the demolition and renovation of structures.

### Non-Road Diesel Rule

The USEPA has established a series of increasingly strict emissions standards for new off-road diesel vehicles and engines, including aircraft, heavy equipment, and locomotives. Any off-road construction equipment used for the Project would be required to comply with the applicable emissions standards.

## **State**

### California Air Resources Board

CARB is the agency responsible for coordination and oversight of state and local air pollution control programs in California and for implementing the CCAA of 1988. Other CARB duties include monitoring air quality in conjunction with air monitoring networks maintained by air pollution control districts and air quality management districts, establishing CAAQS, which in many cases are more stringent than the NAAQS, and setting emissions standards for new motor vehicles. The emission standards established for motor vehicles differ depending on various factors including the model year, and the type of vehicle, fuel, and engine used. The CAAQS are set to be protective of human health and are summarized in **Table 4.2-1**. These standards apply to the same criteria pollutants as the FCAA and also include sulfates, visibility reducing particulates, hydrogen sulfide, and vinyl chloride. There are currently no NAAQS for these latter pollutants.

### California Clean Air Act

The CCAA requires that all air districts in the state endeavor to achieve and maintain CAAQS for O<sub>3</sub>, CO, SO<sub>2</sub>, and NO<sub>2</sub> by the earliest practical date. The CCAA specifies that districts focus attention on reducing the emissions from transportation and area wide emission sources, and the act provides districts with authority to regulate indirect sources of emissions. Each district plan is required to either (1) achieve a five percent annual reduction, averaged over consecutive 3-year periods, in district-wide emissions of each non-attainment pollutant or its precursors, or (2) to provide for implementation of all feasible measures to reduce emissions. Any planning effort for air quality attainment would thus need to consider both state and federal planning requirements.

### Assembly Bills 1807 and 2588 – Toxic Air Contaminants

Within California, TACs are regulated primarily through AB 1807 (Tanner Air Toxics Act) and AB 2588 (Air Toxics Hot Spots Information and Assessment Act of 1987). AB 1807 sets forth a formal procedure for

## 4 Environmental Setting, Impacts, and Mitigation Measures

CARB to designate substances as TACs. This includes research, public participation, and scientific peer review before CARB designates a substance as a TAC.

Existing sources of TACs that are subject to the Air Toxics Hot Spots Information and Assessment Act are required to: (1) prepare a toxic emissions inventory; (2) prepare a risk assessment if emissions are significant; (3) notify the public of significant risk levels; and (4) prepare and implement risk reduction measures.

### Assembly Bill 617 – Community Air Protection Program

In response to AB 617 (C. Garcia, Chapter 136, Statutes of 2017), CARB established the Community Air Protection Program. The Community Air Protection Program includes community air monitoring, and the community emissions reduction program's focus is to reduce exposure in communities most impacted by air pollution. The California legislature has appropriated funding to support early actions to address localized air pollution through targeted incentive funding to deploy cleaner technologies in these communities and grants to support community participation in the AB 617 process. AB 617 also includes new requirements for accelerated retrofit of pollution controls on industrial sources, increased penalty fees, and greater transparency and availability of air quality and emissions data, which will help advance air pollution control efforts throughout the state.

### Regulatory Attainment Designations

Under the CCAA, CARB is required to designate areas of the state as attainment, non-attainment, or unclassified with respect to applicable standards. An "attainment" designation for an area signifies that pollutant concentrations did not violate the applicable standard in that area. A "non-attainment" designation indicates that a pollutant concentration violated the applicable standard at least once, excluding those occasions when a violation was caused by an exceptional event, as defined in the criteria. Depending on the frequency and severity of pollutants exceeding applicable standards, the non-attainment designation can be further classified as serious non-attainment, severe non-attainment, or extreme non-attainment, with extreme non-attainment being the most severe of the classifications. An "unclassified" designation signifies that the data does not support either an attainment or non-attainment designation. The CCAA divides districts into moderate, serious, and severe air pollution categories, with increasingly stringent control requirements mandated for each category.

USEPA designates areas for O<sub>3</sub>, CO, and NO<sub>2</sub> as "does not meet the primary standards," "cannot be classified," or "better than national standards." For SO<sub>2</sub>, areas are designated as "does not meet the primary standards," "does not meet the secondary standards," "cannot be classified," or "better than national standards." However, CARB terminology of attainment, non-attainment, and unclassified is more frequently used. The USEPA uses the same sub-categories for non-attainment status: serious, severe, and extreme. In 1991, USEPA assigned new non-attainment designations to areas that had previously been classified as Group I, II, or III for PM<sub>10</sub> based on the likelihood that they would violate national PM<sub>10</sub> standards. All other areas are designated as unclassified.

## 4 Environmental Setting, Impacts, and Mitigation Measures

### Low-Emission Vehicle Program and Zero-Emission Vehicle Program

CARB first adopted Low-Emission Vehicle (LEV) program standards in 1990. The first LEV program standards ran from 1994 through 2003. LEV II regulations, running from 2004 through 2010, represented continuing progress in emission reductions. As the state's passenger vehicle fleet continued to grow and more sport utility vehicles and pickup trucks are used as passenger cars rather than work vehicles, the more stringent LEV II standards were adopted to provide reductions necessary for California to meet federally mandated clean air goals outlined in the 1994 State Implementation Plan (SIP). In 2012, CARB adopted the LEV III amendments to California's LEV regulations. These amendments include more stringent emission standards for both criteria pollutants and greenhouse gases for new passenger vehicles.

The Advanced Clean Cars II (ACC II) regulation builds on the ACC rule adopted in 2012. ACC II decreases emissions by increasing electric vehicle (EV) sales via two programs. First, the Zero-Emission Vehicle (ZEV) program requires ZEVs, defined as battery-electric vehicles (BEVs) or fuel-cell-electric vehicles (FCEVs), to comprise an increasing portion of annual vehicle sales. Under the ZEV program, original equipment manufacturers must increase sales of ZEVs from 35 percent in 2026 to 100 percent in 2035. Second, ACC II further strengthened the LEV program discussed above, with more stringent emission standards beginning with model year 2025.

### On-Road Heavy-Duty Vehicle Program

CARB has adopted standards for emissions from various types of new on-road heavy-duty vehicles. Section 1956.8, Title 13, CCR contains California's emission standards for on-road heavy-duty engines and vehicles, and test procedures. CARB has also adopted programs to reduce emissions from in-use heavy-duty vehicles including the Heavy-Duty Diesel Vehicle Idling Reduction Program, the Heavy-Duty Diesel In-Use Compliance Program, the Public Bus Fleet Rule and Engine Standards, and the School Bus Program and others.

In addition, the CARB's Truck and Bus regulation was established to meet federal attainment standards. This regulation requires heavy-duty diesel vehicles that operate in California to reduce TAC emissions from their exhaust. Diesel exhaust is responsible for 70 percent of the cancer risk from airborne toxics. Therefore, as of January 1, 2023, nearly all trucks and buses are required to have 2010 or newer model year engines to reduce PM and NOx emissions.

### In-Use Off-Road Diesel-Fueled Fleets Regulation

CARB has adopted the In-Use Off-Road Diesel-Fueled Fleets Regulation with the intent to reduce PM and NOx emissions from existing off-road heavy-duty diesel vehicles in California. In general, the regulation imposes limits on vehicle idling; requires all vehicle usage to be reported to CARB; restricts the addition of older vehicles into fleets; requires the phase-out of the oldest and least efficient engines; and, starting in 2024, requires the procurement and use of renewable diesel.

## 4 Environmental Setting, Impacts, and Mitigation Measures

### Advanced Clean Truck Act

To reduce emissions, the Advanced Clean Truck Act (ACT) requires original equipment manufacturers of medium- and heavy-duty vehicles to sell ZEVs or near-zero-emissions vehicles (NZEVs), such as plug-in electric hybrids, at an increasing percentage of their annual sales from 2024 to 2035. A ZEV is a vehicle that produces zero tail-pipe emissions, including BEVs and hydrogen fuel cell vehicles. A NZEV is a vehicle with an internal combustion engine and an electric energy storage system, including plug-in hybrid vehicles and hydrogen internal combustion engine vehicles. The ACT includes a cap-and-trade system, capping the number of fossil fuel vehicles sold by stipulating annual sales percentage requirements. Manufacturers can comply with the ACT by generating compliance credits through the sale of ZEVs or NZEVs or through the trading of compliance credits.

### California State Implementation Plan

The FCAA (and its subsequent amendments) requires each state to prepare an air quality control plan referred to as the SIP. The SIP is a living document that is periodically modified to reflect the latest emissions inventories, plans, and rules and regulations of air basins as reported by the agencies with jurisdiction over them. The FCAA Amendments dictate that states with areas violating the NAAQS revise their SIPs to include extra control measures to reduce air pollution. The SIP includes strategies and control measures to attain the NAAQS by deadlines established by the CAA. The USEPA has the responsibility to review all SIPs to determine if they conform to the requirements of the CAA. State law makes CARB the lead agency for all purposes related to the SIP. Local air districts and other agencies prepare SIP elements and submit them to CARB for review and approval. CARB then forwards SIP revisions to the USEPA for approval and publication in the Federal Register.

### Judicial Council Policy on Asbestos Management for Court Facilities

In 2018, the Judicial Council of California adopted a policy with requirements to manage asbestos hazards related to renovation or demolition in court facilities. The policy generally requires compliance with applicable federal and state statutes, as well as notification of all Facilities Services staff and employees that may be affected (Judicial Council of California 2018).

## **Regional**

### Bay Area Air Quality Management District

The Judicial Council is not generally subject to regional or local regulations, except to the extent the regulations are implementing delegated state or federal authority that is applicable to the Judicial Council. The BAAQMD is responsible for ensuring that emission standards are not violated. The BAAQMD is the public agency entrusted with regulating stationary sources of air pollution in the nine counties that surround San Francisco Bay: Alameda, Contra Costa, Marin, Napa, San Francisco, San Mateo, Santa Clara, southwestern Solano, and southern Sonoma counties. The BAAQMD has prepared its own CEQA Guidelines (April 2022), which are intended to be used for assistance with CEQA review related to air quality and GHG emissions. The BAAQMD CEQA Guidelines include thresholds of significance and project screening levels for criteria air pollutants and their precursors (ROG, NO<sub>x</sub>, PM<sub>10</sub>, and PM<sub>2.5</sub>),

## 4 Environmental Setting, Impacts, and Mitigation Measures

GHGs, TACs, CO, and odors, as well as methods to assess and mitigate project-level and plan-level impacts.

### Current Air Quality Plans

As noted previously, the BAAQMD region is designated as non-attainment for federal and state ozone and PM<sub>2.5</sub> as well as state PM<sub>10</sub>; the BAAQMD region is in attainment or unclassified for all other NAAQS and CAAQS (BAAQMD 2017). The BAAQMD adopted the 2017 Clean Air Plan in April 2017 that includes control strategies to reduce ozone precursors (ROG and NOx), PM, TACs, and GHG emissions. The 2017 Clean Air Plan includes several measures for reducing PM emissions from stationary sources and wood burning (BAAQMD 2023).

### Rules and Regulations

BAAQMD's regulations and rules relevant to the Project include the following (BAAQMD 2024):

- **Regulation 2: Permits.**
  - **Rule 1: General Permit Requirements.** This regulation includes criteria for issuance or denial of permits, exemptions, and appeals against decisions of the Air Pollution Control Officer and BAAQMD actions on applications.
- **Regulation 6: Particulate Matter and Visible Emissions.**
  - **Rule 1: General Requirements.** The purpose of this regulation is to limit the quantity of PM in the atmosphere through the establishment of limitations on emission rates, emission concentrations, visible emissions, and opacity.
  - **Rule 6: Prohibition of Track-out.** The purpose of this rule is to limit the quantity of PM in the atmosphere through control of track-out of solid materials onto paved public roads outside the boundaries of Large Bulk Material Site, Large Construction Site, and Large Disturbed Surface sites including landfills. This rule does not apply to Bulk Material Sites, Construction Sites and Disturbed Surface Sites less than 1 acre.
- **Regulation 7: Odorous Substances.** Regulation 7 places general limitations on odorous substances and specific emission limitations on certain odorous compounds. The limitations of this regulation shall not be applicable until BAAQMD receives odor complaints from 10 or more complainants within a 90-day period alleging that a person has caused odors perceived at or beyond the property line of such person and deemed to be objectionable by the complainants in the normal course of their work, travel, or residence. BAAQMD staff shall investigate and track all odor complaints they receive and shall attempt to visit the site, identify the source of the objectionable odor, and assist the owner or facility in finding a way to reduce the odor.
- **Regulation 8: Organic Compounds**
  - **Rule 3: Architectural Coatings.** The purpose of this rule is to limit the quantity of volatile organic compounds in architectural coatings supplied, sold, offered for sale, applied, solicited for application, or manufactured for use within the District.
- **Regulation 11: Hazardous Pollutants**
  - **Rule 2: Asbestos Demolition, Renovation and Manufacturing.** The purpose of this rule is to control emissions of asbestos into the atmosphere during demolition,

## 4 Environmental Setting, Impacts, and Mitigation Measures

renovation, milling and manufacturing and establish appropriate waste disposal procedures.

In addition, construction within BAAQMD's jurisdiction is required to implement the BAAQMD's Basic BMPs for Construction-Related Fugitive Dust Emissions, listed below:

1. All exposed surfaces (e.g., parking areas, staging areas, soil piles, graded areas, and unpaved access roads) shall be watered two times per day.
2. All haul trucks transporting soil, sand, or other loose material offsite shall be covered.
3. All visible mud or dirt track-out onto adjacent public roads shall be removed using wet power vacuum street sweepers at least once per day. The use of dry power sweeping is prohibited.
4. All vehicle speeds on unpaved roads shall be limited to 15 miles per hour (mph).
5. All roadways, driveways, and sidewalks to be paved shall be completed as soon as possible. Building pads shall be laid as soon as possible after grading unless seeding or soil binders are used.
6. All excavation, grading, and/or demolition activities shall be suspended when average wind speeds exceed 20 mph.
7. All trucks and equipment, including their tires, shall be washed off prior to leaving the site.
8. Unpaved roads providing access to sites located 100 feet or further from a paved road shall be treated with a 6- to 12-inch layer of compacted wood chips, mulch, or gravel.
9. Publicly visible signs shall be posted with the telephone number and name of the person to contact at the lead agency regarding dust complaints. This person shall respond and take corrective action within 48 hours. The Air District's General Air Pollution Complaints number shall also be visible to ensure compliance with applicable regulations.

### Local

There are no local plans, policies, regulations, or ordinances related to air quality that apply to the Project.

## 4.2.3 IMPACTS ANALYSIS

### 4.2.3.1 Methodology

#### Criteria Pollutant Emission Methods

The California Emissions Estimator Model (CalEEMod) is a statewide land use emissions computer model designed to provide a uniform platform for government agencies, land use planners, and environmental professionals to quantify potential criteria pollutant and GHG emissions associated with both construction and operations from a variety of land use projects. CalEEMod quantifies direct GHG

## 4 Environmental Setting, Impacts, and Mitigation Measures

emissions, such as construction and operational activities and vehicle use, and indirect emissions, such as energy use, solid waste disposal, vegetation planting and/or removal, and water use. Further, CalEEMod identifies mitigation measures to reduce criteria pollutant and GHG emissions along with calculating the benefits achieved from measures chosen by the user. CalEEMod version 2022.1.1.23 was used to estimate construction and operational impacts of the Project.

### Modeling Assumptions

The Project is anticipated to be constructed in two phases. Phase 1 is expected to include hazardous material abatement (including asbestos), demolition of the existing building and structures, site preparation work, undergrounding and/or relocation of existing underground utilities, and foundations. Phase 1 was modeled to commence in December 2025. Phase 2 would construct the new courthouse building and was modeled to begin in November 2026. All construction would conclude in October 2028, resulting in a total construction duration of approximately 3 years. The CalEEMod modeling sets default values for construction inputs based on the land uses and land use sizes. The default construction equipment was utilized within this analysis. During demolition, 65,000 sf of material was assumed to be removed from the Site to account for the existing 19,994-sf building and all onsite paved areas. In addition, two vendor trips per day were added during the site preparation and grading phases to represent water trucks traveling to the Site.

The operational vehicle trip rate was updated based on Project-specific information, and the trip lengths were left as model default values. As noted previously, the Project would not include natural gas. A 100-horsepower (hp) emergency generator was assumed to operate onsite for up to 100 hours per year to account for routine maintenance and testing. Operational emissions from all sources were estimated at full buildout of the Project, which is anticipated to occur by the end of 2028.

### Health Risk Assessment Methods

This section describes the methodology used for the Project construction health risk assessment (HRA).

To estimate the concentration of DPM from Project activities, an air dispersion model was prepared. An air dispersion model is a mathematical formulation used to estimate the air quality impacts at specific locations (receptors) surrounding a source of emissions given the rate of emissions and prevailing meteorological conditions. This assessment relied on the USEPA's American Meteorological Society (AMS)/EPA Regulatory Model (AERMOD) Version 22112 air dispersion model applied in the Lakes Software AERMOD View Version 11.2.0 interface. The AERMOD model was used to estimate the concentration of DPM at sensitive receptor locations from potential sources of project-generated TACs. DPM is the primary pollutant of concern associated with construction equipment exhaust and consists of a range of TACs. The AERMOD model provides a refined methodology for estimating health impacts by utilizing long-term, measured representative meteorological data for the Site.

The modeling analysis considers the spatial distribution and elevation of each emitting source in relation to the sensitive receptors. Direction-dependent calculations were obtained by identifying the Universal Transverse Mercator (UTM) coordinates for each source location. Terrain elevations were obtained for

## 4 Environmental Setting, Impacts, and Mitigation Measures

the Site using the AERMAP model, which is the AERMOD terrain data pre-processor. The air dispersion model assessment used meteorological data recorded from the San Jose International Airport, which is located approximately five miles east of the Site. The meteorological data used was preprocessed in AERMET for use with AERMOD and included data for the most recent year available (2017).

After using AERMOD to determine the concentration of PM at sensitive receptor locations, the associated health risks were calculated using the CARB's Hotspot Analysis Reporting Program (HARP) Version 2 Risk Assessment Standalone Tool (RAST), which calculates the cancer and non-cancer health impacts using the OEHHA Guidance Manual for Preparation of Health Risk Assessments (OEHHA 2015).

### Modeling Assumptions

The estimated concentration of exhaust PM<sub>10</sub> was used as a proxy to represent emissions of DPM. This is an appropriate proxy as DPM makes up a portion of the exhaust PM<sub>10</sub> emissions. The PM<sub>10</sub> emissions from construction were determined using the results of the CalEEMod modeling conducted for the Project. Construction emissions were assumed to be distributed over the Site by applying an area source in AERMOD. To determine health risks, the concentration of PM<sub>10</sub> was determined at the maximally exposed residential receptor and the maximally exposed worker receptor. The exposure period was set to encompass the entire construction period. Consistent with OEHHA guidance, exposure for the residential receptor was assumed to occur during the third trimester, infant, and a portion of the child stages of life. The worker receptor was assumed to be exposed during the adult stage of life. Detailed parameters and complete calculations are contained in **Appendix C** to this EIR.

#### 4.2.3.2 Thresholds of Significance

While the final determination of whether a project is significant is within the purview of the lead agency pursuant to Section 15064(b) of the CEQA Guidelines, the BAAQMD's significance thresholds serve as a proxy for determining whether the Project could violate air quality standards, cause a substantial contribution to an existing or projected air quality violation, and/or conflict with any applicable air quality plan. The BAAQMD has adopted CEQA thresholds of significance for individual development projects, which establish maximum allowable emissions for ROG, NO<sub>x</sub>, PM<sub>10</sub>, and PM<sub>2.5</sub> (BAAQMD 2022). If the lead agency finds that the project has the potential to exceed these air pollution thresholds, the project could be considered to have significant air quality impacts. The BAAQMD thresholds are presented in **Table 4.2-3**.

**Table 4.2-3. BAAQMD Criteria Pollutant Thresholds of Significance**

Pollutant	Construction	Operational	
	Average Daily Emissions (lbs/day)	Maximum Annual Emissions (tpy)	Average Daily Emissions (lbs/day)
ROG	54	10	54
NO <sub>x</sub>	54	10	54
PM <sub>10</sub>	82	15	82
PM <sub>2.5</sub>	54	10	54

## 4 Environmental Setting, Impacts, and Mitigation Measures

Pollutant	Construction	Operational	
	Average Daily Emissions (lbs/day)	Maximum Annual Emissions (tpy)	Average Daily Emissions (lbs/day)

Note: Construction PM thresholds only account for exhaust PM emissions.  
Source: BAAQMD 2022

According to the BAAQMD, a project would result in a significant impact if it would individually expose sensitive receptors to TACs resulting in an increased cancer risk greater than 10.0 in 1 million, an increased non-cancer risk of greater than 1.0 on the hazard index (chronic or acute), or an annual average ambient PM<sub>2.5</sub> increase greater than 0.3 micrograms per cubic meter (µg/m<sup>3</sup>).

### a. Conflict with or obstruct implementation of the applicable air quality plan?

Air districts are required to prepare air quality plans to identify strategies to bring regional emissions into compliance with federal and state air quality standards. Air districts establish emissions thresholds for individual projects to demonstrate the point at which a project would be considered to increase air quality violations. A project would conflict with the applicable air quality plan if it exceeded any emissions thresholds for which the region is in non-attainment.

As noted previously, the BAAQMD region is designated as non-attainment for federal and state ozone and PM<sub>2.5</sub> as well as state PM<sub>10</sub>. Accordingly, the BAAQMD has prepared air quality plans, including the 2017 Clean Air Plan, to achieve attainment of the applicable ozone and PM standards. The BAAQMD's adopted thresholds of significance indicate the levels of emissions that projects may emit while the region moves towards attainment of the CAAQS and NAAQS. Projects that exceed BAAQMD's thresholds of significance would conflict with the 2017 Clean Air Plan.

As described under threshold question "b." below, the Project would not exceed the thresholds established by the BAAQMD. As a result, the Project would not conflict with or obstruct implementation of the 2017 Clean Air Plan.

#### Level of Significance Before Mitigation

Less than Significant Impact.

#### Mitigation Measures

No mitigation required.

#### Level of Significance After Mitigation

Less than Significant Impact.

### b. Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard?

## 4 Environmental Setting, Impacts, and Mitigation Measures

In developing thresholds of significance for air pollutants, the BAAQMD considered the emission levels for which a project's emissions would be cumulatively considerable. If a project exceeds the identified significance thresholds, its emissions would be cumulatively considerable, resulting in significant adverse air quality impacts to the region's existing air quality conditions.

### Demolition and Construction Emissions

The Project's estimated demolition and construction emissions are provided in **Table 4.2-4**. As shown therein, construction of the Project would not result in emissions that exceed BAAQMD thresholds.

**Table 4.2-4. Demolition and Construction Criteria Pollutant Emissions**

Year	Average Daily Emissions (lbs/day)			
	ROG	NO <sub>x</sub>	PM <sub>10</sub>	PM <sub>2.5</sub>
2025	0.05	0.45	0.06	0.02
2026	0.32	2.83	0.65	0.28
2027	0.64	5.36	0.29	0.18
2028	1.86	3.30	0.17	0.10
<b>BAAQMD Thresholds</b>	<b>54</b>	<b>54</b>	<b>82</b>	<b>54</b>
<b>Exceed BAAQMD Thresholds?</b>	<b>No</b>	<b>No</b>	<b>No</b>	<b>No</b>

Note: BAAQMD thresholds for PM<sub>10</sub> and PM<sub>2.5</sub> are intended for exhaust emissions only. The emissions presented above include total particulate matter (exhaust emissions and fugitive emissions) and are therefore a conservative estimate.

Source: Appendix C.

### Operational Emissions

The Project would replace the existing courthouse building at the Site. The existing courthouse has been vacant since 2016 and generates only minor air emissions associated with off-gassing paints and asphalt and electricity for outdoor lighting. Additionally, the Sixth Appellate District currently operates out of leased space in a commercial office building in downtown San Jose in Santa Clara County. With implementation of the Project, it can be assumed that the office space would be rented to another organization that would emit similar emissions. Therefore, to provide a conservative analysis, the modeled operational emissions were assumed to be from a new build with no net reductions from existing operations.

As shown in **Table 4.2-5**, operation of the Project would not result in emissions that exceed the BAAQMD operational thresholds.

**Table 4.2-5. Operational Criteria Pollutant Emissions**

Source	Emissions			
	ROG	NO <sub>x</sub>	PM <sub>10</sub>	PM <sub>2.5</sub>
Mobile	0.27	0.22	0.58	0.15
Area	1.40	0.01	0.00	0.00

## 4 Environmental Setting, Impacts, and Mitigation Measures

Source	Emissions			
	ROG	NO <sub>x</sub>	PM <sub>10</sub>	PM <sub>2.5</sub>
Energy	0.02	0.32	0.02	0.02
Stationary	0.09	0.25	0.01	1.01
<i>Total Average Daily (lbs/day)</i>	<i>1.77</i>	<i>0.80</i>	<i>0.62</i>	<i>0.19</i>
<b>BAAQMD Thresholds (lbs/day)</b>	<b>54</b>	<b>54</b>	<b>82</b>	<b>54</b>
<i>Total Annual (tons/year)</i>	<i>0.32</i>	<i>0.15</i>	<i>0.11</i>	<i>0.03</i>
<b>BAAQMD Thresholds (tons/year)</b>	<b>10</b>	<b>10</b>	<b>15</b>	<b>10</b>
<b>Exceed BAAQMD Thresholds?</b>	<b>No</b>	<b>No</b>	<b>No</b>	<b>No</b>

Source: Appendix C

The Project would not result in a cumulatively considerable net increase of any criteria pollutant for which the region is non-attainment under an applicable federal or state ambient air quality standard. Therefore, the impact would be less than significant.

### Level of Significance Before Mitigation

Less than Significant Impact.

### Mitigation Measures

No mitigation required.

### Level of Significance After Mitigation

Less than Significant Impact.

### c. Expose sensitive receptors to substantial pollutant concentrations?

This discussion addresses whether the Project would expose sensitive receptors to TACs during construction or operations. According to CARB, some land uses are considered more sensitive to air pollution than others due to the types of population groups or activities involved. Heightened sensitivity may be caused by health problems, proximity to the emissions source, or duration of exposure to air pollutants. Children, pregnant women, the elderly, and those with existing health problems are especially vulnerable to the effects of air pollution. Accordingly, land uses that are typically considered to be sensitive receptors include residences, schools, childcare centers, playgrounds, retirement homes, convalescent homes, hospitals, and medical clinics. The nearest sensitive receptors to the Site include the residential units to the west of the Site, across South Pastoria Avenue, and to the south, across El Camino Real. The closest residential units are approximately 350 feet from the Site's southern boundary and the closest worker receptor was identified at approximately 150 feet from the Site's northern boundary. As discussed further below, this analysis considers potential impacts to both residential and worker receptors.

### Demolition and Construction Emissions

During demolition and construction activities associated with the Project, the potential exists for emissions of fugitive dust, asbestos, and DPM to be released. Each TAC is discussed separately below.

#### Fugitive Dust

Fugitive dust would be generated from demolition, site grading, and other earth-moving activities. Most of this fugitive dust would remain localized and would be deposited near the Site. However, the potential for impacts from fugitive dust exists unless control measures are implemented to reduce the emissions from the Site. However, the Project would comply with the BAAQMD's Basic BMPs for Construction-Related Fugitive Dust Emissions, including watering exposed surfaces twice per day and covering haul truck loads (BAAQMD 2022). The Project's implementation of the BAAQMD's Basic BMPs for Construction-Related Fugitive Dust Emissions would minimize construction-related fugitive dust emissions to a less than significant level.

#### Asbestos

Construction in areas of rock formations that contain NOA could release asbestos into the air and pose a health hazard. BAAQMD enforces CARB's air toxic control measures at sites that contain ultramafic rock. The Air Toxic Control Measures for Construction, Grading, Quarrying and Surface Mining Operations were signed into state law on July 22, 2002, and became effective in November 2002. The purpose of this regulation is to reduce public exposure to NOA. A review of the map with areas more likely to have rock formations containing NOA in California indicates that there is no asbestos in the immediate Project area (California DOC 2024). Therefore, construction of the Project would not expose sensitive receptors to NOA.

Exposure to asbestos can occur during demolition or remodeling of buildings constructed prior to 1977, when asbestos was banned for use in buildings. The existing onsite building was constructed in 1967, and through analysis has been determined to include ACBMs. BAAQMD Regulation 11 Rule 2, Asbestos Demolition, Renovation and Manufacturing, is intended to control the emissions of asbestos during demolition activities and establish appropriate waste disposal procedures. The Project would be subject to the measures listed in Section 11-2-303 of the rule, including conducting an asbestos survey and implementing asbestos reduction measures during demolition, if determined to be necessary (BAAQMD 1998). In addition, the Project would be required to comply with the provisions in the Judicial Council's Policy on Asbestos Management for Court Facilities. Compliance with BAAQMD Regulation 11 Rule 2 would ensure that sensitive receptors are not exposed to substantial concentrations of asbestos, and the impact would be less than significant.

#### Diesel Particulate Matter

Exposure to DPM from diesel vehicles and off-road equipment can result in health risks to nearby sensitive receptors. A HRA was prepared for the Project to assess potential health impacts to the maximum exposed individual residential receptor, located approximately 350 feet from the Site, and the

## 4 Environmental Setting, Impacts, and Mitigation Measures

maximum exposed individual worker receptor, located approximately 160 feet from the Site exposed to DPM generated during Project construction. Results of the analysis are presented in **Table 4.2-6**.

**Table 4.2-6. Unmitigated Health Risk from Project Demolition and Construction**

Receptor	Cancer Risk Per Million	Chronic Inhalation Hazard Index	Average Annual Increase in PM <sub>2.5</sub> Concentration (µg/m <sup>3</sup> ) <sup>1</sup>
Residential	9.86	0.01	0.03
Worker	3.17	0.03	0.13
<b>BAAQMD Thresholds</b>	<b>10.0</b>	<b>1.0</b>	<b>0.30</b>
<b>Exceed BAAQMD Thresholds?</b>	<b>No</b>	<b>No</b>	<b>No</b>

Note:

<sup>1</sup> PM<sub>10</sub> concentration used as a proxy for PM<sub>2.5</sub>.

Source: Appendix C

As shown in the table, unmitigated construction of the Project would not expose residential or worker receptors to an increase in health risk that would exceed the applicable thresholds of significance.

### Operational Emissions

Potential TACs that may be emitted during Project operations, including carbon monoxide and DPM, are discussed below.

#### Carbon Monoxide

With regard to localized CO emissions, according to BAAQMD, a project would have to increase traffic volumes at a single intersection to more than 44,000 vehicles per hour, or to more than 24,000 vehicles per hour in areas where vertical or horizontal mixing is limited, in order to generate a significant CO impact. Areas where vertical or horizontal mixing is limited, such as tunnels or canyons, are not present in the Project area. Based on the Caltrans Traffic Census Program data for the year 2022, traffic volumes along El Camino Real near the Site served an average of 35,000 vehicle trips per day (Caltrans 2024).<sup>3</sup> Based on the trip generation estimate prepared by Stantec, the Project would generate an average of 135 vehicle trips per day. Therefore, the increase in roadway traffic attributable to the Project is not sufficient to increase traffic volumes at any nearby intersection to more than 44,000 vehicles per hour. As a result, vehicle trips associated with Project operations would not exceed the screening criteria of BAAQMD and the Project would not be expected to result in substantial levels of localized CO at surrounding intersections or generate localized concentrations of CO that would exceed standards or cause health hazards.

<sup>3</sup> Traffic volumes from State Route 82 along roadway segment Sunnyvale, Saratoga/Sunnyvale Roads.

### Diesel Particulate Matter

The greatest potential for exposure to DPM during long-term operations is typically from the use of heavy-duty diesel trucks and stationary generators that use diesel fuel. Given the nature of the Project, vehicle trips to and from the Site during operations would primarily be from courthouse staff and guests. As a result, the Project would attract very few diesel-fueled truck trips. Additionally, the Project may include an emergency, back-up generator onsite. However, the generator would only operate during routine testing and maintenance operations and, as a result, would not generate DPM that would impact nearby sensitive receptors.

For these reasons, once operational, the Project would not be expected to expose nearby sensitive receptors to substantial amounts of DPM.

Overall, the Project would not expose sensitive receptors to substantial pollutant concentrations, and the impact would be less than significant.

### **Level of Significance Before Mitigation**

Less Than Significant Impact.

### **Mitigation Measures**

No mitigation required.

### **Level of Significance After Mitigation**

Less than Significant Impact.

### **d. Result in other emissions (such as those leading to odors) adversely affecting a substantial number of people?**

While offensive odors rarely cause physical harm, they can still be unpleasant, leading to distress among the public and often generating citizen complaints to local governments and BAAQMD. The occurrence and severity of odor impacts depends on numerous factors, including nature, frequency, and intensity of the source, the wind speed and direction, and the sensitivity of the receptor. The nearest receptors to the Site include the residences located south of the Site.

Construction activities associated with the Project could result in short-term odorous emissions from diesel exhaust associated with diesel-fueled equipment. However, these emissions would be intermittent and would dissipate rapidly from the source. Project construction would also be required to comply with all applicable CARB and BAAQMD rules and regulations, particularly associated with permitting of air pollutant sources. Compliance with the aforementioned regulations would help to minimize emissions, including emissions leading to odors.

Land uses typically considered as associated with the production of odors during operations include wastewater treatment facilities, waste disposal facilities, and agricultural operations. The Project does not include any land uses that are typically associated with emitting objectionable odors.

## 4 Environmental Setting, Impacts, and Mitigation Measures

Finally, BAAQMD regulates objectionable odors through Regulation 7, Odorous Substances, which does not become applicable until the Air Pollution Control Officer (APCO) receives odor complaints from ten or more complainants within a 90-day period. Once effective, Regulation 7 places general limitations on odorous substances and specific emission limitations on certain odorous compounds, which remain effective until such time that citizen complaints have not been received by the APCO for one year. The limits of Regulation 7 become applicable again when the APCO receives odor complaints from five or more complainants within a 90-day period (BAAQMD 1982). Thus, although not anticipated, if odor complaints are made after the Project is developed, the BAAQMD would ensure that such odors are addressed, and any potential odor effects are minimized or eliminated.

The Project would not result in other emissions, such as those leading to odors, affecting a substantial number of people. Therefore, the impact would be less than significant.

### Level of Significance Before Mitigation

Less than Significant Impact.

### Mitigation Measures

No mitigation required.

### Level of Significance After Mitigation

Less than Significant Impact.

## 4.3 Biological Resources

The following discussion is primarily based on the Biological Resources Technical Report prepared for the Project and included as **Appendix D** to this EIR.

### 4.3.1 EXISTING CONDITIONS

#### Local Setting and Existing Land Use

The Site is located on an approximately 2.03-acre state-owned parcel (APN: 165-02-004). The Site was formerly used as a trial courthouse for the Superior Court of Santa Clara County and currently maintains a vacant building and parking lot. Surrounding properties consist of commercial and residential buildings, government buildings and public open space. The Site is located west of Mathilda Avenue, north of El Camino Real and east of Pastoria Avenue, generally in the center region of the City. It is approximately 1.4 miles east of Highway 85 (W. Valley Freeway) and southeast of Highway 237 (Mountain View Alviso Road).

#### Physical Conditions

The overall topography is extremely low gradient, with elevations ranging from approximately 122 to 127 feet above mean sea level. The regional climate is typical of the San Francisco Bay Area and is

## 4 Environmental Setting, Impacts, and Mitigation Measures

characterized by a Mediterranean climate with cool, wet winters and hot, dry summers. Precipitation in the region primarily occurs as rain. The average annual rainfall is approximately 14.5 inches and typically occurs between October and April. The Site climate typically exhibits a nine-month growing season from February through November. Most herbaceous growth occurs during spring and ceases as soil moisture depletes in early summer. Air temperatures range from an average January high of 58.4 degrees Fahrenheit (F) to an average July high of 82.0F. The annual average high temperature is 71.3 F (Western Regional Climate Center [WRCC] 2024).

### Vegetation Communities

Vegetation types in the Project area were classified based on descriptions provided in A Guide to Wildlife Habitats of California (Mayer and Laudenslayer 1988), as well as the California Natural Community List (CDFW 2023), which is adapted from the technical approach and vegetation alliance classification system described in A Manual of California Vegetation, Online Edition (California Native Plant Society [CNPS] 2023b). The vegetation communities present in the Project area are urban. The Project area for biological resources is defined as the Site plus a 250-foot buffer. No aquatic features were observed within the Project area. Urban vegetation can be classified into five general areas: tree grove, street strip, shade tree/lawn, lawn, and shrub cover. Urban areas typically have a small diversity of trees, shrubs, and grasses, but greater productivity than natural grasslands due to abundant water and fertilizer (McBride and Reid 1988). Examples include residential landscapes, golf courses, parks, and school grounds. Non-native landscape species and invasive weeds are common. Species observed within the Site included all non-native landscape vegetation species.

### Habitat Connectivity

Habitat corridors are segments of land that provide linkages for wildlife movement between different habitats while also providing cover. Corridors also function as avenues along which plants can propagate, genetic interchange can occur, populations can move in response to environmental changes and natural disasters, and populations can be replenished from other areas. Habitat corridors often consist of riparian areas along streams, rivers, or other natural features. The Site is surrounded by urban development and does not provide habitat corridors for terrestrial or aquatic species.

### Invasive Species

Invasive plants (i.e., noxious weeds) are undesirable, non-native plants that commonly invade disturbed sites. Most species were introduced from Europe and Asia, and many are known to negatively affect native wildlife habitat and plant communities. When disturbance results in the creation of habitat openings or in the loss of intact native vegetation, invasive plants may colonize the site and spread, often out-competing native species. Once established, they are very difficult to eradicate.

All pertinent non-native plant species were reviewed to determine their status as invasive plants according to the ratings in the California Invasive Plant Inventory produced by California Invasive Plant Council (Cal-IPC) (Cal-IPC 2024). Cal-IPC categorizes non-native invasive plants into three categories of overall negative ecological impact in California as “high”, “moderate”, and “limited”. Invasive species with a Cal-IPC rating of “high”, “moderate”, or “limited” were not observed within the Site during the

reconnaissance survey. Although the Site consists of primarily ornamental vegetation, these species are not considered “non-native invasive” plants. The Project is not proposing the introduction of non-native invasive plants once construction is completed.

### **Sensitive Natural Communities and Aquatic Habitats**

Habitats are considered “sensitive” by CDFW if they are identified on the List of Vegetation Alliances and Associations as being highly imperiled or classified by CDFW in the California Natural Diversity Database (CNDDDB) as natural communities of special concern – Ranks S1 to S3. No sensitive natural communities are present within or adjacent to the Site.

### **Special-Status Plant Species**

Regionally occurring special-status plant species were identified based on a review of pertinent literature, the USFWS species list, CNDDDB, and CNPS database records, and the reconnaissance-level biological field survey results. No special-status plants were observed during the reconnaissance survey within the Project Area. CNDDDB special-status plant species occurrences within five miles of the Project Site are illustrated in **Appendix D**, Figure 3. For each species, habitat requirements were assessed and compared to the habitats in the Site and Project area to determine if potential habitat occurs in the Site. Database records included 62 special-status plants within a nine-quad search of the Project area. Out of those 62 species, none were found to have a potential to occur in the Site due to the Site occurring in a heavily developed and urbanized area.

### **Special-Status Animal Species**

Regionally occurring special-status animal species were identified based on a review of pertinent literature, the USFWS species list, CNDDDB database records, and the reconnaissance-level biological field surveys results. No special-status animals were observed during the reconnaissance survey. For each species, habitat requirements were assessed and compared to the habitats in the Site and survey area to determine the species’ potential to occur in or near the Site. The literature and database review identified 29 special-status wildlife species; however, based on initial assessment of wildlife habitats conducted during the biological surveys, only one of these species was determined to have a moderate potential to occur, monarch butterfly – California overwintering population (*Danaus plexippus plexippus* pop. 1). The Site does not provide suitable larval host plant habitat for this species, but there is potentially suitable foraging habitat within the Site for monarch butterfly. The foraging habitat consists of flowering plant species found at the Site that may be used for feeding of adult monarchs.

## **4.3.2 REGULATORY SETTING**

### **Federal**

#### Endangered Species Act

The Federal Endangered Species Act (FESA) of 1973 was established to protect and recover endangered and threatened species and the ecosystems upon which they depend. According to the FESA, designating a species as “endangered” indicates a species is in danger of extinction throughout all

## 4 Environmental Setting, Impacts, and Mitigation Measures

or a significant portion of its range. In addition, the FESA defines a species as "threatened" if that species is likely to become endangered within the foreseeable future. The USFWS maintains a list of endangered and threatened species. The USFWS and the National Marine Fisheries Service (NMFS) administer FESA and are responsible for consulting with other federal agencies pursuant to FESA. Consultation with the USFWS would be necessary if a Project action has the potential to affect federally listed species, their habitat, or areas of Designated Critical Habitat (DCH). This consultation would proceed under Section 7 of the FESA if a federal action is required for the Project or it would proceed under Section 10 of the FESA if there is no required federal action.

### Clean Water Act

The objective of the CWA of 1977, as amended, is to maintain and restore the chemical, physical, and biological integrity of the nation's waters. The discharge of dredged or fill material into waters of the United States (WOTUS), including jurisdictional wetlands, is regulated under Section 404 of the CWA by the United States Army Corps of Engineers (USACE) via a permitting process. Surface water quality is further regulated by the USEPA; in California this authority is delegated to the SWRCB or the RWQCB. Applicants for Section 404 permits are also required to comply with Section 401 of the CWA by obtaining Water Quality Certification (WQC) through the State.

### Migratory Bird Treaty Act

The Migratory Bird Treaty Act (MBTA) of 1918 enacts the provisions of treaties between the United States, Great Britain, Mexico, Japan, and the Soviet Union and authorizes the U.S. Secretary of the Interior to protect and regulate the taking of migratory birds. This treaty prohibits "take," which has been variously defined to include harming any migratory bird listed under the MBTA, including nests, eggs, and/or young.

## **State**

### California Endangered Species Act (CESA)

The CESA prohibits "take" of plants or animals listed as endangered or threatened and protects native species of fish, amphibians, reptiles, birds, mammals, invertebrates, and plants, and their habitats, that are threatened with extinction or experiencing a significant decline which, if not halted, would lead to a threatened or endangered designation. "Take" is defined in Section 86 of the California Fish and Game Code (FGC) as to "hunt, pursue, catch, capture, or kill, or attempt to hunt, pursue, catch, capture, or kill." CESA authorizes the CDFW to issue incidental take permits for state-listed species when specific criteria are met.

### Porter-Cologne Water Quality Control Act

The Porter-Cologne Water Quality Control Act (Porter-Cologne), Sections 1601 to 1602 of the California FGC, authorizes the SWRCB to oversee water rights and water quality policy, and the SWRCB has established nine RWQCBs to protect and enhance water quality at the regional and local levels. In addition to preparing WQCs to designate beneficial uses of water bodies in each region, the RWQCBs issue a permit, referred to as a Waste Discharge Requirement (WDR), for activities that result in pollutant

## 4 Environmental Setting, Impacts, and Mitigation Measures

or nuisance discharges that may affect surface or groundwater, including isolated wetlands not subject to the jurisdiction of the USACE.

### California Fish and Game Code

The California FGC has several provisions for the protection of Waters of the State (WOTS), and special-status plant, fish, and wildlife resources, including their habitat. The applicable California FGCs are as follows:

**Sections 1600-1616 (Streambed Alteration):** The CDFW is responsible for the protection and conservation of fish and wildlife resources in California. Under Section 1602, CDFW has the authority to issue Lake or Streambed Alteration Agreements (LSAA) for construction activities that substantially divert or obstruct the natural flow or substantially change the bed, channel, or bank of any river, stream, or lake designated by the CDFW as providing resources for fish or wildlife.

**Sections 1900-1913 (Native Plant Protection Act):** The Native Plant Protection Act (NPPA) of 1977 prohibits the taking, possessing, or sale within the State of any plants that the CDFW has determined are rare, threatened, or endangered. The CDFW has the authority to enforce the provisions of this act and authorize measures to salvage native plants that may otherwise be affected by project activities, if deemed appropriate.

**Sections 3500-3516 (Game Birds and Birds of Prey):** The CDFW protects game birds, birds of prey, migratory birds, and fully protected birds and their nests, eggs, and young from take or possession, except as otherwise provided by the code (e.g., incidental take under CESA).

**Sections 3511, 4700, 5050, and 5515 (Fully Protected Species):** California statutes accord a “fully protected” status to specific birds, mammals, reptiles, amphibians, and fish. These species cannot be “taken,” and no process exists for issuance of incidental take permits for fully protected species.

### **Local**

#### City of Sunnyvale – Tree Preservation

The City requires a tree removal permit for the removal of any protected tree on public or private property within the City limits. A protected tree is defined as a tree of significant size. Significant size is defined below (Section 19.94.030 of the Code of Ordinances):

“a tree thirty-eight inches or greater in circumference measured four and one-half feet above ground for single-trunk trees. For multi-trunk trees "significant size" means a tree which has at least one trunk with a circumference thirty-eight inches or greater measured four and one-half feet above ground level, or in which the measurements of the circumferences of each of the multi-trunks, when measured four and one-half feet above the ground level, added together equal an overall circumference one hundred thirteen inches or greater.”

Because the Judicial Council is the CEQA lead agency for the Project, and is acting for the State of California, local government regulations do not apply to the Project. However, the Judicial Council considers policies and guidelines, as appropriate.

### 4.3.3 IMPACTS ANALYSIS

#### 4.3.3.1 Methodology

##### Literature and Database Review

Information about habitat types and special-status species that could occur in the Site was obtained from the following sources: CDFW CNDDDB plant and animal records (CDFW 2024), CNPS online *Inventory of Rare and Endangered Plants* (CNPS 2024), Calflora (2024), USFWS list of endangered and threatened species that may occur in the Site (USFWS 2024a) and USFWS DCH within the Site (USFWS 2024c).

The Site is within the *Cupertino* U.S. Geological Survey (USGS) 7.5-minute quadrangle. A CNDDDB and CNPS database search for special-status species included the Cupertino USGS 7.5-minute quadrangle and eight surrounding quadrangles. In this case, the *Cupertino, Palo Alto, Mountain View, Milpitas, Fruitdale, Los Gatos, Castle Rock Ridge, Big Basin* and *Mindogo Hill* topographic quadrangles were queried. A 5-mile radius quadrangle search was conducted based on habitat types and migration distances for potential special-status species that could occur within the Site. The USFWS database of endangered species was also utilized to query all federally endangered, threatened, candidate, and proposed animal and plant species, as well as DCH with known occurrences in the Project quadrangle and the adjacent quadrangles. Calflora and CNPS' Online Inventory databases were used to obtain more information on the habitat requirements of rare plants.

Other information sources consulted to determine which special-status species could potentially occur in the Site included aerial photographs of the Project area and surrounding vicinity (Google Earth 2024) and USFWS National Wetland Inventory (USFWS 2024b).

Based on this background research, a list of special-status species that have the potential to occur or are known to occur in the Site and vicinity was developed. The list was refined based on a reconnaissance-level biological field surveys to determine the potential for those species to occur in the Site.

##### Field Surveys Conducted

A biological survey for special-status species and sensitive natural communities, including wetlands, was conducted by a Stantec biologist on March 14, 2024. The biological survey was performed by walking meandering transects throughout the entire Site, and using binoculars to look for nesting birds, including raptors, within a 250-foot buffer around the Site. The main objective of the biological survey included characterizing habitats, identifying aquatic resources that may be subject to regulatory agency jurisdiction (e.g., USACE, RWQCB and CDFW), assessing potential for special-status species or their habitat to occur, and recording observed species. There was a large emphasis on nesting birds due to the urban setting of the Project.

### 4.3.3.2 Thresholds of Significance

- a. **Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special-status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service?**

#### **Demolition and Construction**

Due to the Site being located within an urban environment, there are no CNDDDB occurrences within the Site or directly adjacent. The Site may provide suitable foraging habitat for monarch butterflies, but it does not provide suitable habitat for other special-status species. Suitable foraging habitat for monarch butterflies within the Site is marginal, with limited flowering plant species; however, monarch butterflies could temporarily feed, within the Site. With marginal foraging habitat within the Site and adult monarch butterflies only occurring seasonally, this species is not anticipated to be impacted by demolition and construction activities. With a lack of suitable habitat for other special-status species within and adjacent to the Site, along with the current level of disturbance, impacts to special-status species or their habitat are not anticipated as a result from Project implementation.

The Site does provide potentially suitable habitat for migratory nesting birds in the form of large trees and shrubs. Disturbances to nesting birds through construction noise, vibrations, possible tree removal, and human presence could have a potentially significant impact on nesting birds. The Project will be required to implement mitigation measures to minimize potential impacts to nesting birds, including conducting nesting bird surveys prior to work commencement. If a nest is found on-site, a biological monitor may be needed to ensure there are no disturbances to the nest or nesting birds. With the implementation of the mitigation measure described below, the level of significance would be reduced from potentially significant impacts to a less than significant impact.

#### **Operation**

Operation of the Project would include traditional courthouse and judiciary activities that would not cause a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special-status species in local or regional plans, policies, or regulations, or by the CDFW or USFWS. There would be a less than significant impact from operation of the Project.

#### **Level of Significance Before Mitigation**

Potentially Significant Impact.

#### **Mitigation Measures**

**BIO-1:** If demolition and/or construction (including any tree removal) occurs during the typical nesting season (February 1 through September 1) a pre-construction nesting bird survey will be conducted during the nesting season to document any nests on the Site. Nesting bird surveys will be performed at a minimum of two weeks prior to the start of Project activities. If an active nest is observed, a protective buffer will be established around the nest to avoid any disturbances. During vegetation removal, if an

active nest is identified within the Site, a biological monitor may also be required to monitor the nest during Project activities to ensure there are no disturbances to the nesting bird and prevent nest failure.

### Level of Significance After Mitigation

Less than Significant Impact.

### e. Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?

#### Demolition and Construction

It was determined after the submittal of the Initial Study that removal of trees at the Site may be required, and therefore this impact category was brought forward to the Draft EIR for additional analysis.

The Site may provide suitable foraging habitat for monarch butterflies, but it does not provide suitable habitat for other special-status species. There were also no special-status species observed during the biological field survey. The Site does contain large trees, including African yellow trees (*Afrocarpus sp.*), pepper trees (*Schinus sp.*), ash trees (*Fraxinus sp.*) and pine trees (*Pinus sp.*) and on the perimeter of the Site. None of the trees fall under the City of Sunnyvale Tree Protection Ordinance (City of Sunnyvale 2024).

#### Operation

Operation of the Project would include traditional courthouse and judiciary activities that would not conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance. There would be no impact from operation of the Project.

### Level of Significance Before Mitigation

Potentially Significant Impact.

#### Mitigation Measures

##### BIO-1

### Level of Significance After Mitigation

Less than Significant Impact.

## 4.4 Cultural Resources

This section describes the existing environment for cultural resources within and around the Site and evaluates the potential for impacts related to cultural resources to occur as a result of development of the Project. The term “cultural resources” refers to built-environment resources (e.g., buildings, structures, objects, districts) and archaeological resources.

## 4 Environmental Setting, Impacts, and Mitigation Measures

The environmental section is based on information provided in the *Historic Resource Assessment* (Stantec 2024) included as **Appendix E** and *Archaeological Resources Study*<sup>4</sup> (Stantec 2024). The Project's ethnographic setting and impacts on tribal cultural resources are addressed in Section 4.11, *Tribal Cultural Resources*.

### 4.4.1 EXISTING CONDITIONS

The existing conditions section provides a brief pre-European contact Cultural Chronology, and historical overview of the Site.

#### Cultural Resources

##### Pre-European Contact Cultural Chronology

In the San Francisco Bay Area region of central California, researchers have developed a chronology to describe the general evolution of precontact cultures through time. This chronology, summarized below, consists of a sequence comprised of six periods<sup>5</sup>.

##### Early Holocene/ Lower Archaic (8000-3500 Before Common Era [BCE])

The Early Holocene is characterized by “a generalized mobile forager pattern,” as indicated by assemblages containing milling slabs and handstones, as well as large wide-stemmed and leaf-shaped projectile points. Early Holocene archaeological sites are rare, although this may in part be due to ancient deposits likely underlying several feet of sediment or submerged by sea level rise. Sites from this period include terrestrial mammal remains, chipped stone tools, milling implements, and remnants of acorns.

##### Early Period/ Middle Archaic (3500-500 BCE)

The Early Period is generally marked by increased sedentism, regional trade, and symbolic integration as evidenced by ground stone technology and thick rectangular Olivella (a type of marine snail) shell beads in a mortuary context. Some of the earliest known cut and-shaped shell beads in a San Francisco Bay Area were recovered in Sunnyvale approximately one mile from the current Site.

##### Lower Middle Period/ Initial Upper Archaic 500 BCE – CE 430)

Symbolic integration and technology evolved during the Lower Middle Period. At the onset of the Middle Period, rectangular shell beads, markers of the Early Period, are replaced in the archaeological record with stylistically new beads, including split-beveled and saucer Olivella types. Other artifacts introduced

---

<sup>4</sup> This report contains confidential information regarding the location of archaeological resources. Such resources are nonrenewable, and their scientific, cultural, and aesthetic values can be significantly impaired by disturbance. To deter vandalism, artifact hunting, and other activities that can damage such resources, this study is not included in Appendix E. The legal authority to restrict cultural resources information is in Section 304 of the National Historic Preservation Act of 1966, as amended. Furthermore, California Government Section Code 6254.10 exempts archaeological sites from the California Public Records Act, which requires that public records be open to public inspection.

<sup>5</sup> These phases are academic constructs and do not necessarily reflect the views of Indigenous groups of California.

## 4 Environmental Setting, Impacts, and Mitigation Measures

during this period include barbless fish spears, elk femur spatula, tubes, whistles, and bone basketry awls.

### Upper Middle Period/ Late Upper Archaic (430-1050 Common Era [CE])

The Upper Middle Period is characterized by dramatic cultural and demographic disruption which began during the Lower Middle Period and climaxed during the Upper Middle Period circa CE 1000. During this time, a new population, known as the Meganos Aspect, migrated from the San Joaquin Delta to most of the East Bay's interior valleys and the Santa Clara Valley. This new population was distinguished by a distinct mortuary complex and stylistic and temporally distinct Olivella saddle beads.

### Initial Late Period/ Lower Emergent (1050-1550 CE)

The Initial Late Period represents the ethnographically documented cultures present at the time of European contact. This period is marked in part by increased sedentism, status ascription, and social stratification observed in burial practices, and by the emergence of the Kuksu Cult, a ceremonial system that unified several language groups in central California. Late Period deposits in central California have been documented from most interior valleys and bayshore locations, as well as from upland contexts, where habitation and task-specific sites have been reported. New technology was also introduced during this period, notably the bow and arrow, which is evidenced in the archaeological record by small dart-sized projectile points. Other artifacts associated with the Initial Late Period include abalone-shell banjo-shaped ornaments, collared smoking pipes, and temporally distinct Olivella beads.

### Terminal (Phase 2) Late Period (1550-1850 CE)

Archaeologists refer to the time after circa CE 1500 until Euro-American contact as Phase 2 of the Late Period in central California, characterized in part by new bead types such as those made from saltwater clam shells, Dentalium (a marine snail) shells, and magnesite. These new artifacts were used as a medium of monetized exchange until Euro-American contact, representing social and economic integration previously unseen in the archaeological record for central California.

## **Historic Setting**

### City of Sunnyvale

In 1842, the land encompassing present day Mountain View and Sunnyvale was granted to Francisco Estrada as Rancho Pastoria de las Borregas. In 1850, Irish immigrant Martin Murphy, Jr. arrived in the area and purchased a portion of the rancho and operated it as Bay View Ranch. When the San Francisco and San Jose Railroad was constructed in 1860, they named the stop near Bay View Ranch Murphy Station. As agriculture grew in the area through the 1860s and 1870s, Murphy became an unincorporated town in Santa Clara County. By 1901, Murphy was ready to incorporate, but they were told by the postal service they needed to change their name. The name Sunnyvale was chosen, and through the 1910's and 1920's, rapid development occurred throughout the City.

In 1930, construction began on Naval Air Station (NAS) Sunnyvale, which would serve as the West Coast dirigible base. By 1940, NAS Sunnyvale was not only used as an operational Navy base but also as the

## 4 Environmental Setting, Impacts, and Mitigation Measures

Ames Research Center for the National Aeronautics and Space Administration (NASA). The onset of World War II set Sunnyvale on the track to become the technological hub it remains today and was the beginning of its nickname “the heart of Silicon Valley.” Sunnyvale was a hub of activity during the war, and in the post-war period, the economy and population swelled with the construction of new subdivisions and new technology-based enterprises, like the addition of the Lockheed Martin headquarters and operations facility in 1956.

Throughout the 1950's, the extensive growth in Sunnyvale led to the undertaking of major rezoning efforts, including the widening of roads and construction by the City and county of new municipal infrastructure. Farmlands within and surrounding the City were impacted. Farmers were displaced, or their farms were divided into smaller sections of land. New subdivisions, schools, shopping centers, highways, parks, and fire stations were built for the growing population. A volunteer civic improvement committee helped the City secure a \$6.8 million bond for some of these improvements and the construction of a new Civic Center.

Sunnyvale's housing development boomed in the 1950s, thanks in large part to real-estate developer Joseph Eichler and his tracts of what are now iconic mid-century modern houses. The development boom continued into the 1960s. This extensive growth was accompanied by political turmoil. Between 1960–1969, Sunnyvale had eight mayors and four city managers. The cause of this turnover can largely be attributed to the consistent development and rezoning of Sunnyvale, which led to the loss of almost all the previous agricultural land in the area. The development pressures led to the demolition of many buildings associated with the founding of Murphy and Sunnyvale. As the City grew and changed, many locals were split between encouraging more growth or wanting it to be slowed down; that same infighting was reflected within the City government. While local debates occurred, change continued to surge forward in the form of federal urban renewal grants received by the City in the 1960s, which led to the City Council granting the approval to clear out what they viewed as blighted areas of the City for the construction of a shopping mall, among other businesses. By the late 1960s, the City spent close to \$50 million on upgrades to the downtown core since 1960; new residential development across the City; and municipal buildings, including a new City Hall and a new courthouse within the current Site.

### **Sunnyvale Courthouse**

In 1960, the City entered discussions with private developer Hare, Brewer and Kelley of Palo Alto to purchase land for a new municipal court. The City hoped to purchase one acre of land behind the existing library; the parcel was being sold for \$91,000. The City and the developer had not come to an agreement by August 1960, despite a price drop to \$73,000. The local newspaper reported that the City would consider utilizing public land adjacent to the City Hall at the intersection of West Olive Avenue and South Mathilda Avenue. The City Council still preferred the site next to the library and asked the City Manager Perry Scott to consider further negotiations with Hare, Brewer and Kelley. One suggestion was to trade the public land for the private land, rather than enter into a purchase agreement.

The political turmoil of Sunnyvale in the 1960s and prolonged debate over a location delayed further decision-making on a new courthouse until 1964. On April 20, 1964, it was announced that the City intended to build on the old Murphy estate, a 2-acre site at the intersection of Sunnyvale Avenue and

## 4 Environmental Setting, Impacts, and Mitigation Measures

Arques Avenue. William W. Hedley, Jr. of San Jose was chosen as the architect for the Sunnyvale Courthouse in April 1964. The Santa Clara County Board of Supervisors was eager to move the Sunnyvale Courthouse project forward because of previous project delays. As a result, Hedley was chosen despite a no vote from Supervisor Ed R. Levin who instead asked for more information on the project. Hedley was a local architect who worked on projects primarily in the San Jose area and went on to design the San Jose Convention Center, which was completed in 1977.

Hedley's plan for the Sunnyvale Avenue and Arques Avenue site was accepted in October that same year. Although the design was more than \$100,000 over budget, the Board approved the design that was said to "reflect the county and the dignity of the court." Hedley's plan depicted a single-story stucco building that fit with the modest surrounding neighborhood. The design encompassed three courtrooms and provided space for a fourth. A month later, in November 1964, the location of the Sunnyvale Courthouse was changed. The new location was 3.06 acres at the northwest corner of the intersection of El Camino Real and Mathilda Avenue. The new site was part of the Civic Center complex, as was originally suggested back in 1960. The decision was made by the City Council after plans for the Central Expressway adjacent to the Murphy estate were altered. The expressway alteration would result in less parking available at the Sunnyvale Courthouse Project Site, making it unfit for the courthouse. Hedley's building plans were also reviewed, and it was determined the courthouse building would fit on either site. The Murphy estate would instead be used as a memorial park and cultural heritage museum.

On December 10, 1964, the City Council approved the Civic Center site for the Sunnyvale Courthouse and determined the existing building design was appropriate for the site. Thomas A. Sweeny, acting City Manager, noted the stucco, redwood, and stone building exterior would be similar in appearance to buildings at Foothill College in Los Altos Hills. The potential conflict between Hedley's neighborhood-specific design and the new location did not go unnoticed; however, City officials chose to move forward with the existing design instead of spending more money to redesign the courthouse. Although the design did not match the other buildings in the Civic Center complex, it was a similar design to other civic structures and schools around Sunnyvale and northern California at the time.

Groundbreaking for the Sunnyvale Courthouse occurred on Friday, May 20, 1966. The final design included two finished courtrooms and space for two more, anticipating future growth of the City. The courthouse was completed on time and opened on May 22, 1967. Judges James Duvaras and James B. Scott were the first judges to occupy the newly finished building. Instead of two courtrooms, three courtrooms were completed in the initial construction of the Sunnyvale Courthouse. The fourth courtroom was eventually completed in the 1980s when the county took over responsibility of the Sunnyvale Courthouse and began to use it for family court cases countywide.

In 1985, the Santa Clara County Board of Supervisors proposed the demolition of the Superior Court building in San Jose. The Sunnyvale Courthouse would be made obsolete and replaced with a new "Hall of Justice" building in San Jose, expected to cost the county \$25.8 million. The county set about looking for funding opportunities. One option considered was the sale of the Sunnyvale Courthouse to a private buyer, which could bring in as much as \$2.7 million for the San Jose project. The Sunnyvale Courthouse was of greater monetary value than smaller courthouses in Los Gatos and Gilroy and was not shared by other county departments as was the case at other courthouses under consideration for sale. The

Sunnyvale Courthouse was ultimately not sold and continued operations as the family court for the county. Eventually the County Clerk office was also housed in the building and alterations were made to one of the primary entrances in 2004. Use of the Sunnyvale Courthouse continued until its closure on August 12, 2016. It has been vacant since that time, and all operations were moved to the Family Justice Center Courthouse in San Jose.

### 4.4.2 REGULATORY SETTING

#### Federal

There are no federal plans, policies, regulations, or ordinances related to cultural resources that apply to the Project.

#### State

##### California Environmental Quality Act, Public Resources Code Section 21082.2, and State CEQA Guidelines

CEQA requires the lead agency to consider the effects of a project on historical resources. State CEQA Guidelines Section 15064.5 provides specific guidance for determining the significance of impacts on historical resources (State CEQA Guidelines Section 15064.5(b)) and unique archaeological resources (State CEQA Guidelines Section 15064.5(b) and PRC Section 21083.2). Under CEQA, these resources are called “historical resources” whether they are of historic or pre-European contact age. CEQA Section 21084.1 defines *historical resources* as those listed, or eligible for listing, in the California Register of Historical Resources (CRHR), or those listed in the historical register of a local jurisdiction (county or city) unless the preponderance of the evidence demonstrates that the resource is not historically or culturally significant. National Register of Historic Places (NRHP)-listed “historic properties” in California are considered historical resources for the purposes of CEQA and are also listed in the CRHR. The CRHR criteria for listing such resources are based on, and are very similar to, the NRHP criteria. CEQA Section 21083.2 and State CEQA Guidelines Section 15064.5(c) provide further definitions and guidance for archaeological sites and their treatment.

##### California Register of Historical Resources (PRC Section 5024.1)

PRC Section 5024.1 establishes the CRHR. The register lists California properties considered to be significant historical resources. The CRHR also includes all properties listed or determined eligible for listing in the NRHP, including properties evaluated and determined eligible under Section 106. The criteria for listing in the CRHR, criteria 1–4, are similar to those of the NRHP:

- Criterion 1: Resources associated with important events that have made a significant contribution to the broad patterns of our history.
- Criterion 2: Resources associated with the lives of persons important to our past.
- Criterion 3: Resources that embody the distinctive characteristics of a type, period, or method of construction, or that represent the work of a master.

## 4 Environmental Setting, Impacts, and Mitigation Measures

- Criterion 4: Resources that have yielded, or may be likely to yield, information important in prehistory or history.

The CRHR regulations govern the nomination of resources to the CRHR (14 CCR Section 4850). The regulations set forth the criteria for eligibility as well as guidelines for assessing historical integrity and resources that have special considerations.

### Unique Archaeological Resources

State CEQA Guidelines Section 15064.5(c) specifies how CEQA applies to archaeological sites, including archaeological sites that are historical resources, unique archaeological resources, or neither.

PRC Section 21083.2(g) defines a unique archaeological resource as an archaeological artifact, object, or site about which it can be clearly demonstrated that, without merely adding to the current body of knowledge, there is a high probability that it meets any of the following criteria:

1. It contains information needed to answer important scientific research questions, and there is a demonstrable public interest in that information.
2. It has a special and particular quality, such as being the oldest of its type or the best available example of its type.
3. It is directly associated with a scientifically recognized important prehistoric or historic event or person.

State CEQA Guidelines sections 15064.5(d) and (e) specify responsibilities and respectful treatment of human remains, including Native American human remains, that are found or likely to be found within a project site.

### Human Remains – Health and Safety Code 7050.5

In the event of discovery or recognition of any human remains in any location other than a dedicated cemetery, Section 7050.5 of the Health and Safety Code states that there shall be no further excavation or disturbance of the site or any nearby area reasonably suspected to overlie adjacent remains until the coroner of the county in which the remains were discovered has determined whether the remains are subject to the coroner's authority. If the human remains are of Native American origin, the coroner must notify the NAHC within 24 hours of this identification. State CEQA Guidelines sections 15064.5(d) and (e) specify responsibilities regarding human remains as well as the respectful treatment of human remains, including Native American human remains, that are found or likely to be found within a project site.

### **Local**

#### City of Sunnyvale Code of Ordinances, Chapter 19.96 Heritage Preservation

The City has their own heritage preservation guidelines, which are outlined in the City's Code of Ordinances for Zoning under Discretionary Permits and Procedures, Chapter 19.96 Heritage Preservation. The guidelines are aimed at protecting the character and history of the City through cultural,

## 4 Environmental Setting, Impacts, and Mitigation Measures

historical, and architectural heritage, to safeguard the City's unique cultural heritage, and to facilitate public knowledge and appreciation of the City's history. The guidelines were put in place by the Sunnyvale City Council and are upheld by the Heritage Preservation Commission. Because the Judicial Council is the CEQA lead agency for the Project, and is acting for the State of California, local government regulations do not apply to the Project. However, the Judicial Council considers local policies and guidelines, as appropriate.

Criteria for the evaluation and nomination of heritage resources within the City are as follows:

**Criterion A:** It exemplifies or reflects special elements of the city's cultural, social, economic, political, aesthetic engineering, architectural, or natural history;

**Criterion B:** It is identified with persons or events significant in local, state, or national history;

**Criterion C:** It embodies distinctive characteristics of a style, type, period, or method of construction, or is a valuable example of the use of Indigenous materials or craftsmanship;

**Criterion D:** It is representative of the work of a notable builder, designer, or architect;

**Criterion E:** It contributes to the significance of an historic area, being a geographically definable area possessing a concentration of historic or scenic properties or thematically related grouping of properties which contribute to each other and are unified aesthetically or by plan or physical development;

**Criterion F:** It has a unique location or singular physical characteristic or is a view or vista representing an established and familiar visual feature of a neighborhood, community, or the City;

**Criterion G:** It embodies elements of architectural design, detail, materials, or craftsmanship that represents a significant structural or architectural achievement or innovation;

**Criterion H:** It is similar to other distinctive properties, sites, areas, or objects based on a historic, cultural, or architectural motif;

**Criterion I:** It reflects significant geographical patterns, including those associated with different eras of settlement and growth, particular transportation modes, or distinctive examples of park or community planning;

**Criterion J:** It is one of the few remaining examples in the city, region, state, or nation possessing distinguishing characteristics of an architectural or historic type or specimen;

**Criterion K:** With respect to a local landmark, it is significant in that the resource materially benefits the historical character of a neighborhood or area, or the resource in its location represents an established and familiar visual feature of the community or city;

**Criterion L:** With respect to a local landmark district, a collective high integrity of the district is essential to the sustained value of the separate individual resources;

## 4 Environmental Setting, Impacts, and Mitigation Measures

**Criterion M:** With respect to a designated landmark and designated landmark district, the heritage resource shall meet Criteria of the National Register of Historical Places, which are incorporated by reference into this chapter.

### City of Sunnyvale General Plan

**Goal CC-5:** Protection of Sunnyvale's Heritage: To enhance, preserve, and protect Sunnyvale's heritage including natural features, the built environment and significant artifacts.

**Policy CC-5.1:** Preserve existing landmarks and cultural resources and their environmental settings.

**Policy CC-5.5:** Archaeological resources should be preserved whenever possible.

Because the Judicial Council is the CEQA lead agency for the Project, and is acting for the State of California, local government regulations do not apply to the Project. However, the Judicial Council considers policies and guidelines, as appropriate

### 4.4.3 IMPACTS ANALYSIS

This section describes the impact analysis relating to cultural resources for the Project. It describes the methods used to determine the impacts of the Project and lists the thresholds used to conclude whether an impact would be significant. Measures to mitigate (i.e., avoid, minimize, rectify, reduce, eliminate, or compensate for) significant impacts accompany each significant impact discussion.

#### 4.4.3.1 Methodology

##### **Cultural Resource Data Sources**

This section describes the methods used to identify cultural resources at the Site and in the vicinity and determine their significance under CEQA.

##### Built Environment Resources

The Historic *Resource Assessment (Appendix E)* documents primary and secondary desktop research to develop a historic context for the evaluation of the former Sunnyvale Courthouse. Resources consulted include the *City of Sunnyvale Historic Context Statement*, historic newspapers, local historic contexts, and other local periodicals that address the development of the region. In addition to the desktop research, an architectural historian surveyed the exterior and interior of the Sunnyvale Courthouse and documented the building with written documentation and photography.

Based on the information obtained from the desktop research and survey, the former Sunnyvale Courthouse was evaluated in accordance with Section 15064.5(a)(2)-(3) of the CEQA Guidelines, using the criteria outlined in PRC Section 5024.1 and the former Sunnyvale Courthouse does not appear to meet the criteria for listing in the CRHR because of a lack of historical significance. While the building retains overall integrity, it does not meet any of the eligibility criteria for listing in the CRHR and therefore

## 4 Environmental Setting, Impacts, and Mitigation Measures

is not considered a historical resource for the purposes of CEQA (Refer to **Appendix E** for the Historic Resource Assessment).

### Archaeological Resources

The *Archaeological Resources Study* documents background research to identify cultural resources and studies within the Site and to assess the potential for subsurface archaeological deposits. The background research consisted of a records search at the Northwest Information Center (NWIC) and a literature and historical map review. The results are summarized below.

#### California Historical Resources Information Systems (CHRIS) Record Search

The NWIC, an affiliate of the California Office of Historic Preservation, is the official state repository of cultural resources records and reports for Santa Clara County. On April 3, 2024, a records search was conducted for the Site and a 0.25-mile radius at the NWIC. On April 30, 2024, a supplemental records search was conducted of the Site and vicinity which expanded the search radius to one mile for previously recorded archaeological resources. As part of the records search, the following local and state inventories were reviewed (Office of Historic Preservation 2024):

- California Inventory of Historic Resources;
- Five Views: An Ethnic Historic Site Survey for California;
- California Points of Historical Interest; and
- California Historical Landmarks.

No previously recorded archaeological resources were identified in or within 0.25-miles of the Site; two previously recorded pre-European contact archaeological resources, one historic-period, and one pre-European contact informal resource was recorded within one mile of the Site.

No previous cultural resources studies were conducted within the Site, five were documented within 0.25-miles and are listed in **Table 4.4-1** below.

**Table 4.4-1. Previous Cultural Resource Investigations within 0.25-mile of the Project Site**

Author	Year(s)	Report Title
Archaeological/Historical Consultants	1990-1992	Archaeological Survey Report, Tasman Corridor Project, Santa Clara County, CA
Peak & Associates, Inc.	2000	Cultural Resource Overview for the AT&T San Jose Build, Cities of Redwood City and San Jose, San Mateo, and Santa Clara Counties
Earth Touch, LLC	2000	Nextel Communication Wireless Telecommunications Service Facility-Santa Clara County
Archaeological Resource Management	2013	Geoarchaeological Auger Testing Program for Properties at 538-560 S. Mathilda Avenue in the City of Sunnyvale
Holman & Associates	2014	Archaeological Subsurface Presence/Absence Testing, 481 Mathilda Ave, City of Sunnyvale, Santa Clara County, CA

## 4 Environmental Setting, Impacts, and Mitigation Measures

Historic-period maps and aerial photographs indicate that the Site was undeveloped until the late 1960s, the time when the Sunnyvale Courthouse was constructed; therefore, it is unlikely that any historic-period archaeological deposits are located within the Site.

A review of geologic maps to assess the Project's potential for containing as-yet undocumented buried archaeological resources indicated that pre-European contact archaeological deposits could be encountered during deep excavations. Pre-European contact archaeological deposits, including midden soils, hearths, stone tools, subsistence remains, and human remains, could occur below artificial fill. The Site is underlain by Holocene alluvium deposits that were most likely available for human habitation and have the potential for containing as-yet undocumented buried pre-European contact archaeological resources.

### Field Survey

A pedestrian survey of the Site was conducted on March 21, 2024, to examine the ground surface for evidence of archaeological materials. All exposed soils were inspected for pre-European contact archaeological materials (e.g., stone tools, lithic debitage, ground stone), historic-period artifacts (e.g., metal, glass, ceramics), and discoloration that might indicate the presence of archaeological deposits. The survey used five- to ten-meter-wide transects. A majority of the ground surface was obscured by pavement and the survey did not identify any surface indications of archaeological resources.

#### 4.4.3.2 Thresholds of Significance

##### Cultural Resources

In accordance with Appendix G of the State CEQA Guidelines, the Project would have a significant effect if it would result in any of the conditions listed below.

- Cause a substantial adverse change in the significance of a historical resource pursuant to CEQA Guidelines Section 15064.5.
- Cause a substantial adverse change in the significance of an archaeological resource pursuant to CEQA Guidelines Section 15064.5.
- Disturb any human remains, including those interred outside of formal cemeteries.

#### a. Cause a substantial adverse change in the significance of a historical resource pursuant to § 15064.5?

For a cultural resource to be considered a historical resource (i.e., eligible for listing in the CRHR), it must generally be 50 years or older. Under CEQA, historical resources can include pre-European contact (i.e., Native American) archaeological deposits, historic-period archaeological deposits, historic buildings, and historic districts. CEQA requires that agencies considering projects that are subject to discretionary action shall consider the potential impacts on cultural resources that may occur from project implementation.

##### Built Environment

### Demolition, Construction, and Operation

Based on the information obtained from the desktop research and survey, the former Sunnyvale Courthouse does not appear to meet the criteria for listing in the CRHR because of a lack of historical significance and therefore is not considered a historical resource for the purposes of CEQA, nor is it adjacent to any built environment resource that qualifies as a historical resource for the purposes of CEQA. Therefore, new development on the Site would not have the potential to cause a substantial adverse change to the significance of any built environment historical resource, as defined in Section 15064.5 of the CEQA Guidelines. The Project would not demolish a significant historical resource or alter its physical characteristics, nor would it change elements within the historic setting of such a resource. Therefore, the Project would have no impact on built environment historical resources.

### Archaeology

According to the State CEQA Guidelines, “When a project will impact an archaeological site, a lead agency shall first determine whether the site is an historical resource” (State CEQA Guidelines Section 15064.5[c][1]).

### Demolition, Construction, and Operation

No surface indications of archaeological resources were identified during the pedestrian survey. The results of the NWIC records search indicate that no previously recorded archaeological resources were identified in or within 0.25-miles of the Site, two previously recorded pre-European contact archaeological resources, one historic-period, and one pre-European contact informal resource were recorded within one mile of the Site. Archival maps and aerial photographs indicate that the Site was undeveloped until the late 1960s; therefore, it is unlikely that any historic-period archaeological deposits are located within the Site that could qualify as historical resources. However, a review of the relevant geologic maps and literature indicated sensitivity for buried pre-European contact archaeological deposits.

Depending on the final layout and depth of proposed building foundations, Site preparation may disturb areas beyond what have been previously disturbed. In addition, the existing Site utilities would be expanded, which could require additional excavation in previously undisturbed areas. Therefore, excavations related to Project construction could encounter archaeological deposits and result in an adverse change to a buried archaeological deposit that could qualify as a historical resource. Thus, potentially significant impacts related to buried archaeological deposits could result from construction of the Project.

Implementation of mitigation measures CUL-1, CUL-2, and CUL-3 would ensure that impacts related to archaeological resources that qualify as historical resources would be reduced to less than significant impact with mitigation through implementation of a monitoring plan, worker awareness training, and requirements to stop work if archaeological deposits are encountered during ground-disturbing activities.

### Level of Significance Before Mitigation

Potentially Significant Impact.

### Mitigation Measures

#### CUL-1: Development of an Archaeological Monitoring Plan and Archaeological Monitoring.

- A. Prior to any Project-related ground disturbance an Archaeological Monitoring Plan (AMP) shall be developed by a qualified archaeologist who meets the Secretary of the Interior's (SOI) Professional Qualifications Standards for Archaeology<sup>6</sup> for review and approval by the Judicial Council.
  - i. The AMP shall include but not limited to, archaeological monitoring methods specific to Project grading, utilities, and foundation exaction; 2) protocols and a chain of contact if unanticipated archaeological discoveries are encountered during Project-related ground disturbance; 3) a summary of documentation procedures for unanticipated discoveries; 4) a description of the types of archaeological deposits that are likely to be encountered specific to the Site; and 5) procedures for evaluating these archaeological deposit types as historical resources or unique archaeological resources pursuant to PRC Section 5024.1 or PRC Section 21083.2(g)
- B. Prior to any Project-related ground disturbance, the Judicial Council shall retain the services of an SOI qualified archaeologist to implement the AMP and oversee archaeological monitoring of Project grading, utilities, and foundation excavation pursuant to the AMP.
  - i. If archaeological deposits are encountered during Project-related ground disturbance, the monitoring archaeologist shall have the authority to stop work in the area (50-foot radius) and implement the procedures outlined in the AMP.
  - ii. Work shall not resume until the monitoring archaeologist under the oversight if the SOI qualified archaeologist and, in consultation with the Judicial Council, determines that all applicable protocols of the AMP have been met and that the archaeological deposit does not qualify as a historical resource or unique archaeological resource pursuant to PRC Section 5024.1 or PRC Section 21083.2(g) and no further archaeological investigation is necessary.
  - iii. Should the monitoring archaeologist under the oversight of the SOI qualified archaeologist and, in consultation with the Judicial Council, determine the archaeological deposit does qualify as a historical resource or unique archaeological resource pursuant to PRC Section 5024.1 or PRC Section 21083.2(g), a treatment plan with appropriate protection and preservation measure will be developed for review, approval, and implementation by the Judicial Council to mitigate impacts to the resource.

---

<sup>6</sup> U.S. Department of the Interior. 1983. *Archaeology and Historic Preservation; Secretary of the Interior's Standards and Guidelines*. Available: <https://www.nps.gov/subjects/historicpreservation/upload/standards-guidelines-archeology-historic-preservation.pdf>

## 4 Environmental Setting, Impacts, and Mitigation Measures

- iv. Following the completion of all ground disturbance associated with Project construction, the results of the archaeological monitoring will be summarized in a technical document. The technical document shall be provided to the Judicial Council for review and approval and submitted to the NWIC.

### **CUL-2: Conduct Cultural Resource Sensitivity Training**

Prior to any Project-related ground disturbance, the Judicial Council shall retain the services of an SOI qualified archaeologist to oversee and ensure that all construction workers involved in ground-disturbing activities receive cultural resource sensitivity training by an archaeologist who is experienced in teaching non-specialists to recognize archaeological resources in the event that any are discovered during construction. Construction staff directly overseeing or engaged in ground-disturbing activities must participate in this training. This training shall be provided once to each worker involved in ground-disturbing activities before they begin work and shall be documented in training records submitted to the Judicial Council.

This training shall be administered as standalone trainings or included as part of the overall environmental awareness training required by the Project. The training shall include, at minimum, the following:

- the appearance and types of cultural and archaeological resources that are likely to be encountered.
- the notification procedures and protocols to be taken in the event of an inadvertent cultural or archaeological resource discovery.
- the penalties for disturbing or destroying cultural resources.

### **CUL-3: Stop Work if Archaeological Deposits and/or Human Remains Are Encountered During Ground-Disturbing Activities.**

If archaeological deposits are encountered during Project-related ground disturbance, work in the area (50-foot radius) shall stop immediately and the procedures outlined in the AMP will be implemented. If any human remains are discovered during ground-disturbing activities, there shall be no further excavation or disturbance of the Site, or any nearby area reasonably suspected to overlie adjacent human remains. These remains shall be treated in accordance with existing state laws, including California PRC Section 5097.98 and California Health and Safety Code Section 7050.5.

### **Level of Significance After Mitigation**

Less than Significant Impact.

### **b. Cause a substantial adverse change in the significance of an archaeological resource pursuant to § 15064.5?**

### **Demolition, Construction, and Operation**

## 4 Environmental Setting, Impacts, and Mitigation Measures

According to the State CEQA Guidelines, archaeological sites that do not qualify as historical resources shall be assessed to determine if they qualify as “unique archaeological resources” (PRC Section 21083.2; State CEQA Guidelines Section 15064.5[c][3]). As discussed above, excavations related to Project construction could encounter archaeological deposits and result in an adverse change to a buried archaeological deposit that could qualify as an archaeological resource. Thus, potentially significant impacts related to unidentified archaeological resources could result from construction of the Project.

Implementation of mitigation measures CUL-1, CUL-2, and CUL-3 would ensure that impacts related to archaeological deposits that qualify as archaeological resource would be reduced to less than significant impact with mitigation through implementation of a monitoring plan, worker awareness training, and requirements to stop work if archaeological deposits are encountered during ground-disturbing activities.

### **Level of Significance Before Mitigation**

Potentially Significant Impact.

### **Mitigation Measure**

#### **CUL-1, CUL-2, CUL-3**

### **Level of Significance After Mitigation**

Less than Significant Impact

### **c. Disturb any human remains, including those interred outside of dedicated cemeteries?**

#### **Demolition, Construction, and Operation**

Based on the records search results and the desktop archaeological sensitivity assessment described above, excavations related to Project construction could result in substantial adverse changes to historical resources and/or archaeological deposits that may contain human remains. Thus, potentially significant impacts and disturbance of human remains outside of dedicated cemeteries could result from construction of the Project.

In the event that human remains are identified during Project activities, these remains would be required to be treated in accordance with Section 7050.5 of the California Health and Safety Code and Section 5097.98 of the PRC, as appropriate. Section 7050.5 of the California Health and Safety Code states that, in the event of discovery or recognition of any human remains in any location other than a dedicated cemetery, there shall be no further excavation or disturbance of the Site or any nearby area reasonably suspected to overlie adjacent remains until the Santa Clara County Coroner has determined whether or not the remains are subject to the coroner’s authority. If the human remains are of Native American origin, the coroner must notify the NAHC within 24 hours of this identification. The NAHC will identify a Native American Most Likely Descendant (MLD) to inspect the Site and provide recommendations for the proper treatment of the remains and associated grave goods. Compliance with the California Health and Safety

Code and with implementation of mitigation measures CUL-1, CUL-2, CUL-3, impacts to human remains in any location other than a dedicated cemetery would be reduced to less than significant impact.

### **Level of Significance Before Mitigation**

Potentially Significant Impact

### **Mitigation Measures**

#### **CUL-1, CUL-2, CUL-3**

### **Level of Significance After Mitigation**

Less than Significant Impact

## **4.5 Geology and Soils**

### **4.5.1 EXISTING CONDITIONS**

#### **Site Geology and Paleontology**

The Site is in the Coast Ranges geomorphic province. The Coast Ranges consist of relatively young (3.5 million years old) northwest-trending mountain ranges and valleys that run along the Pacific coast from Santa Barbara to the Klamath Mountains, coincident with the Pacific-North American plate boundary (Page et al. 1998). The Coast Ranges preserve a thick sequence of sedimentary strata dating back to the Mesozoic (approximately 251 million years ago) overlying granitic and metamorphic bedrock (Norris and Webb 1990). These sedimentary rocks have a rich fossil history in central California, recording the filling of offshore basins dating to the Mesozoic followed by the progressively shallowing sea and the emergence of terrestrial environments in the Pliocene and Pleistocene (Page et al. 1998).

Locally, the Site is in the Santa Clara Valley, a primarily flat alluvial plain extending southwards from the San Francisco Bay, between the Santa Cruz Mountains in the east and the Diablo Range in the west (Langenheim et al. 2015). The valley is bound by a complex array of right-lateral strike-slip faults and range-front thrust and reverse faults, including the San Andreas Fault on the western margin, offset on which has played a significant role in the development of the valley, starting in the early to middle Miocene, as much as 23 million years ago (Langenheim et al. 2015; Stanley et al. 2002). The valley is a subsiding alluvial basin, with the upper layers filled with Holocene-aged alluvium that is inset into and overlaps older, late Pleistocene-aged fans that have accumulated in the most recent stage of basin development over the past 1 to 1.5 million years (Langenheim et al. 2015). Older terrestrial sediments of the Santa Clara Formation underlie the alluvium, which are in turn underlain by progressively older, stratigraphically unconformable, marine units from the Pliocene, Miocene, and Jurassic, for a total sedimentary thickness of over 1.8 miles (Stanley et al. 2002).

Geologic mapping by Dibblee and Minch (2007) indicates the surface of the Site consists of young stream alluvium, with older alluvium likely present in the subsurface. Young stream alluvium dates from the Recent to the Early Holocene (approximately 11,000 years ago). Given their relatively recent age, they

## 4 Environmental Setting, Impacts, and Mitigation Measures

are unlikely to preserve paleontological resources in the shallow upper layers of the unit, but as the threshold for biological remains to be considered as fossils is 5,000 years in age, or mid-Holocene (SVP 2010), the deeper layers of this unit may preserve fossils. Similarly, older alluvium, which dates to the Pleistocene, likely underlies young stream alluvium in the subsurface, is of an age to preserve fossils.

The records of the University of California Museum of Paleontology (UCMP) (UCMP 2024) include 13 localities in Santa Clara County from Holocene-aged deposits that are likely similar to those mapped in the Site. Of note is the occurrence of intermixing of Holocene and Pleistocene-aged fossils in older surficial sediments, including in the San Francisco region, such that detailed age constraint is difficult, with Early Holocene and late Pleistocene localities preserving similar fauna (Tomiya et al. 2011).

Pleistocene-aged older alluvium is known for preserving a wide variety of Ice Age plants and animals in the San Francisco Bay region (Stirton 1939; Savage 1951; Tomiya et al. 2011; Wolff 1973, 1975). A review of the scientific literature reports numerous Pleistocene-aged fossil localities have been reported from the Santa Clara Valley, the first of which was reported in 1907 (Branner et al. 1909; Hay 1927; Jefferson 1991). There have been 210 fossil specimens recorded from 12 localities in the Santa Clara Valley (Maguire and Holroyd 2016). The closest of these to the Site were discovered in Sunnyvale, where two localities are documented preserving mammoth, bison, camel, horse, bear, and gopher fossils (Maguire and Holroyd 2016). Depths of two feet to 32 feet below ground surface are reported for some of these localities (Maguire and Holroyd 2016; Jefferson 1991; Hay 1927).

Therefore, the surficial sediments that underlie the Site are assessed as having low-to-high paleontological potential, increasing with depth (Stantec 2024). Refer to **Appendix F** for Paleontological Resources Assessment. While establishing an exact depth for the threshold from low to high potential is not possible with currently available data, a range of five feet to ten feet below ground surface is reasonable given the depths of other documented localities in the vicinity (Stantec 2024).

### Project-Specific Soils

Based on results of a geotechnical investigation (Geotechnical Study) performed in February 2024, the upper two to five feet of soil in portions of the Site appears to be artificial fill, consisting mostly of lean clay with sand. The artificial fill layer is underlain by alluvial fan deposits, consisting of sand with clay and varying amounts of gravel, and sand and silty sand with occasional interbeds of lean and fat clay with sand to the maximum depth explored of 100 feet below ground surface (bgs). Groundwater was not encountered in any of the manually logged hollow-stem auger borings drilled on the Site (maximum depth of 50 feet bgs). Two deeper seismic cone penetration test (CPT) borings were completed to 100 feet bgs. Pore pressure dissipation tests performed during the seismic CPT boring installation indicated groundwater was at a depth of approximately 53 feet bgs. The Geotechnical Study stated that based on review of California Geological Survey (CGS) data, the estimated highest groundwater elevation at the Site is approximately 40 to 50 feet bgs (**Appendix H**).

### 4.5.2 REGULATORY SETTING

#### Federal

##### Clean Water Act (Erosion Control)

The Federal CWA (33 United States Code [USC] 1251 et seq.), formally known as the Federal Water Pollution Control Act of 1972, was enacted with the intent of restoring and maintaining the chemical, physical, and biological integrity of the WOTUS. The CWA requires states to set standards to protect, maintain, and restore water quality through the regulation of point-source and certain nonpoint source discharges to surface water. Such discharges are regulated by the NPDES permit process (Federal CWA Section 402). Projects that disturb one acre or more are required to obtain coverage under the NPDES General Permit for Stormwater Discharges Associated with Construction Activity (Construction General Permit) administered by the SWRCB, Order No. 2022-0057-DWQ (SWRCB 2022). The Construction General Permit requires the development and implementation of a SWPPP, which includes best BMPs to regulate stormwater runoff, including measures to prevent soil erosion. Requirements of the CWA and associated Construction General Permit are described in further detail in *Section 4.8, Hydrology and Water Quality* of this EIR.

##### Earthquake Hazards Reduction Act

The Earthquake Hazards Reduction Act was enacted in 1977 to “*reduce the risks to life and property from future earthquakes in the United States through the establishment and maintenance of an effective earthquake hazards and reduction program.*” To accomplish this, the Act established the National Earthquake Hazards Reduction Program. This program was significantly amended in November 1990, which refined the description of agency responsibilities, program goals, and objectives.

National Earthquake Hazards Reduction Program’s mission includes improved understanding, characterization, and prediction of hazards and vulnerabilities; improvement of building codes and land use practices; risk reduction through post-earthquake investigations and education; development and improvement of design and construction techniques; improvement of mitigation capacity; and accelerated application of research results. The National Earthquake Hazards Reduction Program designates the FEMA as the lead agency of the program and assigns it several planning, coordinating, and reporting responsibilities. Programs under National Earthquake Hazards Reduction Program help inform and guide planning and building code requirements such as emergency evacuation responsibilities and seismic code standards such as those to which the Project would be required to adhere.

#### State

##### Alquist-Priolo Earthquake Fault Zoning Act – Affected Local Agencies

The state legislation protecting the population of California from the effects of fault-line ground-surface rupture is the Alquist-Priolo Earthquake Fault Zoning Act (California PRC 1972, 1997), passed in the wake of the 1971 Sylmar (or San Fernando) Earthquake, which resulted in extensive surface fault ruptures that damaged numerous structures. This Act is intended to a) prevent the construction of buildings intended for human occupancy on the surface traces of active faults, and b) to increase safety

## 4 Environmental Setting, Impacts, and Mitigation Measures

and minimize the loss of life resulting from earthquakes by facilitating seismic retrofitting to strengthen buildings against ground shaking. At the direction of this Act, in 1972 the State Geologist became responsible for delineating Earthquake Fault Zones (called Special Studies Zones prior to 1994) around active and potentially active fault traces to reduce fault-rupture risks to structures for human occupancy. The zones are revised periodically and extend 200 to 500 feet on either side of identified active fault traces. The CGS has prepared nearly 600 maps delineating Earthquake Fault Zones, which are provided to cities and counties in planning, zoning, and building regulation functions.

Local agencies must enforce this Act in the development permit process, where applicable, and may be more restrictive than state law requires. According to this Act, before a project can be permitted, cities and counties must require a geologic investigation, prepared by a licensed geologist, to demonstrate that buildings will not be constructed across active faults. If an active fault is found, a structure for human occupancy cannot be placed over the trace of the fault and must be set back. Although setback distances may vary, a minimum 50-foot setback is required.

### Seismic Hazards Mapping Act – Affected Local Agencies

One of the state legislations protecting the public from geo-seismic hazards other than surface faulting, such as strong ground shaking, liquefaction, landslides, and other ground failures, is the Seismic Hazards Mapping Act (California 1991). This Act's regulations apply to public buildings intended for human occupancy and a large percentage of private buildings intended for human occupancy. This Act became effective in 1991 with the purpose of identifying and mapping seismically hazardous areas to assist cities and counties in preparing the safety elements of their general plans and to encourage land use management policies and regulations that reduce seismic hazards. Under the terms of this Act, cities and counties must require a geotechnical report defining and delineating any seismic hazard prior to the approval of a project in a state-identified seismic hazard zone. The local jurisdiction is required to submit one copy of the approved geotechnical report to the State Geologist within 30 days of approval of the report.

At the direction of this Act, the State Geologist became responsible for preparing maps delineating Liquefaction Zones of Required Investigation and Earthquake-Induced Landslide Zones of Required Investigation in the Los Angeles Basin and San Francisco Bay areas.

### California Building Standards Code

CCR Title 24, Part 2, the CBC, outlines regulations for building, planning, and construction in the state, including occupancy classification, structural design, building materials, and fire-resistance requirements. The current 2022 CBC, effective date of January 1, 2023, is based on the 2021 International Building Code (IBC) (IBC, 2021). The CBC is a compilation of three types of building standards from three different origins:

- Building standards that have been adopted by state agencies without change from building standards contained in national model codes;

## 4 Environmental Setting, Impacts, and Mitigation Measures

- Building standards that have been adopted and adapted from national model codes to address California's ever-changing conditions; and
- Building standards, authorized by the California Legislature, that constitute amendments not covered by national model codes, that have been created and adopted to address particular California concerns.

All occupancies in California are subject to national model codes adopted into Title 24, and occupancies are further subject to amendments adopted by state agencies. Although the project is subject to amendments adopted by state agencies, it is not subject to ordinances implemented by local jurisdictions' governing bodies.

Chapter 16 of the CBC deals with structural design requirements governing seismically resistant construction (Section 1604), including factors and coefficients used to establish seismic site class and seismic occupancy category for the soil/rock at the building location and the proposed building design (Sections 1613.5 through 1613.7). Chapter 18 includes the requirements for foundation and soil investigations (Section 1803); excavation, grading, and fill (Section 1804); allowable load-bearing values of soils (Section 1806); and the design of footings, foundations, and slope clearances (Sections 1808 and 1809), retaining walls (Section 1807), and pier, pile, driven, and cast-in-place foundation support systems (Section 1810). Chapter 33 includes requirements for safeguards at work sites to ensure stable excavations and cut or fill slopes (Section 3304). CBC includes (but is not limited to) grading requirements for the design of excavations and fills and for erosion control. Construction activities are subject to occupational safety standards for excavation, shoring, and trenching as specified in the California Occupational Safety and Health Administration (Cal-OSHA) regulations (CCR Title 8). The CBC is revised every three years.

### Local

Because the Judicial Council is the CEQA lead agency for the Project, and is acting for the State of California, local government regulations do not apply to the Project. However, the Judicial Council considers policies and guidelines, as appropriate.

#### City of Sunnyvale Municipal Code

Sunnyvale adopted the CBC in Chapter 16.16.020 of the City's Municipal Code. The Judicial Council is not required to obtain any permits from the City. The permit to perform grading will be provided by the Judicial Council's AHJ/Building Official and the State Fire Marshal.

#### Hazard Mitigation Plans

In March 2005, the Association of Bay Area Governments (ABAG) adopted a multi-jurisdictional Hazard Mitigation Plan for the Bay Area. Participating local county and city governments in the Bay Area prepare an annex to this plan to explain how the plan specifically applies to that agency. Sunnyvale has established a Local Hazard Mitigation Plan (LHMP) as an annex to the ABAG regional Hazard Mitigation Plan.

### 4.5.3 IMPACTS ANALYSIS

#### 4.5.3.1 Methodology

##### Geology and Soils Methodology

The geology and soil analyses are based on a review of published information and reports regarding regional geology and soils. Information was obtained from governmental agencies and websites including the DOC California Earthquake Hazard Zone Application Map, NRCS Web Soil Survey (WSS), City of Sunnyvale General Plan, and a Project-specific Geotechnical Study (**Appendix H**) performed in 2024.

##### Paleontological Methodology

Paleontological resources are evidence of ancient life, and as such are non-renewable. This includes the remains of the body of an organism, such as bones, skin impressions, shell, or leaves, as well as traces of an organism's activity, such as footprints or burrows, called trace fossils. In addition to the fossils themselves, geologic context is an important component of paleontological resources, and includes the stratigraphic placement of the fossil as well as the lithology of the rock in order to assess paleoecologic setting, depositional environment, and taphonomy.

While CEQA does not define a significance threshold for paleontological resources, the standards of the Society of Vertebrate Paleontology (SVP) are often used to establish scientific importance of fossils, in order to assess what constitutes a "unique" paleontological resource for the purposes of CEQA. The SVP defines significant paleontological resources as:

identifiable vertebrate fossils, large or small, uncommon invertebrate, plant, and trace fossils, and other data that provide taphonomic, taxonomic, phylogenetic, paleoecologic, stratigraphic, and/or biochronologic information. Paleontological resources are considered to be older than recorded human history and/or older than middle Holocene (i.e., older than about 5,000 radiocarbon years). [SVP 2010: 11].

It should be noted that the threshold for scientific importance varies with factors including geologic unit, geographic area, and the current state of scientific research (Murphey et al. 2019). Many paleontological studies have developed criteria for assessing the scientific importance of paleontological resource discoveries (e.g., Eisentraut and Cooper 2002; Murphey et al. 2019; Scott and Springer 2003). In general, these studies assess fossils as scientifically important if one or more of the following criteria apply:

- The fossils provide information on the evolutionary relationships and developmental trends among organisms, living or extinct.
- The fossils provide data useful in determining the age(s) of the rock unit or sedimentary stratum, including data important in determining the depositional history of the region and the timing of geologic events, through biochronology or biostratigraphy and the correlation with isotopic dating.
- The fossils provide ecological data, such as the development of biological communities, the interaction between paleobotanical and paleozoological biotas, or the biogeography of lineages.

## 4 Environmental Setting, Impacts, and Mitigation Measures

- The fossils demonstrate unusual or spectacular circumstances in the history of life.
- The fossils provide information on the preservational pathways of paleontological resources, including taphonomy, diagenesis, or preservational biases in the fossil record.
- The fossils are in short supply and/or in danger of being depleted or destroyed by the elements, vandalism, or commercial exploitation, and are not found in other geographic locations.
- The fossils inform our understanding of anthropogenic effects to global environments or climate.

Because paleontological resources occur within a geologic unit and fossil localities can only be identified once they are exposed through natural or artificial means, paleontologists evaluate the potential for a geologic unit to yield paleontological resources as a means of assessing a project's potential impacts. The SVP (2010) provides four ranks of paleontological potential:

- **High Potential.** Rock units from which vertebrate or scientifically important invertebrate, plant, or trace fossils have been recovered are considered to have a high potential for containing additional significant paleontological resources.
- **Low Potential.** Rock units that are poorly represented by fossil specimens in institutional collections or, based on general scientific consensus, only preserve fossils in rare circumstances (e.g., basalt flows or Recent colluvium) have low paleontological potential.
- **No Potential.** Some rock units have no potential to contain fossils, for instance high-grade metamorphic rocks (such as gneisses and schists) and plutonic igneous rocks (such as granites and diorites).
- **Undetermined Potential.** Rock units for which little information is available in the literature or museum records concerning their paleontological content, geologic age, and depositional environment are considered to have undetermined potential.

### 4.5.3.2 Thresholds of Significance

#### a. **Directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving:**

##### iii. **Seismic-related ground failure, including liquefaction?**

Seismic-induced liquefaction is a phenomenon whereby loose, saturated, granular sediments lose a significant portion of their shear strength due to the generation of excess pore water pressure resulting from cyclic loading during an earthquake event. Liquefaction can result in loss of foundation support, failures due to lateral spreading, and differential compaction of affected soils. The requisite condition for liquefaction is the presence of loose, cohesionless, granular soils below the water table. According to the California Earthquake Hazards Zone Application Map (2021), the Site is not located within a liquefaction zone. The nearest liquefaction zone is the Mountain View Quadrangle, located 0.6 miles north of the Site.

## 4 Environmental Setting, Impacts, and Mitigation Measures

Although the Site is not located within a liquefaction zone, given its proximity to the Mountain View Quadrangle, local geological and hydrogeological conditions could pose a potential risk for liquefaction.

Based on results of the Geotechnical Study (**Appendix H**), the potential occurrence of seismically induced ground motion displacement or failure related to liquefaction is low to moderate, and the potential occurrence of seismically induced cyclic softening of fine-grained materials, lateral spreading, and compaction settlement (large scale) is low.

### **Demolition**

The risk of seismic-related ground failure, including liquefaction, during demolition activities is considered very low. Additionally, the building structures would be unoccupied. Therefore, impacts would be less than significant.

### **Construction**

The primary approach to mitigating potential impacts of ground failure and liquefaction on the proposed building is to design the building in accordance with the current seismic design code and using data collected during the Geotechnical Study, which includes recommendations for seismic design parameters per the 2022 CBC and American Society of Design Engineers (ASCE) 7-16 minimum design loads for buildings and other structures. With implementation of these design parameters, impacts would be less than significant.

### **Operation**

Operation of the Project would include traditional courthouse and judiciary activities. As the Site is not located within a liquefaction zone, and the courthouse building will be developed in accordance with the 2022 CBC using criteria obtained from the Geotechnical Study, impacts would be less than significant.

### **Level of Significance Before Mitigation**

Less than Significant Impact.

### **Mitigation Measures**

No mitigation required.

### **Level of Significance After Mitigation**

Less than Significant Impact.

### **b. Result in substantial soil erosion or the loss of topsoil?**

Implementation of the Project would result in exposure of soils during demolition and construction. Earth-moving activities, including trenching, excavating, stockpiling, and grading would occur. Each earth-moving and ground-disturbing activity mobilizes the soil and increases the chance of erosion, which could result in a significant impact.

### Demolition and Construction

All demolition and construction activities would be required to comply with CBC Chapter 70 standards, which would ensure implementation of appropriate measures during grading activities to reduce soil erosion. Additionally, Site development activities will require preparation and compliance with a SWPPP, as soil disturbance will exceed 1 acre. The SWPPP will consider a full range of erosion control best BMPs as further discussed in Section 4.8. Considering that Site development activities will be performed in accordance with the above erosion control standards, impacts from soil erosion during demolition and construction are anticipated to be less than significant.

### Operation

Following construction and operation of the courthouse, the property would be completed with pavement or erosion resistant landscaping and vegetation and implement drainage design per CBC standards and recommendations in the Geotechnical Study, resulting in a less than a significant impact.

### Level of Significance Before Mitigation

Less than Significant Impact.

### Mitigation Measures

No mitigation required.

### Level of Significance After Mitigation

Less than Significant Impact.

- c. Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or offsite landslide, lateral spreading, subsidence, liquefaction or collapse?**

### Landslides

According to the United States Geological Survey Map, the area contains no major landforms, is relatively flat, and contains no potential for landslides (USGS 2023). Additionally, a review of the State of California Seismic Hazards Zones (DOC 2021) – Cupertino Quadrangle Map indicates that the Site is not located within an “Earthquake-Induced Landslides” zone, which is defined as an area where previous occurrence of landslide movement or local topographic, geological, geotechnical, and subsurface water conditions indicate a potential for permanent ground displacement such that mitigation as defined in PRC Section 2693(c) would be required. Due to the flat gradient at the Site, and no anticipated changes in surface gradient from Project activities, no impacts are anticipated related to demolition, construction, or operations.

### Lateral Spreading

Lateral spreading typically occurs as a form of horizontal displacement of relatively flat-lying alluvial material toward an open or “free” face such as an open body of water, channel, or excavation. This movement is generally due to failure along a weak plane and may often be associated with liquefaction. As cracks develop within the weakened material, blocks of soil displace laterally toward the open face. The Geotechnical Study concluded that based on the relatively flat Project topography, the potential for lateral spreading is low (**Appendix H**). Impacts related to demolition, construction, or operations would be less than significant.

### Subsidence

Subsidence related to compaction settlement, or seismic densification, occurs when loose granular soils above the water table increase in density due to earthquake shaking. The soil densification can result in differential settlement because of variations in soil composition, thickness, and initial density. Materials encountered in the Geotechnical Study exploration borings were deemed less susceptible to earthquake-induced densification. The Geotechnical Study concluded the potential for compaction settlement affecting the proposed construction to be low (**Appendix H**). Impacts related to demolition, construction, or operations would be less than significant.

### Liquefaction or Collapse

The Project is not located within a liquefaction zone. The nearest liquefaction zone is the Mountain View Quadrangle, located 0.6 miles north of the Site. Based on results of the Geotechnical Study, the potential occurrence of seismically induced ground motion displacement or failure related to liquefaction is low to moderate (**Appendix H**). Project activities will be performed in accordance with current seismic design code and using data collected during the Geotechnical Study, which includes recommendations for seismic design parameters per the 2022 CBC and ASCE 7-16. With implementation of these design parameters, impacts associated with demolition, construction, and operation would be less than significant.

### Level of Significance Before Mitigation

Less than Significant Impact.

### Mitigation Measures

No mitigation required.

### Level of Significance After Mitigation

Less than Significant Impact.

### **d. Be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial direct or indirect risks to life or property?**

## 4 Environmental Setting, Impacts, and Mitigation Measures

Expansive soils are those that shrink or swell significantly with changes in moisture content. Clay content and porosity of the soil influence the change in volume. A Preliminary Geotechnical Study was performed at the Site in 2024 (**Appendix H**). The upper 2 to 5 feet of soil in portions of the site appears to be artificial fill, consisting mostly of lean clay with sand. The artificial fill layer is underlain by alluvial fan deposits, consisting of sand with clay and varying amounts of gravel, and sand and silty sand with occasional interbeds of lean and fat clay with sand to the maximum depth of exploration of 100 feet. The Geotechnical Study concluded that based on the materials encountered at the surface, the potential for expansive soils is judged to be low.

The CBC and other related construction standards apply seismic requirements and address certain grading activities. The CBC includes common engineering practices requiring special design and construction methods that reduce potential expansive soil-related impacts. Compliance with CBC regulations ensure adequate design and construction of building foundations to resist soil movement.

Considering the low risk of expansive soil at the surface determined by the Geotechnical Study, and implementation of building design under CBC construction standards, the level of impact for demolition, construction, and operation is less than significant.

### **Level of Significance Before Mitigation**

Less than Significant Impact.

### **Mitigation Measures**

No mitigation required.

### **Level of Significance After Mitigation**

Less than Significant Impact.

### **f. Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?**

The following discussion is primarily based on the Paleontological Resources Assessment prepared for the Project and included as **Appendix F** to this EIR. Should Project activities exceed five feet in depth and encounter previously undisturbed sediments, they may encounter paleontological resources. The damage or destruction of scientifically important resources would constitute a significant impact.

### **Demolition**

Demolition plans are anticipated to involve excavations of up to or over ten feet in depth into previously undisturbed sediments for removal of the current basement footings.

### Construction

Of the activities planned for the Project, grading and trenching may exceed five feet bgs into areas of previously undisturbed sediments. Other Project activities, such as surficial grading, paving, and landscaping are not anticipated to reach five feet in depth or encounter previously undisturbed sediments.

### Operation

Operation is not expected to involve ground disturbance over five feet in depth into previously undisturbed sediments.

### Level of Significance Before Mitigation

Potentially Significant Impact.

### Mitigation Measures

The ability to apply mitigation is tied to the nature of the ground-disturbing activity. Paleontological monitoring is the most common mitigation tool, during which a trained paleontologist observes construction activities and halts construction temporarily to inspect the exposed sediments. If fossils are observed, the paleontologist will recognize them and stop work so that they can be assessed and, if found to meet criteria for scientific importance, salvage them for conservation and curation in a museum.

Construction monitoring therefore requires a paleontologist to be able to observe either cuts into the ground, such as the sidewalls of trenches, a graded ground surface, or spoils piles, such as from drilling or trenching. The mitigation measures consider this to reduce potential impacts on paleontological resources to less than significant.

**PALEO-1:** A qualified paleontologist meeting professional standards as defined by Murphey et al. (2019) will be retained as the designated Project Paleontologist to oversee a paleontological mitigation program. The Project Paleontologist should draft and oversee the implementation of a Paleontological Mitigation Plan that reviews detailed Project plans and establishes monitoring plans that provide for paleontological monitoring of earthwork and ground-disturbing activities into undisturbed geologic units with high paleontological potential to be conducted by a paleontological monitor meeting industry standards (Murphey et al. 2019). This plan should include provisions for worker training, depths and locations for monitoring, monitoring procedures, a fossil discovery plan in the event a fossil is found during construction, including a plan for assessment and treatment, and requirements for final reporting of the results of the mitigation program. The plan should include a review of geotechnical data, if available, to refine the depth at which Pleistocene-aged sediments are present.

**PALEO-2:** Full-time paleontological monitoring should be implemented once excavations reach five feet in depth across the Site in previously undisturbed sediments. The Project Paleontologist may alter the frequency or depth of monitoring based on subsurface conditions.

**PALEO-3:** The Project Paleontologist should develop a WEAP training outlining the requirements and procedures if inadvertent discovery of fossils is identified during construction, to be delivered by the

paleontological monitor. This training shall be provided once to each worker involved in ground-disturbing activities before they begin work and shall be documented in training records submitted to the Judicial Council.

**PALEO-4:** In the event fossils are encountered during construction activities, all work must stop in the immediate vicinity of the finds while the paleontological monitor documents the find. The Project Paleontologist shall assess the discovery. Should the Project Paleontologist assess the discovery as meeting criteria of scientific importance to be considered a paleontological resource, the discovery shall be collected and curated in an accredited repository along with all necessary associated data and curation fees.

### Level of Significance After Mitigation

Less than Significant Impact.

## 4.6 Greenhouse Gas

The following discussion is based on the Air Quality and Greenhouse Gas Impact Assessment prepared for the Project and included as **Appendix C** to this EIR.

### 4.6.1 EXISTING CONDITIONS

To fully understand global climate change, it is important to recognize the naturally occurring “greenhouse effect” and to define the greenhouse gases (GHGs) that contribute to this phenomenon. Various gases in the earth’s atmosphere, classified as atmospheric GHGs, play a critical role in determining the earth’s surface temperature. Solar radiation enters the earth’s atmosphere from space, and a portion of the radiation is absorbed by the earth’s surface. The earth emits this radiation back toward space, but the properties of the radiation change from high-frequency solar radiation to lower-frequency infrared radiation. GHGs, which are transparent to solar radiation, are effective in absorbing infrared radiation. As a result, this radiation that would have escaped back into space is now retained, resulting in a warming of the atmosphere. This phenomenon is known as the greenhouse effect.

#### Greenhouse Gases

Among the prominent GHGs contributing to the greenhouse effect are carbon dioxide (CO<sub>2</sub>), methane (CH<sub>4</sub>), nitrous oxide (N<sub>2</sub>O), hydrofluorocarbons (HFCs), perfluorocarbons (PFCs), nitrogen trifluoride (NF<sub>3</sub>), and sulfur hexafluoride (SF<sub>6</sub>). Primary GHGs attributed to global climate change, are discussed in the following subsections.

**Carbon Dioxide.** CO<sub>2</sub> is a colorless, odorless gas. CO<sub>2</sub> is emitted in a number of ways, both naturally and through human activities. The largest source of CO<sub>2</sub> emissions globally is the combustion of fossil fuels such as coal, oil, and gas in power plants, automobiles, industrial facilities, and other sources. A number of specialized industrial processes, such as mineral production and metal production, and the use of petroleum-based products can also lead to CO<sub>2</sub> emissions. The atmospheric lifetime of CO<sub>2</sub> is variable because it is so readily exchanged in the atmosphere (USEPA 2024a).

## 4 Environmental Setting, Impacts, and Mitigation Measures

**Methane.** CH<sub>4</sub> is a colorless and odorless gas. CH<sub>4</sub> is the major component of natural gas, about 87 percent by volume. It is also formed and released to the atmosphere by biological processes occurring in anaerobic environments. CH<sub>4</sub> is emitted from a variety of both human-related and natural sources. Human-related sources include fossil fuel production, animal husbandry (e.g., enteric fermentation in livestock and manure management), rice cultivation, biomass burning, and waste management. These activities release significant quantities of CH<sub>4</sub> to the atmosphere. Natural sources of CH<sub>4</sub> include wetlands, gas hydrates, permafrost, termites, oceans, freshwater bodies, non-wetland soils, and other sources such as wildfires. The atmospheric lifetime of CH<sub>4</sub> is about 12 years (USEPA 2024a).

**Nitrous Oxide.** N<sub>2</sub>O is a clear, colorless gas with a slightly sweet odor. N<sub>2</sub>O is produced by both natural and human-related sources. Primary human-related sources of N<sub>2</sub>O are agricultural soil management, animal manure management, sewage treatment, mobile and stationary combustion of fossil fuels, adipic acid production, and nitric acid production. N<sub>2</sub>O is also produced naturally from a wide variety of biological sources in soil and water, particularly microbial action in wet tropical forests. The atmospheric lifetime of N<sub>2</sub>O is approximately 120 years (USEPA 2024a).

**Hydrofluorocarbons.** HFCs are manufactured chemicals, many of which have been developed as alternatives to ozone-depleting substances for industrial, commercial, and consumer products. The only significant emissions of HFCs before 1990 were of the chemical HFC-23, which is generated as a byproduct of the production of HFC-22, or Freon 22, used in air conditioning applications. The atmospheric lifetime for HFCs varies from just over a year for HFC-152a to 260 years for HFC-23. Most of the commercially used HFCs have atmospheric lifetimes of less than 15 years (e.g., HFC-134a, which is used in automobile air conditioning and refrigeration, has an atmospheric life of 14 years) (USEPA 2024a).

**Perfluorocarbons.** PFCs are colorless, highly dense, chemically inert, and nontoxic. There are seven PFC gases: perfluoromethane (CF<sub>4</sub>), perfluoroethane (C<sub>2</sub>F<sub>6</sub>), perfluoropropane (C<sub>3</sub>F<sub>8</sub>), perfluorobutane (C<sub>4</sub>F<sub>10</sub>), perfluorocyclobutane (C<sub>4</sub>F<sub>8</sub>), perfluoropentane (C<sub>5</sub>F<sub>12</sub>), and perfluorohexane (C<sub>6</sub>F<sub>14</sub>). Natural geological emissions have been responsible for the PFCs that have accumulated in the atmosphere in the past; however, the largest current source is aluminum production, which releases CF<sub>4</sub> and C<sub>2</sub>F<sub>6</sub> as byproducts. The estimated atmospheric lifetimes for CF<sub>4</sub> and C<sub>2</sub>F<sub>6</sub> are 50,000 and 10,000 years, respectively (USEPA 2024a).

**Nitrogen Trifluoride.** NF<sub>3</sub> is an inorganic, colorless, odorless, toxic, nonflammable gas used as an etchant in microelectronics. NF<sub>3</sub> is predominantly employed in the cleaning of the plasma-enhanced chemical vapor deposition chambers in the production of liquid crystal displays and silicon-based thin film solar cells. In 2009, NF<sub>3</sub> was listed by California as a potential GHG to be listed and regulated under AB 32, Section 38505 Health and Safety Code. NF<sub>3</sub> has an atmospheric lifetime of 740 years (USEPA 2024a).

**Sulfur Hexafluoride.** SF<sub>6</sub> is an inorganic compound that is colorless, odorless, nontoxic, and generally nonflammable. SF<sub>6</sub> is primarily used as an electrical insulator in high voltage equipment. The electric power industry uses roughly 80 percent of all SF<sub>6</sub> produced worldwide. Leaks of SF<sub>6</sub> occur from aging equipment and during equipment maintenance and servicing. The use of SF<sub>6</sub> in electric power systems

## 4 Environmental Setting, Impacts, and Mitigation Measures

has decreased dramatically in recent years; for example, according to the USEPA, an old circuit breaker can contain up to 2,000 pounds of SF<sub>6</sub> while modern breakers usually contain less than 100 pounds. Best practices to reduce the potential for SF<sub>6</sub> leaks include training staff to handle SF<sub>6</sub> properly; implement leak detection and repair strategies; and decommissioning equipment appropriately. SF<sub>6</sub> has an atmospheric life of 3,200 years (USEPA 2023).

**Black Carbon.** Black carbon is the most strongly light-absorbing component of PM emitted from burning fuels such as coal, diesel, and biomass. Black carbon contributes to climate change both directly by absorbing sunlight and indirectly by depositing on snow and by interacting with clouds and affecting cloud formation. Black carbon is considered a short-lived species, which can vary spatially and, consequently, it is very difficult to quantify associated global warming potentials. The main sources of black carbon in California are wildfires, off-road vehicles (e.g., locomotives, marine vessels, tractors, excavators, dozers), on-road vehicles (e.g., cars, trucks, and buses), fireplaces, agricultural waste burning, and prescribed burning of forest or wildlands. California has been an international leader in reducing emissions of black carbon, including programs that target reducing PM from diesel engines and burning activities (CARB 2013).

### Global Warming Potential

Each GHG differs in its ability to absorb heat in the atmosphere based on the lifetime, or persistence, of the gas molecule in the atmosphere. Often, estimates of GHG emissions are presented in carbon dioxide equivalents (CO<sub>2</sub>e), which weigh each gas by its global warming potential (GWP).

Expressing GHG emissions in carbon dioxide equivalents takes the contribution of all GHG emissions to the greenhouse effect and converts them to a single unit equivalent to the effect that would occur if only CO<sub>2</sub> were being emitted. Based on a 100-year time horizon, CH<sub>4</sub> traps over 25 times more heat per molecule than CO<sub>2</sub>; and N<sub>2</sub>O absorbs roughly 298 times more heat per molecule than CO<sub>2</sub>. Additional GHGs with high GWP include NF<sub>3</sub>, SF<sub>6</sub>, PFCs, and black carbon.

### Sources of Greenhouse Gas Emissions

On a global scale, GHG emissions are predominantly associated with activities related to energy production from fossil fuel sources; changes in land use, such as deforestation and land clearing; industrial sources; agricultural activities; transportation; waste and wastewater generation; and commercial and residential land uses. Worldwide, energy production including the burning of coal, natural gas, and oil for electricity and heat is the largest single source of global GHG emissions.

#### United States of America

In 2021, net GHG emissions in the United States totaled 5,586 million metric tons of carbon dioxide equivalents (MMTCO<sub>2</sub>e). Within the United States, the largest contributor to GHG emissions is the transportation sector (28 percent). The next largest contributors are from electricity production (25 percent) and industry (23 percent), followed by the commercial and residential sector (13 percent) and the agricultural sector (10 percent). Transportation emissions primarily come from burning fossil fuels for cars, trucks, ships, trains, and planes. Over 90 percent of the fuel used for transportation is petroleum-based,

## 4 Environmental Setting, Impacts, and Mitigation Measures

which includes primarily gasoline and diesel. The bulk of emissions generated from energy production come from burning fossil fuels, mostly coal and natural gas. Industry emissions are also primarily generated from fossil fuels burned for heat, the use of certain products that contain GHGs, and the handling of waste. Similar to industry sector emissions, commercial and residential uses arise primarily from fossil fuels for heat, the use of certain products that contain GHGs, and the handling of waste. Agricultural emissions come from livestock such as cows, agricultural soil, and rice production. The land use and forestry sector within the U.S. serves as a carbon sink. Carbon sinks absorb CO<sub>2</sub> from the atmosphere. Land areas across the U.S. absorbed approximately 12 percent of the 2021 GHG emissions (USEPA 2024b).

### California

In 2021, GHG emissions within California totaled 381.3 MMTCO<sub>2</sub>e. Similar to national emissions, in California, the transportation sector is the largest contributor. Transportation emissions account for approximately 38 percent of the total statewide GHG emissions. A majority of transportation emissions are derived from passenger vehicles and heavy-duty trucks. Emissions associated with industrial uses are the second largest contributor, totaling roughly 19 percent. Industrial emissions are driven by fuel combustion from sources that include refineries, oil and gas extraction, cement plants, and the portion of cogeneration emissions attribution to thermal energy output. Electricity generation (in state and imports) totaled roughly 16 percent. Emissions from the electricity generation sector have declined over the years due to the increase in renewable generation that continues to replace fossil power (CARB 2023).

### **Effects of Global Climate Change**

There are uncertainties as to exactly what the climate changes will be in various areas of earth. There are also uncertainties associated with the magnitude and timing of other consequences of a warmer planet, e.g., sea level rise, spread of certain diseases out of their usual geographic range, the effect on agricultural production, water supply, sustainability of ecosystems, increased strength and frequency of storms, extreme heat events, increased air pollution episodes, and the consequence of these effects on the economy.

Within California, climate changes would likely alter the ecological characteristics of many ecosystems throughout the state. Such alterations would likely include increases in surface temperatures and changes in the form, timing, and intensity of precipitation. For instance, historical records are depicting an increasing trend toward earlier snowmelt in the Sierra Nevada Mountain range. This snowpack is a principal supply of water for the state, providing roughly 50 percent of the state's annual runoff. If this trend continues, some areas of the state may experience an increased danger of floods during the winter months and possible exhaustion of the snowpack during spring and summer months. An earlier snowmelt would also impact the state's energy resources. An early exhaustion of the Sierra snowpack may force electricity producers to switch to more costly or non-renewable forms of electricity generation during spring and summer months. A changing climate may also impact agricultural crop yields, coastal structures, and biodiversity. As a result, resultant changes in climate will likely have detrimental effects on some of California's largest industries, including agriculture, wine, tourism, skiing, recreational and commercial fishing, and forestry.

### 4.6.2 REGULATORY SETTING

There are considerable regulatory actions regarding GHGs and climate change at the federal, state, regional, and local level. The following includes the key regulations that may be relevant to the Project. As noted previously, the Judicial Council is not generally subject to regional or local regulations, except to the extent the regulations are implementing delegated state and federal authority that is applicable to the Judicial Council.

#### **Federal**

The USEPA is the federal agency responsible for implementing the FCAA. On April 2, 2007, the U.S. Supreme Court held that the USEPA must consider regulation of motor vehicle GHG emissions. In addition, in 2010, the USEPA issued a GHG Tailoring Rule, which relates to permitting GHG emissions of major sources.

The Inflation Reduction Act of 2022 is a multi-faceted, landmark federal law intended to reduce GHG emissions, help build a clean economy, reduce energy costs for Americans, and advance environmental justice. The Inflation Reduction Act affirms USEPA's authority to regulate GHG emissions under the FCAA.

#### **State**

##### Executive Order S-3-05

EO S-3-05, issued in June 2005, set forth the following target dates by which statewide GHG emissions shall be progressively reduced:

- By 2010, reduce GHG emissions to 2000 levels.
- By 2020, reduce GHG emissions to 1990 levels.
- By 2050, reduce GHG emissions to 80 percent below 1990 levels.

##### Assembly Bill 32: The California Global Warming Solutions Act

In line with EO S-3-05, AB 32, passed in 2006, required that GHGs emitted in California be reduced to 1990 levels by the year 2020. GHGs, as defined under AB 32, include CO<sub>2</sub>, CH<sub>4</sub>, N<sub>2</sub>O, HFCs, PFCs, and SF<sub>6</sub>. Since AB 32 was enacted, a seventh chemical, NF<sub>3</sub>, has also been added to the list of GHGs. CARB is the state agency charged with monitoring and regulating sources of GHGs. AB 32 states the following:

*Global warming poses a serious threat to the economic well-being, public health, natural resources, and the environment of California. The potential adverse impacts of global warming include the exacerbation of air quality problems, a reduction in the quality and supply of water to the state from the Sierra snowpack, a rise in sea levels resulting in the displacement of thousands of coastal businesses and residences, damage to marine ecosystems and the natural environment, and an increase in the incidences of infectious diseases, asthma, and other human health-related problems.*

## 4 Environmental Setting, Impacts, and Mitigation Measures

CARB approved the 1990 GHG emissions level of 427 MMTCO<sub>2</sub>e on December 6, 2007. Therefore, to meet the state's target, emissions generated in California in 2020 were required to be equal to or less than 427 MMTCO<sub>2</sub>e. In order to set a framework for the state to meet this target, CARB was tasked with creating a Scoping Plan (as described below). California announced in July 2018 that the state emitted 427 MMTCO<sub>2</sub>e in 2016 and achieved AB 32 goals (CARB 2018).

### Executive Order B-30-15

EO B-30-15, issued in April 2015, established a statewide GHG reduction goal of 40 percent below 1990 levels by 2030. The emission reduction target acts as an interim goal between the AB 32 goal (i.e., achieve 1990 emission levels by 2020) and EO S-3-05 goal of reducing statewide emissions 80 percent below 1990 levels by 2050.

### Senate Bill 32

Senate Bill (SB) 32 is an amendment to the California Global Warming Solutions Act (AB 32) and was signed into law on September 8, 2016. SB 32 states that "In adopting rules and regulations to achieve the maximum technologically feasible and cost-effective GHG emissions reductions authorized by this division, the state [air resources] Board shall ensure that statewide GHG emissions are reduced to at least 40 percent below the statewide GHG emissions limit no later than December 31, 2030." In other words, SB 32 codified the interim goal established in EO B-30-15 of reducing statewide emissions to 40 percent below 1990 levels by 2030.

### Executive Order N-19-19

EO N-19-19, issued in September 2019, directs the Department of Finance to create a Climate Investment Framework that shifts investments into sectors that focus on carbon reduction and climate resiliency. This EO also directs the State Transportation Agency to align transportation spending with the Scoping Plan, including encouraging manufacturers to produce clean vehicles.

### Assembly Bill 1279: The California Climate Crisis Act

On September 16, 2022, AB 1279, also known as the California Climate Crisis Act, codified the carbon neutrality goal established by EO B-55-18. AB 1279 establishes the policy of the state to achieve carbon neutrality as soon as possible, but no later than 2045, and maintain net negative GHG emissions thereafter. AB 1279 would also ensure that by 2045 the statewide anthropogenic GHG emissions are reduced by at least 85 percent below 1990 levels. The bill would require CARB to ensure that an updated Scoping Plan identifies and recommends measures to achieve carbon neutrality, and to identify and implement policies and strategies that enable CO<sub>2</sub> removal and carbon capture, utilization, and storage technologies to complement AB 1279's emissions reduction requirements.

### 2022 Climate Change Scoping Plan

The 2022 Climate Change Scoping Plan (2022 Scoping Plan) was approved in December 2022 and assesses progress toward achieving the interim 2030 target and laying out a path to achieve carbon neutrality no later than 2045. The 2022 Scoping Plan focuses on outcomes needed to achieve carbon

## 4 Environmental Setting, Impacts, and Mitigation Measures

neutrality by assessing paths for clean technology, energy deployment, natural and working lands, and others, and is designed to meet the state's long-term climate objectives and support a range of economic, environmental, energy security, environmental justice, and public health priorities (CARB 2022a).

### Cap-and-Trade Program

CARB administers the state's Cap-and-Trade Program, which covers GHG sources that emit more than 25,000 metric tons of carbon dioxide equivalents (MTCO<sub>2e</sub>) per year, such as refineries, power plants, and industrial facilities. This market-based approach to reducing GHG emissions provides economic incentives for achieving GHG emission reductions.

The governor signed AB 398 on July 25, 2017, to extend the cap-and-trade program to 2030. The legislation includes provisions to ensure that offsets used by sources are limited to 4 percent of their compliance obligation from 2021 to 2025 and 6 percent of their compliance obligation from 2026 through 2030. AB 398 also prevents air districts from adopting or implementing emission reduction rules from stationary sources that are also subject to the cap-and-trade program (CARB 2022b).

### Senate Bill 375: The Sustainable Communities and Climate Protection Act of 2008

SB 375 was signed into law on September 30, 2008. According to SB 375, the transportation sector is the largest contributor of GHG emissions, which emits more than 40 percent of the total GHG emissions in California. SB 375 states, "Without improved land use and transportation policy, California will not be able to achieve the goals of AB 32." SB 375 does the following: (1) requires metropolitan planning organizations to include sustainable community strategies in their regional transportation plans for reducing GHG emissions, (2) aligns planning for transportation and housing, and (3) creates specified incentives for the implementation of the strategies.

In 2018, CARB updated the SB 375 Greenhouse Gas Emission Reduction Targets, setting updated GHG reduction targets for metropolitan planning organizations for 2020 and 2035 (CARB 2024). The Bay Area reduction targets for per capita vehicular emissions were 10 percent by 2020 and 19 percent by 2035.

### Assembly Bill 1493: Pavley Regulations and Fuel Efficiency Standards

AB 1493, enacted on July 22, 2002, required CARB to develop and adopt regulations and fuel efficiency standards that reduce GHGs emitted by passenger vehicles and light duty trucks.

The fuel efficiency standards were phased in during the 2009 through 2016 model years.

The second phase of the implementation for AB 1493 was incorporated into Amendments to the Low-Emission Vehicle Program, referred to as LEV III or the ACC program. The ACC program combines the control of smog-causing pollutants and GHG emissions into a single coordinated package of requirements for model years 2017 through 2025. The regulation would reduce GHGs from new cars by 34 percent from 2016 levels by 2025. The rules would reduce pollutants from gasoline and diesel-powered cars and would deliver increasing numbers of zero-emission technologies, such as full battery electric cars, newly emerging plug-in hybrid electric vehicles, and hydrogen fuel cell cars. The regulations would also provide adequate fueling infrastructure for the increasing numbers of hydrogen fuel cell

## 4 Environmental Setting, Impacts, and Mitigation Measures

vehicles planned for deployment in California. In general, these regulations ensure that emissions associated with non-commercial, personal transportation are gradually reduced such that the state is able to achieve its climate goals.

### Senate Bill 350: Clean Energy and Pollution Reduction Act of 2015

SB 350 (October 7, 2015) reaffirms California's commitment to reducing its GHG emissions and addressing climate change. Key provisions include an increase in the Renewable Portfolio Standards (RPS), higher energy efficiency requirements for buildings, initial strategies toward a regional electricity grid, and improved infrastructure for EV charging stations.

### Executive Order S-13-08: Climate Adaptation Strategy

EO S-13-08 states that, "climate change in California during the next century is expected to shift precipitation patterns, accelerate sea level rise and increase temperatures, thereby posing a serious threat to California's economy, to the health and welfare of its population and to its natural resources." Pursuant to the requirements in this EO, the 2009 California Climate Adaptation Strategy was adopted, which is the, "... first statewide, multi-sector, region-specific, and information-based climate change adaptation strategy in the United States." Objectives include analyzing risks of climate change in California, identifying and exploring strategies to adapt to climate change, and specifying a direction for future research.

### Executive Order S-20-04

EO S-20-04, issued in December 2004, required increased investments in energy efficiency in state-owned buildings. This EO also mandated that all new and renovated buildings paid for with state funds be certified as LEED Silver standard or higher.

### Executive Order N-7-22

EO N-7-22, issued in 2022, emphasizes the severity of long-term drought conditions throughout the state, and encourages the voluntary reduction in water consumption. In addition, the EO directs the State Water Board to adopt several emergency regulations, including, among other requirements, a ban on the irrigation of "non-functional turf", which is defined as turf that is solely ornamental and not otherwise used for recreation.

### California Green Building Code and Energy Efficiency Standards

The CALGreen (CCR Title 24, Part 11) is a state-mandated building code aimed at improving public health, safety, and general welfare through mandating efficient design and construction of buildings within the state. An updated CALGreen standards is published every three years by order of the California Legislature.

The California Energy Efficiency Standards (CCR Title 24, Part 6) are updated by the California Energy Commission every three years. The triennial updates strengthen efficiency standards and allow for the regulation consideration of new energy-efficient technologies and methods. Energy-efficient buildings

## 4 Environmental Setting, Impacts, and Mitigation Measures

require less electricity; therefore, increased energy efficiency reduces fossil fuel consumption and decreases GHG emissions. The current 2022 Building Energy Efficiency Standards went into effect on January 1, 2023.

### Judicial Council's Water Conservation Policy

Adopted in 2015, the Judicial Council of California's Water Conservation Policy identifies best practices to encourage water conservation in all capital projects and courthouse facilities. The best practices that may be applicable to the Project include using non-potable water for dust control during construction, installing efficient indoor plumbing fixtures, and requiring climate-appropriate landscape planning (Judicial Council 2015).

### Judicial Council's Appellate Court Facilities Guidelines

The Judicial Council's Appellate Court Facilities Guidelines are intended to ensure that new facilities meet certain principles; specifically, facilities shall be (1) safe and cost-effective, (2) durable, operationally efficient, and easily maintained, and (3) reflect a place of justice. Sections of the guidelines that relate to GHG emissions include General Facilities Design Guidelines Sections 7, Heating, Ventilating and Air Conditioning, Section 8, Plumbing and Electrical, Section 10, Lighting, and Appendix A, Design Guidelines (Judicial Council of California 2002).

## **Regional**

### Bay Area Air Quality Management District

Appendix B of the BAAQMD's CEQA Guidelines, CEQA Thresholds for Evaluating the Significance of Climate Impacts from Land Use Project and Plans, establishes non-binding recommendations for evaluating impacts related to GHG emissions (BAAQMD 2022a).

The BAAQMD analyzed the requirements of land use development projects that would achieve California's long-term climate goal of carbon neutrality by 2045. The resulting approach, if implemented and incorporated by a land use project, would result in the project contributing its portion ("fair share") toward achieving California's long-term climate goals and carbon neutrality by 2045.

## **Local**

There are no regional or local plans, policies, regulations, or ordinances related to greenhouse gas that apply to the Project.

## **4.6.3 IMPACTS ANALYSIS**

### **4.6.3.1 Methodology**

#### **GHG Emission Methods**

CalEEMod version 2022.1.1.23 was used to estimate construction and operational emissions associated with the Project. Refer to Section 4.2.3 of this EIR and **Appendix C** for additional information.

### 4.6.3.2 Thresholds of Significance

Lead agencies have flexibility to develop their own significance thresholds or to determine significance thresholds on a case-by-case basis. Although CARB has not adopted quantitative thresholds of significance for GHG emissions, they have delegated regulatory authority over the air quality within the SFBAAB to the BAAQMD. Applying its expertise, the BAAQMD adopted guidelines which, if followed, provide that a project's GHG impacts, including cumulative impacts, are less than significant. The Judicial Council finds the BAAQMD's analysis and guidelines persuasive and adopts the proposed measures as the threshold of significance for this Project. In April 2022, the BAAQMD Board of Directors adopted the CEQA Thresholds for Evaluating the Significance of Climate Impacts from Land Use Projects and Plans, which updated the BAAQMD's previous guidance related to evaluating GHG emissions to address the most recent climate legislation.

Because construction emissions are temporary and variable, the BAAQMD has not developed a quantitative threshold of significance for construction-related GHG emissions. However, BAAQMD recommends that construction-related GHG emissions should still be quantified and disclosed in environmental documents.

For land use projects, the BAAQMD considers a project to have a less than significant impact related to GHG emissions if it meets the specific project design elements listed below (BAAQMD 2023).

#### Buildings

- a. The project will not include natural gas appliances or natural gas plumbing (in both residential and non-residential development).
- b. The project will not result in any wasteful, inefficient, or unnecessary energy use as determined by the analysis required under CEQA Section 21100(b)(3) and Section 15126.2(b) of the State CEQA Guidelines.

#### Transportation

- a. The project will achieve a reduction in project-generated VMT below the regional average consistent with the current version of the California Climate Change Scoping Plan (currently 15 percent) or meet a locally adopted Senate Bill 743 VMT target that reflects the recommendations provided in the Governor's Office of Planning and Research's Technical Advisory on Evaluating Transportation Impacts in CEQA:
  - i. Residential projects: 15 percent below the existing VMT per capita;
  - ii. Office projects: 15 percent below the existing VMT per employee;
  - iii. Retail projects: no net increase in existing VMT.
- b. The project will achieve compliance with off-street EV requirements in the most recently adopted version of CALGreen Tier 2.

**a. Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?**

As noted previously, the applicable thresholds for the significance of GHG emissions are qualitative, and the following GHG emissions inventories are provided for informational purposes. Potential impacts related to GHGs from implementation of the Project are considered in comparison with BAAQMD’s adopted thresholds of significance below.

**Demolition and Construction Emission Inventory**

GHGs would be emitted by the off-road equipment used in demolition and construction activities and vehicle travel by workers and material deliveries to the Site. The estimated demolition and construction GHG emissions are shown in **Table 4.6-1**.

**Table 4.6-1. Demolition and Construction Greenhouse Gas Emissions**

Year	Emissions (MTCO <sub>2e</sub> )
2025	17.97
2026	116.94
2027	223.89
2028	142.32
<b>Total</b>	<b>501.12</b>

Source: Appendix C

**Operational Emission Inventory**

The Project would replace the existing courthouse building at the Site. The existing courthouse has been unoccupied since 2016 and generates only minor emissions associated with off-gassing paints and asphalt and electricity for outdoor lighting. Additionally, the existing Sixth Appellate District currently operates out of leased space in a commercial office building in downtown San Jose in Santa Clara County. With implementation of the Project, it can be assumed that the office space would be rented to another organization that will emit similar emissions. Therefore, to provide a conservative analysis, the modeled operational emissions were conservatively assumed to be from a new build with no net reductions from existing operations.

Operational, or long-term, emissions occur over the life of the Project. Operational activities of the Project would generate GHG emissions primarily from mobile sources. Operational GHG emissions are shown in **Table 4.6-2**.

**Table 4.6-2. Operational Greenhouse Gas Emissions**

Source	Emissions (MTCO <sub>2e</sub> per year)
Mobile	98.07
Area	0.73

#### 4 Environmental Setting, Impacts, and Mitigation Measures

Source	Emissions (MTCO <sub>2e</sub> per year)
Energy	165.23
Water	19.65
Waste	14.52
Refrigerants	0.02
Stationary	7.64
<b>Total</b>	<b>305.86</b>

Source: Appendix C

#### Consistency with BAAQMD's Project Design Elements

According to the BAAQMD's guidance, in order to find a less than significant GHG impact, projects must include certain project design elements. The Project is evaluated in relation to each design element in **Table 4.6-3**.

**Table 4.6-3. Project Consistency with BAAQMD's Project Design Elements**

Measure	Consistency Determination
<b>Buildings a)</b> The project will not include natural gas appliances or natural gas plumbing (in both residential and non-residential development).	<b>Consistent.</b> The Project would include all electric appliances and plumbing and, therefore, would not include natural gas appliances or natural gas plumbing.
<b>Buildings b)</b> The project will not result in any wasteful, inefficient, or unnecessary energy use as determined by the analysis required under CEQA Section 21100(b)(3) and Section 15126.2(b) of the State CEQA Guidelines.	<b>Consistent.</b> As explained in further detail in Section 3.6, Energy, of the Initial Study prepared for the Project, the Project would comply with all applicable federal and state regulations regarding energy use during both Project construction and operations. Therefore, the Project would not result in any wasteful, inefficient, or unnecessary energy use.
<b>Transportation a)</b> The project will achieve a reduction in project-generated VMT below the regional average consistent with the current version of the California Climate Change Scoping Plan (currently 15 percent) or meet a locally adopted Senate Bill 743 VMT target that reflects the recommendations provided in the Governor's Office of Planning and Research's Technical Advisory on Evaluating Transportation Impacts in CEQA: <ul style="list-style-type: none"> <li>i. Residential projects: 15 percent below the existing VMT per capita;</li> <li>ii. Office projects: 15 percent below the existing VMT per employee;</li> <li>iii. Retail projects: no net increase in existing VMT.</li> </ul>	<b>Consistent.</b> The significance threshold that would represent 15 percent below the regional average is 13.03 VMT per employee, and Project VMT was determined to be 8.75 VMT per employee. Therefore, the Project would achieve a 15 percent reduction in project-generated VMT below the regional average consistent with the current version of the California Climate Change Scoping Plan. Please refer to Section 4.10, Transportation, of this EIR for additional detail regarding the Project VMT analysis.

## 4 Environmental Setting, Impacts, and Mitigation Measures

Measure	Consistency Determination
<p><b>Transportation b)</b> The project will achieve compliance with off-street EV requirements in the most recently adopted version of CALGreen Tier 2.</p>	<p><b>Consistent.</b> Consistent with Tier 2 of the CALGreen Code (see Table A5.106.5.3.2), for non-residential projects with 26 to 50 onsite parking stalls, at least 17 spaces shall be EV-capable, and six of those shall include a Level 2 EV charging station. The Project would include 17 EV-capable spaces, including six with charging stations. Therefore, the Project would comply with the applicable Tier 2 CALGreen standards.</p>

Source: BAAQMD 2022b

Based on the analysis included above, the Project would comply with the BAAQMD’s project design elements. The Project would not generate GHG emissions that may have a significant impact on the environment, and the impact would be less than significant.

### Level of Significance Before Mitigation

Less than Significant Impact.

### Mitigation Measures

No mitigation required.

### Level of Significance After Mitigation

Less than Significant Impact.

### b. Conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of greenhouse gases?

A project would have a significant impact with respect to GHG emissions and global climate change if it would substantially conflict with the provisions of Section 15064.4(b) of the CEQA Guidelines. Pursuant to Appendix G of the CEQA Guidelines, a significant GHG impact is identified if the project could conflict with applicable GHG reduction plans, policies, or regulations. The Project would be subject to complying with SB 32 and AB 1279. For this analysis, the applicable plan adopted for the purpose of reducing GHG emissions is the CARB’s 2022 Scoping Plan. Project consistency with the foregoing plan is evaluated below.

### Consistency with CARB’s 2022 Scoping Plan

The 2022 Scoping Plan, approved in December 2022, builds upon previous iterations of state scoping plans to achieve carbon neutrality and reduce anthropogenic GHG emissions below 85 percent below 1990 no later than 2045, as directed by AB 1279 (CARB 2022a). **Table 4.6-4** identifies the Scoping Plan policies that may be applicable to the Project.

**Table 4.6-4. Project Consistency with 2022 Scoping Plan Greenhouse Gas Reduction Strategies**

Measure	Consistency Determination
Deploy ZEVs and reduce driving demand	<b>Consistent.</b> While the Project would not deploy ZEVs, consistent with the 2022 CBC, or applicable code at the time of construction, the proposed parking area would include EV-capable spaces and EV chargers. Additionally, the Project would reduce driving demand due to the Site location along the El Camino Real high-quality transit corridor (Metropolitan Transportation Commission [MTC]/ABAG 2024), and within 0.5-mile of the following four bus stops serviced by VTA: El Camino & Pastoria, El Camino & Hollenbeck, El Camino & Mathilda north, and El Camino & Mathilda south. The availability of public transportation options would encourage the use of alternative modes of transportation and reduce single-passenger vehicle use.
Generate clean electricity	<b>Consistent.</b> The Project would include PV panels to provide solar power generation on 17 covered spaces in the proposed parking area. Therefore, the Project would support future generation of clean electricity.
Decarbonize Buildings	<b>Consistent.</b> The Project would not include any natural gas connections and would be constructed in compliance with the applicable version of the CBC. Additionally, the Project would include PV panels on 17 parking spaces to generate clean energy.
Reduce non-combustion emissions (Methane)	<b>Consistent.</b> The Project would not include any land uses that generate significant levels of methane, such as landfills or dairy farms.
Reduce non-combustion emissions (Hydrofluorocarbons [HFCs])	<b>Consistent.</b> The Project will comply with all state regulations governing short-lived climate pollutants (SLCPs), including HFCs.

Source: CARB 2022a

This analysis finds that the Project would be consistent with the applicable strategies recommended in the 2022 Scoping Plan.

The Project would not conflict with an applicable plan adopted for the purposes of reducing GHG emissions, and impacts would be considered less than significant.

**Level of Significance Before Mitigation**

Less than Significant Impact.

**Mitigation Measures**

No mitigation required.

**Level of Significance After Mitigation**

Less than Significant Impact.

### 4.7 Hazards and Hazardous Materials

This section evaluates the potential effects on the public or environment from the storage and use of hazardous materials for the Project. This section also discusses reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment. It presents the laws, regulations, and standards related to hazardous materials, describes existing conditions, identifies potential impacts on the public and environment from routine transport, use, and disposal of hazardous materials, and presents mitigation measures to reduce potentially significant impacts.

#### 4.7.1 EXISTING CONDITIONS

The Site is located within the City and is a state-owned asset that was previously used by the Superior Court of Santa Clara County for trial court operations. This property has been identified for potential redevelopment as a permanent facility for the Sixth Appellate District that would alleviate the ongoing uncertainty and ongoing escalating lease expenses of operating in leased space. This Site is 2.03 acres with an existing 19,994 square foot, single-story building with a partial basement constructed in 1967 and associated parking and landscaped areas. A Phase I Environmental Site Assessment (ESA) was completed for the Project by Stantec in 2023 (**Appendix G**) to assess potential soil, soil vapor, and groundwater contamination that may have resulted from the current or historical use of the Site and adjoining and nearby properties.

A pre-demolition asbestos, lead-based paint, polychlorinated biphenyls (PCBs), and visual hazardous materials survey was conducted at the Site by Stantec in 2024 to identify building materials potentially containing asbestos, building materials potentially containing PCBs, and lead in paint (**Appendix I**). A variety of building materials were sampled within the existing building, associated parking lot, and ancillary shed structure in the parking lot to the east of the building. Asbestos was detected in the existing courthouse and shed structure and lead paint was detected on the existing courthouse. PCBs were detected in the courthouse building material below the limit of PCB bulk product waste.

#### 4.7.2 REGULATORY SETTING

##### Federal

##### Federal Toxic Substances Control Act/Resource Conservation and Recovery Act/Hazardous and Solid Waste Act

The Federal Toxic Substances Control Act (1976) and the Resource Conservation and Recovery Act of 1976 (RCRA) established a program administered by the USEPA to regulate the generation, transportation, treatment, storage, and disposal of hazardous waste. RCRA was amended in 1984 by the Hazardous and Solid Waste Act (HSWA), which affirmed and extended the “cradle to grave” system of regulating hazardous wastes.

## 4 Environmental Setting, Impacts, and Mitigation Measures

### Comprehensive Environmental Response, Compensation, and Liability Act/Superfund Amendments and Reauthorization Act

The Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA), commonly known as "Superfund," was enacted by Congress on December 11, 1980. This law (42 United States Code [USC] 103) provides broad federal authority to respond directly to releases or threatened releases of hazardous substances that may endanger public health or the environment. CERCLA establishes requirements concerning closed and abandoned hazardous waste sites, provides for liability of persons responsible for releases of hazardous waste at these sites, and establishes a trust fund to provide for clean-up when no responsible party can be identified. CERCLA also enables the revision of the National Contingency Plan (NCP). The NCP (Title 40, CFR, Part 300) provides the guidelines and procedures needed to respond to releases and threatened releases of hazardous substances, pollutants, and/or contaminants. The NCP also established the National Priorities List (NPL). CERCLA was amended by the Superfund Amendments and Reauthorization Act (SARA) on October 17, 1986.

### Occupational Safety and Health Administration

The Occupational Safety and Health Administration's (OSHA's) mission is to ensure the safety and health of U.S. workers by setting and enforcing standards; providing training, outreach, and education; establishing partnerships; and encouraging continual improvement in workplace safety and health. The OSHA staff establishes and enforces protective standards and reaches out to employers and employees through technical assistance and consultation programs. OSHA standards are listed in 29 CFR 1910. 29 CFR 1926.62 addresses safety and health regulations for construction involving lead. 29 CFR 1910.1001 and 1926.1101 address asbestos exposure for general industry and for the construction industry respectively.

### United States Environmental Protection Agency (USEPA), National Emissions Standard for Hazardous Air Pollutants (NESHAP), 40 CFR Part 61

Under the NESHAP regulation, no visible emissions are allowed during facility demolition or renovation activities, which involve regulated asbestos-containing materials. For this reason, all facilities must be surveyed for asbestos-containing materials prior to demolition or renovation. The USEPA, and/or the local air quality management district which has delegated authority from the USEPA NESHAP, must be notified prior to any building demolition, even if no asbestos-containing materials are present. Assessments are made by the inspector as to the condition of each material and whether or not the materials are "friable."

### USEPA Asbestos Hazard Emergency Response Act (AHERA), 40 CFR Part 763, Subpart E

The AHERA requires performance of asbestos surveys and the development of Asbestos Management Plans for all K-12 public and non-profit private schools in the United States and its territories. Although this regulation applies to such schools only, the procedures mandated under AHERA are considered the industry standard for conducting asbestos surveys.

## 4 Environmental Setting, Impacts, and Mitigation Measures

### Other Regulations

Other federal regulations overseen by the USEPA relevant to hazardous materials and environmental contamination include 40 CFR Parts 100 to 149 -- Water Programs, 40 CFR Parts 239 to 259 -- Solid Wastes, and 40 CFR Parts 260 to 279 -- Hazardous Waste. These regulations designate hazardous substances under the CWA; determine the reportable quantity for each substance that is designated as hazardous; and establish quantities of designated substances equal to or greater than the reportable quantities that may be discharged into WOTUS.

### **State**

#### Asbestos and Lead – California Code of Regulations

In California, potential asbestos exposure in construction is regulated when construction, alteration, repair, maintenance, renovation or demolition of structures, substrates, or portions thereof contain asbestos [8 CCR §1529 (a)(1)(C)]. Additionally, in California, materials containing greater than one-tenth of one percent (>0.1%) asbestos by weight are regulated as asbestos-containing construction materials (ACM).

The State of California, Title 17, Division 1, Chapter 8 (Title 17) pertains to all public and residential buildings in California and is enforced by the California Department of Public Health. Pursuant to Title 17 and EPA regulations, lead-based paint (LBP) is defined as paint or other surface coatings containing an amount of lead equal to or greater than one milligram per square centimeter (1.0 mg/cm<sup>2</sup>) or half of one percent [ $\geq 0.5\%$  or  $\geq 5,000$  parts per million (ppm)] by weight. Title 17 also defines a lead hazard as deteriorated LBP, disturbing LBP or presumed LBP without containment, or any other nuisances which may result in persistent or quantifiable lead exposure. Additionally, worker exposure to materials containing lead during construction work is regulated by the Federal OSHA [29 CFR 1926.62(a)] and the California Division of Occupational Safety and Health (DOSH) [8 CCR §1532.1(a)]. These regulations require worker protection during construction "...where lead or materials containing lead are present."

### **Regional**

#### Bay Area Air Quality Management District Regulation 11, Rule 2 (Asbestos Demolition, Renovation, and Manufacturing)

This rule applies to any demolition or renovation activity and the associated disturbance of ACM. The purpose of this rule is to specify work practice requirements to limit asbestos emissions from building demolition and renovation activities, including the removal and associated disturbance of ACM. The requirements for demolition and renovation activities include asbestos surveying, notification, ACM removal procedures and time schedules, ACM handling and clean-up procedures, and storage, disposal, and landfilling requirements for asbestos-containing waste materials (ACWM).

## 4 Environmental Setting, Impacts, and Mitigation Measures

### Bay Area Air Stormwater Management Agencies Association (BAASMA), *Protocol for Evaluating Priority PCBs-Containing Materials Before Building Demolition*, August 2018 (Revised November 2019)

The BAASMA considers this protocol a general guidance. The San Francisco Bay Region Municipal Regional Stormwater NPDES permit, referred to as the Municipal Regional Permit (MRP), includes provisions that implement stormwater-related aspects of the Total Maximum Daily Load (TMDL) for PCBs in the Bay. One of the provisions of the MRP requires that Permittees develop and implement or cause to be developed and implemented an effective protocol for managing materials with PCBs concentrations of 50 milligrams per kilogram (mg/kg) (equivalent to parts per million, or ppm), the target management level, or greater in applicable structures at the time such structures undergo demolition, so that PCBs do not enter municipal storm drain systems. Structures in which this protocol applies include non-residential structures constructed or remodeled between the years 1950 and 1980 with building materials with PCBs concentrations of 50 ppm or greater. The protocol was developed for the assessment of prioritized PCBs-containing building materials prior to demolition. If materials are found to contain PCBs, those materials must be managed appropriately and according to all applicable local, state, and federal requirements.

### **Local**

#### Certified Unified Program Agency (CUPA) for the City of Sunnyvale

Starting on January 1, 2013, all CUPA-regulated businesses are required by law (AB 2286) to submit business information electronically through the California Environmental Reporting System (CERS). Instead of printing and submitting forms on paper, entities are required to establish an account with CERS and file their information related to CUPA elements electronically.

The City's Department of Public Safety has the responsibility to administer and enforce all six Program Elements of the Unified Program, along with the Industrial Waste Program, and the Uniform Fire Code. The six Program Elements that are consolidated under the Unified Program are:

- Hazardous Materials Reporting through the CERS
- Hazardous Waste Generator
- Hazardous Waste Treatment
- Underground Storage Tank Program
- Aboveground Petroleum Storage Tanks
- California Accidental Release Program (CalARP)

Because the Judicial Council is the CEQA lead agency for the Project, and is acting for the State of California, BAASMA protocols and guidance do not apply to the Project. However, the City Department of Public Safety is a CUPA and is responsible for implementing Unified Program requirements, which apply to the Site.

### 4.7.3 IMPACTS ANALYSIS

#### 4.7.3.1 Methodology

There are two phases of the Project that will handle, store, or use hazardous materials: 1) Demolition of existing structures and 2) Construction of the new facility. Potential impacts from these two phases are described in this section.

#### 4.7.3.2 Thresholds of Significance

As described in the Initial Study, only two criteria from the CEQA Guidelines related to hazards and hazardous materials were determined to result in potentially significant impacts (Stantec, 2024). Other criteria from the CEQA Guidelines related to hazards and hazardous materials were determined to result in less than significant impacts or no impacts. Therefore, only the two criteria determined to result in potentially significant impacts from the Initial Study will be discussed in this analysis. These are discussed below.

##### a. Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?

###### Demolition

The existing former courthouse building would be demolished and removed from the Site. Prior to demolition, hazardous materials and universal wastes at the Site would be removed and disposed offsite in accordance with regulatory requirements. ACMs would be removed by a licensed abatement contractor prior to demolition and lead paint would be stabilized by licensed contractors prior to demolition. These activities would be conducted in accordance with applicable regulatory requirements.

Soil contaminated with agricultural chemicals such as organochlorine pesticides, chlorinated herbicides may be encountered during subsurface demolition activities and construction based the 2023 Phase I ESA. Excavation, handling, and transport of contaminated soil has the potential to impact workers and the public if not handled and contained properly.

###### Construction

Hazardous materials used during construction of the Project will include gasoline, diesel fuel, motor oil, hydraulic fluid, solvents, cleaners, sealants, welding flux, various lubricants, paint, and paint thinner. The types of paint to be used will be dictated by the types of equipment and structures that must be coated and by manufacturer specifications.

The quantities of hazardous materials that will be used onsite during construction will be limited to the quantities required to complete construction of the Project. The potential exists for fuels, oil, and grease to drip from construction equipment. The volume of incidental drips of petroleum products is not anticipated to require clean up or disposal of hazardous materials. Spills of fuel may occur during onsite refueling operations if refueling operations are not conducted properly. It is not anticipated that spills related to refueling operations would be large and would be limited to the immediate area and cleaned up at the

## 4 Environmental Setting, Impacts, and Mitigation Measures

time of the spill using spill kits stationed on the fuel truck. It is unlikely that the volume of refueling spills will travel beyond the immediate area of the spill and impact offsite receptors.

### Operation

Operation of the Project would include traditional courthouse and judiciary activities that would not involve the use of hazardous materials and would not create a significant hazard to the public or the environment.

### Level of Significance Before Mitigation

Potentially Significant Impact.

### Mitigation Measures

**HAZ-1:** Preparation of a Hazardous Materials Management Plan. Structures to be demolished containing asbestos and lead paint shall be appropriately handled prior to demolition at the Site and disposed in accordance with an Asbestos and Lead Paint Management Plan prepared by the contractor and submitted to the Judicial Council for review and approval prior to initiating demolition activities. Prior to demolition of the Site hazardous materials or other universal wastes onsite shall be inventoried, packaged, removed, and disposed of in accordance with a Hazardous Materials Management Plan prepared by the contractor and submitted to the Judicial Council for review and approval prior to initiating demolition activities.

Hazardous materials used during construction shall be limited to the quantities required for construction and shall be stored and handled in accordance with regulatory requirements. Utility trucks and refueling trucks operating onsite shall have a spill kit onboard at all times. Small spills of petroleum products or other hazardous materials during construction operations shall be reported to the construction supervisor and a spill response form completed with a description of the type and quantity of the spill accompanied by photographs and a description of the disposition of the spill material. Hazardous spill material shall be disposed according to regulatory requirements. In the event of a large spill of hazardous materials equal to or above reportable quantities federal, state, and applicable local reporting requirements shall be followed.

**HAZ-2:** Preparation of a site-specific HASP to protect the health and safety of construction workers and the environment. The HASP shall be prepared in accordance with Title 8 of the CCR State and federal Occupational Safety and Health Association regulations (29 Code of Federal Regulations 1910.120). The HASP shall be made available to construction workers for review prior to starting work at the Site. The HASP shall identify potential hazards (including stained or odorous soils at any location where earth-moving activities would occur within the proposed development area), chemicals of concern (e.g., volatile organic compounds, heavy metals, and gases), personal protective equipment and devices, decontamination procedures, the need for personal or area monitoring, and emergency response procedures. The HASP shall provide direction in the event stained or odorous soil is encountered onsite during construction activities that the Judicial Council shall retain a licensed environmental professional to conduct a Phase II ESA that includes appropriate soil and/or groundwater analysis, and potential soil vapor analysis. Recommendations contained in the Phase II ESA to address any contamination that is

## 4 Environmental Setting, Impacts, and Mitigation Measures

discovered during the investigation shall be implemented before initiating ground-disturbing activities in these areas. The HASP shall also require notification of the appropriate federal, state, and local agencies if evidence of previously undiscovered soil contamination (e.g., stained soil, odorous groundwater, or groundwater with a surface sheen). Any contaminated areas shall be remediated in accordance with recommendations made by the RWQCB, Department of Toxic Substance Control, the Sunnyvale Department of Public Safety (i.e., designated CUPA), County of Santa Clara Department of Environmental Health, and/or other appropriate federal or state regulatory agencies.

### Level of Significance After Mitigation

Less than Significant Impact with Mitigation.

### **b. Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?**

### Demolition and Construction

As provided above, the Project includes the demolition of the existing courthouse facilities. Given that the Project would demolish existing long-standing structures that contain ACMs and LBPs, workers and the public may be exposed to asbestos and lead via inhalation of demolition dust. The Project also has the potential to create a hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment should subsurface soil impacts be encountered during demolition and construction.

### Operation

Operation of the Project would include traditional courthouse and judiciary activities that would not involve the use of hazardous materials and would not create a significant hazard to the public or the environment.

### Level of Significance Before Mitigation

Potentially Significant Impact.

### Mitigation Measures

#### HAZ-1, HAZ-2

### Level of Significance After Mitigation

Less than Significant Impact with Mitigation.

## 4.8 Hydrology and Water Quality

The purpose of this evaluation is to determine the potential impacts of the Project on surface water drainage, stormwater, and groundwater quality in the vicinity of the Site and within the Santa Clara Basin watersheds. This section identifies the hydrological resources, existing drainage conditions, and surface

water and groundwater quality at the Project Site and surrounding area. The section evaluates the potential impacts of the Project with respect to flooding, drainage, erosion, and water quality. Next, a brief description of laws, regulations, and ordinances pertinent to the Project is presented. Feasible mitigation measures are recommended, where necessary.

### 4.8.1 EXISTING CONDITIONS

#### Regional Hydrology and Drainage

The northern tip of Sunnyvale is located along the southern shoreline of San Francisco Bay. The entire San Francisco Bay comprises a group of interconnecting bays and rivers including the Sacramento River, San Joaquin River, and Napa River; Suisun Bay, San Pablo Bay, and the main San Francisco Bay; and the Carquinez Strait. Natural regional drainage courses convey rainfall runoff from the southwest portion of Sunnyvale to Stevens Creek and in the east to Calabazas Creek (Sunnyvale 2016).

The regional flood control agency is the Santa Clara Valley Water District (SCVWD). The SCVWD provides flood control protection throughout Santa Clara County, including Sunnyvale. To provide flood protection of urbanized areas, the SCVWD constructed three open channels (Sunnyvale West, Sunnyvale East, and El Camino) to increase drainage capacity to San Francisco Bay. A system of levees protects the City at its northern border from encroachment of San Francisco Bay waters. Stormwater runoff in low-lying portions of the City is pumped out over the levees for discharge into San Francisco Bay by Sunnyvale-owned and operated pump stations (Sunnyvale 2016).

The SCVWD responsible for and manages all channels and creeks in the City, including Stevens Creek, Calabazas Creek, the Sunnyvale East and West channels, and the El Camino Channel. The City owns and operates approximately 3,200 storm drain inlets, two pump stations, and 145 to 150 miles of storm drains. Two pump stations collect runoff from low-lying urban areas and discharge to creeks and sloughs that are at a higher elevation. Levees were constructed in the northern portion of the City to control flooding and saltwater intrusion from San Francisco Bay (Sunnyvale 2016).

Based on review of the Sustainable Groundwater Management Act (SGMA) data viewer portal, and USGS Watershed Boundary Dataset, the Project is located within the Coyote Watershed. The Santa Clara Valley Urban Runoff Pollution Prevention Program (SCVURPPP) further divides the western portion of the Coyote Watershed into multiple smaller watersheds within the Santa Clara Valley. Per the SCVURPPP, the Site straddles the eastern portion of the Sunnyvale West Watershed and the western portion of the Sunnyvale East Watershed.

The Site overlies the Santa Clara Subbasin (DWR Groundwater Basin 2-9.02), which is managed by SCVWD through its Groundwater Management Plan. The Santa Clara Subbasin is located within the California Coast Ranges physiographic province between the San Andreas and Hayward Faults at the southern end of the San Francisco Bay. The subbasin underlies a relatively flat valley and consists of unconsolidated alluvial sediments. The Santa Clara Subbasin is part of the Santa Clara Valley Groundwater Basin (DWR Groundwater Basin 2-9), which extends beyond Santa Clara County into San Mateo, Alameda, and Contra Costa counties and beneath San Francisco Bay. Due to different hydrogeologic, land use and water supply management characteristics, SCVWD further subdivides the

## 4 Environmental Setting, Impacts, and Mitigation Measures

Santa Clara Subbasin into two groundwater management areas: the Santa Clara Plain and the Coyote Valley (SCVWD 2021). The Site is located within the Santa Clara Plain groundwater management area, and within the northwestern portion of the Santa Clara Subbasin.

Recharge within the Santa Clara Subbasin generally occurs along the margins and southern portion of the subbasin where coarse-grained sediments predominate. The recharge area includes the alluvial fan and fluvial deposits along the edge of the subbasin where high lateral and vertical permeability allow surface water to infiltrate the aquifers. The percolation of surface water in recharge areas replenishes unconfined groundwater within the recharge area and contributes to the recharge of principal aquifers in the confined area through subsurface flow. The Santa Clara Plain has two hydrogeologic areas, the recharge (unconfined) and confined areas. The confined area is located in the central portion where a laterally extensive, low permeability aquitard restricts the vertical flow of groundwater and contaminants. The confined area boundary is approximate and is a simplification of natural conditions based on the extent of artesian wells (SCVWD 2021). The Site is located within the confined area, and therefore surface water infiltration at the Project would not be anticipated to be a significant source of groundwater recharge to the subbasin.

SCVWD does not supply groundwater directly to customers but sustainably manages the Santa Clara and Llagas subbasins to support beneficial use by water retailers, private well users, and the environment. Local groundwater resources make up the foundation of the county's water supply, but they need to be augmented by water supply management activities to reliably meet the county's needs. These include the managed recharge of imported and local surface water and in-lieu recharge through the provision of treated surface water, acquisition of supplemental water supplies, and water conservation and recycling (SCVWD 2021).

Due to SCVWDs comprehensive groundwater management activities, the Santa Clara Subbasin is in long-term balance, groundwater quality is typically very good, and most public water supply wells do not require any treatment beyond disinfection (SCVWD 2021).

### **Project Site Hydrology and Drainage**

The Site and nearby surrounding areas do not contain streams, rivers, or ephemeral drainage features and so implementation of the Project would not alter the existing course of any streams or rivers. The Project includes redevelopment of the existing Site with a similar use that would have an equivalent amount of impervious surface subject to stormwater flows via surface sheet flow. Operation of the Project would not substantially alter the existing drainage pattern of the site or area in a manner which would result in substantial erosion or siltation on- or offsite.

Based on information obtained from the Geotechnical Study completed at the Site, groundwater was estimated to occur at 53 feet bgs (**Appendix H**).

### **City Water Supply and Water Quality**

The City has several sources of potable water to meet expected water demand. These include local groundwater wells, imported supplies from the San Francisco Public Utilities Commission (SFPUC) and

SCVWD, plus interagency connections with other local water suppliers for emergencies. Temporary interruptions of water supply from one source can be readily offset by increasing supply from the other available sources. In order to further manage supplies, the City uses recycled water for non-potable use and water conservation efforts. Future challenges will include the possible expansion of the recycled water system and new capital projects to address the aging water infrastructure (Sunnyvale 2017).

Water delivered in the City originates from different sources and is therefore subject to different water quality conditions. Waters from different sources blend within the distribution system, depending on the daily demand, seasonal quality and relative quantity fluctuations, and temporary interruptions due to maintenance activities, resulting in water quality variances. In all cases the City's water quality meets or exceeds all federal and state requirements (Sunnyvale, 2017).

### 4.8.2 REGULATORY SETTING

#### Federal

##### Clean Water Act

The CWA (33 U.S.C. Section 1251 et seq.), formally the Federal Water Pollution Control Act of 1972, was enacted with the intent of restoring and maintaining the chemical, physical, and biological integrity of the WOTUS. The CWA required states to set standards to protect, maintain, and restore water quality through the regulation of point-source and certain nonpoint source discharges to surface water. Those discharges are regulated by the NPDES permit process (CWA Section 402). In California, NPDES permitting authority is delegated to, and administered by, the nine RWQCBs. The Project Site is within the San Francisco Bay RWQCB (SFRWQCB). Projects that disturb one or more acres, including the Project, are required to obtain NPDES coverage under the Construction General Permit.

##### Clean Water Act: Section 402, National Pollutant Discharge Elimination System (NPDES).

The NPDES permit program was established as part of the CWA to regulate municipal and industrial discharges to surface waters of the U.S. Federal NPDES permit regulations have been established for broad categories of discharges, including point-source municipal waste discharges and nonpoint source stormwater runoff. NPDES permits generally identify limits on the concentrations and/or mass emissions of pollutants in effluent discharged into receiving waters; prohibitions on discharges not specifically allowed under the permit; and provisions that describe required actions by the discharger, including industrial pre-treatment, pollution prevention, self-monitoring, and other activities. The discharge prohibitions and limitations in an NPDES permit are designed to ensure the maintenance of public health and safety, protection of receiving water resources, and safeguarding of the water's designated beneficial uses.

In November 1990, EPA published regulations establishing NPDES permit requirements for municipal and industrial stormwater discharges. Phase I of the permitting program applied to municipal discharges of stormwater in urban areas where the population exceeded 100,000 persons.<sup>1</sup> Phase II of the NPDES stormwater permit regulations became effective in March 2003 and required NPDES permits be issued for construction activity for projects that disturb between 1 and 5 acres.

## 4 Environmental Setting, Impacts, and Mitigation Measures

California's RWQCBs are responsible for implementing the NPDES permit system (refer to additional details in the subsection "State Regulations" below).

### Clean Water Act: Section 303, Water Quality Standards, and Implementation Plans

Section 303(d) of the CWA (33 USC 1250, et seq., at 1313(d)) requires states to identify "impaired" water bodies as those which do not meet water quality standards. States are required to compile this information in a list and submit the list to the USEPA for review and approval. This list is known as the Section 303(d) list of impaired waters. As part of this listing process, states are required to prioritize waters and watersheds for future development of TMDL requirements. The SWRCB and RWQCBs have ongoing efforts to monitor and assess water quality, to prepare the Section 303(d) list, and to develop TMDL requirements. Stevens Creek and lower San Francisco Bay are listed on the CWA Section 303(d) List of Limited Water Quality Segments requiring TMDLs (Sunnyvale 2016).

### Federal Emergency Management Agency National Flood Insurance Program

The FEMA administers the National Flood Insurance Program (NFIP, 42 USC. 4016(a)) to provide flood insurance to individuals within communities that adopt and enforce NFIP regulations that limit development in floodplains; federally-backed flood insurance is only available within NFIP communities. FEMA also develops and issues flood insurance rate maps (FIRMs) that identify which land areas are subject to flooding. Flood hazard zones in the community are identified within the FIRMs, at the minimum, for the 1-in-100 annual exceedance probability flood event and sometimes other flood events. The design standard for flood protection covered by the FIRMs is established by FEMA with the minimum level of flood protection for new development determined to be the 1-in-100 annual exceedance probability (AEP) (i.e., the 100-year flood event). As developments are proposed and constructed, FEMA is also responsible for issuing revisions to FIRMs, such as Conditional Letters of Map Revision (CLOMR) and Letters of Map Revision (LOMR) through the local agencies that work with the NFIP.

The Project is not within a 100-year flood hazard area as identified on the applicable FIRM (Panel 06085C0206H, effective 5/18/2009) (FEMA 2023). The Project proposes to construct a new courthouse and associated parking area within the same general footprint as the existing courthouse and parking area and does not involve any substantial changes to the existing grade of the Site. Because the Site is not located within a 100-year flood hazard zone and the resulting use of the Site will be similar to its current use, no impact related to this issue is anticipated to occur.

## **State**

### Porter-Cologne Water Quality Control Act

Porter-Cologne, passed in 1969, requires protection of water quality by appropriate designing, sizing, and construction of erosion and sediment controls. Porter-Cologne established the SWRCB and divided California into nine regions, each overseen by a RWQCB. The SWRCB is the primary state agency responsible for protecting the quality of the state's surface and groundwater supplies and has delegated primary implementation authority to the nine RWQCBs.

## 4 Environmental Setting, Impacts, and Mitigation Measures

Porter-Cologne assigns responsibility for implementing the CWA Sections 401 through 402 and 303(d) to the SWRCB and the nine RWQCBs. Porter-Cologne requires the development and periodic review of water quality control plans (basin plans) that designate beneficial uses of California's major rivers and groundwater basins and establish narrative and numerical water quality objectives for those waters, provide the technical basis for determining waste discharge requirements, identify enforcement actions, and evaluate clean water grant proposals. The basin plans are updated every three years. Compliance with basin plans is primarily achieved through implementation of the NPDES, which regulates waste discharges as discussed above. The SFRWQCB regulates water quality in Santa Clara County, including at the Site.

### Regional Water Quality Control Board, San Francisco Bay Region

The SFRWQCB regulates surface water and groundwater quality in the San Francisco Bay region. The area under the RWQCB's jurisdiction comprises all of the San Francisco Bay segments extending to the mouth of the Sacramento-San Joaquin Delta (Winter Island near Pittsburg). In its efforts to protect the region's surface waters and groundwater, the RWQCB addresses region-wide water quality concerns through the creation and triennial update of a Water Quality Control Plan (Basin Plan) and adopts, monitors compliance with, and enforces waste discharge requirements and NPDES permits.

The Basin Plan is a master policy document that contains descriptions of the legal, technical, and programmatic bases of water quality regulation in the San Francisco Bay region. The plan describes the beneficial uses to be protected in these waterways, water quality objectives to protect those uses, and implementation measures to make sure those objectives are achieved. The Basin Plan was last updated in 2023.

### General Construction Stormwater Permit

Section 402 of the CWA authorizes the SWRCB to issue a NPDES General Construction Storm Water Permit (Order No. 2022-0057-DWQ: General Permit No. CAS000002), referred to as the "General Construction Permit." Projects that disturb one or more acres, including the Project, are required to obtain NPDES coverage. NPDES regulations for the Project area are administered by the SFRWQCB.

Construction activities can comply with and be covered under the General Construction Permit provided that they:

- Develop and implement a SWPPP which specifies BMPs that will prevent all construction pollutants from contacting stormwater and with the intent of keeping all products of erosion from moving off-site into receiving waters.
- Eliminate or reduce non-stormwater discharges to storm sewer systems and other waters of the nation.
- Perform inspections of all BMPs.
- Certify and submit all permit-related compliance documents via the Storm Water Multiple Application and Report Tracking System (SMARTS). Dischargers shall certify and submit these

## 4 Environmental Setting, Impacts, and Mitigation Measures

documents which include, but are not limited to, Permit Registration Documents (PRDs) including Notice(s) of Intent (NOI), SWPPPs, as well as Annual Reports, and Notices of Termination (NOTs).

### Sustainable Groundwater Management Act

In 2014, the California Legislature enacted a three-bill law (Assembly Bill-1739, Senate Bill [SB]-1168, and SB-1319), known as the SGMA. The SGMA was created to provide a framework for the sustainable management of groundwater supplies, and to strengthen local control and management of groundwater basins throughout the state with little state intervention. The SGMA is intended to empower local agencies to adopt groundwater sustainability plans that are tailored to the resources and needs of their communities, such that sustainable management would provide a buffer against drought and climate change, and ensure reliable water supplies regardless of weather patterns. The SGMA and corresponding regulations require that each high- and medium-priority groundwater basin is operated to a sustainable yield, balancing natural and artificial groundwater recharge with groundwater use to ensure undesirable results such as chronic lowering of groundwater levels, loss of storage, water quality impacts, land subsidence, and impacts to hydraulically connected streams do not occur. The SGMA is considered part of the statewide, comprehensive California Water Action Plan that includes water conservation, water recycling, expanded water storage, safe drinking water, and wetlands and watershed restoration. The SGMA protects existing surface water and groundwater rights and does not affect current drought response measures.

The SGMA requires local public agencies and Groundwater Sustainability Agencies (GSAs) to develop and implement groundwater sustainability plans (GSPs) in high- and medium-priority groundwater basins throughout the State of California. GSPs are not required for low- or very low-priority basins. DWR identified the Santa Clara and Llagas subbasins as high-priority basins and are not critically overdrafted basins (SCVWD 2021).

### Groundwater Management Plan for the Santa Clara Subbasin

In May 2016, SCVWD was adopted as the GSA for the Santa Clara and Llagas subbasins. SCVWD developed the 2021 Groundwater Management Plan (GWMP) covering the Santa Clara and Llagas subbasins, located entirely in Santa Clara County and identified by the Department of Water Resources (DWR) as Basins 2-9.02 and 3-3.01, respectively (SCVWD 2021). The 2021 GWMP was prepared pursuant to authority granted by the District Act and supersedes all previous Groundwater Management Plans (SCVWD 2021). The 2021 GWMP describes SCVWDs groundwater management framework, including existing and potential actions to achieve basin sustainability goals and ensure continued sustainable groundwater management.

### **Local**

Because the Judicial Council is the CEQA lead agency for the Project, and is acting for the State of California, some local government regulations do not apply to the Project. However, the Judicial Council considers policies and guidelines, as appropriate.

### Municipal Regional Stormwater Permit (MRP) – San Francisco Bay Region

The SCVURPPP is an association of thirteen cities and towns in Santa Clara Valley, the County of Santa Clara, and the SCVWD that share a common NPDES permit to discharge stormwater to South San Francisco Bay (Municipal Regional Stormwater Permit [MRP] Order No. R2-2022-0018: NPDES Permit No. CAS612008; amended by Order No. R2-2023-0019). The City of Sunnyvale is one of the Member Agencies (also called Co-permittees) covered by the MRP. Each member agency is individually responsible for implementing the MRP requirements.

The SCVURPPP has developed a guidance handbook (C.3 Stormwater Handbook, Guidance for Implementing Stormwater Requirements for New Development and Redevelopment Projects [Stormwater Guidance Handbook]) to help developers and builders include appropriate post-construction stormwater controls in their projects, to meet local municipal requirements and requirements of the MRP.

Municipalities covered by the MRP must require post-construction stormwater controls on development projects as part of their obligations under Provision C.3 of the MRP. The Stormwater Guidance Handbook is an available reference for post-construction stormwater control design elements (SCVURPPP 2016).

### City of Sunnyvale Municipal Code

The City's Municipal Code, Chapter 12.60 Stormwater Management, provides regulations and gives legal effect to certain requirements of the MRP issued to the City on July 1, 2022. Chapter 12.60 includes but is not limited to: Discharge prohibitions to the stormwater conveyance system; Requirements for stormwater pollution prevention and the development of stormwater management plans; Applicability of hydromodification management requirements to certain areas of the City based on drainage area to creeks and watersheds; and Requirements for agreements to maintain stormwater treatment BMPs once constructed.

## **4.8.3 IMPACTS ANALYSIS**

### **4.8.3.1 Methodology**

Potential impacts related to hydrology and water quality were evaluated based on a review of publicly available information regarding watersheds, surface waters, groundwater, soil characteristics, flooding hazards, and stormwater control and treatment requirements in the Project area. The information obtained from these sources was reviewed and summarized to document existing conditions and to identify the potential environmental effects of the Project.

### **4.8.3.2 Thresholds of Significance**

#### **a. Violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or ground water quality?**

#### **Demolition and Construction**

Site preparation would require the demolition of an existing 19,994 square foot one-story building with a partial basement as well as an unused shed structure currently within the parking lot. The proposed

## 4 Environmental Setting, Impacts, and Mitigation Measures

Project would additionally involve demolition of approximately 19,760 SF of existing paving, full repaving of 4,580 SF of existing drive access road, resurfacing of 9,800 SF of existing parking area, and paving of 13,200 SF of new parking area to build a new courthouse within the 2.03-acre Site. The parking lot contains an unused structure that would be demolished, and the underlying area resurfaced for additional parking space.

Since the Project would disturb an area greater than one acre, an NPDES permit will be required from the SFRWQCB through enrollment in SMARTS. NPDES permit coverage is accomplished by submitting a NOI, permit fees, and all necessary documents to the SFRWQCB. Preparation and submittal of a SWPPP prior to the commencement of grading activities and implementation of the SWPPP during construction activities would also be required.

The primary objective of the SWPPP is to identify, construct, implement, and maintain BMPs to reduce or eliminate pollutants in stormwater discharges and authorize non-stormwater discharges from the construction site during construction activities. BMPs may include programs, technologies, processes, practices, and devices that control, prevent, remove, or reduce pollution. The SWPPP would also address BMPs developed specifically to reduce pollutants in stormwater discharges following the completion of construction activities.

Compliance with of the regulatory controls discussed above, which include implementation of a SWPPP with site-specific BMPs during project construction, compliance with City's Municipal Code, Chapter 12.60 Stormwater Management, and usage of the SCVURPPP Stormwater Guidance Handbook, would minimize risk of erosion and sedimentation from alteration and addition of new impervious surfaces at the Site during demolition and construction. Therefore, demolition and construction impacts would be less than significant.

### **Operation**

Stormwater within the existing facility flows via surface sheet flow to existing local gutters and storm drains. Under the Project, stormwater would be managed through stormwater catchment, treatment, dispersal, and drainage systems designed to capture, convey and treat stormwater runoff onsite. The Project would implement standard LID design criteria to manage stormwater runoff and protect water quality of receiving waterbodies by reducing the overall volume of runoff from impervious surfaces and pollutants to the maximum extent practicable. The Project would implement stormwater drainage that is designed to mitigate post-development flows to a level that is no greater than existing conditions. Therefore, operational impacts would be less than significant.

### **Level of Significance Before Mitigation**

Less than Significant Impact.

### **Mitigation Measures**

No mitigation required.

**Level of Significance After Mitigation**

Less than Significant Impact.

- c. Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would:**

- i. Result in a substantial erosion or siltation on- or offsite;**

**Demolition and Construction**

Demolition and construction of the Project would involve land disturbances that temporarily alter site drainage and expose site soils to erosion. However, as stated previously, with implementation of a SWPPP throughout construction, using site-specific BMPs, and compliance with City Municipal Code, Chapter 12.60 Stormwater Management, this impact would be less than -significant.

**Operation**

The Site and surrounding areas do not contain streams, rivers, or ephemeral drainage features and so implementation of the Project would not alter the existing course of any streams or rivers. The Project is anticipated to result in an increase of approximately 4,640 SF (approximately 8.6%) of paved/impervious surfaces within the Site as compared to the existing facility. As discussed above and further described in Section 2.3.2, the Project would implement stormwater drainage that is designed to mitigate post-development flows to a level that is no greater than existing conditions, therefore, operational impacts would be less than significant.

**Level of Significance Before Mitigation**

Less than Significant Impact.

**Mitigation Measures**

No mitigation required.

**Level of Significance After Mitigation**

Less than Significant Impact.

- d. Create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff; or**

**Demolition and Construction**

Demolition and construction of the Project would involve land disturbances that temporarily alter site drainage and expose site soils to erosion. However, as stated previously, with implementation of a

## 4 Environmental Setting, Impacts, and Mitigation Measures

SWPPP throughout the construction period, and site-specific BMPs, and compliance with City of SMC, Chapter 12.60 Stormwater Management, this impact would be less than -significant.

### Operation

Once operational, the Project would result in a similar use to that of the existing site and would not provide substantial additional sources of polluted runoff. Under the Project, stormwater would be managed through storm water catchment, treatment, dispersal, and area drainage systems. The Project would implement standard LID design criteria to manage stormwater runoff and protect water quality of receiving waterbodies by reducing the volume of stormwater runoff and pollutant concentrations to the maximum extent practicable. The Project would implement stormwater drainage that is designed to mitigate post-development flows to a level that is no greater than existing conditions. Therefore, the impact during operation would be less than -significant.

### Level of Significance Before Mitigation

Less than Significant Impact.

### Mitigation Measures

No mitigation required.

### Level of Significance After Mitigation

Less than Significant Impact.

### e. Conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan?

The Site overlies the Santa Clara Subbasin, which is managed by SCVWD through its GMP. Due to SCVWDs comprehensive groundwater management activities, including the managed recharge of imported and local surface water, in-lieu recharge of treated surface water, acquisition of supplemental water supplies, and water conservation and recycling, the Santa Clara Subbasin is in long-term balance, groundwater quality is typically very good, and most public water supply wells do not require any treatment beyond disinfection (SCVWD 2021). Based on the site-specific preliminary Geotechnical Study, depth to groundwater was approximately 53 feet bgs, and the estimated highest groundwater elevation was 40 to 50 feet bgs (**Appendix H**).

The Project would include the demolition of the existing 19,994 SF one-story building and construction of a new courthouse of approximately 50,000 SF within the 2.03-acre site. The Project is anticipated to result in an increase of approximately 4,640 SF of paved/impervious surfaces within the Site as compared to the existing facility.

The total amount of potable water required for the Project is anticipated to be 3,240 gallons per day (925,275 gallons per year or 2.87-acre-feet per year), which represents approximately 0.002 percent of the total projected future groundwater demand in the Santa Clara Subbasin in years 2025 through 2040, which includes the Site and surrounding lands (SCVWD 2020). According to the SCVWD 2020 Urban

## 4 Environmental Setting, Impacts, and Mitigation Measures

Water Management Plan (UWMP), the Santa Clara Subbasin is not in a condition of chronic overdraft and the long-term average yields are sustainable.

The City currently provides domestic water service to the Site and would continue to provide services to the new courthouse facility. The Project would include connection to the existing water mains for domestic and fire water service and rely upon existing City fire hydrants. Onsite pipelines for water supply, such as pipelines required for landscape irrigation, would also be installed at the time of construction. The City does not have recycled water service available to the Site; therefore, recycled water is not anticipated for use as part of the proposed Project.

The facility is anticipated to generate approximately 1,960 gallons per day of wastewater. The City currently provides wastewater treatment services to the Site and would continue to provide services to the new courthouse facility. The Project would include connection to the City's existing sewer lines and would be conveyed through the City's wastewater collection system to the Donald M. Somers WPCP. The Project does not include the construction or use of septic tanks or alternative wastewater disposal systems.

### Demolition and Construction

Demolition and construction of the Project would involve land disturbances that temporarily alter site drainage and expose site soils to erosion. Runoff could carry increased levels of sediment as well as oil and grease (resulting from construction activities) that could affect water quality in the watershed. However, these impacts would be mitigated through implementation of a SWPPP and site-specific BMPs, and compliance with City of SMC, Chapter 12.60 Stormwater Management. Water use during construction and demolition activities would be negligible. No impacts to groundwater beneath the Site would be anticipated. Therefore, impacts associated with demolition and construction would be less than significant.

### Operation

Under the Project, stormwater would be managed through storm water catchment, treatment, dispersal, and area drainage systems. The Project would implement standard LID design criteria to manage stormwater runoff and protect water quality of receiving waterbodies by reducing the discharge of pollutants found in stormwater resulting from the proposed development to the maximum extent practicable, and by reducing increased flows from impervious surfaces that could cause erosion and degrade habitat. The Project would implement stormwater drainage that is designed to mitigate post-development flows to a level that is no greater than existing conditions. The Project Site is located within the Santa Clara Subbasin, Santa Clara Plain confined area, and therefore surface water infiltration at the Project would not be anticipated to be a significant source of groundwater recharge to the subbasin.

The Project does not include the construction or use of septic tanks or alternative wastewater disposal systems that could impact water quality and would not involve pumping of groundwater beneath the Site. Potable water would be provided by the City. The total amount of potable water required for the Project represents approximately 0.002 percent of the total projected future groundwater demand in the Santa Clara Subbasin in years 2025 through 2040, which includes the Site and surrounding lands (SCVWD

2020). According to the SCVWD 2020 UWMP, the Santa Clara Subbasin is not in a condition of chronic overdraft and the long-term average yields are sustainable. Therefore, based on the above, operational impacts would be less than significant.

### **Level of Significance Before Mitigation**

Less than Significant Impact.

### **Mitigation Measures**

No mitigation required.

### **Level of Significance After Mitigation**

Less than Significant Impact.

## **4.9 Noise**

This section includes a description of ambient noise conditions, a summary of applicable regulations related to noise and vibration, and an analysis of the potential impacts resulting from the implementation of the Project. Mitigation measures are recommended, as necessary, to reduce potentially significant noise and vibration impacts.

### **4.9.1 EXISTING CONDITIONS**

#### **Noise Fundamentals and Terminology**

Noise is generally defined as unwanted sound that annoys or disturbs people and potentially causes an adverse psychological or physiological effect on human health. Because noise is an environmental pollutant that can interfere with human activities, evaluation of noise is necessary when considering the environmental impacts of a project.

Sound is mechanical energy transmitted by pressure waves over a medium such as air or water. Sound is characterized by various parameters that include the rate of oscillation of sound waves (frequency), the speed of propagation, and the pressure level or energy content (amplitude). In particular, the sound pressure level (SPL) is the most common descriptor used to characterize the loudness of an existing sound level.

Although the decibel (dB) scale, a logarithmic scale, is used to quantify sound intensity, it does not accurately describe how sound intensity is perceived by human hearing. The perceived loudness of sound is dependent upon many factors, including SPL and frequency content. The human ear is not equally sensitive to all frequencies in the entire spectrum, so noise measurements are weighted more heavily for frequencies to which humans are sensitive in a process called A-weighting, written as dB(A) and referred to as A-weighted decibels. There is a strong correlation between A-weighted sound levels and community response to noise. For this reason, the A-weighted sound level has become the standard tool of environmental noise assessment. **Table 4.9-1** summarizes typical A-weighted sound levels for different common noise sources.

Table 4.9-1. Typical A-Weighted Sound Levels

Common Outdoor Activities	Noise Level (dB(A))	Common Indoor Activities
Jet flyover at 1,000 Feet	-110-	Rock band
Gas lawnmower at 3 Feet	-100-	
Diesel truck at 50 Feet at 50 MPH	-90-	Food blender at 3 Feet
Noisy urban area, daytime	-80-	Garbage Disposal at 3 Feet
Gas lawnmower, 100 Feet	-70-	Vacuum Cleaner at 10 Feet
Commercial area	-60-	Normal Speech at 3 Feet
Heavy traffic at 300 Feet	-50-	
Quiet urban daytime	-40-	Large business office
Quiet urban nighttime	-30-	Dishwasher in next room
Quiet suburban nighttime	-20-	Theater, large conference room (Background)
Quiet rural nighttime	-10-	Library
	-0-	Bedroom at night, concert hall (Background)
		Broadcast/recording studio

Source: Caltrans 2013

Different types of measurements are used to characterize the time-varying nature of sound. These measurements include the equivalent sound level (Leq), the minimum and maximum sound levels (Lmin and Lmax), percentile-exceeded sound levels (such as L10, L20), the day-night sound level (Ldn), and the community noise equivalent level (CNEL). Ldn and CNEL values often differ by less than 1 dB. As a matter of practice, Ldn and CNEL values are considered to be equivalent and are treated as such. **Table 4.9-2** further defines these sound levels and other sound measurements and terminology used in this analysis.

**Table 4.9-2. Definition of Sound Measurements**

Sound Measurements	Definition
Decibel (dB)	A unitless measure of sound on a logarithmic scale, which indicates the squared ratio of sound pressure amplitude to a reference sound pressure amplitude. The reference pressure is 20 micro-pascals.
A-Weighted Decibel (dB(A))	An overall frequency-weighted sound level in decibels that approximates the frequency response of the human ear.
Maximum Sound Level (Lmax)	The maximum sound level measured during the measurement period.
Minimum Sound Level (Lmin)	The minimum sound level measured during the measurement period.
Equivalent Sound Level (Leq)	The equivalent steady-state sound level that in a stated period of time would contain the same acoustical energy.
Percentile-Exceeded Sound Level (Lxx)	The sound level exceeded xx % of a specific time period. L10 is the sound level exceeded 10% of the time. L90 is the sound level exceeded 90% of the time. L90 is often considered to be representative of the background noise level in a given area.
Day-Night Level (Ldn)	The energy average of the A-weighted sound levels occurring during a 24-hour period, with 10 dB added to the A-weighted sound levels occurring during the period from 10:00 PM to 7:00 AM.
CNEL	The energy average of the A-weighted sound levels occurring during a 24-hour period with 5 dB added to the A-weighted sound levels occurring during the period from 7:00 PM to 10:00 PM and 10 dB added to the A-weighted sound levels occurring during the period from 10:00 PM to 7:00 AM.
Peak Particle Velocity (Peak Velocity or PPV)	A measurement of ground vibration defined as the maximum speed (measured in inches per second) at which a particle in the ground is moving relative to its inactive state. PPV is usually expressed in inches/second.
Frequency: Hertz (Hz)	The number of complete pressure fluctuations per second above and below atmospheric pressure.

Source: FHWA 2006

With respect to how humans perceive and react to changes in noise levels, a 1 dB(A) increase is imperceptible, a 3 dB(A) increase is barely perceptible, a 6 dB(A) increase is clearly noticeable, and a 10 dB(A) increase is subjectively perceived as approximately twice as loud (Caltrans 2013). These subjective reactions to changes in noise levels were developed on the basis of test subjects' reactions to changes in the levels of steady-state pure tones or broadband noise and to changes in levels of a given noise source. These statistical indicators are thought to be most applicable to noise levels in the range of 50 to 70 dB(A), as this is the usual range of voice and interior noise levels (Caltrans 2013). Numbers of agencies and municipalities have developed or adopted noise level standards, consistent with these and

## 4 Environmental Setting, Impacts, and Mitigation Measures

other similar studies to help prevent annoyance and to protect against the degradation of the existing noise environment.

For a point-source such as a stationary compressor or construction equipment, sound attenuates based on geometry at a rate of 6 dB per doubling of distance. For a line source such as free-flowing traffic on a freeway, sound attenuates at a rate of 3 dB per doubling of distance. Atmospheric conditions including wind, temperature gradients, and humidity can change how sound propagates over distance and can affect the level of sound received at a given location. The degree to which the ground surface absorbs acoustical energy also affects sound propagation. Sound that travels over an acoustically absorptive surface, such as grass, attenuates at a slightly greater rate than sound that travels over a hard surface, such as pavement. The increased attenuation is typically in the range of 1 to 2 dB per doubling of distance. Barriers, such as buildings and topography that block the line of sight between a source and receiver, also increase the attenuation of sound over distance (Caltrans 2013).

### Decibel Addition

Because decibels are logarithmic units, SPLs cannot be added or subtracted through ordinary arithmetic. On the dB scale, a doubling of sound energy corresponds to a 3 dB increase. In other words, when two identical sources are each producing sound of the same loudness, their combined sound level at a given distance would be 3 dB higher than one source under the same conditions (Caltrans 2013). For example, if one source produces a sound pressure level of 70 dB(A), two identical sources would combine to produce 73 dB(A). The cumulative sound level of any number of sources can be determined using decibel addition.

### Vibration Standards

Vibration is like noise such that it involves a source, a transmission path, and a receiver. While related to noise, vibration differs in that noise is generally considered to be pressure waves transmitted through air, whereas vibration usually consists of the excitation of a structure or surface. As with noise, vibration consists of an amplitude and frequency. A person's perception to vibration depends on their individual sensitivity to vibration, as well as the amplitude and frequency of the source and the response of the system that is vibrating (Caltrans 2020).

Vibration can be measured in terms of acceleration, velocity, or displacement. A common practice is to monitor vibration in terms of peak particle velocity in inches per second (in/sec PPV). Standards pertaining to perception as well as damage to structures have been developed for vibration levels defined in terms of in/sec PPV.

Human and structural response to different vibration levels is influenced by a number of factors, including ground type, distance between source and receptor, duration, and the number of perceived vibration events. **Table 4.9-3** describes the reaction of people and damage to building from continuous or frequent intermittent vibration levels.

**Table 4.9-3. Guideline Vibration Annoyance Potential Criteria**

Velocity Level, PPV (in/sec)	Human Reaction	Effect on Buildings
0.01	Barely perceptible	No effect.
0.04	Distinctly perceptible	Vibration unlikely to cause damage of any type to any structures.
0.08	Distinctly perceptible to strongly perceptible	Recommended upper level of the vibration to which ruins and ancient monuments should be subjected.
0.1	Strongly perceptible	Virtually no risk of damage to normal buildings.
0.3	Strongly perceptible to severe	Threshold at which there is a risk of damage to newer residential structures.
0.5	Severe – Vibration Considered Unpleasant	Architectural damage and possible minor structural damage.

Notes:

Transient sources create a single isolated vibration event, such as blasting or drop balls. Continuous/frequent intermittent sources include impact pile drivers, pogo-stick compactors, crack-and-seal equipment, vibratory pile drivers, and vibratory compaction equipment.

Source: Caltrans 2020.

The operation of heavy construction equipment, particularly pile driving, and other impact devices, such as pavement breakers, create seismic waves that radiate along the surface of the ground and downward into the earth. These surface waves can be felt as ground vibration. Vibration from the operation of this equipment can result in effects ranging from annoyance of people to damage of structures. Varying geology and distance will result in different vibration levels containing different frequencies and displacements. In all cases, vibration amplitudes will decrease with increasing distance. Perceptible groundborne vibration is generally limited to areas within a few hundred feet of construction activities (Caltrans 2020).

Vibration Source Levels for Construction Equipment are listed in Table 7-4 of the 2018 Federal Transit Administration (FTA) Transit Noise and Vibration Impact Assessment Manual lists vibration source levels for the construction equipment most likely to generate high levels of ground vibration (FTA 2018). High vibratory construction equipment that would be used during Project construction includes vibratory rollers, bulldozers, and trucks. **Table 4.9-4** summarizes the typical reference vibration levels generated by this equipment.

**Table 4.9-4. Vibration Source Levels for Construction Equipment**

Equipment	PPVref at 25 Feet
Vibratory roller	0.210
Large bulldozer	0.089
Loaded trucks	0.076
Small bulldozer	0.003

Source: FTA 2018

Vibration amplitude attenuates over distance and is a complex function of how energy is imparted into the ground and the soil conditions through which the vibration is traveling. The following equation can be used to estimate the vibration level at a given distance for typical soil conditions (FTA 2018). “PPVref” is the reference PPV from Table 5 and “Distance” is the distance between the source and the receptor:

$$PPV = PPV_{ref} \times (25/Distance)^{1.5}$$

**Sensitive Receptors**

Some land uses are more tolerant of noise than others. For example, schools, hospitals, churches, and residences are more sensitive to noise intrusion than are commercial or industrial activities. Ambient noise levels can also affect the perceived desirability or livability of a development.

The Site is located at 605 W. El Camino Real (APN: 165-02-004) in the City of Sunnyvale in Santa Clara County, California (**Figure 2.1-1**). The 2.03-acre Site is situated on the north side of W. El Camino Real between Mathilda Avenue and Pastoria Avenue (**Figure 2.1-2**).

Land immediately north and west of the Site consist of government offices and a parking lot is located immediately to the east. The Sunnyvale City Hall and City Hall Annex are located immediately north of the Site, with the Sunnyvale Public Library located farther to the north across Olive Avenue. Sunnyvale Public Safety Services is located directly west of the Site. Commercial businesses are located to the south of the Site across El Camino Real, which include a hotel and restaurants.

The closest noise-sensitive receptor to the Site is the Courtyard Sunnyvale Mountain View hotel to the south across El Camino Real. The hotel is located approximately 230 feet south of the Site.

**Existing Ambient Noise Levels**

The City, including the Site, is exposed to noise generated by several sources, including traffic noise from major interstates, such as US-101 and US-280, major arterial roads, such as El Camino Real, traffic noise from local roadways, and noise generated from various industrial, commercial, and residential activities.

The ambient noise levels at the Site were determined through a community noise survey. The community noise survey was conducted on April 2, 2024, and consisted of documenting noise levels at the Site and

## 4 Environmental Setting, Impacts, and Mitigation Measures

taking short-term (15-minute) noise measurements during daytime and nighttime hours at three (3) locations around the Site. The locations of the measurements are noted in **Table 4.9-5** below.

The loudest source of noise at the Site was traffic on El Camino Real. The traffic on El Camino Real is comprised of primarily vehicles, but also contains louder sources of noise, such as trucks, buses, and motorcycles. Other sources of noise at the Site include parking lot activity including car alarms, faint aircraft flyovers, construction noise, sidewalk traffic, and nature-based noises.

**Table 4.9-5. Ambient Noise Measurement Locations**

Measurement Number	Measurement Location
Measurement M1	On south side of Site along El Camino Real across from the Courtyard Hotel.
Measurement M2	On east side of Site in the parking lot central to the Site.
Measurement M3	Along the north edge of the Site at the edge of the parking lot on All America Way.

All measurements were taken with a fully calibrated Larson Davis LxT sound level meter. The sound level meter was manned for all measurements. The microphone for all measurements was located about five feet above local ground for all measurements. A description of the measurement location, the short-term measurement results, and the estimated Ldn at each measurement location is shown below in **Table 4.9-6**. All Ldn levels were calculated using the equations in Appendix E: “Determining Existing Noise” in the FTA Transit Noise and Vibration Impact Assessment Manual.

**Table 4.9-6. Measured Short-Term Noise Levels Around Site**

Measurement Location	Leq, dB(A)		Estimated Ldn, dB(A)
	Daytime Hours (7 AM to 10 PM)	Nighttime Hours (10 PM to 7 AM)	
Measurement M1: South Edge of Site	70.2	65.8	71.2
Measurement M2: East Center of Site	57.8	52.5	58.2
Measurement M3: North Edge of Site	57.4	51.4	57.4

Based on the measured data, ambient noise levels near El Camino Real and at the closest noise-sensitive receptor (i.e., the Courtyard Hotel) are anticipated to be between 66 and 70 dB(A) Leq. The estimated day-night noise level at the closest noise-sensitive receptor is 71 dB(A) Ldn. Noise levels are reduced with greater distance from the roadway.

### 4.9.2 REGULATORY SETTING

#### Federal

Federal noise standards are not directly applicable to the Project or to the Judicial Council, but the research that supports the development of federal community noise standards is helpful in understanding human response to different noise levels and is summarized below for the reader's edification.

#### U.S. Environmental Protection Agency Noise Control Act

The federal Noise Control Act of 1972 (Public Law 92-574) established a requirement that all federal agencies administer their programs to promote an environment free of noise that would jeopardize public health or welfare<sup>7</sup>. Although the USEPA was given a major role in disseminating information to the public and coordinating federal agencies, each federal agency retains authority to adopt noise regulations pertaining to agency programs<sup>8</sup>.

In 1974, in response to the requirements of the federal Noise Control Act, the EPA identified indoor and outdoor noise level limits to protect public health and welfare (communication disruption, sleep disturbance, and hearing damage). Outdoor and indoor noise exposure limits of 55 dB(A) Ldn and 45 dB(A) Ldn, respectively, are identified as desirable to protect against speech interference and sleep disturbance for residential, educational, and healthcare areas. The sound level criterion identified to protect against hearing damage in commercial and industrial areas is 70 dB(A) 24-hour Leq (both outdoors and indoors).

The EPA's Office of Noise Abatement and Control was established to coordinate federal noise control activities. In 1981, EPA administrators determined that subjective issues such as noise would be better addressed at lower levels of government. Consequently, in 1982 many responsibilities for regulating noise control policies were transferred to state and local governments. The EPA continues to coordinate the programs of all federal agencies relating to noise research and noise control.

#### Federal Transit Administration Transit Noise and Vibration Impact Assessment

FTA procedures for the evaluation of noise from transit projects are specified in the document entitled, "Transit Noise and Vibration Impact Assessment" (FTA 2018). The FTA Noise Impact Criteria address the following categories:

- Category 1: Buildings or parks, where quiet is an essential element of their purpose.

---

<sup>7</sup> The U.S. EPA was given the responsibility for providing information to the public regarding identifiable effects of noise on public health and welfare, publishing information on the levels of environmental noise that will protect the public health and welfare with an adequate margin of safety, coordinating federal research and activities related to noise control, and establishing federal noise emission standards for selected products distributed in interstate commerce. The Noise Control Act also directed that all federal agencies comply with applicable federal, State, interstate, and local noise control regulations.

<sup>8</sup> The EPA can, however, require other federal agencies to justify their noise regulations in terms of the Noise Control Act policy requirements.

## 4 Environmental Setting, Impacts, and Mitigation Measures

- Category 2: Residences and buildings where people normally sleep. This includes residences, hospitals, and hotels where nighttime sensitivity is assumed to be of utmost importance.
- Category 3: Institutional land uses with primarily daytime and evening use. This category includes schools, libraries, churches, and active parks.

The Ldn noise level descriptor is used to characterize noise exposure for residential areas (Category 2). For other noise-sensitive land uses, such as outdoor amphitheatres and school buildings (Categories 1 and 3), the maximum hourly Leq during the facility's operating period is used. Noise impacts are identified based on absolute predicted noise levels and increases in noise associated with the subject Project.

Impacts relating to noise generated during construction activities is addressed in Section 7 in the FTA Transit Noise and Vibration Impact Assessment document. FTA Table 7-3 gives the following noise level limit criteria for construction noise impact depending on the use of the receptor:

**Table 4.9-7. Detailed Analysis Construction Noise Criteria**

Land Use	L <sub>eq, equip(8hr)</sub> , dB(A)		L <sub>dn, equip(30day)</sub> , dB(A) 30-day average
	Day	Night	
Residential	80	70	75
Commercial	85	85	80*
Industrial	90	90	85*

\*Use a 24-hour L<sub>eq(24hr)</sub> instead of a L<sub>dn, equip(30day)</sub>.

Source: Table 7-3 of the FTA Transit Noise and Vibration Impact Assessment Document

Construction noise levels experienced at a receptor higher than the ones listed in FTA Table 7-3 would have a potential impact and would be subject to appropriate noise control measures, where possible.

With respect to vibration, the range of interest is from approximately 50 vibration decibels (dB), which is the typical background vibration-velocity level, to 100 VdB, which is the general threshold where minor damage can occur in fragile buildings. The background vibration-velocity level in residential areas is usually approximately 50 VdB. Groundborne vibration is normally perceptible to humans at approximately 65 VdB. For most people, a vibration-velocity level of 75 VdB is the approximate dividing line between barely perceptible and distinctly perceptible levels (FTA 2018).

### U.S. Department of Transportation and U.S. EPA Vibration Guidelines

To address the human response to groundborne vibration, the FTA of the U.S. Department of Transportation has set forth guidelines for maximum-acceptable vibration criteria for different types of land uses. These include 65 VdB referenced to 1 µin/sec and based on RMS velocity amplitude for land uses where low ambient vibration is essential for interior operations (e.g., hospitals, high-tech manufacturing, laboratory facilities); 80 VdB for residential uses and buildings where people normally

## 4 Environmental Setting, Impacts, and Mitigation Measures

sleep; and 83 VdB for institutional land uses with primarily daytime operations (e.g., schools, churches, clinics, offices) (FTA 2018).

Standards have also been established to address the potential for groundborne vibration to cause structural damage to buildings. These standards were developed by the Committee of Hearing, Bio Acoustics, and Bio Mechanics (CHABA) at the request of the USEPA (FTA 2018). For fragile structures, CHABA recommends a maximum limit of 0.25 in/sec PPV (FTA 2018).

### State

In 1971, the state required cities and counties to include noise elements in their general plans (Government Code section 65302 et seq.). The State of California General Plan Guidelines (Governor’s Office of Planning and Research [OPR] 2017) identify guidelines for the noise elements of local general plans, including a sound level/land use compatibility chart. The noise element guidelines identify the “normally acceptable”, “conditionally acceptable”, “normally unacceptable”, and “clearly unacceptable” Ldn ranges for varying land use categories. Overlapping noise level ranges are intended to indicate local conditions (existing sound levels and community attitudes toward dominant sound sources) should be considered in evaluating land use compatibility at specific locations. The State’s guidance for land use/noise compatibility is summarized in **Table 4.9-8**.

**Table 4.9-8. State of California Land Use Noise Compatibility Guidelines**

Land Use Category	Normally Acceptable <sup>1</sup>	Conditionally Acceptable <sup>2</sup>	Normally Unacceptable <sup>3</sup>	Clearly Unacceptable <sup>4</sup>
Residential-Low Density Single-Family, Duplex, Mobile Home	<60	55-70	70-75	75+
Residential-Multiple Family	<65	60-70	70-75	75+
Transient Lodging, Motel, Hotel	<65	60-70	70-80	80+
School, Library, Church, Hospital, Nursing Home	<70	60-70	70-80	80+
Auditorium, Concert Hall, Amphitheater		<70	65+	
Sports Arenas, Outdoor Spectator Sports		<75	70+	
Playground, Neighborhood Park	<70		67.5-75	72.5+
Golf Courses, Stable, Water Recreation, Cemetery	<75		70-80	80+
Office Building, Business Commercial, and Professional	<70	67.5-77.5	75+	
Industrial, Manufacturing, Utilities, Agriculture	<75	70-80	75+	

CNEL = Community Noise Equivalent Level; dBA = A-weighted decibels; L<sub>dn</sub> = day-night average noise level.

Notes:

1. Specified land use is satisfactory, based on the assumption that any buildings involved are of normal conventional construction, without any special noise insulation requirements.

## 4 Environmental Setting, Impacts, and Mitigation Measures

2. New construction or development should be undertaken only after a detailed analysis of the noise reduction requirements is made and needed noise insulation features are included in the design. Conventional construction, but with closed windows and fresh air supply systems or air conditioning will normally suffice.
3. New construction or development should generally be discouraged. If new construction or development does proceed, a detailed analysis of the noise reduction requirements must be made and needed noise insulation features included in the design. Outdoor areas must be shielded.
4. New construction or development should generally not be undertaken.

Source: OPR 2017

Also, a part of the General Plan Guidelines is a discussion regarding the balance between environmental noise and other planning objectives. There are design strategies that can reduce adverse exposure to noise even in areas with relatively higher ambient noise levels (OPR 2017).

### California Department of Transportation

For the protection of fragile, historic, and residential structures, Caltrans recommends for highway construction analysis a threshold of 0.2 in/sec PPV for normal residential buildings and 0.08 in/sec PPV for old or historically significant structures (Caltrans 2020). These standards are more stringent than the recommended guidelines established by the FTA, presented above. **Table 4.9-9** shows the general thresholds for structural responses to vibration levels.

**Table 4.9-9. Structural Response to Vibration Levels, Peak Vibration Threshold (in/sec PPV)**

<b>Structure and Condition</b>	<b>Peak Vibration Threshold (in/sec PPV) Transient Sources</b>	<b>Peak Vibration Threshold (in/sec PPV) Continuous / Frequent Intermittent Sources</b>
Extremely fragile historic buildings, ruins, ancient monuments	0.12	0.08
Fragile buildings	0.2	0.1
Historic and some old buildings	0.5	0.25
Older residential structures	0.5	0.3
New residential structures	1.0	0.5
Modern industrial / commercial buildings	2.0	0.5

in/sec = inches per second; PPV = peak particle velocity

Source: Caltrans 2020.

### **Local**

This section discusses regional and local noise and land use planning (e.g., goals, policies, and implementation plans) for informational purposes and to provide context for the impact analysis below. Because the Judicial Council is the CEQA lead agency for the Project, and is acting for the State of California, local government regulations do not apply to the Project. However, the Judicial Council considers policies and guidelines, as appropriate.

## 4 Environmental Setting, Impacts, and Mitigation Measures

### City of Sunnyvale General Plan<sup>9</sup>

Chapter 6 “Safety and Noise” in the City’s General Plan provides “information on existing and projected noise conditions with policies and programs to maintain or reduce noise from transportation, land use operations and single-event noise.” Figure 6-6 in the General Plan (shown below in **Table 4.9-10**) identifies the highest level of noise exposure that is considered normally acceptable for each land type.

**Table 4.9-10. Exterior Noise Compatibility Standards for Various Land Uses**

Land Use Type <sup>1</sup>	Highest Level of Exterior Noise Exposure that is Regarded as “Normally Acceptable <sup>2</sup> ” (Ldn <sup>3</sup> )
Residential: Low Density Detached Single-Family Homes, Duplexes, Mobile Homes	60 dBA <sup>4</sup>
Other Residential: Townhomes, Multi-Family Apartments, Condominiums, and all other residential	65 dBA <sup>5</sup>
Lodging: Motels and Hotels	70 dBA
Outdoor Activities: Golf Courses, Cemeteries, Parks	75 dBA <sup>6</sup>
Auditoriums, Concert Halls, Amphitheaters, Sports Arena, Outdoor Spectator Sports	70 dBA
Industrial, Manufacturing, Utilities	75 dBA

Notes:

1. When a proposed use is not specifically listed, the use shall comply with the noise exposure standard from the nearest similar use as determined by the Community Development Director.
2. As defined in the State of California General Plan Guidelines 2017, “Normally Acceptable” is the maximum desirable level for existing or conventional construction that does not incorporate any special acoustic treatment. The standards in the table above were derived based on the conservative assumption that typical building construction materials can achieve, at minimum, a 25 dB exterior-to-interior noise reduction. For projects located along major transportation corridors (major freeways, arterials, and rail lines), in mixed-use or infill urban locations, this “normally acceptable” exterior noise level may be exceeded for certain areas of the Project Site (e.g., the frontage adjacent to the corridor, parking arenas, balconies). Proposals located in areas where noise exceeds these levels, would require all feasible noise attenuation measures and City consideration prior to approval.
3. L<sub>dn</sub> is the average sound level over a 24-hour period, with a penalty of 10-dB added for nighttime hours of 10 pm to 7 am.
4. Applies to the primary useable open space area of a detached single-family home or duplex, which is typically the backyard or a fenced side yard. This standard shall be measured at the approximate center of the primary useable open space area. This standard does not apply to secondary open space areas, such as front yards, balconies, stoops, and porches.
5. The highest level of a 65 dBA applies at the primary useable open space area of townhomes and multi-family apartments or condominiums (private rear yards for townhomes; and common courtyards, roof lawns, or gathering spaces for multi-family projects). This standard shall be measured at the approximate center of the primary useable open space area. This standard does not apply to secondary open space areas, such as front yards, balconies, stoops, and porches. The highest level of 70 dBA applies at the primary useable open space area of mixed-use projects (private rear yards for townhomes; and common courtyards, roof gardens, or gathering spaces for multi-family or mixed-use projects) and all other residential uses. This standard does not apply to secondary open space areas, such as front yards, balconies, stoops, or porches.
6. Applies at the outdoor activity areas, defined as common areas where people generally congregate, including outdoor seating areas. Where the location of outdoor activity areas is unknown, the exterior noise standard shall be applied to the property line of the receiving land use.

Source: Figure 6-6 of the City of Sunnyvale General Plan

<sup>9</sup> <https://www.sunnyvale.ca.gov/home/showpublisheddocument/602/638370338402370000>, last accessed May 9, 2024.

## 4 Environmental Setting, Impacts, and Mitigation Measures

The City also lists several noise policies relevant to noise related to commercial properties:

- Policy SN-8.4: Require development projects to assess potential construction noise impacts on nearby noise-sensitive land uses and to minimize impacts on those uses, to the extent feasible, as determined by the director of community development.
- Policy SN-8.5: Require a vibration impact assessment for proposed projects in which heavy-duty construction equipment would be used within 600 feet of an existing structure. If applicable, the City shall require all feasible mitigation measures to be implemented to ensure that no damage or disturbance to structures would occur.
- Policy SN-8.7: Ensure new stationary noise sources affecting existing development comply with adopted SMC Title 19 (Zoning).
- Policy SN-8.8: Consider the compatibility of proposed land uses with the noise environment when preparing or revising community and/or specific plans and when reviewing development proposals. The noise compatibility standards (Figure 6-6) and the contour maps depicting noise levels should be used by the City as a guide to land use/noise compatibility.
- Policy SN-9.2: When new equipment is installed on a property, including new stationary noise sources (e.g. heating, ventilation, and air conditioning systems, generators, heating boilers) that could affect existing sensitive land uses, construction of enclosures or other screening materials should be installed around the stationary noise source such that equipment is in compliance with the City's operational noise code.

### City of Sunnyvale Municipal Code

Section 19.42.030 "Noise or Sound Level" in the City's Municipal Code states the following regarding noise level limits at neighboring properties:

a) *Residential Noise Limits.*

- 1) *Operational noise shall not exceed 50 dBA during nighttime or 60 dBA during daytime hours at any point on the property line of the adjacent single-family or duplex uses.*
- 2) *Operational noise shall not exceed 55 dBA during nighttime or 65 dBA during daytime hours on the primary useable open space of multi-family uses.*
- 3) *Operational noise shall not exceed 60 dBA during nighttime or 70 dBA during daytime hours on the primary useable open space of residential uses located along major transportation corridors (freeways, expressways, arterials, and rail lines) or mixed-use residential properties.*

b) *Non-residential Noise Limits.*

- 1) *Operational noise shall not exceed 60 dBA during nighttime or 70 dBA during daytime hours at any point on the property line of the adjacent non-residential use.*

## 4 Environmental Setting, Impacts, and Mitigation Measures

- 2) *Operational noise generated at industrial, manufacturing, or similar uses shall not exceed 75 dBA during daytime hours at the adjacent property line.*
- c) *Special Exceptions from Noise Limits.*
- 1) *Powered Equipment. Powered equipment used on a temporary basis during daytime hours is exempt from the operational noise limits. When used on a continuous basis or during nighttime hours, they should comply with operational noise limits. When used adjacent to residential uses, operation of powered equipment is not allowed during nighttime hours.*
  - 2) *Construction. Construction activity regulated by Title 16 of this code shall not be governed by this section.*
  - 3) *Deliveries. Noise from deliveries shall not be considered operational noise. It is unlawful for any person to make or allow to be made a nighttime delivery to a commercial or industrial establishment when the loading/unloading area of the establishment is adjacent to a residential use. Businesses legally operating at a specific location as of February 1, 1995, are exempt from this requirement.*
  - 4) *Leaf Blower. A "leaf blower" is a small, combustion engine-powered or electric device used for property or landscape maintenance that can be hand-held or carried by the operator and which operates by propelling air under pressure through a cylindrical tube. It is unlawful for any person to operate a leaf blower on private property in or adjacent to a residential use except between the hours of eight a.m. and eight p.m. Effective January 1, 2000, all leaf blowers operated in or adjacent to a residential area shall operate at or below a noise level of 65 dBA at a distance of 50 feet, as determined by a test conducted by the American National Standards Institute or an equivalent. The dBA rating shall be prominently displayed on the leaf blower.*
  - 5) *Warning Sounds. Warning sounds necessary for the protection of public health, safety, and welfare including, but not limited to: civil defense and fire sirens; commercial and residential burglar or fire alarms; and emergency response warning noises are exempt from the operational noise limits.*
  - 6) *Emergency Utility and Street Repairs. Noise from emergency utility and street repairs are exempt from this chapter.*
  - 7) *Street Sweeping and Refuse Collection Services. Noise from street sweeping and refuse collection services (garbage, recycling, and organic materials) are exempt from this chapter.*

Section 16.08.030 "Hours of Construction – Time and noise limitations" in the City's Municipal Code lists the following regarding noise from construction activity:

*Construction activity shall be permitted between the hours of seven a.m. and six p.m. daily Monday through Friday. Saturday hours of operation shall be between eight a.m. and five p.m. There shall be no construction activity on Sunday or federal holidays when city offices are closed.*

## 4 Environmental Setting, Impacts, and Mitigation Measures

*No loud environmentally disruptive noises, such as air compressors without mufflers, continuously running motors or generators, loud playing musical instruments, radios, etc., will be allowed where such noises may be a nuisance to adjacent residential neighborhoods.*

*Exceptions:*

- a) *Construction activity is permitted for detached single-family residential properties when the work is being performed by the owner of the property, provided no construction activity is conducted prior to seven a.m. or after seven p.m. Monday through Friday, prior to eight a.m. or after seven p.m. on Saturday and prior to nine a.m. or after six p.m. on Sunday and national holidays when city offices are closed. It is permissible for up to two persons to assist the owner of the property so long as they are not hired by the owner to perform the work. For purposes of this section, "detached single-family residential property" refers only to housing that stands completely alone with no adjoining roof, foundation, or sides.*
- b) *As determined by the chief building official:*
  - 1) *No loud environmentally disruptive noises, such as air compressors without mufflers, continuously running motors or generators, loud playing musical instruments, radios, etc., will be allowed where such noises may be a nuisance to adjacent properties.*
  - 2) *Where emergency conditions exist, construction activity may be permitted at any hour or day of the week. Such emergencies shall be completed as rapidly as possible to prevent any disruption to other properties.*
  - 3) *Where additional construction activity will not be a nuisance to surrounding properties, based on location and type of construction, a waiver may be granted to allow hours of construction other than as stated in this section.*

### 4.9.3 IMPACTS ANALYSIS

#### 4.9.3.1 Methodology

Short-term ambient noise level measurements were used to provide baseline noise conditions at nearby sensitive receptors and within the Site and vicinity. For the purpose of this analysis, potential sensitive receptors were determined by reviewing aerial photography of the Project vicinity in 2024 and from Site observations.

Impacts from Project-related traffic was estimated using peak hour trip generation numbers contained within the transportation technical study prepared by Stantec in April 2024 (Stantec 2024) and the 2022 Annual Average Daily Traffic volumes for El Camino Real published on the Caltrans Traffic Census Program website<sup>10</sup>. Noise from the Project's stationary mechanical systems, such as air handling units and exhaust fans, and operational activities were analyzed based on site conditions.

---

<sup>10</sup> <https://dot.ca.gov/programs/traffic-operations/census>, last accessed May 9, 2024.

## 4 Environmental Setting, Impacts, and Mitigation Measures

The FHWA Roadway Construction Noise Model (RCNM) was used to estimate the impact from short-term construction activities. The RCNM is used as the FHWA’s national standard for predicting noise generated from construction activities. The RCNM analysis includes the calculation of noise levels at a defined distance for a variety of construction equipment. The spreadsheet inputs include acoustical use factors and distance to receptors and calculates the expected Lmax values and Leq values at a selected receptor. The RCNM output files are provided in **Appendix J**.

Groundborne vibration levels associated with construction-related activities for the Project were evaluated utilizing typical groundborne vibration levels associated with construction equipment. Potential groundborne vibration impacts related to structural damage and human annoyance were evaluated, taking into account the distance from construction activities to nearby structures and typically applied criteria for structural damage and human annoyance.

### 4.9.3.2 Thresholds of Significance

#### EPA and Caltrans Guidelines

As noted previously in this section, with respect to how humans perceive and react to changes in noise levels, a 1 dB(A) increase is imperceptible, a 3 dB(A) increase is barely perceptible, a 6 dB(A) increase is clearly noticeable, and a 10 dB(A) increase is subjectively perceived as approximately twice as loud (Caltrans 2013). These levels are based on the EPA established guidelines (EPA 1978) for assessing the impact of an increase in noise levels. These guidelines have been used for several years as industry standards to determine the potential impact of noise increases on communities. Most people will tolerate a small increase in background noise (up to about 5 dB(A)) without complaint, especially if the increase is gradual over a period of years (such as from gradually increasing traffic volumes). Increases greater than 5 dB(A) may cause complaints and interference with sleep. Increases above 10 dB(A) (heard as a doubling of judged loudness) are likely to cause complaints and should be considered a serious increase. **Table 4.9-11** defines each of the traditional impact descriptions, their quantitative range, and the qualitative human response to changes in noise levels.

**Table 4.9-11. EPA / Caltrans Impact Guidelines**

Increase over Existing or Baseline Sound Levels	Impact Per EPA Region Guidelines	Qualitative Human Perception of Difference in Sound Levels
0 dB to 5 dB	Minimum impact	Imperceptible or Slight difference
6 dB to 10 dB	Significant impact	Significant Noticeable difference—complaints possible
Over 10 dB	Serious impact	Loudness changes by a factor of two or greater. Clearly audible difference—complaints likely

dB = decibels; EPA = U.S. Environmental Protection Agency

### CEQA Guidelines Appendix G Environmental Checklist

In accordance with the CEQA Guidelines' Appendix G Environmental Checklist, the Project would have a significant impact related to noise if it would result in a:

- Generation of a substantial temporary or permanent increase in the ambient noise levels in the vicinity of the project noise levels in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies.
- Generation of excessive groundborne vibration or groundborne noise levels.
- For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?

The discussion below addresses whether the Project would expose sensitive noise-receptors, neighboring properties, or occupied non-residential spaces to excessive noise during Project demolition, construction, or operation. The impacts from demolition / construction, exterior traffic noise, and operational activities, such as fixed sources are discussed below.

**a. Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?**

#### **Short-Term Noise from Demolition / Construction**

Two types of short-term noise impacts could occur during demolition / construction activities. The first type of short-term noise impact is traffic noise from construction crew vehicular and truck commutes on the access roads leading to and from the Site. As noted in previous sections, construction equipment and activities would involve access via multiple routes depending on the activities (e.g., material and equipment source(s), material or equipment point of origin). The following SRs and major and minor arterial roads may be utilized by construction equipment and vehicles: I-280, US-101, CA-SR-85, CA-SR-237, Lawrence Expressway, Evelyn Avenue, El Camino Real, and S. Mathilda Avenue. These roadways already contain a great deal of traffic volume, including vehicles, trucks, and buses.

Typically, traffic volumes double before the associated increase in noise levels is noticeable (3 dBA Ldn) along roadways (Caltrans 2013). Existing traffic noise levels along the adjacent roadways are steady. For example, the 2022 peak hour traffic volume along El Camino Real near the Site is 3,650 vehicles (Caltrans 2022). Construction-related traffic would not double existing traffic volumes and would not increase the traffic noise by 3 dB. Therefore, construction-related traffic impacts would be less than significant.

The second type of short-term noise impact is related to noise generated during demolition / construction. Each construction stage has its own mix of equipment, and consequently, its own noise characteristics. The various construction operations would change the character of the noise generated at the Site, and

#### 4 Environmental Setting, Impacts, and Mitigation Measures

therefore the noise level, as construction progresses. The loudest stages of construction typically involve earth-moving and grading equipment.

The demolition / construction of the Project would be conducted in six (6) stages and each stage will use different construction equipment. The main types of noise-producing equipment for each construction stage are shown in **Table 4.9-12**.

**Table 4.9-12. Demolition / Construction Stage Equipment**

Demolition / Construction Stage	Demolition / Construction Equipment	
Demolition	<ul style="list-style-type: none"> <li>• Tractor</li> <li>• Backhoe</li> <li>• Concrete Saw</li> </ul>	<ul style="list-style-type: none"> <li>• Front End Loader</li> <li>• Rubber-Tired Dozer</li> </ul>
Site Preparation	<ul style="list-style-type: none"> <li>• Grader</li> <li>• Tractor</li> </ul>	<ul style="list-style-type: none"> <li>• Scraper</li> </ul>
Grading	<ul style="list-style-type: none"> <li>• Grader</li> <li>• Tractor</li> </ul>	<ul style="list-style-type: none"> <li>• Rubber-Tired Dozer</li> <li>• Front End Loader</li> </ul>
Building Construction	<ul style="list-style-type: none"> <li>• Crane</li> <li>• Generator</li> <li>• Welders (3)</li> </ul>	<ul style="list-style-type: none"> <li>• Gradall Forklifts (2)</li> <li>• Tractor</li> </ul>
Paving	<ul style="list-style-type: none"> <li>• Tractor</li> <li>• Rollers (2)</li> </ul>	<ul style="list-style-type: none"> <li>• Pavers (2)</li> <li>• Cement Mixer</li> </ul>
Architectural Coating	<ul style="list-style-type: none"> <li>• Air Compressor</li> </ul>	

**Table 4.9-13** lists the types of demolition / construction equipment and the maximum and average operational noise level as measured at 230 feet from the operating equipment. The 230-foot distance represents the approximate distance between the Site boundary and the closest noise-sensitive receptor (i.e., the hotel across El Camino Real).

**Table 4.9-13. FHWA Roadway Construction Noise Model Source Noise Levels**

Demolition / Construction Equipment Source at the Project Site	Distance to Nearest Sensitive Receptor, feet	Sound Level at Receptor		
		Lmax, dB(A)	Acoustical Use Factor (%)	Leq, dB(A)
Backhoe	230	64.3	40	60.3
Cement Mixer	230	65.5	40	61.6

#### 4 Environmental Setting, Impacts, and Mitigation Measures

Demolition / Construction Equipment Source at the Project Site	Distance to Nearest Sensitive Receptor, feet	Sound Level at Receptor		
		Lmax, dB(A)	Acoustical Use Factor (%)	Leq, dB(A)
Crane	230	67.3	16	59.3
Compressor (air)	230	64.4	40	60.4
Concrete Saw	230	76.3	20	69.3
Dozer	230	68.4	40	64.4
Forklift (Gradall)	230	70.1	40	66.2
Front End Loader	230	65.9	40	61.9
Generator	230	67.4	50	64.4
Grader	230	71.7	40	67.8
Paver / Paving Equipment	230	64.0	50	61.0
Roller	230	66.7	20	59.8
Scraper	230	70.3	40	66.3
Tractor	230	70.7	40	66.8
Welder	230	60.7	40	56.8

Source: Stantec 2024

A worst-case condition for construction activity would assume all noise-generating equipment were operating at the same time and at the same distance from the closest noise-sensitive receptor. Using this assumption, the RCNM program calculated the following combined Leq and Lmax noise levels from each stage of demolition / construction as shown in **Table 4.9-14**.

**Table 4.9-14. Calculated Noise Level from Each Demolition / Construction Stage**

Demolition / Construction Stage	Distance to Closest Noise-Sensitive Receptor, ft	Calculated Lmax, dB(A)	Calculated Leq, dB(A)
Demolition	230	78.3	72.7
Site Preparation	230	75.7	71.8
Grading	230	75.7	71.8

## 4 Environmental Setting, Impacts, and Mitigation Measures

Demolition / Construction Stage	Distance to Closest Noise-Sensitive Receptor, ft	Calculated Lmax, dB(A)	Calculated Leq, dB(A)
Building Construction	230	76.7	72.6
Paving	230	74.7	70.2
Architectural Coating	230	64.4	60.4

Source: Stantec 2024

As noted in Section 4.9.2, the FTA Transit Noise and Vibration Impact Assessment Manual offers guidelines in Section 7 “Noise and Vibration During Construction”. Section 7 in the manual states “While it is not the purpose of this manual to specify standardized criteria for construction noise impact, the following guidelines can be considered reasonable criteria for assessment. If these criteria are exceeded, there may be adverse community reaction.” Table 7-3 in the FTA Transit Noise and Vibration Impact Assessment Manual lists a criterion of 80 dB(A) Leq for construction noise received at residential properties during daytime hours. All calculated worst-case construction noise levels from the Project are below the 80 dB(A) daytime criterion.

In conclusion, construction noise would be short-term and intermittent and all calculated noise levels are below the construction noise criterion recommended by the FTA. Therefore, the impacts from short-term demolition / construction would be less than significant.

### Exterior Traffic Noise Impacts

Traffic noise depends primarily on vehicle speed (tire noise increases with speed), proportion of medium and large truck traffic (trucks generate engine, exhaust, and wind noise in addition to tire noise), and number of speed control devices, such as traffic lights and stop signs (accelerating and decelerating vehicles and trucks can generate more noise).

Changes in traffic volumes can also have an impact on overall traffic noise levels. For example, it takes 25 percent more traffic volume to produce an increase of only 1 dB(A) in the ambient noise level. For roads already heavy with traffic volume, an increase in traffic numbers could even reduce noise because the heavier volumes could slow down the average speed of the vehicles. A doubling of traffic volume results in a 3 dB(A) increase in noise levels.

To describe future noise levels due to traffic added from the Project, AM and PM peak hour trips listed in Section 4.10 “Transportation” below were used to determine the percentage increase of traffic on El Camino Real near the Site and the closest noise-sensitive receptor. According to the Transportation section, the Project is anticipated to generate approximately 135 average daily trips (ADT), with approximately 19 trips during the AM peak hour and 18 trips during the PM peak hour. The Caltrans Traffic Census Program lists a 2022 peak hour traffic volume of 3,650 vehicles on El Camino Real near the Site. Adding approximately 19 vehicles to the peak hour traffic volume on El Camino Real results in a 0.5 percent increase in traffic and less than 1 dB(A) increase in noise. Therefore, the Project should not

## 4 Environmental Setting, Impacts, and Mitigation Measures

cause increased traffic noise levels over the current conditions, and this would be a less than significant impact relative to this topic.

### Landscape and Building Maintenance Activities

Landscape maintenance activities include the use of leaf blowers and power tools and could result in intermittent average noise levels of approximately 73 dB(A) at 50 feet<sup>11</sup>. Based on an equipment noise level of 73 dB(A), the use of such equipment, assuming a noise attenuation rate of 6 dB per doubling of distance from the source, would result in exterior noise levels of approximately 60 dB(A) at the closest noise-sensitive receptor.

As indicated in **Table 4.9-6** average daytime noise levels in the vicinity of the closest noise-sensitive receptor are approximately 70 dB(A) Leq. Landscape maintenance activities would not result in a substantial permanent increase (more than 3–5 dB) in ambient noise levels at the closest noise-sensitive receptor. Therefore, this impact would be less than significant.

### Fixed-Source Noise

Mechanical, and sometimes electrical, equipment is often mounted on building rooftops, located on the ground around the Project Site, or located within mechanical equipment rooms inside the building with louvers to the exterior. The noise sources could take the form of fans, pumps, air compressors, chillers, cooling towers, and generators. This equipment will generate noise that will radiate to the neighboring properties. Noise from mechanical equipment associated with operation of the Project is required to comply with the CBC requirements pertaining to noise attenuation. Therefore, the onsite equipment would be designed incorporating measures such as shielding and/or appropriate attenuators to reduce noise levels that may affect nearby properties.

When the actual onsite equipment for the building is designed and selected, the equipment would be designed to incorporate measures as needed, such as shielding, barriers, and/or attenuators, to reduce noise levels that may affect nearby properties. Therefore, the impacts from fixed-source noises to the neighboring properties would be less than significant.

### Parking Lot Activities

Noise generated from parking lot activities include elements such as car doors closing, intermittent car alarms, conversations among passengers, and cars starting and idling. The area around the Site already includes several active parking lots which generate the same noise as would be produced by the Project's parking lot. Therefore, noise generated from the Project's parking lot would not introduce any new noise sources or increase the level of noise already present in the surrounding neighborhood. Therefore, noise generated from parking lot activities would be less than significant.

---

<sup>11</sup> <https://www.ncbi.nlm.nih.gov/pmc/articles/PMC6707732/>, last accessed May 9, 2024.

**Level of Significance Before Mitigation**

Less than Significant Impact.

**Mitigation Measures**

No Mitigation required.

**Level of Significance After Mitigation**

Less than Significant Impact.

**b. Generation of excessive groundborne vibration or groundborne noise levels?**

During construction of the Project, equipment such as trucks, bulldozers, and rollers may be used as close as 230 feet from the nearest sensitive receptor (Courtyard Hotel). Equipment used during Project construction could generate vibration levels between 0.0001 PPV (in/sec) and 0.008 PPV (in/sec) at 230 feet, as shown below in **Table 4.9-15**. All the groundborne vibration levels are below the FTA vibration threshold at which human annoyance could occur of 0.10 PPV (in/sec). Additionally, construction activities would be temporary in nature and would likely occur during normal daytime working hours. Also based on **Table 4.9-3**, construction vibrations are not predicted to cause damage to existing buildings or cause annoyance to sensitive receptors. Therefore, the impacts from construction vibration would be less than significant.

**Table 4.9-15. Calculated Vibration Levels for Construction Equipment**

Type of Equipment	Peak Particle Velocity at 230 Feet, PPV (in/sec)	Threshold at which Human Annoyance Could Occur, PPV (in/sec)	Potential for Project to Exceed Threshold
Large Bulldozer	0.003	0.10	None
Loaded Trucks	0.003	0.10	None
Small Bulldozer	0.0001	0.10	None
Vibratory Roller	0.008	0.10	None

Source: FTA 2018

**Level of Significance Before Mitigation**

Less than Significant Impact.

**Mitigation Measures**

No Mitigation required.

**Level of Significance After Mitigation**

Less than Significant Impact.

## 4.10 Transportation

The Site is located at 605 West El Camino Real on the north side of the road between S. Mathilda Avenue to the east, All America Way to the north, and S. Pastoria Avenue to the west. Regional access to the Site is provided by Norman Y. Mineta Highway (SR 85), El Camino Real (SR 82), Central Expressway (G6) and Lawrence Expressway (G2). The Site access would be from El Camino Real, with secured parking for court staff only and a separate parking area used for public parking. A total of approximately 50 onsite parking spaces are proposed, including 12 secured parking spaces for the justices and up to 38 surface parking spaces for public and staff.

The Project includes the demolition of an existing vacant single-story building of 19,994 SF and construction of a new up to three story courthouse of approximately 50,000 SF. Vehicle trip generation estimates for the Project were prepared using standardized Institute of Transportation Engineers (ITE) 11<sup>th</sup> Edition trip generation rates for the Single Tenant Office Building (715) land use category. Based on the commute and parking survey data for months from May 2023 to March 2024 provided by the Judicial Council, the actual number of court staff/employees ranges from 19 to 35 onsite per day. To be conservative, 35 employees were assumed for calculating the trip generation. **Table 4.10-1** below summarizes the anticipated trip generation of the Project based on the conservative assumption of 35 employees onsite for a typical workday. As shown, the Project is expected to generate approximately 135 ADT, with approximately 19 trips occurring during the AM peak hour and approximately 18 trips during the PM peak hour.

**Table 4.10-1. Trip Generation Summary**

Category	Amount	Unit	AM Peak Hour			PM Peak Hour			ADT
			In	Out	Total	In	Out	Total	
<b>Trip Rate</b>									
Single Tenant Office Building (715)		Emp	0.48	0.06	0.54	0.08	0.43	0.51	3.85
<b>Trip Generation</b>									
Sunnyvale Courthouse	35	Emp	17	2	19	3	15	18	135

ADT = Average Daily Traffic; Emp = employee

Note:

Trip Rate Source: ITE 11<sup>th</sup> Edition, 2021, with ITE code in parentheses

### 4.10.1 EXISTING CONDITIONS

#### Roadway System

El Camino Real (SR 82) runs generally in an east-west direction within the City and is a six-lane divided intra-regional arterial that supports both local and regional travel with a posted speed limit of 35 miles per hour in the vicinity of the Site. It serves the commercial and civic uses along the corridor.

## 4 Environmental Setting, Impacts, and Mitigation Measures

S. Mathilda Avenue runs generally in a north-south direction. It is a six-lane divided connector street with a posted speed limit of 30 miles per hour in the vicinity of the Site. S. Mathilda Avenue provides connectivity to Central Expressway (G6), U.S. Highway 101, and SR 237 to the north, and to I-280 (via Sunnyvale-Saratoga Road) to the south.

### Active Transportation

Active transportation refers to non-motorized means of travel such as walking or biking. The City's built environment has infrastructure that help facilitate pedestrian and bicyclist movement. To allow pedestrians to access nearby transit stops, residential uses, and commercial uses, sidewalks and crosswalks are present for the majority of the area surrounding the Site. Marked crosswalks are provided at the intersections of El Camino Real and S. Mathilda Avenue, W. Olive Avenue and S. Mathilda Avenue, W. Olive Avenue and All America Way, W. Olive Avenue and S. Pastoria Avenue, and El Camino Real and S. Pastoria Avenue.

The Sunnyvale Active Transportation Plan<sup>12</sup> describes the City's existing bike network as being comprised of shared use paths, separated bikeways, buffered bike lanes, bike lanes and bike routes. The majority of the City's street network has complete sidewalk coverage and approximately 18 miles of shared pedestrian and bicyclist paths.

In the vicinity of the Site, there are Class II bicycle lanes on S. Mathilda Avenue, south of El Camino Real, and on W. Olive Avenue between S. Pastoria Avenue and S. Mathilda Avenue. The City's Active Transportation Plan identifies a future Class IV separated bikeway on El Camino Real, a future Class I Shared use path on S. Mathilda Avenue south of W. Olive Avenue, and a future Class IIB buffered bicycle lane on S. Mathilda Avenue, north of W. Olive Avenue.

### Transit Facilities

Transit services within the City are provided by the Santa Clara Valley VTA and Caltrain commuter rail. VTA provides bus, light rail, and paratransit services. VTA's Rapid Bus Route 522, Rapid Bus Route 523, Frequent Bus Route 22, and Local Bus Route 55 provides service to the Site with nearest bus stops at the intersection of El Camino Real and S. Mathilda Avenue, and the intersection of El Camino Real and S. Pastoria Avenue. These buses generally run every 15 to 30 minutes.

Commuter rail services between San Francisco County and Santa Clara County is provided by Caltrain. The Sunnyvale Caltrain station is located on Evelyn Avenue, approximately 0.75 miles northeast of Site and is the closest rail station to the Project. Those taking Caltrain may transfer to VTA bus routes 20, 21, 53, 55, and Rapid 523 at the station.

---

<sup>12</sup> Sunnyvale Active Transportation Plan, City of Sunnyvale, August 202

## 4.10.2 REGULATORY SETTING

### Federal

There are no federal plans, policies, regulations, or ordinances related to transportation that apply to the Project.

### State

#### California Department of Transportation

Caltrans is responsible for planning, designing, constructing, operating, and maintaining all state-owned roadways. The state highways in the vicinity of the Site are Norman Y. Mineta Highway (State Route 85), El Camino Real (SR 82), Central Expressway (G6) and Lawrence Expressway (G2).

#### Senate Bill (SB 743)

CEQA guidelines (Section 15064.3) recommends the use of VMT as the primary metric to identify a transportation impact for land use and transportation projects. Generally, SB 743 moves away from using delay-based level of service (LOS) as the primary metric for identifying a project's significant impact within CEQA, to instead use VMT.

SB 743 required the Governor's OPR to establish recommendations for identifying and mitigating transportation impacts within CEQA. In response, OPR prepared a document referred in this EIR as OPR's Technical Advisory. OPR's Technical Advisory recommends methodologies for quantifying VMT, significance thresholds for identifying a transportation impact, and screening criteria to quickly identify if a Project can be presumed to have a less than significant impact. Lead agencies can adopt local guidelines appropriate for their jurisdiction. This analysis has been prepared in accordance with the OPR guidelines.

VMT screening criteria is used to identify if a project is expected to have a less than significant impact without conducting a project-level VMT analysis. The screening criteria outlined in the OPR guidelines is based on factors such as project size, project type and project location. More specifically, categories include small project screening, neighborhood-serving retail screening, affordable housing screening, and transit supportive projects screening. The criteria and threshold used for each category is summarized in **Table 4.10-2**.

**Table 4.10-2. Project Screening Threshold**

Category	Criteria/Screening
<b>Size-based Exemption Screening</b>	
Small Project Screening	Small projects that generate less than 110 trips per day can be screened out from completing a full VMT analysis.
Neighborhood-Serving Retail Project Screening	Retail projects that are neighborhood-serving and are a maximum of 100,000 SF total can be screened out from completing a full VMT analysis.

## 4 Environmental Setting, Impacts, and Mitigation Measures

<b>Specific Land Use Exemption Screening</b>	
Restricted Affordable Housing	<p>Affordable housing Projects that meet the following can be screened out from completing a full VMT analysis:</p> <ul style="list-style-type: none"> <li>• <u>For rental development</u>: At least 25% of the proposed residential units dedicated as affordable to households up to 80% Area Median Income (AMI).</li> <li>• <u>For ownership development</u>: At least 25% of the proposed residential units dedicated as affordable to households up to 120% AMI.</li> </ul>
<b>Location-based Exemption Screening</b>	
Transit Supportive Projects	<p>Projects that do not generate significant levels of VMT and are located within ½ mile of an existing major bus stop or existing stop along a high-quality transit corridor that meets all the following requirements can be screened out from completing a full VMT analysis:</p> <ul style="list-style-type: none"> <li>• Supports the multimodal transportation network by facilitating access to multimodal transportation with improved pedestrian facilities, bicycle lanes, transit stops; does not harm or hinder access to multimodal transportation;</li> <li>• Does not exceed maximum parking requirements or propose higher than what is allowed per the development standards;</li> <li>• Is transit oriented in design:               <ul style="list-style-type: none"> <li>• Has a walkable design that prioritizes pedestrians;</li> <li>• Is sustainable and compact;</li> <li>• Facilitates ease of bicycle use;</li> <li>• Is focused or centered around transit; and</li> </ul> </li> <li>• Redevelopment of a site which provides at least as many affordable units as previously existed.</li> </ul>

### Local

There are no local plans, policies, regulations, or ordinances related to transportation that apply to the Project.

### 4.10.3 IMPACTS ANALYSIS

#### 4.10.3.1 Methodology

The analysis included in this section is in accordance with the OPR guidelines, consistent with Section 15064.3 of the CEQA Guidelines.

Potential impacts related to transportation were evaluated using VMT data obtained from the VTA Santa Clara Countywide VMT Evaluation Tool – Version 2<sup>13</sup> (SCC VMT Evaluation Tool), which utilizes data produced by the VTA Countywide Model (December 2019), a trip-based model. The SCC VMT Evaluation Tool provides baseline VMT data appropriate for use in analyzing small- to medium-sized residential, office, and industrial land use projects in Santa Clara County. The SCC VMT Evaluation Tool was developed by the VTA in collaboration with the 15 cities and towns of Santa Clara County, and the County of Santa Clara. A combination of the Project’s location and land use details is used to estimate VMT generated from the Project, which is expressed as a VMT rate (i.e., VMT per employee).

---

<sup>13</sup> <https://vmttool.vta.org/>, accessed May 20, 2024.

### 4.10.3.2 Thresholds of Significance

#### a. Conflict with a program, plan, ordinance or policy addressing the circulation system, including transit, roadway, bicycle and pedestrian facilities?

The Project does not conflict with the General Plan, any program plan, ordinance, or policy addressing the circulation system. The Project does not propose to amend or adjust roadway classifications, the roadway network, transit routes, or bicycle networks as identified in the General Plan.

The Site is located within one mile of the City Caltrain station. Caltrain riders may bike or bus to the Site. Multiple VTA bus routes operate within the vicinity of the Project. The nearest bus stops are near the intersection of El Camino Real and S. Mathilda Avenue, and the intersection of El Camino Real and S. Pastoria Avenue.

Marked crosswalks are present directly surrounding the Site at the intersections of El Camino Real and S. Mathilda Avenue, W. Olive Avenue and S. Mathilda Avenue, W. Olive Avenue and All America Way, W. Olive Avenue and S. Pastoria Avenue, and El Camino Real and S. Pastoria Avenue. Pedestrians would utilize sidewalks along S. Mathilda Avenue to travel to and from the City Caltrain station. This will facilitate better connections to nearby amenities and public transit. Pedestrian amenities to be constructed by the Project within the Site include Americans with Disabilities Act accessibility and increase landscaped pedestrian connectors.

There are Class II bicycle lanes on S. Mathilda Avenue, south of El Camino Real, and on W. Olive Avenue between S. Pastoria Avenue and S. Mathilda Avenue, located in the vicinity of the Site. The Project will provide on-Site bicycle facilities and bicycle parking spaces. The Project would include approximately 50 on-Site parking spaces, 12 secured parking spaces for justices and up to 38 surface parking spaces for the public and staff.

In regard to access, Project improvements will not cause any conflicts with other improvements planned for the area. As mentioned above, operation of the Project would include amenities and Site improvements for pedestrians such as landscaped pedestrian connectors along internal streets that connect to existing facilities. As a result, the Project would not create hazards or barriers for pedestrians, bicyclists, or local transit service.

During construction, existing and future bicycle facilities in the Project area would not be affected by Project-related construction activity except for limited circumstances. Therefore, the Project would not cause a conflict with a program plan, ordinance, or policy related to the circulation system, including transit, roadway, bicycle, and pedestrian facilities.

#### Level of Significance Before Mitigation

Less than Significant Impact.

#### Mitigation Measures

No mitigation required.

### Level of Significance After Mitigation

Less than Significant Impact.

#### **b. Conflict or be inconsistent with CEQA Guidelines § 15064.3, subdivision (b)?**

According to CEQA Guidelines §15064.3 Subdivision (b)(1), VMT exceeding an applicable threshold of significance may indicate a significant impact. As previously discussed, OPR guidelines provide screening criteria that is used to identify if a project is expected to have a less than significant impact without conducting a full VMT analysis. A Project is exempt from VMT analysis if it meets one of the screening criteria. The Project can be presumed to have a less than significant VMT impact based on meeting the following screening criteria:

*Location-based exemption screening - the Project is a transit supportive project.*

The Project meets the transit supportive project location-based screening criteria. The Sunnyvale Courthouse site is well served by VTA bus stops with connections to Caltrain from the Sunnyvale Transit Center. Multiple VTA bus routes (Rapid Bus Route 522, Rapid Bus Route 523, Frequent Bus Route 22, and Local Bus Route 55) operate within the vicinity of the Project with headways of 15-30 minutes. The nearest bus stops are near the intersection of El Camino Real and S. Mathilda Avenue, and the intersection of El Camino Real and S. Pastoria Avenue, which are within 0.5 miles of the Project Site, providing multiple opportunities for Project employees and visitors to utilize public transit. The Project is an approximately 18-minute walk from the Sunnyvale Transit Center, approximately 0.75 miles to the northeast, which provides Caltrain service. Caltrain riders may bike or bus to the Project. Furthermore, data presented in the City's Transportation Analysis Guidelines, Appendix D - City of Sunnyvale Transit Priority Area and High-Quality Transit Corridors<sup>14</sup>, shows the Project is located in an area considered by the City to be a high-quality transit area.

The Project utilizes TDM strategies at their courthouse locations, including work from home, hybrid in-person workplace models, and increased use of virtual meetings and remote appearances during oral arguments. A survey was conducted of current San Jose courthouse employees who would be relocated to the Site to determine the number of employees who currently utilize alternative means of transportation for work commutes and the number of days when employees work from home and how the commute would change after relocating to Sunnyvale courthouse location. (see **Appendix K** for a summary of survey responses). 59 employees were surveyed, and 73 percent provided responses. Based on the survey responses, after the relocation, approximately 77 percent of courthouse employees would continue to work from home for at least one day each week, and the overall number of work from -home days equates to approximately 43 percent of total work days. Additionally, approximately 6 percent of courthouse employees would continue to utilize alternative modes of travel for commuting, such as carpooling, walking, biking, and transit.

---

<sup>14</sup> City of Sunnyvale Transportation Analysis Guidelines for Vehicle Miles Traveled and Local Transportation Analysis, Department of Public Works, October 2021

The Santa Clara County (SCC) VMT Evaluation Tool indicates that the baseline VMT data for the Site is 15.35 VMT per employee (see **Appendix L** for SCC VMT Evaluation Tool output). The regional average for work commutes is 15.33 VMT per employee, and a threshold of significance based on 15 percent lower than the regional average equates to 13.03 VMT per employee. **Table 4.10-3** summarizes the applicable Project VMT data and shows that Project VMT would be below the regional threshold of significance (see **Appendix L** for a listing of VMT calculations).

**Table 4.10-3. Project VMT Summary**

Scenario	VMT per Employee
Regional VMT Average	15.33
Threshold of Significance (Regional Ave. minus 15%)	13.03
Baseline VMT for Project Location	15.35
Project-level Work from Home Factor	-43%
Project-level Alternative Commute Mode Factor	n/a*
Project VMT	8.75
Above/Below Threshold of Significance?	Below
*Not applicable – included in baseline VMT for Project location	

As discussed above, the Project is located in an area identified as being along a high-quality transit corridor. The Project would also produce VMT per employee that is lower than the regional threshold of significance based on data from the SCC VMT Evaluation Tool and Project-specific features. Based on the above, the Project would not conflict or be inconsistent with CEQA Guidelines Section 15064.3, subdivision (b). Furthermore, the Project is below the threshold of significance of 15 percent lower than the regional average. Therefore, impacts would be less than significant.

**Level of Significance Before Mitigation**

Less than Significant Impact.

**Mitigation Measures**

No mitigation required.

**Level of Significance After Mitigation**

Less than Significant Impact.

**4.11 Tribal Cultural Resources**

This section describes the existing environment for tribal cultural resources within and around the Site and evaluates the potential for impacts related to tribal cultural resources to occur as a result of development of the Project. Section 4.4 *Cultural Resources*, addresses impacts on built environment and archaeological/historical cultural resources. The term tribal cultural resources refers to sites, features,

places, cultural landscapes, sacred places, and objects with cultural value to a California Native American tribe that are either included in or determined eligible for inclusion in the CRHR or included in a qualifying local register of historic and other resources that have been determined by a lead agency to be significant pursuant to the criteria for listing in the CRHR. Included in this section are brief descriptions of the ethnographic and contemporary setting of the Site.

### 4.11.1 EXISTING CONDITIONS

#### Ethnographic Setting

The Indigenous people who occupied the southern edge of the Carquinez Strait to a portion of the Big Sur and Salinas Rivers south of Monterey Bay, to approximately 50 miles inland from the coast were referred to by ethnographers as Ohlone or Costanoan, derived from the Spanish word *Costeños* meaning coast people which was the name given by the Spanish when establishing missions in the area (Levy 1978; Margolin 1978).

Linguists identify Costanoan as sub-family of the Utian language group which includes Miwokan languages spoken in the North Bay, Clear Lake Basin, and the Consumnes, Mokelumne, and lower Sacramento River drainages of the Central Valley and western Sierra foothills. In the San Francisco Bay Area, linguists have identified six languages with three dialects (Milliken 2009:35).

The City is within the ethnolinguistic boundary between the Tamyen and Ramaytush language groups. However, it is important to note that not all the Indigenous communities of the San Francisco Bay Area agree that all Costanoan language family descend from a single ethnic group that should be called the Ohlone/Costanoan ethnic community (Milliken 2009). Tamyen, present day referred to as Tamien, identify their traditional cultural affiliation as extending north to Redwood City. The contemporary Tamien community descended from the Indigenous population forcefully displaced to Mission Santa Clara, Mission Santa Cruz, and Mission San Juan Bautista. Tamien Nation recently exercised their self-determination, and the language is being actively revitalized and documented (City of Menlo Park 2022; Tamien Nation 2024).

The Ramaytush, who refer to themselves as Ohlone, recognize their ethnolinguistic boundaries as the Golden Gate to the north, Pacific Ocean to the west, San Francisco Bay to the east, and San Antonio Road to Pigeon Point to the south (Association of Ramaytush Ohlone 2024).

The Amah Mutsun Tribal Band is composed of the direct descendants of the people whose territories fell under the influence of Mission Santa Cruz (Awaswas) and Mission San Juan Bautista (Mutsun). Amah villages were distinct from those outside the San Juan Valley because no other tribe spoke Mutsun (Amah Mutsun Tribal Band 2024).

The Muwékma Ohlone, also known as the Pleasanton or Verona Band of Alameda County, identifies their territorial boundaries to include San Francisco, San Mateo, most of Santa Clara, Alameda, Contra Costa, and portions of Napa, Santa Cruz, Solano, and San Joaquin counties and crosscut linguistic and tribal boundaries (Muwékma Ohlone Tribe 2024).

## 4 Environmental Setting, Impacts, and Mitigation Measures

According to the ethnographic and archaeological studies, the San Francisco Bay area was dotted with resource-related occupational and specialized task sites, lesser villages, as well as semi-sedentary and sedentary villages. Communities generally consisted of one main, strategically situated principal ceremonial village occupied year-round and a series of smaller hamlets with resource gathering and processing locations occupied intermittently or seasonally. Encompassing the territorial areas of each group were larger regions composed of several villages and their outliers (ceremonial shrines, cemeteries, and specialized task sites). The Spanish explorers called these territorial units *rancherías* and anthropologists have described these larger regions variably (Arellano et. al 2021; Krober 1955).

Acorns gathered from different oak species were a diet staple, as well as nuts from the buckeye tree; hazelnuts; grassland and plant seeds from buttercup, chia, redmaids, tarweed, and grey pine; wild strawberries, elderberries, and madrone berries; and wild grapes. Hunting and gathering of numerous creek, shore, and terrestrial species supplemented the diet (Levy 1978:491–492; Margolin 1978:40). Groups with access to bay and estuarine resources used tule balsas for watercraft, and acquired shellfish, waterfowl, salmon, sturgeon, and lamprey eels. Larger terrestrial mammals (e.g., grizzly bear, Roosevelt elk, black tailed deer) were hunted with the bow and arrow, while communal drives and nets were used to capture smaller game (e.g., rabbits, mice, rats). Bow and arrow, cordage, bone tools, and twined basketry to procure and process their foodstuffs. Larger mammals, in addition to being a food source, had ceremonial and religious importance, as demonstrated in the archaeological record by ceremonial burials of elk, coyotes, wolves, and bears in the archaeological record (Cambra et al. 1996; Pastron and Bellifemine 1999).

The most common type of dwelling was a thatched domed structure consisting of a framework of poles and pole binders. Other common structures included sweathouses, dance enclosures and assembly houses consisting of excavated semi-subterranean buildings which likely uses boughs of hardwood or redwood trees as center posts for structural support. The sweat lodges and dance houses (tʔupentak in the Chochenyo dialect, but more commonly referred to in the literature by the Mexican term “temescal”) may also have been earth covered as elsewhere in California (Arellano et. al 2021).

Between 1776 and 1797, seven Spanish missions were founded in Ohlone territory and where many Ohlone were forcefully brought to live and work. While living within the mission system, the Ohlone commingled with other groups, including the Esselen, Yokuts, Miwok, and Patwin. Exposure to European diseases, unsanitary living conditions, and malnutrition was devastating to the Ohlone population residing at the missions. By 1832, the Ohlones numbered less than 2,000 (Milliken 2009).

Under the Mexican government, secularization of the mission lands began in earnest in 1834. Most of the former mission land was divided into ranchos and granted to loyal Mexican subjects. Following the secularization of the missions, the surviving missionized Indigenous population continued to live and work in several post-contact communities at various *rancherías* and Californio ranchos surrounding each of the other greater Bay Area missions.

In 1850, California became a part of the United States and laws were established which restricted the civil rights of the Indigenous communities and prevented them from having representation in the government, eliminated the right to testify in court, serve on juries, or be recognized as citizens. Laws allowed

## 4 Environmental Setting, Impacts, and Mitigation Measures

members of the Indigenous communities to be arrested for vagrancy and auctioned out as laborers for periods of four months at a time. Another law provided that children could be given to white citizens as wards until adulthood (Milliken 2009).

In 1851 U.S. government agents negotiated treaties, signed by representatives of groups living to the north and east of the old mission lands, agreeing to set aside large tracts of Central Valley and northern California land as reservations. However, due to pressure from the California Congressional delegation, the United States Senate refused to sign the treaties that had been negotiated and placed the treaties under seal. Between the un-ratified treaties and the Land Claims Act of 1851, many members of Indigenous communities became homeless (Milliken 2009).

During the early 20th century Indigenous groups participated in legal efforts to obtain recognition by the federal government, including two legal suits brought against the U.S. government by Indians of California (1928–1964) for reparation due to them for the loss of traditional lands. Although these Indigenous groups have yet to receive formal recognition from the federal government, they are becoming increasingly organized as political units and have developed an active interest in preserving their ancestral heritage and advocating for Native American issues.

### 4.11.2 REGULATORY SETTING

#### State

#### Tribal Cultural Resources

CEQA defines a “tribal cultural resource” as any one of the following (PRC Section 21074):

- Sites, features, places, cultural landscapes, sacred places, and objects with cultural value to a California Native American tribe that are either (1) included in or eligible for inclusion in the CRHR, or (2) included in a local register of historical resources.
- A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Section 5024.1. The lead agency shall consider the significance of the resource to a California Native American tribe.
- A cultural landscape that meets the requirements listed above and is geographically defined in size and scope.

Archaeological sites, including those that qualify as historical resources (PRC Section 21084.1), unique archaeological resources (PRC Section 21083.2(g)), and non-unique archaeological resources (PRC Section 21083.2(h)), may qualify as tribal cultural resources.

Prior to the release of a Negative Declaration, Mitigated Negative Declaration, or EIR, the agency must initiate consultation with tribes that are traditionally and culturally affiliated with the geographic area of the proposed project if (1) the tribe requested of the agency, in writing, to be informed through formal notification of proposed projects in the geographic area that is traditionally and culturally affiliated with the

## 4 Environmental Setting, Impacts, and Mitigation Measures

tribe; and (2) the tribe responds, in writing, within 30 days of receipt of the formal notification of a proposed project and requests consultation with the agency (PRC Section 21080.3.1(b)).

Consultation is concluded when the agency and tribe(s) agree to measures to mitigate or avoid significant effects on a tribal cultural resource, or if either party concludes that mutual agreement cannot be reached after a good-faith and reasonable effort (PRC Section 21080.3.2(b)).

### **HEALTH AND SAFETY CODE 7050.5: HUMAN REMAINS**

Section 7050.5 of the California Health and Safety Code states that, in the event of discovery or recognition of any human remains in any location other than a dedicated cemetery, there shall be no further excavation or disturbance of the Site or any nearby area reasonably suspected to overlie adjacent remains until the SCC Coroner has determined whether the remains are subject to the coroner's authority. If the human remains are of Native American origin, the coroner must notify the NAHC within 24 hours of this identification.

### **PUBLIC RESOURCES CODE 5097.98: NOTIFICATION OF MOST LIKELY DESCENDANT**

PRC Section 5097.98 states that the NAHC, upon receiving notification of the discovery of Native American human remains pursuant to Health and Safety Code Section 7050.5, shall immediately notify the MLD of the deceased. With permission of the landowner or a designated representative, the MLD may inspect the remains and any associated cultural materials and make recommendations for treatment or disposition of the remains and associated grave goods. The MLD shall provide recommendations or preferences for treatment of the remains and associated cultural materials within 48 hours of being granted access to the site.

#### **Local**

There are no local plans, policies, regulations, or ordinances related to tribal cultural resources that apply to the Project.

### **4.11.3 IMPACTS ANALYSIS**

#### **4.11.3.1 Methodology**

The following section analyzes potential impacts on tribal cultural resources that may be caused by the Project. In accordance with PRC Section 21084.2, the analysis considers the potential for Project activities to cause a substantial adverse change in the significance of a tribal cultural resource.

The NAHC is a state agency that maintains the Sacred Lands File (SLF), an official list of sites that have cultural and religious importance to California Native American tribes. To identify areas within the Project Site that may be considered sensitive by local Indigenous tribal groups, the NAHC was contacted on February 22, 2024. The NAHC responded on February 28, 2024, with a negative result; however, the NAHC included in the response, a list of 14 tribal representatives from eight tribal groups.

## 4 Environmental Setting, Impacts, and Mitigation Measures

Invitation to consult letters pursuant to PRC Section 21080.3.1 were sent to the 14 representatives from the following eight tribal groups on April 19, 2024. Included in the letters were details about the Project and a location map.

- Amah Mutsun Tribal Band
- Amah Mutsun Tribal Band of Mission San Juan Bautista
- Indian Canyon Mutsun Band of Costanoan
- Muwékma Ohlone Indian Tribe of the San Francisco Bay Area
- Northern Valley Yokuts / Ohlone Tribe
- Tamien Nation
- The Ohlone Indian Tribe
- Wuksachi Indian Tribe/Eshom Valley Band

The Judicial Council received communication from two of the above tribal groups: the Amah Mutsun Tribal Band and the Amah Mutsun Tribal Band of Mission San Juan Bautista. On April 22, 2024, the Judicial Council received communication via email with a letter attachment from the Amah Mutsun Tribal Band of San Juan Bautista<sup>15</sup> that stated:

If you have received any positive cultural or historic sensitivity within one mile of the Project Area, here are A.M.T.B Inc's and Amah Mutsun Tribal Band of San Juan Bautista's recommendations:

- All Crews, Individuals and Personnel who will be moving any earth be Cultural Sensitivity Trained.
- A Qualified California Trained Archaeological Monitor is present during any earth movement.
- A Qualified Native American Monitor is present during any earth movement.

The Amah Mutsun Tribal Band of Mission San Juan Bautista's April 22, 2024, letter did not request tribal consultation. On May 13, 2024, the Judicial Council responded to Amah Mutsun Tribal Band of Mission San Juan Bautista providing the results of the 1-mile records search conducted on April 30, 2024 (refer to Section 4.4, Cultural Resources) and invited the Amah Mutsun Tribal Band of Mission San Juan Bautista to request consultation on or before the 30-day deadline to request consultation on May 20, 2024. No further response was received from the Amah Mutsun Tribal Band of Mission San Juan Bautista.

The Judicial Council also sent follow up emails to the remaining 13 tribal representatives explaining that additional information from an expanded records search was available and reminded tribal representatives of the 30-day deadline to request consultation on May 20, 2024. On May 14, 2024, the Judicial Council received a response via email from the Amah Mutsun Tribal Band which stated: "This

---

<sup>15</sup> The NAHC listed name includes the word "Mission" but the reply letter does not.

project site is outside our traditional tribal territory and therefore we have no comments.” As of June 2024, no additional responses have been received and the Judicial Council has determined that the consultation process is concluded, pursuant to PRC Section 21080.3.1 (i.e., AB 52) and PRC Section 21084.3.

### 4.11.3.2 Thresholds of Significance

The Project would have a significant effect if it would result in any of the conditions listed below.

- Cause a substantial adverse change in the significance of a tribal cultural resource, defined in PRC Section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe that is:
  - a. Listed or eligible for listing in the CRHR or in a local register of historical resources, as defined in PRC Section 5020.1(k), or
  - b. Determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of PRC Section 5024.1. In applying the criteria set forth in subdivision (c) of PRC Section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe.

#### a. **Would the project cause a substantial adverse change in the significance of a tribal cultural resource, defined in PRC §21074**

The results of the NWIC records search as described in Section 4.4, *Cultural Resources*, indicate that no previously recorded archaeological resources or tribal cultural resources listed or eligible for listing in the CRHR or a local register of historical resources are known to exist within the Site or a 0.25-mile radius from the Site. However, two previously recorded pre-European contact archaeological resources, and one pre-European contact informal resource was recorded within one mile of the Site. In addition, a review of the relevant geologic maps and literature indicated sensitivity for buried pre-European contact archaeological deposits. No tribal representatives provided additional information about tribal cultural resources that may be affected by the Project as a result of the Judicial Council’s invitation to consult pursuant to PRC Section 21080.3.1. As discussed in Section 4.4, *Cultural Resources*, although not expected archaeological deposits that may qualify as tribal cultural resources could be encountered during Project excavation. Such resources may be eligible for listing in the CRHR or a local register of historical resources, or the lead agency, in its discretion and supported by substantial evidence, could determine the resources to be significant pursuant to the criteria set forth in subdivision (c) of PRC Section 5024.1. Should deposits be encountered during Project excavation, this could result in an adverse change to a tribal cultural resource. Thus, potentially significant impacts related to tribal cultural resources could result from construction of the Project.

Should Native American human remains be encountered during Project excavation, the Santa Clara County Coroner would be required to notify the NAHC as provided in CUL-3, and all applicable state and federal regulations governing the treatment of human remains will be followed.

## 4 Environmental Setting, Impacts, and Mitigation Measures

Implementation of mitigation measures CUL-1 CUL-2 and CUL-3, described in Section 4.4, *Cultural Resources*, would ensure that impacts related to any tribal cultural resources that may be uncovered at the Project Site would be less than significant with mitigation through development and implementation of an AMP, implementation of cultural resources sensitivity training (including training regarding sensitivity to tribal cultural resources) for all construction crews participating in ground-disturbing activities, and requirements to stop work if archaeological deposits are encountered during ground-disturbing activities.

### Level of Significance Before Mitigation

Potentially Significant Impact.

### Mitigation Measures

#### CUL-1, CUL-2, CUL-3

**TCR-1:** Inadvertent/Unanticipated Tribal Cultural Resources Discovery Protocols. If tribal cultural resources or potential tribal cultural resources are discovered during Project implementation, all activities within a 50-foot radius of the find shall be stopped, the Judicial Council's Project Manager and Tribal Representative from the Amah Mutsun Tribal Band of Mission San Juan Bautista shall be immediately notified. The Tribal Representative(s) shall evaluate the find(s) within 48-hours and make recommendations to the Judicial Council if it meets the definition of a tribal cultural resource (PRC Section 21074) and follow the procedures below. The qualified archaeologist shall make recommendations to the Judicial Council and the Judicial council will make the determination. Should the Amah Mutsun Tribal Band of Mission San Juan Bautista be unable to evaluate the find(s) within this defined period, only the qualified archaeologist shall make the recommendation.

- i. If the find(s) does not meet the definition of a tribal cultural resource, a historical resource, or a unique archaeological resource, no further study or protection is necessary prior to resuming Project implementation.
- ii. If the find(s) does meet the definition of a tribal cultural resource, then it shall be avoided by Project activities and preserved in place, if feasible. The contractor shall implement any measures deemed by the Judicial Council to be necessary and feasible to preserve in place, avoid, or minimize impacts to the tribal cultural resource. If avoidance is not feasible, as determined by the Judicial Council, the Tribal Representative(s) from the Amah Mutsun Tribal Band of Mission San Juan Bautista, if available, shall make recommendations regarding the culturally appropriate treatment and disposition of such find(s) and significant impacts to such tribal cultural resources shall be mitigated in accordance with the recommendations of the Amah Mutsun Tribal Band of Mission San Juan Bautista prior to resuming construction activities within the 50-foot radius.

### Level of Significance After Mitigation

Less Than Significant Impact.

## 5 Cumulative Impacts

### 5.1 Introduction

Section 15130(a) of the CEQA Guidelines requires a discussion of the cumulative impacts of a project with the project's incremental effect is cumulatively considerable. Cumulatively considerable, as defined in CEQA Guidelines Section 15065(a)(3), means that the "incremental effects of an individual project are significant when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects." CEQA Guidelines Section 15355 defines a cumulative impact as two or more individual effects that, when considered together, are considerable or that compound or increase other environmental impacts. Cumulative impacts can result from individually minor but collectively significant projects taking place over time.

CEQA Guidelines Section 15130 identifies two basic methods for establishing the cumulative environment in which a project is considered: the use of a list of past, present, and probable future projects or the use of adopted projections from general plan, specific plan, other regional planning document, or a certified EIR for such a planning document. This cumulative analysis uses the "projections" approach to identify the cumulative setting.

A list of planning documents and projects associated with these plans are provided in **Table 5.1-1** below. Probable future projects are those in the Project vicinity that have the possibility of interacting with the Project to generate a cumulative impact and either:

1. Are partially occupied or under construction;
2. Have received final discretionary approvals;
3. Have applications accepted as complete by local agencies and are currently undergoing environmental review;
4. Have been discussed publicly by an applicant or otherwise have become known to the lead agency, provided sufficient information is available about the project to allow at least a general analysis of environmental impacts and an evaluation for the likelihood of implementation.

The analysis also considers planning efforts that address regional environmental issues, such as conservation and water quality improvement programs, and potential effects associated with climate change. These plans, programs, and effects are discussed in relevant resource discussions below.

Table 5.1-1. Projects Contributing to Cumulative Impacts

Planning Document	Description
City of Sunnyvale General Plan	The City of Sunnyvale General Plan (General Plan) was adopted as a consolidated document by the City Council on July 26, 2011. The Land Use and Transportation Element was subsequently updated in April 2017, which plans for the City's growth until 2035. The General Plan serves as the local government's long-term blueprint for the community's vision of future growth. It includes goals, policies, and programs that convey a long-term vision for the Sunnyvale community and guides local decisions-making to advance that vision. In accordance with state law, the General Plan is the basis for determining acceptable land uses and related park, road, and other infrastructure needs. Consequently, the zoning code, Specific Plans, and individual public and private development proposals must be consistent with the General Plan goals, policies, and standards. The General Plan addresses many issues that are directly related to and influence land use decisions, transportation, urban design, economic development, and other topics.
El Camino Real Specific Plan	The ECRSP was adopted by the City Council in June 2022. The plan reflects the community's long-term vision for El Camino Real within the City. The plan includes policies and regulations for new building development. The plan also recommends potential improvements to the roadway and streetscaping. There are future programs and actions included in the plan to fulfill this vision. The plan area comprises about 350 acres of developable land along the entire length of El Camino Real in the City of Sunnyvale. The ESRSP contains the Civic Center Note of which includes the former courthouse.
Master Plan for Civic Center	The Civic Center Master Plan is a 20-year, multi-phased vision to modernize the Civic Center campus that was adopted by the City of Sunnyvale in September 2018. Phase 1 of the plan built a new City Hall which opened in March 2023. Phase 1 also includes an addition to the Public Safety Headquarters for an Emergency Operations Center. Phase 2 focuses on revitalization of the main library and is currently underway. The conceptual design process began in January 2024 and a possible ballot measure to determine next steps is anticipated in late 2024.

## 5.2 Cumulative Context

The geographic area that could be affected by implementation of the Project varies depending on the type of environmental resources being considered. **Table 5.2-1** presents the general geographic areas associated with the different resources addressed in this analysis. For the purpose of the cumulative context, the term "Project area" refers to the areas within the vicinity of the Site and/or further away, depending on the resource topic under evaluation.

**Table 5.2-1. Geographic Scope**

<b>Resource Topic</b>	<b>Geographic Area</b>
Aesthetics	Local (Site and surrounding public viewpoints)
Air Quality	Regional (pollutant emissions that affect the air basins) and immediate Project vicinity (pollutant emissions that are highly localized)
Biological Resources	Local and regional
Cultural Resources	Local (limited to Site), with regional implications
Geology and Soils	Local
Greenhouse Gases	Global
Hazards and Hazardous Materials	Local (immediate Project area)
Hydrology and Water Quality	Local and regional
Noise	Local (immediate Project area) with the exception of transportation noise, which is local and regional
Transportation	Local and regional
Tribal Cultural Resources	Local (limited to Site), with regional implications

### 5.3 Projects Contributing to Potential Cumulative Impacts

**Table 5.1-1** identifies various planning documents within the cities of Sunnyvale that provide insight into the past, present, and probable future development that could contribute to a potential cumulative impact.

### 5.4 Analysis of Cumulative Impacts

For purposes of this EIR, the Project would result in a significant cumulative effect if:

- The cumulative effects of related projects (past, current, and probable future projects) are not significant, and the incremental impact of implementing the Project is substantial enough, when added to the cumulative effects of related projects, to result in a new cumulatively significant impact; or
- The cumulative effects of related projects (past, current, and probable future projects) are already significant, and implementation of the Project makes a considerable contribution to the effect. The standards used herein to determine a considerable contribution are that either the impact must be substantial or must exceed an established threshold of significance.

Significance criteria, unless otherwise specified, are the same for cumulative impacts and Project impacts for each environmental topic area. This cumulative analysis assumes the adoption of all mitigation measures identified in Sections 4.1 through 4.11 to mitigate the Project's impacts. This chapter analyzes whether, after adoption of Project-specific mitigation, the residual impacts of the Project would cause a cumulatively significant impact or would contribute considerably to existing/anticipated (without the Project) cumulatively significant effects.

### 5.4.1 AESTHETICS

Implementation of the Project in conjunction with anticipated development within the City's General Plan area, Sunnyvale Civic Center Master Plan area, and ECRSP area would introduce new development within the region. Development of the Project would visually change the Site. The Project would contribute to the cumulative change in the visual character of the surrounding area through the introduction of a taller building, lighting, and parking spaces. While the taller structure would be introducing new visual elements, the construction of the Project complements the beautification and modernization goals of the Sunnyvale Civic Center Master Plan. One such goal includes replacing outdated one-story structures connected with outdoor circulation with efficient, multi-story, sustainably designed new facilities. The JCC is not required to abide by local zoning ordinance; however, the Project is considered a Public Facility which would be consistent with the City's zoning code. The Project is consistent with applicable local policies guiding the City's overall visual resources and aesthetics as outlined in the Community Character and Land Use Transportation chapters of the City's General Plan. Additionally, the ECRSP identifies the Site as located in the 'Civic Center Node' and within the Land Use Classification of El Camino Real Public Facility. Land uses within this area include civic centers and governmental uses which are consistent with the Project type (Sunnyvale 2022).

As discussed in their respective EIRs, development associated with the buildout of the City's General Plan, ECRSP, and Civic Center Master Plan would have less than significant impacts on scenic vistas, scenic resources, and conflicts with applicable zoning and other regulations governing scenic quality. All anticipated development occurring within the City's General Plan area, ECRSP, and the Sunnyvale Civic Center Master Plan would be subject to the City's applicable policies and zoning requirements related to scenic quality, and would be subject to the City's adopted Design Guideline documents, which act to enhance the overall image of the City, protect and preserve the existing character of the community, communicate the image the community desires, and achieve a higher design quality. Therefore, the Project would not contribute to an existing significant cumulative impact. Development of the Project in connection with other cumulative development in the area would result in a **less than cumulatively considerable impact** related to applicable zoning and other regulations governing scenic quality.

As discussed in Section 4.1, "Aesthetics," there are no state scenic highways located adjacent to, or within view of, the Site (Caltrans 2019). Therefore, impacts related to damage of scenic resources near a highway that is considered eligible for designation as a State and County Scenic Highway would be **less than cumulatively considerable**.

As discussed in their respective EIRs, development associated with the buildout of the City's General Plan and ECRSP would have less than significant impacts related to light and glare. Development associated with buildout of the Civic Center Master Plan could create a new source of substantial light or glare that would adversely affect day or nighttime views in the area, but would be less than significant with implementation of MM Aesthetics-1, which would shield stationary lighting used during nighttime construction such that the light source is not directed toward residential areas or into streets where glare could impact motorists or pedestrians. The construction and operation of the new Sixth Appellate District Courthouse would create new sources of light and glare. As discussed in Section 4.1 "Aesthetics", lighting at the new Courthouse would be designed utilizing to Judicial Council lighting strategies, including:

exterior lighting, shall not contribute to light pollution or trespass by emitting light beyond the property; would minimize glare and unwanted light for neighbors; use LEED guidelines for developing exterior lighting plan; use the code-required light pollution reduction measures in CALGreen; and will specifying LED light figures compliant with the International Dark-Sky Association requirements. Therefore, the impacts related to light and glare would be **less than cumulatively considerable**.

### 5.4.2 AIR QUALITY

The geographic scope for cumulative air quality impacts is limited to the SFBAAB, which is under the jurisdiction of the BAAQMD. The SFBAAB is designated as a non-attainment area related to the state standards for O<sub>3</sub>, PM<sub>10</sub>, and PM<sub>2.5</sub> in addition to federal O<sub>3</sub> and PM<sub>2.5</sub> standards. Cumulative growth in population, vehicle use, and industrial activity could inhibit efforts to improve regional air quality and attain ambient air quality. Thus, the appropriate geographic scope would be the SFBAAB and associated growth and development anticipated in the air basin.

By its very nature, regional air pollution is largely a cumulative impact. Past, present, and future development projects contribute to the region's adverse air quality impacts on a cumulative basis. According to the BAAQMD, a single project is not typically sufficient in size to independently affect the region's attainment of state or federal ambient air quality standards. Rather, a project's individual emissions contribute to the existing and future ambient air quality. As such, a project may be cumulatively considerable when taken in combination with past, present, and future development projects. In establishing these thresholds, BAAQMD considered the emissions levels for which a project's individual emissions would be cumulatively considerable. If a project exceeds the thresholds, then the project would be cumulatively considerable resulting in a significant adverse air quality impact to the region's existing air quality considerations (BAAQMD 2022).

As discussed in Section 4.2, the project's air emissions were compared to BAAQMD thresholds to determine significance. Emissions were found to fall below BAAQMD construction, operation, and cancer risk thresholds. As such, since the project falls below BAAQMD thresholds, there are **no cumulative impacts** anticipated to air quality as a result of the Project.

### 5.4.3 BIOLOGICAL RESOURCES

The Site is currently located within a heavily urbanized area with an existing building onsite. The Site may provide suitable foraging habitat for monarch butterfly, but there is no suitable habitat for candidate, sensitive, or other special-status species within the Site or vicinity of the Site and no special-status species or potential habitat was observed during the biological field survey. Suitable foraging habitat for monarch butterflies within the Site is marginal, with limited flowering plant species; however, monarch butterflies could temporarily feed within the Site. With marginal foraging habitat within the Site and adult monarch butterflies only occurring seasonally, this species is not anticipated to be impacted by the Project.

Potential impacts to migratory nesting birds could occur during Project demolition and construction through construction noise, possible tree removal, and human presence; however, these impacts will be

minimized to a less than significant level through the implementation of mitigation measure BIO-1, including conducting nesting bird surveys prior to work commencement.

Development associated with the buildout of the City's General Plan would result in less than significant impacts to biological resources. Development associated with buildout of the ECRSP and Civic Center Master Plan would have less than significant impacts to migratory nesting birds with implementation of nesting bird measures identified in the ECRSP EIR and Civic Center Master Plan EIR. These measures include pre-construction surveys for development projects under both the ECRSP and Civic Center Master Plan. In addition, measures for development projects under the Civic Center Master Plan would also include daily inspections for nests during construction and limiting lighting during nighttime hours. It is also reasonable to assume that other development projects within the City, as part of the previously approved plans described, would undergo environmental review to evaluate potential impacts to biological resources and would be required to mitigate for impacts to migratory nesting birds in a manner similar to the Project. Therefore, with implementation of mitigation measure BIO-1, impacts to migratory nesting birds would be **less than cumulatively considerable**.

### 5.4.4 CULTURAL RESOURCES

The geographic scope for the analysis of cumulative impacts associated with cultural resources is the Site and the immediate vicinity. Because significant cultural resources are unique and non-renewable members of finite classes, all adverse effects erode a dwindling resource base. The loss of any one archaeological site could affect the scientific value of others in a region because these resources are best understood in the context of the entirety of the cultural system of which they are a part. The cultural system is represented archaeologically by the total inventory of all sites and other cultural remains in the region. As a result, a meaningful approach to preserving and managing cultural resources must focus on the likely distribution of cultural resources, rather than on a single project or parcel boundary.

#### **Built Environment**

Cumulative impacts are addressed only for those thresholds that would result in a Project-related impact. If the Project would result in no impact with respect to a particular threshold, it would not contribute, by definition, to a cumulative impact. Therefore, no cumulative analysis would be required. The Project would not affect a built environment historical resource; thus, built environment is not analyzed for cumulative impacts.

#### **Archaeological Resources**

Because the Site is situated in an archaeologically sensitive area, the possibility exists of encountering unknown archaeological resources during ground-disturbing activities associated with Project construction. The Project could contribute to a cumulative loss of archaeological resources and disturbance of human remains. Therefore, the Project's cumulative impact prior to the application of mitigation measures could be significant. However, in addition to adopted policies and existing regulations to protect cultural resources and human remains, the Project would be subject to mitigation measures CUL-1, CUL-2 and CUL-3, which call for development and implementation of a monitoring plan, worker awareness training, and requirements to stop work if archaeological deposits are encountered during

ground-disturbing activities. Cumulative development in the region could disturb areas with the potential to contain archaeological resources.

Development associated with the buildout of the City's General Plan would result in less than significant impacts to undiscovered archaeological resources and unrecorded human remains as projects would be consistent with Policy CCC-5.5 of the Community Character Chapter of the General Plan that directs that archaeological resources should be protected whenever possible and implementation of Health and Safety Code Section 7050.5(b) that specifies protocol to be followed when human remains are discovered. Development associated with the buildout of the ECRSP would result in less than significant impacts to undiscovered archaeological resources and unrecorded human remains as projects with implementation of mitigation measures to stop work if unidentified archaeological resources are discovered until a qualified archaeologist can assess the significance of the find and, if necessary, develop the appropriate treatment measures in consultation with the City and all other appropriate agencies. Development associated with the buildout of the Civic Center Master Plan would result in less than significant impacts to undiscovered archaeological resources and unrecorded human remains with implementation of mitigation measures for cultural resource sensitivity training during construction activities and stop work in the event of an inadvertent discovery of archaeological resources or human remains.

It is reasonable to assume that other development projects would undergo environmental review to evaluate potential impacts to archaeological resources, would be required to adhere to state and federal regulation, and would be required to mitigate for impacts in a manner similar to the Project. Therefore, with implementation of mitigation measures CUL-1, CUL-2 and CUL-3, impacts to archaeological resources would be **less than cumulatively considerable**.

### 5.4.5 GEOLOGY AND SOILS

#### Geology and Soils

Development associated with the buildout of the City's General Plan, ECRSP, and Civic Center Master Plan would result in less than significant impacts because all development within the City is subject to the CBC, which contains engineering and design requirements that are specifically intended to reduce the loss of life and property from seismic hazards, and geologic hazards such as construction in unstable soils, to the maximum extent practicable. In addition, the Project would also be subject to California Building Standards. Therefore, development projects considered in this cumulative analysis would not result in a cumulatively significant impact from seismic or geologic hazards, and the contribution of the Project would be **less than cumulatively considerable**.

All projects in California that disturb 1-acre or more of land during construction, which includes the development projects considered in this cumulative analysis, are required by law to prepare a SWPPP and implement site-specific BMPs designed to control construction-related stormwater runoff and reduce erosion. The Judicial Council is also required to prepare a SWPPP and implement BMPs at the Site. The SWPPPs and BMPs would be submitted to the San Francisco Bay RWQCB for approval in compliance with the statewide NPDES Construction General Permit. Therefore, implementation of the projects considered in this cumulative analysis would not result in a cumulative significant impact from

construction-related soil erosion, and the contribution of the Project would be **less than cumulatively considerable**.

### Paleontological Resources

The loss of scientifically important resources resulting from the implementation of various projects over time would constitute a cumulative impact that this Project could contribute to. The mitigation measures PALEO-1 through PALEO-4 would reduce impacts from this Project to less than significant and cause scientifically important paleontological resources that may be encountered during Project activities to be recovered for curation.

Development associated with the buildout of the City's General Plan would result in less than significant impacts to paleontological resources. Development associated with the buildout of the ECRSP would result in less than significant impacts to paleontological resources with implementation of mitigation measures to stop work if paleontological resources are discovered during construction until a qualified paleontologist can assess the significance of the find and, if necessary, develop the appropriate treatment measures in consultation with the City and all other appropriate agencies. Development associated with the buildout of the Civic Center Master Plan would result in less than significant impacts to paleontological resources with implementation of mitigation measures for paleontological resource sensitivity training during construction activities and stop work in the event of an inadvertent discovery of paleontological resources.

It is reasonable to assume that other development projects would undergo environmental review to evaluate potential impacts to paleontological resources, would be required to adhere to state and federal regulation, and would be required to mitigate for impacts in a manner similar to the Project. Therefore, with implementation of mitigation measures PALEO-1 through PALEO-4, impacts to paleontological resources would be **less than cumulatively considerable**.

### 5.4.6 GREENHOUSE GASES

Project-related GHG emissions are not confined to a particular air basin; instead, GHG emissions are dispersed worldwide. No single project is large enough to result in a measurable increase in global concentrations of GHG emissions. All GHG emissions contribute to the significant environmental impacts of global climate change and the combination of GHG emissions from an individual project with other future projects could contribute to global climate change.

As discussed in Section 4.6, BAAQMD has qualitative thresholds to determine Project significance. Projects that meet specific design criteria regarding building energy and traffic would be less than significant. The Project implemented these measures, see Impact GHG-1, and was found to be less than significant. According to the BAAQMD in accordance with State Supreme Court's judgment on the *Center for Biological Diversity v. Department of Fish & Wildlife (2015) 62 Cal.4th 204*, lead agencies should use a "fair share" approach for determining whether an individual project's GHG emissions would be cumulative considerable (Association of Environmental Professionals 2015). The BAAQMD established their qualitative thresholds to determine if a project was doing its "fair share" to meet the state's reduction goals. As an agency with expertise in air quality and emissions, the Judicial Council finds the BAAQMD's

fair share thresholds persuasive for determining the Project's significance. Since the Project is consistent with BAAQMD qualitative thresholds, the Project's GHG emissions in conjunction with past, present, and foreseeable future projects would **not be cumulatively considerable**.

### 5.4.7 HAZARDS AND HAZARDOUS MATERIALS

Hazardous materials impacts associated with past or current uses of a project site usually occur on a project-by-project basis and are site-specific rather than regional in nature. Any hazardous materials uncovered during construction activities would be managed consistent with applicable federal, state, and local laws as well as mitigation measures HAZ-1 through HAZ-3. In addition, the use, storage, transport, disposal of hazardous materials would be managed in accordance with applicable federal and state requirements to limit risk of exposure. Other projects considered in this cumulative analysis that could create similar hazardous material effects during standard demolition and construction activities would also be required to comply with measures that would minimize and/or avoid exposure of hazardous materials to people or the environment. Therefore, there would be **no cumulative impact** associated with hazardous materials use, storage, transport, or accidental spills.

### 5.4.8 HYDROLOGY AND WATER QUALITY

Cumulative development on undisturbed lands within the Santa Clara Valley watersheds could increase the amount of impervious surfaces, thereby increasing runoff rates in the area. Runoff could carry increased levels of sediment as well as oil and grease (resulting from construction activities) that could affect water quality in the watershed. Any project in the state that would disturb 1-acre or more of land, which includes development projects considered in this cumulative analysis along with the Project, is required to prepare a SWPPP and implement site-specific BMPs to comply with the requirements of the statewide NPDES Construction General Permit. The BMPs identified in the SWPPP would reduce the impact of construction activities on stormwater quality. Therefore, implementation of the projects considered in this cumulative analysis would not result in a cumulatively significant impact from construction-related degradation of water quality, and the contribution of the Project would be **less than cumulatively considerable**.

Cumulative development and increases in localized runoff would generally increase the amount of impermeable surface area in the Santa Clara Valley watersheds, and could introduce urban pollutants (such as oil, grease, pesticides, fertilizers, and sediment), which can be transported via soil percolation into the groundwater aquifer (if not properly treated), and into surface water bodies via overland flow if the drainage system capacity is exceeded. Such pollutant transport would degrade groundwater and/or surface water quality. The projects considered in this cumulative analysis could also potentially alter drainage patterns, and thereby increase the volume and rate of peak flood flows from stormwater runoff which could exceed stormwater drainage systems and result in upstream or downstream flooding. Buildout of projects considered in this cumulative analysis would require compliance with state, regional, and local standards related to storm drainage infrastructure and treatment. These standards include specific requirements for design and sizing of stormwater facilities, and stormwater pre-treatment via LID features. These standards regulate site-specific development projects in compliance with the City's Municipal Code, Chapter 12.60 Stormwater Management. These standards also ensure that upstream or

downstream flooding from alteration of drainages or exceedance of stormwater drainage systems would not occur. Therefore, implementation of the projects considered in this cumulative analysis would not result in a cumulatively significant impact from alteration of drainages, exceedance of stormwater drainage facility capacities, operational water quality, or flooding and the contribution of the Project would be **less than cumulatively considerable**.

The total amount of potable water required for the Project is anticipated to be 3,240 gallons per day (925,275 gallons per year or 2.87 acre feet per year), which represents approximately 0.002 percent of the total projected future groundwater demand in the Santa Clara Subbasin in years 2025 through 2040, which includes the Site and surrounding lands (SCVWD 2020). According to the SCVWD 2020 UWMP, the Santa Clara Subbasin is not in a condition of chronic overdraft and the long-term average yields are sustainable. The projects considered in this cumulative analysis, along with the Project, include new development that would result in the use of additional groundwater resources to meet potable water needs. Full buildout of these development projects, including the Project, would result in limited changes to the amounts of the impermeable surfaces (resulting in a limited decrease of rainfall percolation through the soil and into the groundwater aquifer) because these areas are largely developed with impervious surfaces. In addition, the Project is not located within a groundwater recharge area and no groundwater extraction would occur as part of the Project. In addition, the ECRSP and Civic Center Master Plan are not located in a groundwater recharge area. As required by SGMA, the GWMP for the Santa Clara Subbasin includes projects that are designed to promote groundwater sustainability, including alternative water supply options such as desalination, increased water conservation measures, additional advanced treatment water, and indirect potable reuse/groundwater recharge and replenishment. Implementation of projects in the GWMP would ensure that the Santa Clara Subbasin is managed for sustainability such that groundwater overdraft would not occur. Therefore, implementation of the projects considered in this cumulative analysis would not result in a cumulatively significant impact related to groundwater sustainability (including impermeable surfaces and groundwater supply), and the contribution of the Project would be **less than cumulatively considerable**.

### 5.4.9 NOISE

The geographic scope for cumulative noise and vibration impacts is generally limited to areas within approximately 0.5 mile of the Site or less, because noise impacts are localized and site-specific. According to **Table 5.1-1**, development associated with the ECRSP and Civic Center Master Plan are within close proximity to the Project.

Development associated with these plans happening simultaneously with implementation of the Project would create the potential for a cumulative construction noise and vibration impact only if construction activity was taking place at both sites at the same time. Since sound is only energy that attenuates naturally and rapidly with increasing distance traveled from a source, a potentially impacted noise-sensitive receptor would need to be physically near multiple concurrent projects.

There is a potential for projects within the Civic Center Master Plan to be in close proximity to the Site (i.e. less than 500 feet). However, based on the calculated demolition / construction noise levels generated by the Project in **Table 4.9-12**, doubling the construction equipment in the area would only increase overall

construction noise levels by 3 dB(A) (accounting for decibel addition). All levels received by the closest noise-sensitive receptors would still be below the FTA Transit Noise and Vibration Impact Assessment Manual construction noise criterion of 80 dB(A) Leq for construction noise received at residential properties during daytime hours. Therefore, the contribution of the Project would be **less than cumulatively considerable**.

Noise associated with Project operations, such as mechanical equipment, with projects under the ECRSP and Civic Center Master Plan could also combine with noise from the Project and radiate to the surrounding community. All exterior equipment noise associated with the ECRSP and Civic Center Master Plan projects would be designed to the requirements listed in Section 19.42.030 "Noise or Sound Level" in the City's Municipal Code; therefore, the equipment would be designed to incorporate measures as needed, such as shielding, barriers, and/or attenuators, to reduce noise levels that may affect nearby properties. Therefore, the Project would **not have a considerable contribution to a cumulative impact** from fixed-source noises to the neighboring properties.

### 5.4.10 TRANSPORTATION

The geographic scope for cumulative transportation impacts includes past, present, and future development of such plans as the ECRSP, the City's General Plan, and the Civic Center Master Plan.

While local policies and plans do not apply to the Project and the Judicial Council is not subject to local land use regulations, there are no significant adverse environmental effects attributable to the Project that are the result of any inconsistency with programs, plans, ordinances, or policies addressing the circulation system, including transit, roadways, bicycle and pedestrian facilities. Therefore, the Project would have a **less than cumulatively considerable** impact.

The Project is located in an area identified in the City's Transportation Analysis Guidelines as being along a high-quality transit corridor. As to potential cumulative transit impacts, the Project plus other cumulative development could contribute transit ridership above current weekday peak hour bus route capacity for the bus routes that serve the area. It is possible that with the Project and other cumulative development near the Project, the capacities on one or more of these bus routes could be exceeded. Should this occur in the future, it is expected that additional transit service would be implemented to serve the future ridership demand. The Project's cumulative impact on transit ridership and facilities would be **less than cumulatively considerable**.

The Project would not result in impacts relative to VMT. The Project would produce VMT per employee that is lower than the regional threshold of significance based on data from the SCC VMT Evaluation Tool and Project-specific features. Other similar cumulative projects, particularly those located within one-half mile of an existing major transit stop or stop along an existing high-quality transit corridor, are anticipated to result in similar cumulative VMT impacts. In addition, the City will consider the environmental effects of a proposed development projects at a project-level relative to VMT. As stated in OPR's Technical Advisory, "(a) project that falls below an efficiency-based threshold that is aligned with long-term goals and relevant plans has no cumulative impact distinct from the project impact. Accordingly, a finding of a less than significant project impact would imply a less than significant cumulative impact, and vice versa."

Therefore, the Project's contribution to a cumulative environmental impact associated with VMT and conflict with CEQA Guidelines Section 15064.3(b) would be **less than cumulatively considerable**.

The Project, in combination with cumulative projects in the vicinity of the Site, would require emergency access. The Project would require review by the California State Fire Marshal involving a plan review and approval, followed by periodic field inspections, and concluding with issuance of a certificate of occupancy to provide for adequate emergency access and building safety features. Similarly, design and construction documents for cumulative projects would need to be reviewed and approved for adequate emergency access by the local agency building and fire departments. With implementation of local agency approval process, individual projects would provide adequate emergency access such that cumulative impact related to emergency access would be **less than cumulatively considerable**.

### 5.4.11 TRIBAL CULTURAL RESOURCES

The geographic scope for the analysis of cumulative impacts associated with tribal cultural resources is the Project Site and the immediate vicinity. Because tribal cultural resources are unique and non-renewable, all adverse effects or negative impacts erode a dwindling resource base. For this reason, the cumulative effects of development in the region on tribal cultural resources are considered significant.

Although tribal cultural resources can encompass features, places, cultural landscapes, sacred places, and objects with cultural value to a California Native American tribe, none of these resource types were identified in the Project Site or immediate vicinity as a result of the NAHC SLF search or tribal outreach pursuant to PRC Section 21080.3; however, because the Project Site is situated in an archaeologically sensitive area, the possibility exists of encountering unknown archaeological deposits that qualify as tribal cultural resources during Project excavation. Therefore, the Project could contribute to a cumulative loss of tribal cultural resources through the disturbance and prior to the application of mitigation measures. However, in addition to adopted policies and existing regulations to protect tribal cultural resources and Native American human remains, the Project would be subject to mitigation measures CUL-1, CUL-2 and CUL-3, and TCR-1 which call for development and implementation of a monitoring plan, worker awareness training, and requirements to stop work if archaeological deposits are encountered during ground-disturbing activities.

Cumulative development in the region could disturb areas with the potential to contain archaeological resources that qualify as tribal cultural resources. Development associated with the buildout of the City's General Plan would result in less than significant impacts to undiscovered archaeological resources that qualify as tribal cultural resources as projects would be consistent with Policy CCC-5.5 of the Community Character Chapter of the General Plan that directs that archaeological resources should be protected whenever possible. Development associated with the buildout of the ECRSP would result in less than significant impacts to undiscovered archaeological resources that qualify as tribal cultural resources as projects with implementation of mitigation measures to stop work if unidentified archaeological resources are discovered until a qualified archaeologist can assess the significance of the find and, if necessary, develop the appropriate treatment measures in consultation with the City and all other appropriate agencies. Development associated with the buildout of the Civic Center Master Plan would result in less than significant impacts to undiscovered archaeological resources that qualify as tribal cultural resources

with implementation of mitigation measures for cultural resource sensitivity training during construction activities and stop work in the event of an inadvertent discovery of archaeological resources.

## 6 Other CEQA Requirements

This chapter provides a discussion of growth-inducing effects and a summary of significant and unavoidable impacts, as required by the CEQA.

### 6.1 Growth-Inducing Impacts

#### 6.1.1 INTRODUCTION TO GROWTH-INDUCING IMPACTS

CEQA (CEQA Guidelines, CCR Section 15126.2(d)) requires an examination of the direct and indirect impacts of the Project, including the potential of the Project to induce growth leading to changes in land use patterns, population densities, and related impacts on environmental resources. Specifically, CEQA states that the EIR shall:

[D]iscuss ways in which the proposed project could foster economic or population growth, or the construction of additional housing, either directly or indirectly, in the surrounding environment. Included in this are projects that would remove obstacles to population growth (a major expansion of a wastewater treatment plant might, for example, allow for more construction in service areas). Increases in the population may tax existing community service facilities, requiring the construction of new facilities that could cause significant environmental effects...also discuss characteristics of some projects that may encourage and facilitate other activities that could significantly affect the environment, either individually or cumulatively. It must not be assumed that growth in any area is necessarily beneficial, detrimental, or of little significance to the environment.

Direct growth inducement would result if a project involved construction of new housing. Indirect growth inducement would result for example, if implementing a project resulted in any of the following:

- Substantial new permanent employment opportunities (e.g., commercial, industrial, or governmental enterprises); or
- Removal of an obstacle to additional growth and development, such as removing a constraint on a required public utility or service (e.g., construction of a major sewer line with excess capacity through an undeveloped area) or adding new urban development adjacent to undeveloped land.

Growth inducement itself is not an environmental impact, but it may lead to foreseeable environmental impacts. These environmental impacts may include increased demand on other community and public services and infrastructure, increased traffic and noise, degradation of air or water quality, degradation or loss of plant or animal habitats, or conversion of agricultural and open space land to urban uses.

#### 6.1.2 GROWTH-INDUCING IMPACTS OF THE PROPOSED PROJECT

The Site is situated within the ECRSP area, which was adopted by the City in 2022. The adopted ECRSP outlines a plan for future development of primarily mixed-use land uses on approximately 350 acres of

developable land that would allow for development of up to 6,900 residential units and 730,000 SF of commercial floor area and would result in approximately 503 new jobs (City of Sunnyvale 2022b). The ECRSP EIR noted that at buildout for the ERSCP, the City's job/housing ratio would slightly decrease from 1.36 to 1.23, allowing for a ratio higher than 1.0 which generally indicates that a community provides adequate employment opportunities. The Project is consistent with many of the uses identified in the ERSCP.

The purpose of the Project is to find a permanent location for the Sixth Appellate District to ensure its operations can continue in an appropriate location and space that provides public access to justice and eliminates future lease uncertainties and ongoing expensive and escalating lease costs. The Project involves the relocation of the Sixth Appellate District from its leased office building in downtown San Jose, SCC to the site of the existing vacant Sunnyvale Courthouse in Sunnyvale, SCC. The Project would not create new housing or businesses, nor would it extend any roadway infrastructure. Relocation of jobs is not expected to create an increase in the need for housing, as the relocation of the Sixth Appellate District is less than 12 miles from the existing location. Therefore, the Project would not result in indirect growth inducement. Furthermore, the necessary utilities and site access improvements would be sized to serve only the Project. Therefore, the Project would not be growth-inducing.

## 6.2 Significant and Unavoidable Impacts

### 6.2.1 PROJECT-LEVEL SIGNIFICANT AND UNAVOIDABLE IMPACTS

CEQA Guidelines Section 15216.2(b) requires the EIR to include a discussion of any significant environmental impacts that cannot be avoided if the Project is implemented.

Chapter 4 of this EIR provides a detailed analysis of all significant and potentially significant environmental impacts from implementation of the Project; identifies feasible mitigation measures, as appropriate, that could avoid or reduce these significant and potentially significant impacts; and presents a determination whether the identified mitigation measures would reduce these impacts to less than -significant levels. In addition, Chapter 5 of this EIR provides an analysis of the significant cumulative impacts resulting from the combined effects of the Project and other lead agencies' planned projects. If a potentially significant or significant impact cannot be reduced to a less than -significant level, it is considered a significant and unavoidable adverse impact.

The Project would not result in project-level significant and unavoidable impacts.

### 6.2.2 CUMULATIVELY SIGNIFICANT AND UNAVOIDABLE IMPACTS

The Project would not result in a cumulatively considerable contribution to cumulatively significant impacts that would be significant and unavoidable.

## 7 Alternatives

### 7.1 CEQA Requirements for Alternatives Analysis

CEQA requires an evaluation of project alternatives based on the comparative merits of “a range of reasonable alternatives to the Project, or to the location of the project, which would feasibly attain most of the basic objectives of the project but would avoid or substantially lessen any of the significant effects of the project and evaluate the comparative merits of the alternatives” (Title 14, CCR, 15126.6(a)). Thus, the focus of the alternatives analysis should be on alternatives that “could feasibly accomplish most of the basic objectives of the project and could avoid or substantially lessen one or more significant effects” (14 CCR 15126.6(c)). Feasible is defined to include the consideration of economic, environmental, social, legal, and technological factors and includes site suitability, economic viability, availability of infrastructure, general plan consistency, other plans or regulatory limitations, jurisdictional boundaries, and whether the proponent can reasonably acquire, control, or otherwise have access to alternative sites.

The analysis must also address the “no project” alternative (Title 14, CCR, Section 15126.6(e)). The CEQA Guidelines further state that the range of alternatives is governed by the “rule of reason,” which requires consideration only of those alternatives necessary to permit a reasoned choice and to foster informed decision-making and public participation (CCR, Title 14, Section 15126.6 (f) (3)).

This EIR considers a range of alternatives to the Project in accordance with State CEQA Guidelines Section 15126.6. This section of the CEQA Guidelines requires that an EIR describe and evaluate a range of reasonable alternatives to a project to promote informed decision-making.

The Initial Study provided six alternatives for evaluation within the EIR.

1. **No Project Alternative:** This alternative proposes retaining the current leased space located at 333 West Santa Clara Street within downtown San Jose. The current lease expires in January 2029 and has a final extension option through January 2034. Beyond this date, neither the appellate court nor the Judicial Council has the capability to ensure the court can remain in its current leased space. Under this alternative, there would be no demolition or new construction; instead, the Judicial Council would continue operating from its current location by signing a new lease for the existing building on the 10th and 11th floors of the Comerica Bank Building.
2. **Lease of Another Location Alternative:** This alternative proposes entering a new long-term lease at a different location when the current lease expires in January 2029. Under this alternative, the Judicial Council would secure a new lease in a different building that meets the requirements of necessary square footage and court space configuration, ensuring operations can continue without interruption.
3. **Existing Courthouse Rehabilitation Alternative:** This alternative involves renovating or retrofitting the existing courthouse located at 605 W. El Camino Real, Sunnyvale California 94087. The Site consists of a 19,994 SF one-story building and approximately 45,000 SF of existing parking and surfacing. While the outside structure would remain intact, aside from

structural improvements as necessary, the interior would be renovated or retrofitted to accommodate a new interior layout and comply with the requirements of a modern courthouse. With the existing building limited to 19,994 SF, this alternative would also necessitate locating selected court services at a separate location to accommodate for the additional 30,000 SF of space required.

4. **Reduced Scope of Proposed Courthouse Alternative:** This alternative involves scaling down the project's scope. This could involve minor or limited demolition, renovating only parts of the Sunnyvale courthouse that require immediate attention, construction of a new supporting building, deferring certain upgrades or expansions, or implementing more modest design elements.
5. **Alternative Site Location:** This alternative involves building a new courthouse on a different site. This could include other currently owned state property or purchasing new land and constructing a new courthouse to meet the Sixth Appellate District's needs.
6. **Adaptive Reuse Alternative:** This alternative involves repurposing an existing building or structure for the courthouse on a different site, instead of constructing a new courthouse on a different site.

## 7.2 Project Objectives

SCC is part of the greater Silicon Valley and the epicenter of computer technology and development in the United States. It serves high-technology-oriented companies, such as Apple, Google, Facebook, IBM, Microsoft, Zoom, and Intel Corporation, as well as aerospace industries such as Lockheed and Martin Aerospace. Over the last years, rental rates have increased while vacancy rates have decreased, suggesting that the Sixth Appellate District may have difficulty negotiating a new lease at their current location and will need to pay more with limited options for a new location. Existing operations have been confined to the dictated leased space floor plate such that adjacencies required for effective operations have not been fully realized, space shortfall exists, and anticipated future growth cannot be accommodated. The current Sixth Appellate District Court location also has security vulnerabilities. The following was determined in the New Courthouse Feasibility Study.

*“The current lease, last executed in May 2012, has utilized multiple lease extension options over the years. It has one final option for a five-year extension through January 2034. However, there is no guarantee that a new lease can be negotiated or even available thereafter. Should it be determined that the Sixth Appellate District is unable to continue leasing at this current location beyond January 2034, an alternative leased space would need to be identified, negotiated, and tenant improvements completed prior to the current lease expiration.*

*Historically, the uncertainty of having to continue leasing space for its operations and remain reliant on the availability of affordable private property office space within its operating budget has been very challenging for the appellate district.*

*As a public agency having had to compete in a consistently high-demand rental market with private companies with resources for paying top dollar for lease space is and has been an ongoing concern. Without a permanent state-owned facility to operate in, the Sixth Appellate District will continue to be vulnerable to rental market conditions and escalating costs. These factors impact its ability to ensure its operations can continue in an appropriate location and space that provides public access to justice.”*

*“An available asset for the permanent home of the Sixth Appellate District is in the City of Sunnyvale on the Site of the former Sunnyvale Courthouse, which is no longer operated by the Superior Court of Santa Clara County. This property is state-owned and is centrally located with good access to public transportation and adjacent to other public facilities within the City of Sunnyvale Civic Center, making its reuse advantageous, promoting environmental protection through infill development consistent with existing development patterns.”*

The Judicial Council has identified the following Project objectives to guide the planning for the Project, as well as the analysis included within this EIR:

- Provide a permanent location on state-owned property for the Court of Appeal, Sixth Appellate District.
- Eliminate future lease uncertainties and ongoing expensive, escalating lease costs.
- Provide for the construction of a new facility prior to the Sixth Appellate District Court’s current lease expiration in January 2029.
- Maintain appellate court operations in Santa Clara County, a location familiar to court users, visitors, and the public and that provides a connection with the Sunnyvale Civic Center.
- Provide a state-owned appellate courthouse that is modern, safe, secure, accessible and constructed to Judicial Council standards to the benefit of all court users and staff and enhancing the public’s access to justice through relieving the current space shortfall, increasing security, and improving operational efficiency and customer service.

### **7.3 Project Significant Impacts**

No unavoidable significant impacts from implementation of the Project have been identified within this Draft EIR.

### **7.4 Alternatives Considered but Rejected for Detailed Analysis in this EIR**

Section 15126.6, subdivision (c) of the CEQA Guidelines describes selection of a reasonable range of alternatives and the requirement to include those that could feasibly accomplish most of the basic project objectives while avoiding or substantially lessening one or more of the significant effects. The analysis should identify any alternatives that were considered by the lead agency but were rejected as infeasible.

CEQA requires a brief explanation of the reasons underlying the lead agency’s determination to eliminate alternatives from further analysis.

A number of alternatives were considered but excluded from further consideration due to a range of reasons, as outlined below. The alternatives that were reviewed and selected for no further evaluation include new lease agreements, rehabilitation of existing courthouse, and alternative sites. These alternatives are more fully discussed below.

### 7.4.1 LEASE OF ANOTHER LOCATION ALTERNATIVE

This alternative proposes entering a new long-term lease at a different location when the current lease expires in January 2029. Under this alternative, the Judicial Council would secure a new lease in a different building that meets the requirements of necessary square footage and court space configuration, ensuring operations can continue without interruption.

This alternative has been rejected for further analysis for the following reasons: while there may be locations suitable and available for rent today (June 2024), these may not be available when needed in November 2028 for occupancy in January 2029. It is expected that lease rates will increase by 2029, making rental costs higher than current rates. This projection is supported by the 2022 Feasibility Study, specifically Section 5.2.3 on Long-Term Lease Projections.

Per the Feasibility Study, in review of the SCC - South Bay Area/Silicon Valley office rental market, over the past 12 months, rental rates have increased while vacancy rates have decreased. According to CBRE Research Figures for the Silicon Valley Office Market in Q1 2022, the total vacancy rate for Class A office space was 6.7 percent in Sunnyvale and 20.3 percent in downtown San Jose. Lease rates averaged \$7.35 per square foot per month in Sunnyvale and \$4.83 per square foot per month in downtown San Jose. For projecting an appropriate office rental rate for Q4 2028, the lower Mercury News rental rate was used with a 3% annual increase and a 5 percent discount rate, resulting in an expected rate of \$6.50 per square foot per month by November 2028. The below analysis provides a complete 30-year lease cost analysis for Long-Term Lease with Expansion, detailing both projected yearly rent and the 2029 Net Present Value.

**333 W. Santa Clara, San Jose**

2/1/2021 through 1/31/2022	\$ 130,513	\$ 2.98		
<b>Renegotiated Term</b>				
2/1/2022 through 1/31/2023	\$ 150,965	\$ 3.45		16%

2/1/2033 through 1/31/2034	\$ 5.60	\$ 5.84		3.5%

**1. Projectected Rent Cost at Time of Expenditure**

<b>30-Year Lease:</b>	\$ 229,525,892	- Projected
Tenant Improvement:	\$ 7,900,000	- Projected
<b>TOTAL OPTION 2:</b>	<b>\$ 237,425,892</b>	<b>- Projected</b>

**2. 2029 Net Present Value**

<b>30-Year Lease:</b>	\$ 105,301,382	- Net Present Value (NPV)
Tenant Improvement:	\$ 7,900,000	- Net Present Value (NPV)
<b>TOTAL OPTION 2:</b>	<b>\$ 113,201,382</b>	<b>- Net Present Value (NPV)</b>

While this alternative would have no time delay of project duration, as it would remain in the same location, it would not meet the other objectives of a facility on state-owned property, a permanent

courthouse location. This analysis also concludes that long-term rental is not cost-effective for the Judicial Council and the costs associated with long-term rental exceed those of constructing a new building on state-owned property.

#### **7.4.2 EXISTING COURTHOUSE REHABILITATION ALTERNATIVE**

This alternative involves renovating or retrofitting the existing courthouse located at 605 W. El Camino Real, Sunnyvale California 94087. The Site consists of a 19,994 SF one-story building and approximately 45,000 SF of existing surface parking. While the outside structure would remain intact, aside from structural improvements as necessary, the interior would be renovated or retrofitted to accommodate a new interior layout and comply with the requirements of a modern courthouse.

This alternative has been rejected for further analysis for the following reasons: renovating or retrofitting the existing building for the Sixth Appellate District, which requires nearly 50,000 SF, would be insufficient as the current building is only 19,994 SF. The segmented design of the current building would lead to operational inefficiencies for the court. This alternative would need to be augmented by locating selected court services at a separate location which would add to and cause significant operational inefficiencies and obstacles.

The current building's poor condition, irregular shape, and segmented structure surrounding an exterior courtyard make it ineffective for a single entity's use. Attempting to connect these spaces would be costly and difficult due to differing structural systems. The costs of renovating or retrofitting would likely be higher than new construction. Furthermore, the value of money spent on renovation would not be retained in the property's value. Operating costs would be significantly more due to the inefficiencies of both maintaining an old building and operating out of two locations. While this alternative would meet the objectives of a facility on state-owned property, a permanent courthouse location, connection with the Sunnyvale Civic Center, and would be refurbished well within the 5-year time, it does not provide adequate space to house the full needs of appellate court services. The existing building at 19,994 SF falls approximately 30,000 SF short of space needed to house all court services. According to the Appraisal Report, the "highest and best use" of the property is redevelopment, as renovation would be cost-prohibitive and reduce the property's value.

#### **7.4.3 ALTERNATIVE SITE LOCATION**

This alternative involves building a new courthouse on a different site. This could include other currently owned state property or purchasing new land and constructing a new courthouse to meet the Sixth Appellate District's needs.

This alternative has been rejected for further analysis for the following reasons: the Sixth Appellate District, which handles cases from Santa Clara, San Benito, Santa Cruz, and Monterey counties, requires a new courthouse located within its jurisdictional area and ideally located within SCC to continue effective adjudication. A review of surplus state properties revealed three sites: Former Sonoma Development in Sonoma County, Preston Youth Correctional Facility in Amador County, and CARB El Monte in Los Angeles County. All these sites are outside of the Sixth Appellate District's jurisdiction. SCC remains the

optimal location due to its extensive land area and urban centers, but private properties in the county are either residential and too small or located in remote areas unsuitable for courthouse functions.

Regarding property size and location, the available properties with sufficient acreage were not appropriately located, and those in acceptable locations were either too small or situated in residential areas unsuitable for governmental functions. Therefore, none of the properties met the requirements for the courthouse project.

Cost comparisons indicate that developing on existing state property would be similar to new construction on the Site, provided the property is not hilly and requires minimal grading. Since no state properties are available within the jurisdiction, purchasing a suitable private property would significantly increase costs due to the land purchase price, which the Project is not currently funded for. Purchase of land for this Project would necessitate additional funding approval from the Department of Finance or Legislature, a challenging prospect given the current budget climate and state deficit. Moreover, acquiring a private property would add 2.5 to 3 years to the project duration, potentially surpassing the 5-year timeline, in addition to escalating construction costs by 9 to 15 percent. This alternative, while providing a permanent home for the appellate court at a suitable size, would not meet the objectives of a facility on state-owned property or connection with the Sunnyvale Civic Center.

#### **7.4.4 ADAPTIVE REUSE ALTERNATIVE**

This alternative involves repurposing an existing building or structure for the courthouse on a different site.

This alternative has been rejected for further analysis for the following reasons: the state does not own any existing buildings within the jurisdiction of the Sixth Appellate District that could be used as-is, demolished, or renovated/retrofitted for the new courthouse. Furthermore, a search for privately owned office properties of 45,000-55,000 SF available for sale in SCC identified five potential properties.

However, the cost of using these privately owned properties would be significantly higher than new construction. This is because a property purchase would be necessary, adding substantial cost and schedule impacts to the Project as outlined in the alternative Site Location alternative above. Although the Project and this alternative both require varying levels of demolition, the alternative might need significant structural modifications and upgrades, especially for older buildings constructed in 1900 and 1928, which could involve substantial costs due to their age and potential historical status. Additionally, mechanical, plumbing, and electrical system replacements in older buildings could be as costly, if not more so, than new construction due to space and service constraints.

While this alternative provides a permanent home for the Sixth Appellate District, it does not provide connection with the existing Sunnyvale Civic Center and neighborhoods. Another challenge is that the listed properties are not vacant but fully leased, with owners typically negotiating long-term leases with tenants to make the properties more attractive to investors. Buying out tenants' leases and covering relocation costs would add millions of dollars to the property purchase price, making this alternative significantly more expensive and complex than constructing a new building on state-owned land.

## 7.5 Alternatives Analyzed in this EIR

In addition to a No Project Alternative, the following alternatives, which meet some of the project goals and objectives, are summarized in this section.

The State CEQA Guidelines require the analysis of a “no project” alternative and, depending on the circumstances, evaluation of alternative location(s) for the proposed Project, if feasible. Based on the alternative’s analysis, an environmentally superior alternative is to be designated. In general, the environmentally superior alternative is the alternative with the least adverse impacts on the environment. If the environmentally superior alternative is the “no project” alternative, the EIR shall also identify another environmentally superior alternative among the other alternatives.

Section 15126.6(d) of the State CEQA Guidelines states that alternatives analysis need not be presented in the same level of detail as the assessment of the proposed Project. Rather, the EIR is required to

provide sufficient information to allow for meaningful evaluation, analysis, and comparison with the proposed Project. If an alternative would cause one or more significant impacts in addition to those of the proposed Project, analysis of those impacts is to be discussed, but in less detail than for the proposed Project.

## 7.5.1 NO PROJECT ALTERNATIVE

### 7.5.1.1 Description

The existing courthouse would remain untouched and unused. This alternative proposes retaining the current leased space located at 333 West Santa Clara Street within downtown San Jose. The current lease expires in January 2029 and has a final extension option through January 2034. Under this alternative, there would be no demolition or new construction; instead, the Judicial Council would continue operating from its current location by signing a new lease for the existing building on the 10th and 11th floors of the Comerica Bank Building; however, neither the Sixth Appellate District nor the Judicial Council has capability to ensure the court can remain in its current leased space after January 2034. While the location would remain the same, the lease option and rates would be attempted to be renegotiated for future years of use, but at some point, the lease may not be renewable and the Sixth Appellate District would need to find an alternative leased location. This alternative does not meet any of the Project objectives.

### 7.5.1.2 Potential Environmental Impacts

Following are the potential environmental impacts that would result from the No Project Alternative. The No Project Alternative would result in no action if the Judicial Council does not approve the Project or a Project alternative. Following are the potential environmental impacts that would result from the No Project Alternative.

### 7.5.1.3 Potential Environmental Impacts Less than those of the Project

The below resource areas would have a potential environmental impact **less** than those of the Project.

**Aesthetics.** The existing vacant courthouse is located within a well-lit urban portion of Sunnyvale with surrounding ambient lighting sources. Overhead lighting is present at the front and back of the existing vacant courthouse and in the existing parking lot. Current courthouse services would continue to operate out of leased space in a commercial office building in downtown San Jose in SCC. While there would be no change in the current aesthetics, retention of the one-story vacant courthouse building long-term could lead to its dilapidation over time, which could create an aesthetic issue. Addressing this concern would be necessary at a later date to determine the appropriate path forward.

**Biological Resources.** No trees would be removed from the Site; vegetation would remain unchanged. Current courthouse services would continue to operate out of leased space in a commercial office building in downtown San Jose in SCC.

**Cultural Resources.** Under CEQA, cultural resources must be 50 years or older to be considered historical. The former courthouse on the Site does not qualify for listing in the CRHR due to its lack of historical significance, and the Site is not adjacent to any historical resources.

With no Project construction, the potential to encounter buried archaeological deposits, significant adverse changes to these resources, or disruption of human remains outside of dedicated cemeteries would be negated. The vacant courthouse and parking lot would remain in place unchanged.

Current courthouse services would continue to operate out of leased space in a commercial office building in downtown San Jose in SCC.

**Geology, Soil, and Paleontological Resources.** With no Project demolition or construction, there is no potential grading activities, topsoil loss, or potential impact of paleontological resources or sites. The vacant courthouse and parking lot would remain in place unchanged. Current courthouse services would continue to operate out of leased space in a commercial office building in downtown San Jose in SCC.

**Noise and Vibration.** The vacant courthouse and parking lot would remain in place unchanged; no demolition or construction would occur. Current courthouse services would continue to operate out of leased space in a commercial office building in downtown San Jose in SCC.

**Tribal Cultural Resources.** The vacant courthouse and parking lot would remain in place unchanged; no demolition or construction would occur. Current courthouse services would continue to operate out of leased space in a commercial office building in downtown San Jose in SCC.

The existing courthouse has been vacant since 2016 and would remain vacant. The Sixth Appellate District, Court of Appeal currently operates out of leased space in a commercial office building in downtown San Jose in SCC. Existing courthouse services would continue at the existing facility, with no change.

No mitigation would be required for the No Project Alternative.

### 7.5.1.4 Potential Environmental Impacts Similar to those of the Project

The below resource areas would have a potential environmental impact **similar** (or equal) than those of the Project. The

**Air Quality.** The existing vacant courthouse generates only minor air emissions associated with off-gassing paints and asphalt and electricity for outdoor lighting and would remain in place unchanged.

The current courthouse services would continue at the existing facility, thereby resulting in the continuation of existing operational emissions associated with building operations and employee and visitor trips to and from the respective courthouse facilities.

**Greenhouse Gas.** The existing vacant courthouse generates only minor air emissions associated with off-gassing paints and asphalt and electricity for outdoor lighting and would remain in place unchanged.

The current courthouse services would continue at the existing facility, thereby resulting in the continuation of existing operational emissions associated with building operations and employee and visitor trips to and from the respective courthouse facilities.

**Hazards and Hazardous Materials.** The vacant courthouse and parking lot would remain in place unchanged; no demolition or construction would occur. Current courthouse services would continue to operate out of leased space in a commercial office building in downtown San Jose in SCC. Existing operation involves traditional courthouse and judiciary activities that do not require the use of hazardous materials. While there would be no change in the current hazards, retention of the one-story vacant courthouse building long-term could lead to additional decline over time, which could create a hazards issue.

Based on the results of the data collection from the field, there are a number of ACM inside the vacant courthouse where inspectors noted to be in damaged condition. These materials include joint compound on walls and ceilings, floor tile mastic concealed beneath carpeting, and sink undercoating. These materials are not likely to degrade further since they are inside an unoccupied building.

The exterior building components show damaged or significantly damaged locations to window putty on the exteriors of the courthouse windows and asbestos-containing roofing and sealant at the top of the unused shed. There is also a LBP in poor condition at the roof of the courthouse. Since these materials are on exterior building components and exposed to weather, addressing the exterior concerns would be necessary at a later date.

**Hydrology and Water Quality.** The vacant courthouse and parking lot would remain in place unchanged; no demolition or construction would occur. Current courthouse services would continue to operate out of leased space in a commercial office building in downtown San Jose in SCC.

**Transportation.** The vacant courthouse and parking lot would remain in place unchanged; no demolition or construction would occur. Current courthouse services would continue to operate out of leased space in a commercial office building in downtown San Jose in SCC. The current courthouse services would continue at the existing facility, thereby resulting in the continuation of existing employee and visitor trips to and from the respective courthouse facility.

### **7.5.1.5 Potential Environmental Impacts Greater to those of the Project**

The No Project Alternative would not have any potential environmental impacts **greater** than those of the Project.

## **7.5.2 REDUCED SCOPE OF PROPOSED COURTHOUSE ALTERNATIVE**

### **7.5.2.1 Description**

This alternative involves scaling down the Project's scope. This could involve minor or limited demolition, renovating only parts of the Sunnyvale courthouse that require immediate attention, a separate

supporting building on the property, deferring certain upgrades or expansions, and/or implementing more modest design elements.

The existing vacant courthouse consists of a 19,994 SF one-story building and approximately 45,000 SF of existing surface parking. Exterior and interior renovation or retrofitting would be needed to accommodate a new interior layout and comply with the requirements of a modern courthouse. To obtain the additional square footage needed (up to an additional 30,000 SF), the addition of multiple stories to the existing building or expanding on the ground-level would be required.

Although the building appears unified from the exterior, it consists of four separate structures connected by breezeways and was constructed in 1967. Given the changes in building codes over the past 50 years, it is improbable that the existing foundation and wall structures could support a second level or third level.

Expanding on the ground level also presents some challenges. The Project Site has limited space to accommodate an additional 30,000 SF. Additionally, the existing building is currently in violation of a 25-foot vehicular setback at its northeast corner.

This alternative would include the upgrade, refurbishment, and continued use of the existing 19,994 SF one-story building, the construction of a new one to two story building totaling up to an additional 30,000 SF on the remaining 45,000 SF Project Site, and leased parking.

### **Existing Building Renovation:**

The existing 19,994 SF courthouse building will undergo renovation to address immediate needs and enhance functionality. This may include upgrades to utilities, accessibility improvements, and interior redesign to improve workflow and space utilization. The violation of the 25-foot vehicular setback at the northeast corner of the property will remain in place.

### **New Building Construction:**

A new one to two story building, totaling up to 30,000 SF, will be constructed on the remaining 45,000 SF property. This building will accommodate additional space requirements. The design will be modest yet functional, aiming to complement the existing courthouse architecture.

### **Parking Lot:**

To accommodate the increased footprint demand from the new building and existing building, the Site will no longer accommodate the required parking; therefore, the parking lot to the east of the current onsite parking area, previously leased from the City, will need to continue to be leased and utilized for courthouse parking. Public, staff, and court justices will be required to park within the same lot.

### **7.5.2.2 Potential Environmental Impacts**

Is there any risk that storm drain systems of original construction in 1967 that do not implement LIDs or water treatment prior to discharge into City Stormwater systems, could impact those existing systems?

### 7.5.2.3 Potential Environmental Impacts Less than those of the Project

The Reduced Scope Alternative would have no potential environmental impacts **less** than those of the Project.

### 7.5.2.4 Potential Environmental Impacts Similar to those of the Project

The below resource areas would have a potential environmental impact **similar** (or equal) to those of the Project.

The Reduced Scope Alternative would have similar impacts as the Project to **aesthetics, biological resources, cultural resources, geology, soils, and paleontology, hazards and hazardous materials, hydrology and water quality, noise, transportation, and tribal cultural resources** as the land use would be consistent and restricted to the same Site. This alternative would retain demolition, construction, and operation of a courthouse. While demolition would be limited to minor structural improvements to the existing courthouse building, and bringing asbestos and lead affected infrastructure into code, the construction of the new building and courthouse operations would be similar. This alternative would also require the implementation of the Project mitigation measures to reduce impacts to less than significant. Mitigation is as follows:

#### Mitigation Measures

**BIO-1:** If demolition and/or construction (including any tree removal) occurs during the typical nesting season (February 1 through September 1) a pre-construction nesting bird survey will be conducted during the nesting season to document any nests on the Site. Nesting bird surveys will be performed at a minimum of two weeks prior to the start of Project activities. If an active nest is observed, a protective buffer will be established around the nest to avoid any disturbances. During vegetation removal, if an active nest is identified within the Site, a biological monitor may also be required to monitor the nest during Project activities to ensure there are no disturbances to the nesting bird and prevent nest failure.

**CUL-1:** Development of an AMP and Archaeological Monitoring.

- A. Prior to any Project-related ground disturbance an AMP shall be developed by a qualified archaeologist who meets the SOI Professional Qualifications Standards for Archaeology<sup>16</sup> for review and approval by the Judicial Council.
  - i. The AMP shall include but not limited to, archaeological monitoring methods specific to Project grading, utilities, and foundation exaction; 2) protocols and a chain of contact if unanticipated archaeological discoveries are encountered during Project-related ground disturbance; 3) a summary of documentation procedures for unanticipated discoveries; 4) a description of the types of archaeological deposits that are likely to be

---

<sup>16</sup> U.S. Department of the Interior. 1983. *Archaeology and Historic Preservation; Secretary of the Interior's Standards and Guidelines*. Available: <https://www.nps.gov/subjects/historicpreservation/upload/standards-guidelines-archeology-historic-preservation.pdf>

encountered specific to the Site; and 5) procedures for evaluating these archaeological deposit types as historical resources or unique archaeological resources pursuant to PRC Section 5024.1 or PRC Section 21083.2(g)

- B. Prior to any Project-related ground disturbance, the Judicial Council shall retain the services of an SOI qualified archaeologist to implement the AMP and oversee archaeological monitoring of Project grading, utilities, and foundation excavation pursuant to the AMP.
- i. If archaeological deposits are encountered during Project-related ground disturbance, the monitoring archaeologist shall have the authority to stop work in the area (50-foot radius) and implement the procedures outlined in the AMP.
  - ii. Work shall not resume until the monitoring archaeologist under the oversight of the SOI qualified archaeologist and, in consultation with the Judicial Council, determines that all applicable protocols of the AMP have been met and that the archaeological deposit does not qualify as a historical resource or unique archaeological resource pursuant to PRC Section 5024.1 or PRC Section 21083.2(g) and no further archaeological investigation is necessary.
  - iii. Should the monitoring archaeologist under the oversight of the SOI qualified archaeologist and, in consultation with the Judicial Council, determine the archaeological deposit does qualify as a historical resource or unique archaeological resource pursuant to PRC Section 5024.1 or PRC Section 21083.2(g), a treatment plan with appropriate protection and preservation measures will be developed for review, approval, and implementation by the Judicial Council to mitigate impacts to the resource.
  - iv. Following the completion of all ground disturbance associated with Project construction, the results of the archaeological monitoring will be summarized in a technical document. The technical document shall be provided to the Judicial Council for review and approval and submitted to the NWIC.

**CUL-2: Conduct Cultural Resource Sensitivity Training**

Prior to any Project-related ground disturbance, the Judicial Council shall retain the services of an SOI qualified archaeologist to oversee and ensure that all construction workers involved in ground-disturbing activities receive cultural resource sensitivity training by an archaeologist who is experienced in teaching non-specialists to recognize archaeological resources in the event that any are discovered during construction. Construction staff directly overseeing or engaged in ground-disturbing activities must participate in this training. This training shall be provided once to each worker involved in ground-disturbing activities before they begin work and shall be documented in training records submitted to the Judicial Council.

This training shall be administered as standalone trainings or included as part of the overall environmental awareness training required by the Project. The training shall include, at minimum, the following:

- the appearance and types of cultural and archaeological resources that are likely to be encountered.
- the notification procedures and protocols to be taken in the event of an inadvertent cultural or archaeological resource discovery.
- the penalties for disturbing or destroying cultural resources.

**CUL-3:** Stop Work if Archaeological Deposits and/or Human Remains Are Encountered During Ground-Disturbing Activities.

If archaeological deposits are encountered during Project-related ground disturbance, work in the area (50-foot radius) shall stop immediately and the procedures outlined in the AMP will be implemented. If any human remains are discovered during ground-disturbing activities, there shall be no further excavation or disturbance of the Site, or any nearby area reasonably suspected to overlie adjacent human remains. These remains shall be treated in accordance with existing state laws, including California PRC Section 5097.98 and California Health and Safety Code Section 7050.5.

**PALEO-1:** A qualified paleontologist meeting professional standards as defined by Murphey et al. (2019) will be retained as the designated Project Paleontologist to oversee a paleontological mitigation program. The Project Paleontologist should draft and oversee the implementation of a Paleontological Mitigation Plan that reviews detailed Project plans and establishes monitoring plans that provide for paleontological monitoring of earthwork and ground-disturbing activities into undisturbed geologic units with high paleontological potential to be conducted by a paleontological monitor meeting industry standards (Murphey et al. 2019). This plan should include provisions for worker training, depths and locations for monitoring, monitoring procedures, a fossil discovery plan in the event a fossil is found during construction, including a plan for assessment and treatment, and requirements for final reporting of the results of the mitigation program. The plan should include a review of geotechnical data, if available, to refine the depth at which Pleistocene-aged sediments are present.

**PALEO-2:** Full-time paleontological monitoring should be implemented once excavations reach five feet in depth across the Site in previously undisturbed sediments. The Project Paleontologist may alter the frequency or depth of monitoring based on subsurface conditions.

**PALEO-3:** The Project Paleontologist should develop a WEAP training outlining the requirements and procedures if inadvertent discovery of fossils is identified during construction, to be delivered by the paleontological monitor. This training shall be provided once to each worker involved in ground-disturbing activities before they begin work and shall be documented in training records submitted to the Judicial Council.

**PALEO-4:** In the event fossils are encountered during construction activities, all work must stop in the immediate vicinity of the finds while the paleontological monitor documents the find. The Project Paleontologist shall assess the discovery. Should the Project Paleontologist assess the discovery as meeting criteria of scientific importance to be considered a paleontological resource, the discovery shall

be collected and curated in an accredited repository along with all necessary associated data and curation fees.

**HAZ-1:** Preparation of a Hazardous Materials Management Plan. Structures to be demolished containing asbestos and lead paint shall be appropriately handled prior to demolition at the Site and disposed in accordance with an Asbestos and Lead Paint Management Plan prepared by the contractor and submitted to the Judicial Council for review and approval prior to initiating demolition activities. Prior to demolition of the Site hazardous materials or other universal wastes onsite shall be inventoried, packaged, removed, and disposed of in accordance with a Hazardous Materials Management Plan prepared by the contractor and submitted to the Judicial Council for review and approval prior to initiating demolition activities.

Hazardous materials used during construction shall be limited to the quantities required for construction and shall be stored and handled in accordance with regulatory requirements. Utility trucks and refueling trucks operating onsite shall have a spill kit onboard at all times. Small spills of petroleum products or other hazardous materials during construction operations shall be reported to the construction supervisor and a spill response form completed with a description of the type and quantity of the spill accompanied by photographs and a description of the disposition of the spill material. Hazardous spill material shall be disposed according to regulatory requirements. In the event of a large spill of hazardous materials equal to or above reportable quantities federal, state, and applicable local reporting requirements shall be followed.

**HAZ-2:** Preparation of a site-specific HASP to protect the health and safety of construction workers and the environment. The HASP shall be prepared in accordance with Title 8 of the CCR State and federal Occupational Safety and Health Association regulations (29 Code of Federal Regulations 1910.120). The HASP shall be made available to construction workers for review prior to starting work at the Site. The HASP shall identify potential hazards (including stained or odorous soils at any location where earth-moving activities would occur within the proposed development area), chemicals of concern (e.g., volatile organic compounds, heavy metals, and gases), personal protective equipment and devices, decontamination procedures, the need for personal or area monitoring, and emergency response procedures. The HASP shall provide direction in the event stained or odorous soil is encountered onsite during construction activities that the Judicial Council shall retain a licensed environmental professional to conduct a Phase II ESA that includes appropriate soil and/or groundwater analysis, and potential soil vapor analysis. Recommendations contained in the Phase II ESA to address any contamination that is discovered during the investigation shall be implemented before initiating ground-disturbing activities in these areas. The HASP shall also require notification of the appropriate federal, state, and local agencies if evidence of previously undiscovered soil contamination (e.g., stained soil, odorous groundwater, or groundwater with a surface sheen). Any contaminated areas shall be remediated in accordance with recommendations made by the RWQCB, Department of Toxic Substance Control, the Sunnyvale Department of Public Safety (i.e., designated CUPA), County of Santa Clara Department of Environmental Health, and/or other appropriate federal or state regulatory agencies.

### 7.5.2.5 Potential Environmental Impacts Greater to those of the Project

The below resource areas would have a potential environmental impact **greater** to those of the Project.

The Reduced Scope Alternative would have greater impacts as the Project to **air quality** and **greenhouse gas**. The existing courthouse uses natural gas for heating and possibly other needs. Natural gas combustion emits carbon dioxide (CO<sub>2</sub>), methane (CH<sub>4</sub>), and other greenhouse gases (GHGs), contributing to the building's overall GHG emissions, whereas the proposed new building would be designed to operate without using natural gas, potentially relying on electricity from renewable sources. This alternative would retain demolition, construction, and operation of a courthouse. As noted above, demolition would be limited to minor structural improvements to the existing courthouse building and bringing asbestos and lead affected infrastructure into code. While the equipment and schedule would be similar, courthouse operation would be maintained at two facilities (existing refurbished courthouse and new building), resulting in the operational emissions associated with two building operations (one existing and refurbished and one new) and equal employee and visitor trips to and from the respective courthouse facilities. While air quality and greenhouse gas levels may be slightly elevated for operation of the two buildings (one existing refurbished, and one new), it is not anticipated that mitigation will be necessary.

## 7.6 Environmentally Superior Alternative

CEQA requires that an EIR identify the environmentally superior alternative(s) of a project other than the proposed project or the “no project” alternative (CEQA Guidelines Section 15126.6 (e)(2)). As stated at the beginning of this chapter, the purpose of this alternatives analysis is to consider a reasonable range of alternatives that could feasibly attain most of the basic project objectives and avoid or substantially lessen significant program impacts.

From the alternatives evaluated within this EIR, the environmentally superior alternative other than the “proposed Project” and “No Project”, would be the Reduced Scope Alternative.

**The Project.** This Project as described in detail above, while requiring mitigation, would be less than significant and meets all the Project objectives. Additionally, the Project would not result in a cumulatively considerable contribution to cumulatively significant impacts that would be significant and unavoidable.

**The No Project Alternative.** As stated above in Section 7.5.2, the No Project Alternative would have environmental impacts less than those of the Project for the following environmental resource topics aesthetics, biological resources, cultural resources, geology, soils, and paleontological resources, noise and vibration, and tribal cultural resources and be similar (or equal) for air quality, greenhouse gas, hazards and hazardous materials, hydrology and water quality, and transportation. While it does have less environmental impacts, it does not satisfactorily meet any of the Project objectives. The Judicial Council would be required to renew their existing lease; however, should future lease options not be available, the Judicial Council would be required to identify an alternative leased location or reconsider evaluation of a new project and complete analysis of impacts.

**The Reduced Scope Alternative.** As compared to the Project, this alternative was determined to result in slightly increased adverse impacts for air quality and greenhouse gas environmental resource topics.

These increases are generally attributed to maintaining operation of two buildings (one existing refurbished [natural gas], and one new [electric]). All other environmental resource topic areas were determined to have a similar level of impact, as compared to the Project described throughout this EIR. Additionally, this Alternative would not result in a cumulatively considerable contribution to cumulatively significant impacts that would be significant and unavoidable.

The Reduced Scope Alternative would meet some of the Project objectives. While providing the Sixth Appellate District a permanent home, it does not provide a cohesive layout and use. Needed facilities (one courtroom with support spaces, justice chambers, administrative support and operations areas, a law library, mediation area, public entry and lobby, building support area including a conference room, training room, and breakroom.) would be evaluated for space to determine which could be accommodated, and then split between two buildings. While the Judicial Council would not be required to lease a building, they would need to lease the adjacent parking lot indefinitely, as there would be no room for expansion within the Sunnyvale Civic Center and surrounding neighborhood.

[nahc@nahc.ca.gov](mailto:nahc@nahc.ca.gov)

The Native American Heritage Commission (NAHC) has received the Notice of Preparation (NOP), Draft Environmental Impact Report (DEIR) or Early Consultation for the project referenced above. The California Environmental Quality Act (CEQA) (Pub. Resources Code §21000 et seq.), specifically Public Resources Code §21084.1, states that a project that may cause a substantial adverse change in the significance of a historical resource, is a project that may have a significant effect on the environment. (Pub. Resources Code § 21084.1; Cal. Code Regs., tit. 14, § 15064.5 (b) (CEQA Guidelines § 15064.5 (b)). If there is substantial evidence, in light of the whole record before a lead agency, that a project may have a significant effect on the environment, an Environmental Impact Report (EIR) shall be prepared. (Pub. Resources Code §21080 (d); Cal. Code Regs., tit. 14, § 5064 subd.(a)(1) (CEQA Guidelines § 15064 (a)(1)). In order to determine whether a project will cause a substantial adverse change in the significance of a historical resource, a lead agency will need to determine whether there are historical resources within the area of potential effect (APE).

CEQA was amended significantly in 2014. Assembly Bill 52 (Gatto, Chapter 532, Statutes of 2014) (AB 52) amended CEQA to create a separate category of cultural resources, "tribal cultural resources" (Pub. Resources Code §21074) and provides that a project with an effect that may cause a substantial adverse change in the significance of a tribal cultural resource is a project that may have a significant effect on the environment. (Pub. Resources Code §21084.2). Public agencies shall, when feasible, avoid damaging effects to any tribal cultural resource. (Pub. Resources Code §21084.3 (a)). **AB 52 applies to any project for which a notice of preparation, a notice of negative declaration, or a mitigated negative declaration is filed on or after July 1, 2015.** If your project involves the adoption of or amendment to a general plan or a specific plan, or the designation or proposed designation of open space, on or after March 1, 2005, it may also be subject to Senate Bill 18 (Burton, Chapter 905, Statutes of 2004) (SB 18). **Both SB 18 and AB 52 have tribal consultation requirements.** If your project is also subject to the federal National Environmental Policy Act (42 U.S.C. § 4321 et seq.) (NEPA), the tribal consultation requirements of Section 106 of the National Historic Preservation Act of 1966 (154 U.S.C. 300101, 36 C.F.R. §800 et seq.) may also apply.

The NAHC recommends consultation with California Native American tribes that are traditionally and culturally affiliated with the geographic area of your proposed project as early as possible in order to avoid inadvertent discoveries of Native American human remains and best protect tribal cultural resources. Below is a brief summary of portions of AB 52 and SB 18 as well as the NAHC's recommendations for conducting cultural resources assessments.

**Consult your legal counsel about compliance with AB 52 and SB 18 as well as compliance with any other applicable laws.**

AB 52 has added to CEQA the additional requirements listed below, along with many other requirements:

1. Fourteen Day Period to Provide Notice of Completion of an Application/Decision to Undertake a Project: Within fourteen (14) days of determining that an application for a project is complete or of a decision by a public agency to undertake a project, a lead agency shall provide formal notification to a designated contact of, or tribal representative of, traditionally and culturally affiliated California Native American tribes that have requested notice, to be accomplished by at least one written notice that includes:
  - a. A brief description of the project.
  - b. The lead agency contact information.
  - c. Notification that the California Native American tribe has 30 days to request consultation. (Pub. Resources Code §21080.3.1 (d)).
  - d. A "California Native American tribe" is defined as a Native American tribe located in California that is on the contact list maintained by the NAHC for the purposes of Chapter 905 of Statutes of 2004 (SB 18). (Pub. Resources Code §21073).
  
2. Begin Consultation Within 30 Days of Receiving a Tribe's Request for Consultation and Before Releasing a Negative Declaration, Mitigated Negative Declaration, or Environmental Impact Report: A lead agency shall begin the consultation process within 30 days of receiving a request for consultation from a California Native American tribe that is traditionally and culturally affiliated with the geographic area of the proposed project. (Pub. Resources Code §21080.3.1, subs. (d) and (e)) and prior to the release of a negative declaration, mitigated negative declaration or Environmental Impact Report. (Pub. Resources Code §21080.3.1(b)).
  - a. For purposes of AB 52, "consultation shall have the same meaning as provided in Gov. Code §65352.4 (SB 18). (Pub. Resources Code §21080.3.1 (b)).
  
3. Mandatory Topics of Consultation If Requested by a Tribe: The following topics of consultation, if a tribe requests to discuss them, are mandatory topics of consultation:
  - a. Alternatives to the project.
  - b. Recommended mitigation measures.
  - c. Significant effects. (Pub. Resources Code §21080.3.2 (a)).
  
4. Discretionary Topics of Consultation: The following topics are discretionary topics of consultation:
  - a. Type of environmental review necessary.
  - b. Significance of the tribal cultural resources.
  - c. Significance of the project's impacts on tribal cultural resources.
  - d. If necessary, project alternatives or appropriate measures for preservation or mitigation that the tribe may recommend to the lead agency. (Pub. Resources Code §21080.3.2 (a)).
  
5. Confidentiality of Information Submitted by a Tribe During the Environmental Review Process: With some exceptions, any information, including but not limited to, the location, description, and use of tribal cultural resources submitted by a California Native American tribe during the environmental review process shall not be included in the environmental document or otherwise disclosed by the lead agency or any other public agency to the public, consistent with Government Code §6254 (r) and §6254.10. Any information submitted by a California Native American tribe during the consultation or environmental review process shall be published in a confidential appendix to the environmental document unless the tribe that provided the information consents, in writing, to the disclosure of some or all of the information to the public. (Pub. Resources Code §21082.3 (c)(1)).
  
6. Discussion of Impacts to Tribal Cultural Resources in the Environmental Document: If a project may have a significant impact on a tribal cultural resource, the lead agency's environmental document shall discuss both of the following:
  - a. Whether the proposed project has a significant impact on an identified tribal cultural resource.
  - b. Whether feasible alternatives or mitigation measures, including those measures that may be agreed to pursuant to Public Resources Code §21082.3, subdivision (a), avoid or substantially lessen the impact on the identified tribal cultural resource. (Pub. Resources Code §21082.3 (b)).

- 7. Conclusion of Consultation:** Consultation with a tribe shall be considered concluded when either of the following occurs:
- a.** The parties agree to measures to mitigate or avoid a significant effect, if a significant effect exists, on a tribal cultural resource; or
  - b.** A party, acting in good faith and after reasonable effort, concludes that mutual agreement cannot be reached. (Pub. Resources Code §21080.3.2 (b)).

**8. Recommending Mitigation Measures Agreed Upon in Consultation in the Environmental Document:** Any mitigation measures agreed upon in the consultation conducted pursuant to Public Resources Code §21080.3.2 shall be recommended for inclusion in the environmental document and in an adopted mitigation monitoring and reporting program, if determined to avoid or lessen the impact pursuant to Public Resources Code §21082.3, subdivision (b), paragraph 2, and shall be fully enforceable. (Pub. Resources Code §21082.3 (a)).

**9. Required Consideration of Feasible Mitigation:** If mitigation measures recommended by the staff of the lead agency as a result of the consultation process are not included in the environmental document or if there are no agreed upon mitigation measures at the conclusion of consultation, or if consultation does not occur, and if substantial evidence demonstrates that a project will cause a significant effect to a tribal cultural resource, the lead agency shall consider feasible mitigation pursuant to Public Resources Code §21084.3 (b). (Pub. Resources Code §21082.3 (e)).

**10. Examples of Mitigation Measures That, If Feasible, May Be Considered to Avoid or Minimize Significant Adverse Impacts to Tribal Cultural Resources:**

- a.** Avoidance and preservation of the resources in place, including, but not limited to:
  - i.** Planning and construction to avoid the resources and protect the cultural and natural context.
  - ii.** Planning greenspace, parks, or other open space, to incorporate the resources with culturally appropriate protection and management criteria.
- b.** Treating the resource with culturally appropriate dignity, taking into account the tribal cultural values and meaning of the resource, including, but not limited to, the following:
  - i.** Protecting the cultural character and integrity of the resource.
  - ii.** Protecting the traditional use of the resource.
  - iii.** Protecting the confidentiality of the resource.
- c.** Permanent conservation easements or other interests in real property, with culturally appropriate management criteria for the purposes of preserving or utilizing the resources or places.
- d.** Protecting the resource. (Pub. Resource Code §21084.3 (b)).
- e.** Please note that a federally recognized California Native American tribe or a non-federally recognized California Native American tribe that is on the contact list maintained by the NAHC to protect a California prehistoric, archaeological, cultural, spiritual, or ceremonial place may acquire and hold conservation easements if the conservation easement is voluntarily conveyed. (Civ. Code §815.3 (c)).
- f.** Please note that it is the policy of the state that Native American remains and associated grave artifacts shall be repatriated. (Pub. Resources Code §5097.991).

**11. Prerequisites for Certifying an Environmental Impact Report or Adopting a Mitigated Negative Declaration or Negative Declaration with a Significant Impact on an Identified Tribal Cultural Resource:** An Environmental Impact Report may not be certified, nor may a mitigated negative declaration or a negative declaration be adopted unless one of the following occurs:

- a.** The consultation process between the tribes and the lead agency has occurred as provided in Public Resources Code §21080.3.1 and §21080.3.2 and concluded pursuant to Public Resources Code §21080.3.2.
- b.** The tribe that requested consultation failed to provide comments to the lead agency or otherwise failed to engage in the consultation process.
- c.** The lead agency provided notice of the project to the tribe in compliance with Public Resources Code §21080.3.1 (d) and the tribe failed to request consultation within 30 days. (Pub. Resources Code §21082.3 (d)).

The NAHC's PowerPoint presentation titled, "Tribal Consultation Under AB 52: Requirements and Best Practices" may be found online at: [http://nahc.ca.gov/wp-content/uploads/2015/10/AB52TribalConsultation\\_CalEPAPDF.pdf](http://nahc.ca.gov/wp-content/uploads/2015/10/AB52TribalConsultation_CalEPAPDF.pdf)

## SB 18

SB 18 applies to local governments and requires local governments to contact, provide notice to, refer plans to, and consult with tribes prior to the adoption or amendment of a general plan or a specific plan, or the designation of open space. (Gov. Code §65352.3). Local governments should consult the Governor's Office of Planning and Research's "Tribal Consultation Guidelines," which can be found online at: [https://www.opr.ca.gov/docs/09\\_14\\_05\\_Updated\\_Guidelines\\_922.pdf](https://www.opr.ca.gov/docs/09_14_05_Updated_Guidelines_922.pdf).

Some of SB 18's provisions include:

1. Tribal Consultation: If a local government considers a proposal to adopt or amend a general plan or a specific plan, or to designate open space it is required to contact the appropriate tribes identified by the NAHC by requesting a "Tribal Consultation List." If a tribe, once contacted, requests consultation the local government must consult with the tribe on the plan proposal. **A tribe has 90 days from the date of receipt of notification to request consultation unless a shorter timeframe has been agreed to by the tribe.** (Gov. Code §65352.3 (a)(2)).
2. No Statutory Time Limit on SB 18 Tribal Consultation. There is no statutory time limit on SB 18 tribal consultation.
3. Confidentiality: Consistent with the guidelines developed and adopted by the Office of Planning and Research pursuant to Gov. Code §65040.2, the city or county shall protect the confidentiality of the information concerning the specific identity, location, character, and use of places, features and objects described in Public Resources Code §5097.9 and §5097.993 that are within the city's or county's jurisdiction. (Gov. Code §65352.3 (b)).
4. Conclusion of SB 18 Tribal Consultation: Consultation should be concluded at the point in which:
  - a. The parties to the consultation come to a mutual agreement concerning the appropriate measures for preservation or mitigation; or
  - b. Either the local government or the tribe, acting in good faith and after reasonable effort, concludes that mutual agreement cannot be reached concerning the appropriate measures of preservation or mitigation. (Tribal Consultation Guidelines, Governor's Office of Planning and Research (2005) at p. 18).

Agencies should be aware that neither AB 52 nor SB 18 precludes agencies from initiating tribal consultation with tribes that are traditionally and culturally affiliated with their jurisdictions before the timeframes provided in AB 52 and SB 18. For that reason, we urge you to continue to request Native American Tribal Contact Lists and "Sacred Lands File" searches from the NAHC. The request forms can be found online at: <http://nahc.ca.gov/resources/forms/>.

## NAHC Recommendations for Cultural Resources Assessments

To adequately assess the existence and significance of tribal cultural resources and plan for avoidance, preservation in place, or barring both, mitigation of project-related impacts to tribal cultural resources, the NAHC recommends the following actions:

1. Contact the appropriate regional California Historical Research Information System (CHRIS) Center ([https://ohp.parks.ca.gov/?page\\_id=30331](https://ohp.parks.ca.gov/?page_id=30331)) for an archaeological records search. The records search will determine:
  - a. If part or all of the APE has been previously surveyed for cultural resources.
  - b. If any known cultural resources have already been recorded on or adjacent to the APE.
  - c. If the probability is low, moderate, or high that cultural resources are located in the APE.
  - d. If a survey is required to determine whether previously unrecorded cultural resources are present.
2. If an archaeological inventory survey is required, the final stage is the preparation of a professional report detailing the findings and recommendations of the records search and field survey.
  - a. The final report containing site forms, site significance, and mitigation measures should be submitted immediately to the planning department. All information regarding site locations, Native American human remains, and associated funerary objects should be in a separate confidential addendum and not be made available for public disclosure.

- b. The final written report should be submitted within 3 months after work has been completed to the appropriate regional CHRIS center.
3. Contact the NAHC for:
- a. A Sacred Lands File search. Remember that tribes do not always record their sacred sites in the Sacred Lands File, nor are they required to do so. A Sacred Lands File search is not a substitute for consultation with tribes that are traditionally and culturally affiliated with the geographic area of the project's APE.
  - b. A Native American Tribal Consultation List of appropriate tribes for consultation concerning the project site and to assist in planning for avoidance, preservation in place, or, failing both, mitigation measures.
4. Remember that the lack of surface evidence of archaeological resources (including tribal cultural resources) does not preclude their subsurface existence.
- a. Lead agencies should include in their mitigation and monitoring reporting program plan provisions for the identification and evaluation of inadvertently discovered archaeological resources per Cal. Code Regs., tit. 14, §15064.5(f) (CEQA Guidelines §15064.5(f)). In areas of identified archaeological sensitivity, a certified archaeologist and a culturally affiliated Native American with knowledge of cultural resources should monitor all ground-disturbing activities.
  - b. Lead agencies should include in their mitigation and monitoring reporting program plans provisions for the disposition of recovered cultural items that are not burial associated in consultation with culturally affiliated Native Americans.
  - c. Lead agencies should include in their mitigation and monitoring reporting program plans provisions for the treatment and disposition of inadvertently discovered Native American human remains. Health and Safety Code §7050.5, Public Resources Code §5097.98, and Cal. Code Regs., tit. 14, §15064.5, subdivisions (d) and (e) (CEQA Guidelines §15064.5, subds. (d) and (e)) address the processes to be followed in the event of an inadvertent discovery of any Native American human remains and associated grave goods in a location other than a dedicated cemetery.

If you have any questions or need additional information, please contact me at my email address:

### **Re: New Sixth Appellate District Courthouse— Notice of Preparation (NOP) of a Draft Environmental Impact Report (DEIR)**

Dear Mitch Vaccari:

Thank you for including the California Department of Transportation (Caltrans) in the environmental review process for the New Sixth Appellate District Courthouse. The Local Development Review (LDR) Program reviews land use projects and plans to ensure consistency with our mission and state planning priorities. The following comments are based on our review of the April 2024 NOP.

Please note this correspondence does not indicate an official position by Caltrans on this project and is for informational purposes only.

#### **Project Understanding**

The proposed project will involve the demolition of the existing buildings and the construction of a new courthouse with additional parking. The site is located along State Route 82 (SR-82), also known as El Camino Real, and near S Mathilda Ave. The Project site is 2.03 acres, and the new construction will be approximately 50,000 square feet and up to three stories with about 77 parking spots.

#### **Travel Demand Analysis**

With the enactment of Senate Bill (SB) 743, Caltrans is focused on maximizing efficient development patterns, innovative travel demand reduction strategies, and multimodal improvements. For more information on how Caltrans assesses Vehicle Miles Traveled (VMT) analysis for land use projects, please review Caltrans' Transportation Impact Study Guide ([link](#)).

Per the Initial Study, this project may have a potentially significant VMT impact which will be further evaluated in the DEIR. Caltrans looks forward to reviewing the VMT analysis when the DEIR is available.

### **Mitigation Strategies**

Caltrans Smart Mobility Framework Guide defines a place type based on four physical elements: built form, land use, mobility options, and people. Using the Smart Mobility Framework Mapping Application 2022 ([link](#)), the proposed project area is identified as a Urban Community with moderately dense places, mostly residential but with mixed-use centers such as along El Camino Real. Housing is varied in density and type. Transit is available to connect neighborhoods to multiple destinations. Fine-grained network of streets with some connectivity for pedestrians and bicyclists.

We encourage the project applicant to develop and implement an effective Transportation Demand Management (TDM) Program to reduce VMT and greenhouse gas emissions from future development in this area. TDM programs should be documented with annual monitoring reports by a TDM coordinator to demonstrate effectiveness. If the project does not achieve the VMT reduction goals, the reports should also include next steps to take to achieve those targets.

Please also consider the measures listed below are quantified by California Air Pollution Control Officers Association (CAPCOA) and shown to have different efficiencies reducing regional VMT:

#### Place of Work:

- Implement Commute Trip Reduction Program (Voluntary and/or Mandatory)
- Implement Commute Trip Reduction Marketing
- Provide Ridesharing Program
- Implement Subsidized or Discounted Transit Program
- Provide End-of-Trip Bicycle Facilities
- Provide Employer-Sponsored Vanpool
- Price Workplace Parking
- Implement Employee Parking Cash-Out
- Provide Community Based Travel Planning
- Implement Preferential Parking Permit Program
- Provide Electric Vehicle Charging Infrastructure
- Provide Secure Bike Parking
- Provide Real-Time Transit Information
- Limiting parking supply

### **Multimodal Transportation Improvement**

Please consider incorporating site improvements as part of the project, such as bicycle parking, sidewalks of 8-foot wide at minimum, shade trees and landscaping to contribute to a biking and walking friendly environment. Also consider reducing the number of driveways on El Camino.

We encourage a sufficient allocation of fair share contributions toward multi-modal and regional transit improvements to fully mitigate cumulative impacts to regional transportation. We also strongly support measures to increase sustainable mode shares, thereby reducing VMT. The Initial Study noted that This project may have a significant VMT impact. We encourage the applicant to consider coordinating with the city to implement or contribute fair share fees to the following improvements to increase bicycle and pedestrian connectivity and improve transit service to help reduce VMT:

- The District 4 bike plan and ped plan identifies El Camino Real as a top tier corridor improvement. Potential bikeway improvement includes a protected intersection at Mathilda/El Camino or extending existing bikeway on El Camino Real. Potential pedestrian improvement includes a pedestrian refuge island at the El Camino/S Pastoria Ave intersection.
- Regional Transportation Plan (RTP) ID 21-T10-074 Rapid Bus Modernization for the Santa Clara Valley Transit Authority (VTA). This program includes funding to implement rapid transit improvements to existing bus service along El Camino Real. Improvements include dedicated lanes, transit signal priority, improved stop infrastructure and new rolling stock. The anticipated cost of this improvement is \$24 million.

In addition, SR-82 is identified as a Terminal Access (STAA) Route and it is important to preserve lane widths and or turning movements within the corridor to continue the efficient movement of goods.

### **Hydrology**

Please ensure that any increase in storm water runoff to State Drainage Systems or Facilities be treated, contained on project site, and metered to preconstruction levels. Any floodplain impacts must be documented and mitigated.

### **Lead Agency**

As the Lead Agency, the Judicial Council of California is responsible for all project mitigation, including any needed improvements to the STN. The project's fair share contribution, financing, scheduling, implementation responsibilities and lead agency monitoring should be fully discussed for all proposed mitigation measures.

### **Construction-Related Impacts**

Potential impacts to the State Right-of-Way (ROW) from project-related temporary access points should be analyzed. Mitigation for significant impacts due to construction and noise should be identified. Project work that requires movement of oversized or excessive load vehicles on State roadways requires a transportation permit that is issued by Caltrans. To apply, please visit Caltrans Transportation Permits ([link](#)).

Prior to construction, coordination may be required with Caltrans to develop a Transportation Management Plan (TMP) to reduce construction traffic impacts to the State Transportation Network (STN).

### **Equitable Access**

If any Caltrans facilities are impacted by the project, those facilities must meet American Disabilities Act (ADA) Standards after project completion. As well, the project must maintain bicycle and pedestrian access during construction. These access considerations support Caltrans' equity mission to provide a safe, sustainable, and equitable transportation network for all users.

### **Encroachment Permit**

Please be advised that any permanent work or temporary traffic control that encroaches onto Caltrans' Right-of-Way (ROW) requires a Caltrans-issued encroachment permit. As part of the encroachment permit submittal process, you may be asked by the Office of Encroachment Permits to submit a completed encroachment permit application package, digital set of plans clearly delineating Caltrans' ROW, digital copy of signed, dated and stamped (include stamp expiration date) traffic control plans, this comment letter, your response to the comment letter, and where applicable, the following items: new or amended Maintenance Agreement (MA), approved Design Standard Decision Document (DSDD), approved encroachment exception request, and/or airspace lease agreement.

The checklist TR-0416 ([link](#)) is used to determine the appropriate Caltrans review process for encroachment projects. The Office of Encroachment Permit requires 100% complete design plans and supporting documents to review and circulate the permit application package. To obtain more information and download the permit application, please visit Caltrans Encroachment Permits ([link](#)). Your application package may be emailed to [D4Permits@dot.ca.gov](mailto:D4Permits@dot.ca.gov).

Thank you again for including Caltrans in the environmental review process. Should you have any questions regarding this letter, please contact Marley Mathews, Transportation Planner, via [LDR-D4@dot.ca.gov](mailto:LDR-D4@dot.ca.gov). For future early coordination opportunities or project referrals, please contact [LDR-D4@dot.ca.gov](mailto:LDR-D4@dot.ca.gov).

# 1 Introduction

This Initial Study (IS) is an informational document intended to inform the Lead Agency, other responsible or interested agencies and the general public of potential environmental effects of the proposed Project. The environmental review process enables public agencies to evaluate potential environmental consequences and to examine and implement methods of eliminating or reducing potentially significant adverse impacts.

## 1. Project Title

New Sixth Appellate District Courthouse (Proposed Project)

## 2. Lead Agency (name/address)

Judicial Council of California  
2860 Gateway Oaks Drive, Ste 400  
Sacramento, CA 95833

Since the Judicial Council of California (“Judicial Council”) is the lead agency for the proposed Project, and is acting for the State of California, local government land use planning and zoning regulations do not apply to the proposed Project. However, the Judicial Council considers county and/or city policies and guidelines, as appropriate, to determine whether the proposed Project would be consistent with the site’s character and surroundings.

The Judicial Council is responsible for certifying the California Environmental Quality Act (CEQA) document and approving the proposed Project.

## 3. Contact Person (name/phone number)

Mitch Vaccari  
(916) 643-6959

## 4. Project Location

605 West El Camino Real, Sunnyvale, California, 94087  
APN 165-02-004

## 5. Project Sponsor (name/address)

Judicial Council of California Project Manager: Hilda Iorga  
[Hilda.iorga@jud.ca.gov](mailto:Hilda.iorga@jud.ca.gov)  
(916) 263-1541

# California Environmental Quality Act Initial Study

## 1 Introduction

### 6. General Plan Designation

El Camino Real Specific Plan (ECRSP): Public Facilities – Four percent of the ECRSP Area has a Public Facilities land use designation. This area is occupied by the Sunnyvale Civic Center, which has been a prominent part of this commercial corridor.

### 7. Zoning

Since the Judicial Council is the lead agency for the proposed Project, and is acting for the State of California, local government land use planning and zoning regulations do not apply to the proposed Project. However, the Judicial Council considers county and/or city policies and guidelines, as appropriate to determine whether the proposed Project would be consistent with the site's character and surroundings. The Project Site is in the El Camino Real – Public Facilities (ECR-PF) District. The ECR-PF zoning district is reserved for the construction, use and occupancy of governmental, public utility and educational buildings and facilities, and other uses compatible with the public character of the district and does not permit residential development.

### 8. Description of Project

The Project consists of the demolition of an existing building and the construction of a new Courthouse with additional parking for the Sixth Appellate District of the Court of Appeal in a more practical and accessible infill location. Since it was established in 1984, the Sixth Appellate District of the Court of Appeal (Sixth Appellate District), has operated out of 43,758 square feet (SF) of the Comerica Bank Building, located at 333 West Santa Clara Street within downtown San Jose pursuant to a lease. In 2006, the Sixth Appellate District's lease that was managed by the California Department of General Services was assigned to the Judicial Council. The current lease expires in January 2029 and has a final extension option through January 2034 (Moore, Ruble, Yudel, May 18, 2022).

The Sixth Appellate District's current space on the 10<sup>th</sup> and 11<sup>th</sup> floors of the Comerica Bank Building includes one courtroom with support spaces, justice chambers, attorney offices, mediation operations, clerk operations, a law library, and court administration. This space is not contiguous and is distributed between the two floors. Additionally, there is no on-site parking available for any court user including the public and court staff. Only a small number of spaces are available for the justices and the court executive officer. Parking for the public and court staff is accommodated offsite through public pay lots and very limited street parking. Approximately 60 parking spaces is estimated to be needed for the public and court staff, which cannot be achieved at the current leased property.

The Judicial Council is proposing to build a new Sixth Appellate District Courthouse (Courthouse, proposed Project), at 605 W. El Camino Real, Sunnyvale California 94087 (the Site). The location selected was previously used by the Superior Court of Santa Clara County for trial court operations (Figure 1 – Site Location). The State of California, on behalf of the Judicial Council retains ownership of the Site.

The Site is situated on W. El Camino Real between Mathilda Avenue and Pastoria Avenue. This property is within the El Camino Real Public Facilities zoning district.

## California Environmental Quality Act Initial Study

### 1 Introduction

The Site is 2.03 acres (APN 165-02-004) with an existing 19,994 SF, single-story building with a partial basement which was constructed in 1967. The Site has onsite parking and is located within the City of Sunnyvale's Civic Center with easy access to public transit and vehicle freeway infrastructure, making it a more appropriate location for the Sixth Appellate District. The Master Plan for the Civic Center was approved in September of 2018, and features the construction of three new facilities: City Hall, Public Safety Emergency Operations Center Addition, and a Library. These buildings would be situated on the northern half of the Civic Center (Figure 2 – Civic Center Facilities).

Site preparation would require the demolition of the existing 19,994 SF one-story building and approximately 45,000 SF of existing parking and surfacing to build a new Courthouse within the 2.03-acre Site. The parking lot contains an unused structure that will be demolished and resurfaced for additional parking space. (Figure 3 – Proposed Demolition).

This location was selected based on objectives and needs, as well as a feasibility study completed in May 2022, which determined that the existing Superior Court building has surpassed its useful life and the renovation that would be necessary for reuse is cost prohibitive. The study states that “the land value is higher than that of renovating the existing improvements and concluding that the “highest and best use” of this property is for new development” (New Courthouse Feasibility Study, May 2022).

The proposed new Courthouse would be constructed as a 50,000 SF up to three-story facility. The facility would be equipped with one courtroom with support spaces, justice chambers, administrative and operations areas, a law library, mediation area, lobby, public entry, and building support within the same general footprint.

A designated parking zone with seventeen (17) secured parking spaces for justices with solar power generation capability and approximately sixty (60) surface parking spaces for the public and the staff. Construction is planned to begin December of 2025 through September of 2028. Construction laydown yards and temporary workspaces are proposed to be contained within the existing footprint of the Site.

The Site includes mature trees located at the perimeter of the property where a 25-foot vehicle setback naturally occurs. Trees line the west side of the Site, providing shade and privacy. On the east side of the property, two groups of three trees are centered with the building. The building is fronted on El Camino Real, where asymmetrical tree groupings frame the existing courthouse entrance (Figure 4 – Proposed Courthouse Layouts).

Access to the new Courthouse parking area would be within the existing footprint. The existing vehicle entrance to the parking area is established off El Camino Real. The Site is well served by Valley Transportation Authority (VTA) bus stops. The Sunnyvale Transit Center is situated seven blocks to the northeast and contains bus stops with connections to CALTRAIN. The Site is less than 2.5 miles east of the California State Route 85 (CA-SR-85) and southeast of CA-SR-237. The United States (US) 101 and US-237 highways are also located within three miles of the Site. This nearby public transportation and roadway infrastructure connects the property to the surrounding facilities and neighborhood, thereby ensuring public accessibility to the Courthouse.

# California Environmental Quality Act Initial Study

## 1 Introduction

### Objective and Need

Santa Clara County is part of the greater Silicon Valley and the epicenter of computer technology and development in the United States. It serves high-technology-oriented companies, such as Apple, Google, Facebook, IBM, Microsoft, Zoom, and Intel Corporation, as well as aerospace industries such as Lockheed and Martin Aerospace. Over the last years, rental rates have increased while vacancy rates have decreased, suggesting that the Appellate District may have difficulty negotiating a new lease at their current location and will need to pay more with limited options for a new location.

Existing operations have been confined to the dictated leased-space floor plate such that adjacencies required for effective operations have not been fully realized, space shortfall exists, and anticipated future growth cannot be accommodated. The current Sixth Appellate District Court location also has security vulnerabilities.

The following was determined in the New Courthouse Feasibility Study.

*“The current lease, last executed in May 2012, has utilized multiple lease extension options over the years. It has one final option for a five-year extension through January 2034. However, there is no guarantee that a new lease can be negotiated or even available thereafter. Should it be determined that the Sixth Appellate District is unable to continue leasing at this current location beyond January 2034, an alternative leased space would need to be identified, negotiated, and tenant improvements completed prior to the current lease expiration.*”

*Historically, the uncertainty of having to continue leasing space for its operations and remain reliant on the availability of affordable private property office space within its operating budget has been very challenging. As a public agency having had to compete in a consistently high-demand rental market with private companies with resources for paying top dollar for lease space is and has been an ongoing concern. Without a permanent state-owned facility to operate in, the Sixth Appellate District will continue to be vulnerable to rental market conditions and escalating costs. These factors impact its ability to ensure its operations can continue in an appropriate location and space that provides public access to justice.*

*An available asset for the permanent home of the Courthouse is in the city of Sunnyvale on the Site of the former Sunnyvale Courthouse, which is no longer operated by the Superior Court of Santa Clara County. This property is state owned and is centrally located with good access to public transportation and adjacent to other public facilities within the City of Sunnyvale Civic Center, making its reuse advantageous, promoting environmental protection through infill development consistent with existing development patterns.*

*New Courthouse on state-owned property will provide:*

- *Permanent home for the Sixth Appellate District.*
- *Eliminate lease uncertainties and ongoing expensive and escalating lease costs.*
- *5-year project duration from date of appropriation.*
- *Connect with existing the Sunnyvale Civic Center and surrounding neighborhood.”*

**California Environmental Quality Act Initial Study**  
**1 Introduction**

**9. Surrounding Land Uses and Setting**

Surrounding land is predominantly zoned for Commercial use and is moderately to densely developed with shopping centers, hotels, office buildings, and supporting commercial services. Residential uses are located nearby on secondary streets. This neighborhood and its infrastructure are suburban. Additional plans for surrounding land uses include the development of new civic plazas, an outdoor amphitheater, and pedestrian and bicycle enhancements to Olive and Mathilda Avenues.

**10. Other public agencies whose approval is required**

Agency	Permits and Other Approvals	Environmental Review/Consultation Requirements
<b>FEDERAL</b>		
—	N/A	N/A
<b>STATE</b>		
San Francisco Regional Water Control Board	Clean Water Act (CWA) and National Pollutant Discharge Elimination System (NPDES) General Construction Permit/ Stormwater Pollution Prevention Plan (SWPPP)	Approximately one month agency review
<b>LOCAL</b>		
—	N/A	N/A

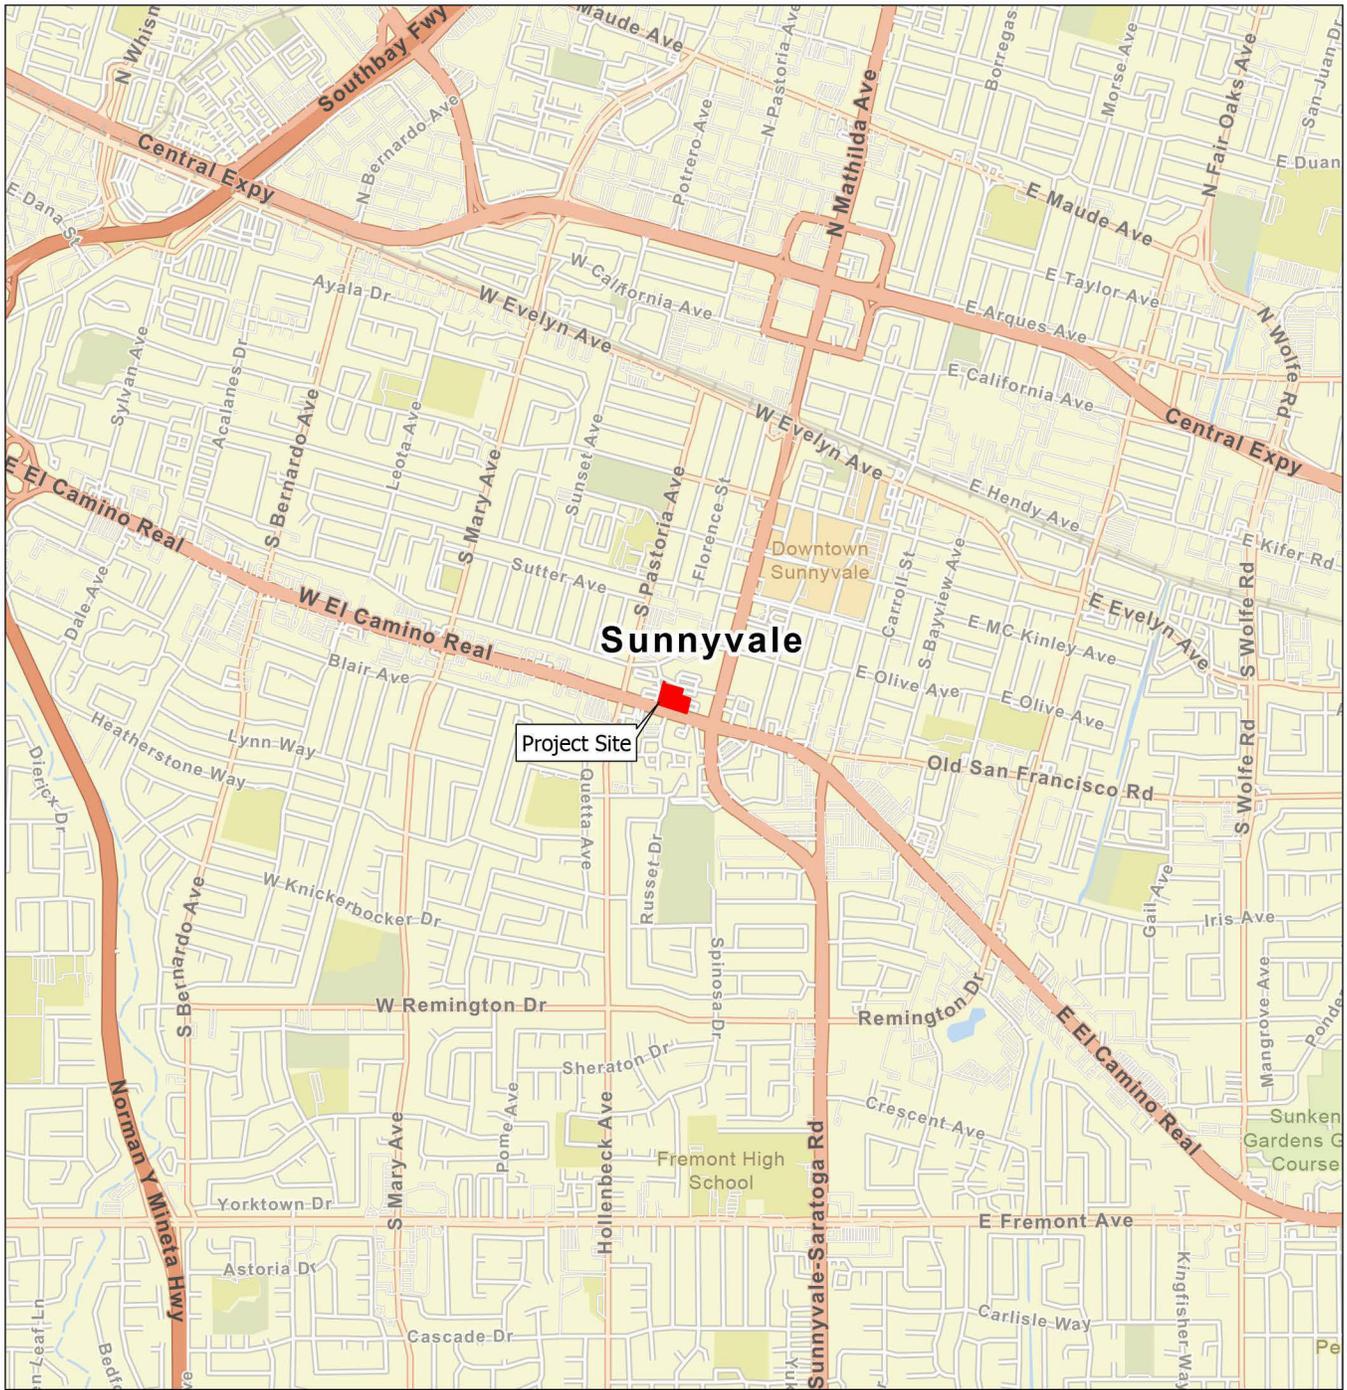

Responsible agencies that may have discretionary approval authority over the Project, and trustee agencies having jurisdiction over natural resources affected by the Project which are held in trust for the people of the State of California, will have the opportunity to review and provide comments during the review period. Other agencies and the public may also provide comments.

**11. Have California Native American tribes traditionally and culturally affiliated with the project area requested consultation pursuant to Public Resources Code section 21080.3?**

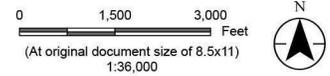

**If so, has consultation begun?**

Consultation will be conducted as part of the Environmental Impact Report.

## 2 Environmental Factors Potentially Affected

The environmental factors checked below would be potentially affected by this project, involving at least one impact that is a "Potentially Significant Impact" as indicated by the checklist on the following pages.

X	Aesthetics
	Agriculture and Forestry Resources
X	Air Quality
X	Biological Resources
X	Cultural Resources
	Energy
X	Geology and Soils
X	Greenhouse Gas
X	Hazards and Hazardous Materials
X	Hydrology and Water Quality
	Land Use / Planning

	Mineral Resources
X	Noise
	Population / Housing
	Public Services
	Recreation
X	Transportation
X	Tribal Cultural Resources
	Utilities / Service Systems
	Wildfire
X	Mandatory Findings of Significance

A detailed analysis of environmental impacts will be presented for each resource area (listed above) utilizing the model Environmental Checklist Form found in Appendix G of the CEQA Guidelines Section 15063(f). Impacts to the environment from construction and operation of the Project will be assessed and described, and the level of significance of impacts will be measured against criteria that have been established by regulation, accepted standards, or other definable criteria.

Each environmental resource area is reviewed by analyzing a series of questions (i.e., Initial Study Checklist) regarding the level of impact posed by the Project. Substantiation is provided to justify each determination. One of four following conclusions is then provided as a determination of the analysis for each of the major environmental factors:

- **No Impact.** A finding of no impact is made when it is clear from the analysis that the project would not affect the environment.
- **Less than Significant Impact.** A finding of a less than significant impact is made when it is clear from the analysis that a project would cause no substantial adverse change in the environment and no mitigation is required.
- **Less than Significant Impact with Mitigation Incorporated.** A finding of a less than significant impact with mitigation incorporated is made when it is clear from the analysis that a project would cause no substantial adverse change in the environment when mitigation measures are

## California Environmental Quality Act Initial Study Environmental Factors Potentially Affected

successfully implemented by the project proponent. In this case, the project proponent would be responsible for implementing measures identified in a Mitigation Monitoring Program.

- **Potentially Significant Impact.** A finding of a potentially significant impact is made when the analysis concludes that the proposed project could have a substantially adverse change in the environment for one or more of the environmental resources assessed in the checklist. In this case, overriding consideration would be required for the project to advance.

It is understood that analyzing potential mitigation measures are an essential component of CEQA, aimed at minimizing or eliminating adverse environmental impacts identified within environmental documents. While the Initial Study doesn't include mitigation, the potential impacts identified within the Initial Study will be further analyzed and the EIR will identify applicable mitigation measures and include them to the extent feasible. These measures will be designed to address a wide range of resource areas. The goal of mitigation under CEQA is to ensure that proposed projects are developed in a manner that protects the environment and enhances the quality of life for present and future generations.

The EIR will also include analysis of project alternatives as required by CEQA. The analysis will evaluate a range of feasible alternatives to the proposed Project, which may include alternative locations, designs, and methods of operation, that could feasibly attain most of the basic objectives of the Project but with reduced impacts on the environment. If an alternative is determined to be infeasible, the Judicial Council will explain why it is infeasible and consistent with applicable law will not fully analyze the alternative in the EIR. The alternatives being considered for the proposed Project include:

- (1) **No Project Alternative:** This alternative proposes retaining the current leased space located at 333 West Santa Clara Street within downtown San Jose. The current lease expires in January 2029 and has a final extension option through January 2034. Under this alternative, there would be no demolition or new construction; instead, the Judicial Council would continue operating from its current location by signing a new lease for the existing building on the 10th and 11th floors of the Comerica Bank Building.
- (2) **Lease of Another Location Alternative:** This alternative proposes entering a new long-term lease at a different location when the current lease expires in January 2029. Under this alternative, the Judicial Council would secure a new lease in a different building that meets the requirements of necessary square footage and court space configuration, ensuring operations can continue without interruption.
- (3) **Existing Courthouse Rehabilitation Alternative:** This alternative involves renovating or retrofitting the existing courthouse located at 605 W. El Camino Real, Sunnyvale California 94087. The Site consists of a 19,994 SF one-story building and approximately 45,000 SF of existing parking and surfacing. While the outside structure would remain intact, aside from structural improvements as necessary, the interior would be renovated or retrofitted to accommodate a new interior layout and comply with the requirements of a modern courthouse.

## California Environmental Quality Act Initial Study Environmental Factors Potentially Affected

- (4) **Reduced Scope of Existing Courthouse Alternative:** This alternative involves scaling down the project's scope. This could involve renovating only parts of the Sunnyvale courthouse that require immediate attention, deferring certain upgrades or expansions, or implementing more modest design elements.
- (5) **Alternative Site Location:** This alternative involves building a new courthouse on a different site. This could include other currently owned state property or purchasing new land and constructing a new courthouse to meet the Judicial Council's needs. This option would require thorough analysis of potential sites, including considerations for accessibility, cost, and environmental impact.
- (6) **Adaptive Reuse Alternative:** This alternative involves repurposing an existing building or structure for the courthouse on a different site, instead of constructing a new one on a different site. This option would require thorough analysis of potential sites, including considerations for accessibility, cost, and environmental impact.

The EIR aims to identify alternatives that could mitigate significant environmental effects, avoid or minimize impacts, and promote the efficient use of resources. This analysis will provide decision-makers and the public with information to assess the environmental consequences of the proposed Project and alternatives, ultimately guiding the selection of a project that best meets the Judicial Council's needs while minimizing environmental impacts.

As stated above, since the Judicial Council is the lead agency for the proposed Project, and is acting for the State of California, local government land use planning and zoning regulations do not apply to the proposed Project. However, the Judicial Council considers county and/or city policies and guidelines, as appropriate, to determine whether the proposed Project would be consistent with the site's character and surroundings. The following impact analysis takes this consideration into account.

### 3 Evaluation of Environmental Impacts

#### 3.1 Aesthetics

Would the project:

a. Have a substantial adverse effect on a scenic vista?			
<input type="checkbox"/> Potentially Significant Impact	<input type="checkbox"/> Less than Significant with Mitigation Incorporated	<input type="checkbox"/> Less than Significant Impact	<input checked="" type="checkbox"/> No Impact

**No Impact**

Scenic vistas are generally described in two ways: panoramic views (i.e., visual access to a large geographic area for which the field of view can be wide and extend into the distance), and focal views (i.e., visual access to a particular object, scene, or feature of interest). The Project Site is within the El Camino Real – Public Facilities (ECR-PF) Zoning District, at 605 West El Camino Real, Sunnyvale, California, 94087, between Mathilda Avenue and Pastoria Avenue. The Site has a flat topography with an existing single-story courthouse building with a partial basement. The proposed new Courthouse would be constructed as a 50,000 SF up to three-story facility. The facility would be equipped with one courtroom with support spaces, justice chambers, administrative and operations areas, law library, mediation, lobby, and public entry, and building support within the same general footprint. The proposed Project would be compatible with the existing public character of the district. Therefore, there would be no impact on a scenic vista. This issue will not be further evaluated in the EIR, consistent with CEQA Guidelines Section 15063 (c)(3).

b. Substantially damage scenic resources including, but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway?			
<input type="checkbox"/> Potentially Significant Impact	<input type="checkbox"/> Less than Significant with Mitigation Incorporated	<input type="checkbox"/> Less than Significant Impact	<input checked="" type="checkbox"/> No Impact

**No Impact**

According to the Caltrans “California Scenic Highway Mapping System,” there are no state scenic highways located adjacent to, or within view of, the Project Site. The Project Site is currently developed and contains no unique geologic features.

However, protected mature trees which are considered a scenic resource exist along the perimeter of the property. Existing mature trees are generally located at the perimeter of the State-owned property, where a 25-foot vehicle setback would naturally occur. Additionally, a line of trees on the west and two groups of trees on the east would be retained to provide shade, privacy, and frame the courthouse entrance.

**California Environmental Quality Act Initial Study  
Evaluation of Environmental Impacts**

Therefore, with retention of the mature trees, no impact would occur to the scenic resources. This issue will not be further evaluated in the EIR, consistent with CEQA Guidelines Section 15063 (c)(3).

c. In nonurbanized areas, substantially degrade the existing visual character or quality of public views of the site and its surroundings? (Public views are those that are experienced from publicly accessible vantage point). If the project is in an urbanized area, would the project conflict with applicable zoning and other regulations governing scenic quality?			
<input type="checkbox"/> Potentially Significant Impact	<input type="checkbox"/> Less than Significant with Mitigation Incorporated	<input checked="" type="checkbox"/> Less than Significant Impact	<input type="checkbox"/> No Impact

**Less than Significant Impact**

The Project Site is within a heavily urbanized area and involves the replacement of the current single-story Sunnyvale Courthouse building that has surpassed its useful life with a new up to three-story Sixth Appellate District Courthouse. While the taller structure would be introducing new visual elements, the construction of the Project complements the beautification and modernization goals of the Sunnyvale Civic Center Master Plan. One such goal includes replacing outdated one-story structures connected with outdoor circulation with efficient, multi-story, sustainably designed new facilities. Though the Judicial Council is not required to abide by local zoning ordinance, the proposed Project is considered a Public Facility which would be consistent with the City of Sunnyvale’s zoning code. The public nature of the building requires it to be readily accessible, easy to identify, attractive and representative of the communities’ values and aspirations. The Project is consistent with applicable local policies guiding the City’s overall visual resources and aesthetics as outlined in the Community Character and Land Use Transportation chapters of the City of Sunnyvale’s General Plan. Additionally, the ECRSP identifies the Project Site as located in the ‘Civic Center Node’ and within the Land Use Classification of El Camino Real Public Facility. Land uses within this area include civic centers and governmental uses which are consistent with the Project type (Sunnyvale 2022). Therefore, the impacts would be less than significant, and the issue will not be further evaluated in the EIR.

d. Create a new source of substantial light or glare which would adversely affect day or nighttime views in the area?			
<input checked="" type="checkbox"/> Potentially Significant Impact	<input type="checkbox"/> Less than Significant with Mitigation Incorporated	<input type="checkbox"/> Less than Significant Impact	<input type="checkbox"/> No Impact

**Potentially Significant Impact**

The Project site is located within a well-lit urban portion of the City of Sunnyvale with surrounding ambient lighting sources. The Sunnyvale Civic Center Redevelopment would create new Civic Plazas, Outdoor Amphitheater, and Pedestrian and Bicycle enhancements to Olive and Mathilda Avenues. The construction and operation of the new Sixth Appellate District Courthouse would create new sources of light and glare. The new source of light and glare may create potentially significant impacts on day and

**California Environmental Quality Act Initial Study  
Evaluation of Environmental Impacts**

nighttime views in the area and will be further evaluated in the EIR. Applicable mitigation measures will be identified and included to the extent feasible.

### 3.2 Agriculture and Forestry Resources

Would the project:

a. Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?			
<input type="checkbox"/> Potentially Significant Impact	<input type="checkbox"/> Less than Significant with Mitigation Incorporated	<input type="checkbox"/> Less than Significant Impact	<input checked="" type="checkbox"/> No Impact

**No Impact**

The California Department of Conservation, Farmland Mapping, and Monitoring Program compiles Important Farmland maps pursuant to the provisions of Section 65570 of the California Government Code. These maps utilize data from the United States Department of Agriculture (USDA), Natural Resource Conservation Service (NRCS) soil survey, and current land use information using eight (8) mapping categories and represent an inventory of agricultural resources within Santa Clara County. The maps depict currently urbanized lands and a qualitative sequence of agricultural designations. Maps and statistics are produced using a process that integrates aerial photo interpretation, field mapping, a computerized mapping system, and public review. Mapping of farmland categories is conducted every two years.

Based on the above-noted desktop resources, there is no existing prime farmland, unique farmland, or farmland of statewide importance within or adjacent to the Project Site and no agricultural activities take place on the Project Site. The proposed Project Site is surrounded by land developed for commercial, public, and residential uses. Therefore, no impacts would occur. This issue will not be further evaluated in the EIR.

b. Conflict with existing zoning for agricultural use, or a Williamson Act contract?			
<input type="checkbox"/> Potentially Significant Impact	<input type="checkbox"/> Less than Significant with Mitigation Incorporated	<input type="checkbox"/> Less than Significant Impact	<input checked="" type="checkbox"/> No Impact

**No Impact**

Williamson Act contracts restrict land development of contract lands. The contracts typically limit land use in contract lands to agriculture, recreation, and open space, unless otherwise stated in the contract. Per the ECRSP zoning map, the proposed Project Site has a zoning designation of P-F (Public Facilities), which is not set aside for agricultural uses. According to the city of Sunnyvale’s zoning map, there are no lands with agricultural zoning designations within the city’s limits (Sunnyvale 2023). According to the county of Santa Clara’s map of Williamson Act properties, there are no lands under the Williams Act contract in the vicinity of the Project Site (SCC Planning 2023). Because the Project Site is not part of a

**California Environmental Quality Act Initial Study  
Evaluation of Environmental Impacts**

Williamson Act contract, no impacts associated with this issue would occur with development of the Project. This issue will not be further evaluated in the EIR.

c. Conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code Section 12220(g)), timberland (as defined by Public Resources Code Section 4526), or timberland zoned Timberland Production (as defined by Government Code Section 51104(g))?			
<input type="checkbox"/> Potentially Significant Impact	<input type="checkbox"/> Less than Significant with Mitigation Incorporated	<input type="checkbox"/> Less than Significant Impact	<input checked="" type="checkbox"/> No Impact

**No Impact**

According to the city of Sunnyvale’s zoning map, there is no existing zoning of forest land or timberland in the city of Sunnyvale (Sunnyvale 2023). Therefore, no impacts to these resources would occur as a result of the Project. This issue will not be further evaluated in the EIR.

d. Result in the loss of forest land or conversion of forest land to non-forest use?			
<input type="checkbox"/> Potentially Significant Impact	<input type="checkbox"/> Less than Significant with Mitigation Incorporated	<input type="checkbox"/> Less than Significant Impact	<input checked="" type="checkbox"/> No Impact

**No Impact**

There is no existing zoning of forest land within the city of Sunnyvale. No forest land would be converted to non-forest use under the Project. Therefore, no impacts would occur as a result of the Project. This issue will not be further evaluated in the EIR.

e. Involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland, to non-agricultural use or conversion of forest land to non-forest use?			
<input type="checkbox"/> Potentially Significant Impact	<input type="checkbox"/> Less than Significant with Mitigation Incorporated	<input type="checkbox"/> Less than Significant Impact	<input checked="" type="checkbox"/> No Impact

**No Impact**

There is no farmland in the vicinity of or on the Project Site. The Project would not result in conversion of farmland to non-agricultural uses. No impacts are expected to occur as a result of this Project. This issue will not be further evaluated in the EIR.

### 3.3 Air Quality

Would the project:

a. Conflict with or obstruct implementation of the applicable air quality plan?			
<input checked="" type="checkbox"/> Potentially Significant Impact	<input type="checkbox"/> Less than Significant with Mitigation Incorporated	<input type="checkbox"/> Less than Significant Impact	<input type="checkbox"/> No Impact

**Potentially Significant Impact**

The Project would result in air pollutant emissions generated during demolition and construction activities that, if not mitigated, would have the potential to conflict with or obstruct implementation of the Bay Area Air Quality Management District (BAAQMD) air quality plan. Therefore, the Project may have a potentially significant impact. The construction air emissions associated with the Project will be further evaluated in the EIR. Applicable mitigation measures will be identified and included to the extent feasible.

b. Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard?			
<input checked="" type="checkbox"/> Potentially Significant Impact	<input type="checkbox"/> Less than Significant with Mitigation Incorporated	<input type="checkbox"/> Less than Significant Impact	<input type="checkbox"/> No Impact

**Potentially Significant Impact**

The Project would result in air pollutant emissions generated during demolition and construction activities, that, if not mitigated, may violate an air quality standard, or significantly contribute to an existing or projected air quality violation. While the operational impacts may not be potentially significant, due to the size of the Project (approximately two-acres), and the potential for pollutant generation the Project may have a potentially significant impact during construction. These issues will be further evaluated in the EIR. Applicable mitigation measures will be identified and included to the extent feasible.

c. Expose sensitive receptors to substantial pollutant concentrations?			
<input checked="" type="checkbox"/> Potentially Significant Impact	<input type="checkbox"/> Less than Significant with Mitigation Incorporated	<input type="checkbox"/> Less than Significant Impact	<input type="checkbox"/> No Impact

**Potentially Significant Impact**

The BAAQMD defines sensitive receptors as facilities that house or attract children, the elderly, people with illnesses or others who are especially sensitive to the effects of air pollutants. Hospitals, schools,

**California Environmental Quality Act Initial Study  
Evaluation of Environmental Impacts**

convalescent facilities, and residential areas are examples of sensitive receptors. The Project is in a Public Facilities zone; however, nearby residential receptors and the public accessing the adjacent Civic Center have the potential to be exposed to pollutant concentrations during construction. Therefore, the Project may have a potentially significant impact and this issue will be further evaluated in the EIR. Applicable mitigation measures will be identified and included to the extent feasible.

d. Result in other emissions (such as those leading to odors) adversely affecting a substantial number of people?			
<input checked="" type="checkbox"/> Potentially Significant Impact	<input type="checkbox"/> Less than Significant with Mitigation Incorporated	<input type="checkbox"/> Less than Significant Impact	<input type="checkbox"/> No Impact

**Potentially Significant Impact**

Construction would include the demolition of the existing courthouse as well as the unused structure in the current parking lot. Resurfacing the parking facility would require the application of asphalt and constructing the new courthouse would involve the application of architectural coatings. These materials have the potential to result in odors. Therefore, the Project may have a potentially significant impact and this issue will be further evaluated in the EIR. Applicable mitigation measures will be identified and included to the extent feasible.

### 3.4 Biological Resources

Would the project:

a. Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service?			
<input checked="" type="checkbox"/> Potentially Significant Impact	<input type="checkbox"/> Less than Significant with Mitigation Incorporated	<input type="checkbox"/> Less than Significant Impact	<input type="checkbox"/> No Impact

#### **Potentially Significant Impact**

The Project Site is located within a heavily urbanized area on land currently developed with a single-story building and associated parking. Based on available aerial imagery, the Project Site contains paved walkways and parking lots, manicured lawns, and ornamental trees and vegetation. The Project Site contains no habitat that would be capable of supporting sensitive plant or wildlife species. Lands adjacent to the Project Site have been equally developed and there is no connectivity among the Project Site to areas of natural habitat for sensitive plant or wildlife species. A review of the California Department of Fish and Wildlife’s California Natural Diversity Database (CNDDDB) identified several occurrence records of sensitive plant and wildlife species within ten miles of the Project. However, no CNDDDB records of sensitive plant or wildlife species are located within or adjacent to the Project Site. Construction of the proposed Project will result in similar land use to that for which it is currently utilized and so would not result in substantial habitat modifications. Protected mature trees exist along the perimeter of the property. Existing mature trees are generally located at the perimeter of the State-owned property, where a 25-foot vehicle setback would naturally occur. Additionally, there are a line of trees on the west and two groups of trees on the east of the existing structure. Due to the current level of disturbance at the Project Site and surrounding area, impacts to sensitive habitats or species are unlikely to result from Project implementation. However, a survey of the Project Site will be required to confirm the absence of sensitive habitats and species. If construction is planned within the nesting bird season (generally February to August), a survey for nesting native birds, which are protected by the federal Migratory Bird Treaty Act, will also be required. This issue will be further evaluated in the EIR. Applicable mitigation measures will be identified and included to the extent feasible.

b. Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service?			
<input type="checkbox"/> Potentially Significant Impact	<input type="checkbox"/> Less than Significant with Mitigation Incorporated	<input type="checkbox"/> Less than Significant Impact	<input checked="" type="checkbox"/> No Impact

**California Environmental Quality Act Initial Study  
Evaluation of Environmental Impacts**

**No Impact**

The Project Site and surrounding area do not contain any riparian habitat or other sensitive natural communities identified in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife (CDFW) or the U.S. Fish and Wildlife Service (USFWS). Therefore, the Project would not impact a riparian habitat or other sensitive natural communities. This issue will not be further evaluated in the EIR.

c. Have a substantial adverse effect on state or federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?			
<input type="checkbox"/> Potentially Significant Impact	<input type="checkbox"/> Less than Significant with Mitigation Incorporated	<input type="checkbox"/> Less than Significant Impact	<input checked="" type="checkbox"/> No Impact

**No Impact**

There are no wetlands located within or in the vicinity of the Project Site. A review of the National Wetlands Inventory Wetlands Mapper and National Hydrography Dataset indicated no wetlands have been previously documented on or adjacent to the Project Site. Therefore, the Project would not impact federally protected wetlands as defined by Section 404 of the Clean Water Act. This issue will not be further evaluated in the EIR.

d. Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?			
<input type="checkbox"/> Potentially Significant Impact	<input type="checkbox"/> Less than Significant with Mitigation Incorporated	<input type="checkbox"/> Less than Significant Impact	<input checked="" type="checkbox"/> No Impact

**No Impact**

The Project Site contains an existing building, maintained lawns and ornamental vegetation, and paved parking areas and walkways and is surrounded by similar urban uses. There are no wildlife corridors or wildlife nursery sites present on the Project Site and wildlife species are unlikely to use the Project Site as a migratory corridor due to the urban nature of the surrounding areas. There are no rivers, creeks, or other waterways capable of supporting fish species present on the Project Site. As a result, the Project would have no impact on the movement of any resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors. Therefore, this issue will not be further evaluated in the EIR.

**California Environmental Quality Act Initial Study  
Evaluation of Environmental Impacts**

e. Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?			
<input type="checkbox"/> Potentially Significant Impact	<input type="checkbox"/> Less than Significant with Mitigation Incorporated	<input checked="" type="checkbox"/> Less than Significant Impact	<input type="checkbox"/> No Impact

**Less than Significant Impact**

The Project would occur on developed land with poor quality habitat to support biological resources. Mature trees exist within the Project site along the perimeter of the property, as well as a line of trees on the west and two groups of trees on the east of the existing courthouse entrance. Chapter 13.16 of the city of Sunnyvale Municipal Code (SMC) requires a permit for maintenance or removal of trees on streets and property within public rights-of-way, and on other property under the ownership and control of the city (with the exception of parks and golf courses). Chapter 19.94 of the SMC requires a protected tree removal permit prior to removal of any protected tree from private property in any zoning district, or from any city owned golf course or park. As the Project site is currently zoned as Public Facilities and is not a city owned golf course or park, it would not fall under this tree preservation ordinance. Although the Judicial Council is not subject to the SMC, project design will take these trees into consideration and would be consistent with the SMC. Under the ECRSP Mitigation Monitoring and Reporting Program, if ground disturbing activities and vegetation removal occur within the nesting bird season (generally February to August) a pre-construction clearance survey for nesting birds is required and appropriate buffers are to be established if active nests are found. As noted above, a survey for nesting native birds will be conducted if construction will occur during the nesting season, and consistent with the ECRSP the Judicial Council will follow appropriate avoidance and mitigation protocols. The Project would have a less than significant impact. This issue will not be further evaluated in the EIR.

f. Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan?			
<input type="checkbox"/> Potentially Significant Impact	<input type="checkbox"/> Less than Significant with Mitigation Incorporated	<input type="checkbox"/> Less than Significant Impact	<input checked="" type="checkbox"/> No Impact

**No Impact**

There is no habitat conservation plan or natural community conservation plan in the city of Sunnyvale. Therefore, implementation of the Project would not conflict with any habitat conservation or natural community conservation plans. This issue will not be further evaluated in the EIR.

### 3.5 Cultural Resources

Would the project:

a. Cause a substantial adverse change in the significance of a historical resource pursuant to § 15064.5?			
<input checked="" type="checkbox"/> Potentially Significant Impact	<input type="checkbox"/> Less than Significant with Mitigation Incorporated	<input type="checkbox"/> Less than Significant Impact	<input type="checkbox"/> No Impact

**Potentially Significant Impact**

The Community Character chapter of the City of Sunnyvale’s General Plan establishes the criteria for identifying local cultural resources within the City. The City delineates local cultural resources by relating them to their heritage value. The City of Sunnyvale maintains an official Heritage Resources Inventory containing landmarks, trees, residential and commercial districts, and individual structures. According to the Sunnyvale Heritage Resources Inventory Map, no City designated Heritage Resources or Heritage Trees are located within or adjacent to the Project Site (Sunnyvale 2020). According to the ECRSP Land Use Policy LU-P26: “buildings greater than 50 years old shall be subject to a historic resource evaluation prior to undertaking any modifications or demolitions”. Since the existing Sunnyvale Courthouse was originally built in 1967 and is over 50 years old, it would be subject to this local policy. However, because the Judicial Council is the lead agency the Project is not subject to the City of Sunnyvale's General Plan or the requirement that the existing Sunnyvale Courthouse be evaluated as a historic property.

To preserve historic resources, the California State Historic Resources Committee conducts the Historic Resources Inventory and maintains the California Register of Historic Resources (CRHR) identifying historic landmarks and points of interest. The statewide Historic Resources Inventory database is included in the California Historical Resources Information System (CHRIS) and is maintained by the Office of Historic Preservation. The CHRIS Northwest Information Center (NWIC) maintains records for Santa Clara County. The potential to encounter historic resources on the Project Site is low given the Site has been previously disturbed and altered by the construction of the existing Sunnyvale Courthouse. However, a search of the CHRIS/NWIC database will be needed to confirm whether the Project Site has listed historic resources in the Historic Resources Inventory and therefore if there is potential to significantly impact historical resources. This issue will be further evaluated in the EIR. Mitigation measures will be identified if applicable and included to the extent feasible.

b. Cause a substantial adverse change in the significance of an archaeological resource pursuant to § 15064.5?			
<input checked="" type="checkbox"/> Potentially Significant Impact	<input type="checkbox"/> Less than Significant with Mitigation Incorporated	<input type="checkbox"/> Less than Significant Impact	<input type="checkbox"/> No Impact

**California Environmental Quality Act Initial Study  
Evaluation of Environmental Impacts**

**Potentially Significant Impact**

Similar to the above historical resource discussion, the potential to encounter archaeological resources is very low because the Project Site was previously disturbed and altered by construction of the existing Sunnyvale Courthouse. However, a review of the CHRIS/NWIC database and further field investigation is needed to confirm the absence of archaeological resources on the Project Site. This issue will be further evaluated in the EIR. Mitigation measures will be identified if applicable and included to the extent feasible.

c. Disturb any human remains, including those interred outside of dedicated cemeteries?			
<input checked="" type="checkbox"/> Potentially Significant Impact	<input type="checkbox"/> Less than Significant with Mitigation Incorporated	<input type="checkbox"/> Less than Significant Impact	<input type="checkbox"/> No Impact

**Potentially Significant Impact**

There is no indication or evidence to suggest the Project Site has been used for human burials in the recent or distant past. Project implementation would involve demolition and other potential earthmoving activities. Human remains are unlikely to be encountered; however, in the event that ground-disturbing activities uncover human remains, they could be inadvertently damaged. A review of the CHRIS/NWIC database and further field investigation is needed to confirm the absence of human remains on the Project Site. This issue will be further evaluated in the EIR. Mitigation measures will be identified if applicable and included to the extent feasible.

### 3.6 Energy

Would the project:

a. Result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation?			
<input type="checkbox"/> Potentially Significant Impact	<input type="checkbox"/> Less than Significant with Mitigation Incorporated	<input checked="" type="checkbox"/> Less than Significant Impact	<input type="checkbox"/> No Impact

#### **Less than Significant Impact**

Energy use associated with a project typically includes fuel (e.g., gasoline and diesel), electricity, and natural gas. Sources of this use include construction-related vehicle and equipment energy use, transportation energy use from people traveling to and from the Project area during operation and operational facility energy use.

Energy use during construction would occur within two general categories: fuel use by vehicles and other equipment to conduct construction activities and fuel use from vehicles used by workers commuting to and from the construction site. There are no known conditions in the proposed Project area that would require nonstandard equipment or construction practices that would increase fuel-energy consumption above typical equipment fuel consumption rates. Construction activities would be temporary and would adhere to all construction Best Management Practices (BMPs). Furthermore, the Judicial Council intends to conform the Project, to the greatest reasonable extent, with state law requiring new state buildings larger than 10,000 gross square feet to be Leadership in Energy and Environmental Design (LEED) Silver certified; LEED provides a rating system and symbol for sustainable and environmentally sound buildings and projects that reduce energy use.

Operational energy consumption would be associated with electricity to run various appliances and equipment, including space and water heaters, air conditioners, ventilation equipment, lights, and numerous other electronic devices. The Project area is served by Pacific Gas & Electricity (PG&E). PG&E provides natural gas and electric service to approximately 16 million people throughout a 70,000-square-mile service area in northern and central California. The Project's electricity demand would be nominal compared to overall demand in the service area. Therefore, the projected electrical demand would not significantly impact PG&E's level of service.

Project construction and operation would not result in the wasteful, inefficient, or unnecessary consumption of energy resources, and impacts would be less than significant. This issue will not be further evaluated in the EIR.

**California Environmental Quality Act Initial Study  
Evaluation of Environmental Impacts**

b. Conflict with or obstruct a state or local plan for renewable energy or energy efficiency?			
<input type="checkbox"/> Potentially Significant Impact	<input type="checkbox"/> Less than Significant with Mitigation Incorporated	<input checked="" type="checkbox"/> Less than Significant Impact	<input type="checkbox"/> No Impact

**Less than Significant Impact**

The applicable state plans that address renewable energy and energy efficiency include CALGreen which is found in the California Energy Code (Title 24, Part 11 of the California Code of Regulations). CALGreen is the first in the nation state-mandated green building code. The code places emphasis on energy efficiency. The Project would be required to meet the mandatory energy requirements of 2022 CALGreen and the 2022 California Energy Code and would benefit from the efficiencies associated with these regulations as they relate to building heating, ventilating, and air conditioning mechanical systems, water-heating systems, and lighting.

The City of Sunnyvale Climate Action Plan describes renewable and efficient energy initiatives in its Climate Action Playbook. One strategy includes electrifying municipal buildings upon rebuild or significant remodel in the Civic Center. Additionally, the “Energy Code for the City of Sunnyvale” (Ord. 3168-20 § 1) requires that a building constructed after January 1, 2021, is required to comply with the All-Electric Building standard. The All-Electric Building standard helps achieve the local all-electric movement with the update of municipal buildings and facilities.

The proposed Project would be required to meet the mandatory energy requirements of 2022 CALGreen and the 2022 California Energy Code. Additionally, the proposed Project would be consistent with the City of Sunnyvale Climate Action Plan. Therefore, the proposed Project would not conflict with or obstruct a state or local plan for renewable energy or energy efficiency, and impacts would be less than significant. This issue will not be further evaluated in the EIR.

### 3.7 Geology and Soils

Would the project:

a. Directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving:			
i. Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map, issued by the State Geologist for the area or based on other substantial evidence of a known fault? Refer to Division of Mines and Geology Special Publication 42.			
<input type="checkbox"/> Potentially Significant Impact	<input type="checkbox"/> Less than Significant with Mitigation Incorporated	<input type="checkbox"/> Less than Significant Impact	<input checked="" type="checkbox"/> No Impact

#### No Impact

The Alquist-Priolo Earthquake Fault Zoning Act (Act) mitigates fault rupture hazards by prohibiting the location of structures for human occupancy across the trace of an active fault. The Act requires the State Geologist to delineate "Earthquake Fault Zones" along faults that are "sufficiently active" and "well defined." The boundary of an "Earthquake Fault Zone" is generally 500 feet from major active faults and from 200 to 300 feet from well-defined minor faults. These maps are distributed to all affected cities, counties, and State agencies for their use in developing planning policies and controlling renovation or new construction. The Project Site is not identified as being within an Alquist-Priolo Earthquake Fault Zone (DOC 2021). The nearest Alquist-Priolo Earthquake Fault Zone is the Mindego Hill Fault Zone and San Andreas Fault both located approximately eight miles to the southwest of the Project Site. As such, no fault rupture impact would result from the implementation of this Project. This issue will not be further evaluated in the EIR.

ii. Strong seismic ground shaking?			
<input type="checkbox"/> Potentially Significant Impact	<input type="checkbox"/> Less than Significant with Mitigation Incorporated	<input checked="" type="checkbox"/> Less than Significant Impact	<input type="checkbox"/> No Impact

#### Less than Significant Impact

Like all of Northern California, the Project Site has and would continue to be subject to ground shaking generated from activity on local and regional-faults. As identified above, the Project Site is not within an earthquake fault zone. The Project Site has the potential to be subject to seismic ground shaking and failure during a major earthquake along the San Andreas Fault, located eight miles to the southwest (DOC 2021). The intensity of the ground shaking would depend on the distance to the epicenter and the geology of the areas between the epicenter and the Project area.

**California Environmental Quality Act Initial Study  
Evaluation of Environmental Impacts**

In accordance with the California Building Code (California Code of Regulations, Title 24), seismic structure design requirements would be based on the Seismic Design Category (SDC) for the proposed structures, which is based on the Occupancy Category for the structure and on the level of expected soil modified seismic ground motion. Compliance with the seismic design requirements specified by the California Building Code would reduce the potential impacts from seismic ground shaking and ground failure on building occupants and structures to a less than significant level. This issue will not be further evaluated in the EIR.

iii. Seismic-related ground failure, including liquefaction?			
<input checked="" type="checkbox"/> Potentially Significant Impact	<input type="checkbox"/> Less than Significant with Mitigation Incorporated	<input type="checkbox"/> Less than Significant Impact	<input type="checkbox"/> No Impact

**Potentially Significant Impact**

Liquefaction occurs when loose, unconsolidated, water-laden soils are subject to shaking, causing the soils to lose cohesion. According to the California Earthquake Hazards Zone Application Map (2021), the Project Site is not located within a liquefaction zone. The nearest liquefaction zone is the Mountain View Quadrangle, located 0.6 mile to the north of the Project Site. Although the Project Site is not located within a liquefaction zone and given its proximity to the Mountain View Quadrangle, local geological, geotechnical, and groundwater conditions could indicate a potential for permanent ground displacements such that mitigation as defined in Public Resources Code Section 2693(c) would be required. Therefore, the Project may have a potentially significant impact. This issue will be further evaluated in the EIR. Applicable mitigation measures will be identified and included to the extent feasible.

iv. Landslides?			
<input type="checkbox"/> Potentially Significant Impact	<input type="checkbox"/> Less than Significant with Mitigation Incorporated	<input checked="" type="checkbox"/> Less than Significant Impact	<input type="checkbox"/> No Impact

**Less than Significant Impact**

According to the United States Geological Survey Map, the area contains no major landforms, is relatively flat, and contains no potential for landslides (USGS 2023). The nearest landform is the Rancho San Antonio County Parks and Open Space area located approximately 3.9 miles to the southwest. Additionally, a review of the State of California Seismic Hazards Zones (2021) – Cupertino Quadrangle Map indicates that the Project area is not located within an “Earthquake-Induced Landslides” zone, which is defined as an area where previous occurrence of landslide movement or local topographic, geological, geotechnical, and subsurface water conditions indicate a potential for permanent ground displacement such that mitigation as defined in Public Resources Code Section 2693(c) would be required. The nearest Earthquake-Induced Landslide zone is located approximately 3.8 miles to the southwest. Impacts associated with landslides are anticipated to be less than significant. This issue will not be further evaluated in the EIR.

**California Environmental Quality Act Initial Study  
Evaluation of Environmental Impacts**

b. Result in substantial soil erosion or the loss of topsoil?			
<input checked="" type="checkbox"/> Potentially Significant Impact	<input type="checkbox"/> Less than Significant with Mitigation Incorporated	<input type="checkbox"/> Less than Significant Impact	<input type="checkbox"/> No Impact

**Potentially Significant Impact**

During construction of the Project, there may be potential changes to the soil, due to excavation, grading, and filling. These changes may have the potential to result in soil erosion and/or loss of top soil. Construction may temporarily expose the soil to wind and/or water erosion. In addition, grading and excavation could potentially result in substantial soil erosion or loss of top soil. Therefore, the Project may have a potentially significant impact. This issue will be further evaluated in the EIR. Mitigation measures will be identified if applicable and included to the extent feasible.

c. Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction or collapse?			
<input checked="" type="checkbox"/> Potentially Significant Impact	<input type="checkbox"/> Less than Significant with Mitigation Incorporated	<input type="checkbox"/> Less than Significant Impact	<input type="checkbox"/> No Impact

**Potentially Significant Impact**

The Project has the potential to be located on a geologic unit that could be geologically unstable and potentially result in lateral spreading, subsidence, liquefaction or collapse. Therefore, the Project may have a potentially significant impact. This issue will be further evaluated in the EIR. Mitigation measures will be identified if applicable and included to the extent feasible.

d. Be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial direct or indirect risks to life or property?			
<input checked="" type="checkbox"/> Potentially Significant Impact	<input type="checkbox"/> Less than Significant with Mitigation Incorporated	<input type="checkbox"/> Less than Significant Impact	<input type="checkbox"/> No Impact

**Potentially Significant Impact**

Expansive soils generally have a significant amount of clay particles which can give up water (shrink) or take on water (swell). The change in volume exerts stress on buildings and other loads placed on these soils. The extent of shrink/swell is influenced by the amount and kind of clay in the soil. The occurrence of these soils is often associated with geologic units having marginal stability. The distribution of expansive soils can be widely dispersed, and they can occur in hillside areas as well as low-lying alluvial basins. A Natural Resource Conservation Service (NRCS) Web Soil Survey (WSS) search was conducted for the

**California Environmental Quality Act Initial Study  
Evaluation of Environmental Impacts**

Project Site. The WSS search identified the Project Site is underlain by Urban land-Elpaloalto complex, which is predominately comprised alluvial sediments, specifically clay loam sediments (NRCS 2023). A Geotechnical Investigation has not been conducted for the Project Site to characterize subsurface conditions. Therefore, the Project may have a potentially significant impact. This issue will be further evaluated in the EIR. Mitigation measures will be identified if applicable and included to the extent feasible.

e. Have soils incapable of adequately supporting the use of septic tanks or alternative waste water disposal systems where sewers are not available for the disposal of waste water?			
<input type="checkbox"/> Potentially Significant Impact	<input type="checkbox"/> Less than Significant with Mitigation Incorporated	<input type="checkbox"/> Less than Significant Impact	<input checked="" type="checkbox"/> No Impact

**No Impact**

The Project would connect to the existing City’s wastewater system and would not require the construction and use of septic tanks or alternative wastewater disposal system. Therefore, the Project would have no impact. This issue will not be further evaluated in the EIR.

f. Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?			
<input checked="" type="checkbox"/> Potentially Significant Impact	<input type="checkbox"/> Less than Significant with Mitigation Incorporated	<input type="checkbox"/> Less than Significant Impact	<input type="checkbox"/> No Impact

**Potentially Significant Impact**

The Project would redevelop an existing courthouse and associated parking area. Demolition and construction activities would require ground disturbance and pending the final layout, and depth of foundation, may disturb areas beyond what have been previously disturbed. Therefore, the Project may directly or indirectly destroy a unique paleontological resource onsite or unique geologic feature and will need to be further evaluated in the EIR. Mitigation measures will be identified if applicable and included to the extent feasible.

### 3.8 Greenhouse Gas Emissions

Would the project:

a. Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?			
<input checked="" type="checkbox"/> Potentially Significant Impact	<input type="checkbox"/> Less than Significant with Mitigation Incorporated	<input type="checkbox"/> Less than Significant Impact	<input type="checkbox"/> No Impact

**Potentially Significant Impact**

Construction and operation of the Project could increase greenhouse gas (GHG) emissions which have the potential to either individually or cumulatively result in a potentially significant impact on the environment. The Project may have a potentially significant impact and this issue will be further evaluated in the EIR. Mitigation measures will be identified if applicable and included to the extent feasible.

b. Conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of greenhouse gases?			
<input checked="" type="checkbox"/> Potentially Significant Impact	<input type="checkbox"/> Less than Significant with Mitigation Incorporated	<input type="checkbox"/> Less than Significant Impact	<input type="checkbox"/> No Impact

**Potentially Significant Impact**

Assembly Bill (AB) 32, the California Global Warming Solutions Act of 2006, was signed by the Governor on September 27, 2006, to further the goals of Executive Order S-3-05 (Health and Safety Code, S38500 et seq.). On September 8, 2016, SB 32 was enacted to require that statewide greenhouse gas emissions are reduced to at least 40 percent below the 1990 level by 2030. On September 16, 2022, AB 1279 was signed into law that requires the state to reduce statewide GHG emissions by 85 percent compared to 1990 levels and achieve net zero GHG emissions by 2045. In line with SB 32 and AB 1279, the California Air Resources Board (CARB) approved the 2022 Scoping Plan on December 15, 2022, which sets a blueprint for the state to meet these reduction goals.

Implementation of the Project could potentially conflict with the applicable plan, policy, or regulation for the purpose of reducing emissions of GHG's. The Project may have a potentially significant impact and this issue will be further evaluated in the EIR. Mitigation measures will be identified if applicable and included to the extent feasible.

### 3.9 Hazards and Hazardous Materials

Would the project:

a. Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?			
<input checked="" type="checkbox"/> Potentially Significant Impact	<input type="checkbox"/> Less than Significant with Mitigation Incorporated	<input type="checkbox"/> Less than Significant Impact	<input type="checkbox"/> No Impact

#### Potentially Significant Impact

The Project includes the demolition of the existing courthouse and parking area, and construction of a new up to three-story courthouse facility and parking zone. A Phase I ESA was completed for the Project in November 2023 and did not identify any recognized environmental conditions (RECs), controlled recognized environmental conditions (CRECs), or business environmental risks (BERs) associated with the Project Site. However, two historical recognized environmental conditions (HRECs) were identified, both of which involve closed leaking underground storage tank cases. One of these cases pertains to gasoline-impacted soil associated with the south-southwestern-adjacent site (located at 666 West El Camino Real) to the Project Site. The other case pertains to gasoline-impacted groundwater associated with a site located approximately 270 feet southwest (estimated to be upgradient) of the Project Site. No additional assessment was recommended for either of the HRECs identified based on the proximity and upgradient hydrologic positions of the sites to the Project Site and the closed regulatory status of the cases.

The Project would require the demolition of existing structures onsite which could cause a significant hazard if demolition activities were to occur on buildings with a presence of asbestos containing materials (ACM) and lead based paint (LBP). The existing courthouse was constructed in 1967, therefore there is the potential presence of ACM and LBP in the building materials and shallow site soil. The Phase I ESA identified that if demolition, renovation, or re-roofing of the building is planned, an asbestos survey is required by local authorities and/or National Emissions Standards for Hazardous Air Pollutants (NESHAP) guidelines. NESHAP requires the removal of potentially friable ACMs prior to building demolition that may disturb the ACMs. Removal of LBP is not required if it is bonded to the budlings material. However, if the LBP is flaking, peeling, or blistering, it is required to be removed before demolition. In either case, applicable Occupational Safety and Health Administration requirements must be followed. Any debris or soil containing LBP must be disposed of appropriately.

Additionally, the Phase I ESA identified the Project Site as historically used for agricultural purposes between at least 1939 and 1956. Based on this historic agricultural use, there is potential agricultural chemicals such as organochlorine pesticides, chlorinated herbicides, and fertilizers were used on the Project Site and adjacent areas, and near-surface soils may contain these compounds resulting from direct onsite application, or from surface runoff from adjacent sites. The potential presence of these compounds in shallow site soil should be managed appropriately with planned subsurface disturbance of

**California Environmental Quality Act Initial Study  
Evaluation of Environmental Impacts**

the Project Site. The Project has the potential to expose the public or the environment during the transportation and disposal of hazardous materials generated during construction activities. Therefore, the Project may have a potentially significant impact. This impact will be further evaluated in the EIR. Mitigation measures will be identified if applicable and included to the extent feasible.

b. Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?			
<input checked="" type="checkbox"/> Potentially Significant Impact	<input type="checkbox"/> Less than Significant with Mitigation Incorporated	<input type="checkbox"/> Less than Significant Impact	<input type="checkbox"/> No Impact

**Potentially Significant Impact**

The Project includes the demolition and redevelopment of new courthouse facilities and parking area. Given that the Project would demolish existing long-standing structures that may contain ABM and LBP, workers and the public may be exposed to asbestos and lead via inhalation of demolition dust. The Project also has the potential to create a hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment should subsurface soil impacts be encountered during construction. Operation of the Project would include traditional courthouse and judiciary activities that would not involve the use of hazardous materials and would not create a significant hazard to the public or the environment. Although operation of the Project is anticipated to have a less than significant impact, construction and demolition of the existing structures has the potential to expose the public to hazardous materials. Therefore, the Project may have a potentially significant impact. This impact will be further evaluated in the EIR. Mitigation measures will be identified if applicable and included to the extent feasible.

c. Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?			
<input type="checkbox"/> Potentially Significant Impact	<input type="checkbox"/> Less than Significant with Mitigation Incorporated	<input checked="" type="checkbox"/> Less than Significant Impact	<input type="checkbox"/> No Impact

**Less than Significant Impact**

The nearest school to the Project Site is Little Tree Montessori International School of Sunnyvale, located approximately 0.24 mile to the northwest. Although Little Tree Montessori is located within one-quarter mile of the Project Site, operation of the Project would not emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste. Construction associated with the Project would result in low amounts of hazardous emissions from construction equipment and activities; however, these low-level emissions would be temporary impacts and not likely to traverse the quarter-mile distance to Little Tree Montessori. Therefore, the Project impact would be less than significant. This impact will not be further evaluated in the EIR.

**California Environmental Quality Act Initial Study  
Evaluation of Environmental Impacts**

d. Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code § 65962.5 and, as a result, would it create a significant hazard to the public or the environment?			
<input type="checkbox"/> Potentially Significant Impact	<input type="checkbox"/> Less than Significant with Mitigation Incorporated	<input type="checkbox"/> Less than Significant Impact	<input checked="" type="checkbox"/> No Impact

**No Impact**

The Project Site is not located on a list of hazardous materials sites compiled pursuant to Government Code § 65962.5. The nearest hazardous waste site is the Sunnyvale Fuel Dock (T0608598524), located 500 feet to the northeast of the Project Site (SWRCB 2023). This site is a Clean-Up Site for gasoline contaminants and was designated as Case Closed on December 21, 1990. Therefore, the Project would have no impact. This impact will not be further evaluated in the EIR.

e. For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard or excessive noise for people residing or working in the project area?			
<input type="checkbox"/> Potentially Significant Impact	<input type="checkbox"/> Less than Significant with Mitigation Incorporated	<input type="checkbox"/> Less than Significant Impact	<input checked="" type="checkbox"/> No Impact

**No Impact**

The Project Site is not located within an airport land use plan or within two miles of a public or private use airport. The closest airport to the Project site is Moffat Federal Airfield, located approximately 2.5 miles to the northeast of the Project Site. Given that the Project is not located within an airport land use plan or within two miles of an existing airport, the Project would not result in a safety hazard for Judicial Council employees or patrons. The Project would not result in a safety hazard or excessive noise for people residing or working in the Project site. Therefore, the Project would have no impact. This impact will not be further evaluated in the EIR.

f. Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?			
<input type="checkbox"/> Potentially Significant Impact	<input type="checkbox"/> Less than Significant with Mitigation Incorporated	<input checked="" type="checkbox"/> Less than Significant Impact	<input type="checkbox"/> No Impact

**Less than Significant Impact**

The Project would be designed, constructed, and maintained in accordance with applicable standards, resulting in the provision of adequate vehicular access that would provide for adequate emergency

**California Environmental Quality Act Initial Study  
Evaluation of Environmental Impacts**

access and evacuation. Construction activities that may temporarily restrict vehicular traffic would be required to implement adequate and appropriate standards to facilitate the passage of persons and vehicles through/around any required road closures. Adherence to these standards would reduce potential impacts related to this issue to a less than significant level. This impact will not be further evaluated in the EIR.

g. Expose people or structures, either directly or indirectly, to a significant risk of loss, injury or death involving wildland fires?			
<input type="checkbox"/> Potentially Significant Impact	<input type="checkbox"/> Less than Significant with Mitigation Incorporated	<input type="checkbox"/> Less than Significant Impact	<input checked="" type="checkbox"/> No Impact

**No Impact**

The Project Site is not located within the wildfire hazard zone as specified by the California Department of Forestry and Fire Protection (CalFIRE) Fire Hazard Severity Zone (FHSZ) Viewer (CalFIRE 2023). Areas surrounding the Project Site consist of urban development with minimal ground cover or vegetation. Because of lack of abundant vegetation and the amount of commercial and residential development within the vicinity of the Project Site, on-site and adjacent areas do not have the capability to support a wildfire. Therefore, the Project does not have the potential to expose people or structures to a significant risk of loss, injury or death involving wildland fires. No impact would occur; this impact will not be further evaluated in the EIR.

### 3.10 Hydrology and Water Quality

Would the project:

a. Violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or ground water quality?			
<input checked="" type="checkbox"/> Potentially Significant Impact	<input type="checkbox"/> Less than Significant with Mitigation Incorporated	<input type="checkbox"/> Less than Significant Impact	<input type="checkbox"/> No Impact

#### **Potentially Significant Impact**

The proposed Project would disturb an area greater than one acre. Therefore, a National Pollutant Discharge Elimination System (NPDES) Permit from the San Francisco Regional Water Quality Control Board (RWQCB) and preparation of a Storm Water Pollution Prevention Plan (SWPPP) will be required. As the Project involves activities and materials during construction that could contribute to stormwater quality impacts, it is conservatively assumed that the Project has the potential to violate a water quality standard or waste discharge requirement. Therefore, the Project may have a potentially significant stormwater impact and this issue will be further evaluated in the EIR. Mitigation measures will be identified if applicable and included to the extent feasible.

b. Substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin?			
<input type="checkbox"/> Potentially Significant Impact	<input type="checkbox"/> Less than Significant with Mitigation Incorporated	<input checked="" type="checkbox"/> Less than Significant Impact	<input type="checkbox"/> No Impact

#### **Less than Significant Impact**

The Project includes the demolition of the existing single-story courthouse and parking area, and construction of a new up to three-story courthouse and parking area within the same general footprint. The Project is not expected to create significantly more paved/impervious surfaces than existing conditions. The Project will cover a very minor portion of the local groundwater recharge area and will be used in a manner similar to its current use. Therefore, the Project is not expected to deplete groundwater supplies or interfere substantially with groundwater recharge and would have no impact. This issue will not be further evaluated in the EIR.

**California Environmental Quality Act Initial Study  
Evaluation of Environmental Impacts**

c. Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would:			
i. Result in a substantial erosion or siltation on- or offsite;			
<input checked="" type="checkbox"/> Potentially Significant Impact	<input type="checkbox"/> Less than Significant with Mitigation Incorporated	<input type="checkbox"/> Less than Significant Impact	<input type="checkbox"/> No Impact

**Potentially Significant Impact**

The Project site and surrounding areas do not contain streams, rivers, or ephemeral drainage features and so implementation of the Project would not alter the existing course of any streams or rivers. The Project includes redevelopment of the existing site with a similar use that would have an equivalent amount of impervious surface subject to stormwater flows via surface sheet flow. Operation of the Project would not substantially alter the existing drainage pattern of the site or area in a manner which would result in substantial erosion or siltation on- or off-site.

Construction of the Project would involve land disturbances that temporarily alter site drainage and expose site soils to erosion. Project construction has the potential to alter the existing drainage pattern of the site or area in a manner which may result in substantial siltation off-site. However, with the implementation of a SWPPP these impacts are anticipated to be less than significant. This issue will not be further evaluated in the EIR.

ii. Substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or offsite;			
<input type="checkbox"/> Potentially Significant Impact	<input type="checkbox"/> Less than Significant with Mitigation Incorporated	<input checked="" type="checkbox"/> Less than Significant Impact	<input type="checkbox"/> No Impact

**Less than Significant Impact**

The proposed Project would result in comparable amounts of impervious surfaces to the existing conditions. Currently, stormwater flows via surface sheet flow to existing localized gutters and local storm drains. Because the Project will result in a similar use to that which is existing on-site, operation of the Project would not substantially alter the existing drainage pattern of the site or area or substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or off-site. Project construction does not include a component with the potential to increase surface runoff in a manner that would result in on- or off-site flooding. Additionally, a SWPPP will be prepared and implemented during Project construction to reduce surface runoff. No impact related to this issue is anticipated to occur. This issue will not be further evaluated in the EIR.

**California Environmental Quality Act Initial Study  
Evaluation of Environmental Impacts**

iii. Create or contribute runoff water which would exceed the capacity of existing or planned stormwater drain-age systems or provide substantial additional sources of polluted runoff; or			
<input checked="" type="checkbox"/> Potentially Significant Impact	<input type="checkbox"/> Less than Significant with Mitigation Incorporated	<input type="checkbox"/> Less than Significant Impact	<input type="checkbox"/> No Impact

**Potentially Significant Impact**

The Project does not include a component that would increase demand on stormwater drainage systems. Once operational, the Project would result in a similar use to that of the current site and would not provide substantial additional sources of polluted runoff. However, as Project construction involves activities and materials that could temporarily contribute to stormwater quality impacts, it is conservatively assumed that the Project has the potential to temporarily increase the amount of polluted runoff. Therefore, the Project may have a potentially significant stormwater impact and this issue will be further evaluated in the EIR. Mitigation measures will be identified if applicable and included to the extent feasible.

iv. Impede or redirect flood flows?			
<input type="checkbox"/> Potentially Significant Impact	<input type="checkbox"/> Less than Significant with Mitigation Incorporated	<input type="checkbox"/> Less than Significant Impact	<input checked="" type="checkbox"/> No Impact

**No Impact**

The Project is not within a 100-year flood hazard area as identified on the Flood Insurance Rate Map (Panel 06085C0206H, effective 5/18/2009) (FEMA 2023). The Project proposes to redevelop a courthouse and associated parking area within the same general footprint as the existing courthouse and parking area and does not involve any substantial changes to the existing grade of the site. Because the Project Site is not located within a 100-year flood hazard zone and the resulting use of the Project Site will be similar to its current use, no impact related to this issue is anticipated to occur. This issue will not be further evaluated in the EIR.

d. In flood hazard, tsunami, or seiche zones, risk release of pollutants due to project inundation?			
<input type="checkbox"/> Potentially Significant Impact	<input type="checkbox"/> Less than Significant with Mitigation Incorporated	<input type="checkbox"/> Less than Significant Impact	<input checked="" type="checkbox"/> No Impact

**No Impact**

A tsunami is a series of waves generated in a body of water by a pulsating or abrupt disturbance that vertically displaces water. Seiches are oscillations in enclosed bodies of water that are caused by a

**California Environmental Quality Act Initial Study  
Evaluation of Environmental Impacts**

number of factors, most often wind or seismic activity. There are no bodies of water near the Project site that would be subject to a seiches or tsunami. Due to the relatively flat topography in the vicinity of the Project site and the lack of nearby major landforms, it is unlikely that a mudflow would impact the site. No impacts are anticipated from inundation, seiche, tsunami, or mud flow. These issues will not be further evaluated in the EIR.

e. Conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan?			
<input checked="" type="checkbox"/> Potentially Significant Impact	<input type="checkbox"/> Less than Significant with Mitigation Incorporated	<input type="checkbox"/> Less than Significant Impact	<input type="checkbox"/> No Impact

**Potentially Significant Impact**

The Project Site overlies the Santa Clara Subbasin, which is managed by the Santa Clara Valley Water District through its Groundwater Management Plan. Additionally, the Project is located within the jurisdiction of the San Francisco RWQCB, which manages surface waters through its Basin Plan. As the Project involves replacing an existing courthouse facility currently adhering to all applicable policies and regulations, and an appropriate NPDES permit will be obtained and implemented during construction, implementation of the Project is not anticipated to conflict with any water quality control plan or sustainable groundwater management plan. These issues will not be further evaluated in the EIR.

### 3.11 Land Use and Planning

Would the project:

a. Physically divide an established community?			
<input type="checkbox"/> Potentially Significant Impact	<input type="checkbox"/> Less than Significant with Mitigation Incorporated	<input type="checkbox"/> Less than Significant Impact	<input checked="" type="checkbox"/> No Impact

**No Impact**

The Project involves demolishing the existing courthouse facility and replacing it with a new multi-level courthouse facility. The Project Site is within the Public Facilities zoned Civic Center with no existing residential uses located on the property. The Project would not entail the displacement of any residential uses, or the use of any land designated for residential uses. Therefore, the Project would have no impact and would not disrupt or physically divide an established community. The issue will not be further evaluated in the EIR.

b. Cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect?			
<input type="checkbox"/> Potentially Significant Impact	<input type="checkbox"/> Less than Significant with Mitigation Incorporated	<input type="checkbox"/> Less than Significant Impact	<input checked="" type="checkbox"/> No Impact

**No Impact**

The Project is consistent with the surrounding development and does not conflict with the adopted plans for the purpose of avoiding or mitigating an environmental effect. Chapter 4 of the ECRSP covers land use and development standards within the plan area and notes only a few of the included land use policies are applicable to the future redevelopment of sites within the ECR-PF zoning district, in which the Project is located. The Project is consistent with applicable land use policies in the ECRSP such as LU-P4 requiring pedestrian-oriented building design with strategically designed publicly accessible areas, LU-P6 encouraging development at the maximum intensities allowable in order to maximize the provision of neighborhood-serving amenities, and LU-P8 aimed at maximizing development intensities (while protecting nearby lower intensity land uses) as one tool to support transit usage. Additionally, according to the ECRSP, the Project site does not fall within an area with 'daylight plane' requirements, which refer to height limitations used to define the building envelope within which new structures or additions must be contained, are applicable.

The Project is within Santa Clara County, which is one of the nine San Francisco Bay Area counties covered by the Plan Bay Area 2050. The Plan Bay Area 2050 is an integrated transportation and land use/housing strategy adopted in 2021 by the Metropolitan Transportation Commission and the Executive Board of the Association of Bay Area Governments. The Project would be consistent with applicable land

## **California Environmental Quality Act Initial Study Evaluation of Environmental Impacts**

use policies outlined in the Plan Bay Area 2050 such as Environmental Strategies 3 and 5, which aim to support electrification and resilient power system upgrades in all public and commercial buildings and to maintain urban growth boundaries by focusing new development within existing urban footprints, respectively.

Chapter 19.36 of the SMC pertains specifically to the El Camino Real Specific Plan District wherein the Project Site is located and contains no policies or regulations which would conflict with the Project. Per section 19.36.060 of the SMC, as a facility used by government agencies for government purposes, the Project is a permitted use in the ECR-PF zoning district. The Project is a permitted use in the Public Facilities zone and is not anticipated to conflict with any applicable land use plan, policy, or regulation. Therefore, the Project would have no impact related to this issue. This issue will not be further evaluated in the EIR.

### 3.12 Mineral Resources

Would the project:

a. Result in the loss of availability of a known mineral resource that would be a value to the region and the residents of the state?			
<input type="checkbox"/> Potentially Significant Impact	<input type="checkbox"/> Less than Significant with Mitigation Incorporated	<input type="checkbox"/> Less than Significant Impact	<input checked="" type="checkbox"/> No Impact

**No Impact**

According to California Department of Conservation’s report *Update of Mineral Land Classification: Aggregate Minerals in the South San Francisco Bay Production-Consumption Region (1996)* no minerals or aggregate resources of statewide importance are located within the city of Sunnyvale. The Project Site is located within a substantially urbanized area and is not designated in the city of Sunnyvale’s General Plan, the ECRSP, or the Zoning Code for any extractive use. No mineral resource extraction, recovery, or processing activities are underway on or adjacent to the Project Site. Implementation of the Project would therefore have no impact on the availability of known mineral resources in the Project vicinity currently available for extraction. This issue will not be further evaluated in the EIR.

b. Result in the loss of availability of a locally important mineral resource recovery site delineated on a local general plan, specific plan or other land use plan?			
<input type="checkbox"/> Potentially Significant Impact	<input type="checkbox"/> Less than Significant with Mitigation Incorporated	<input type="checkbox"/> Less than Significant Impact	<input checked="" type="checkbox"/> No Impact

**No Impact**

The Project Site is located within a substantially urbanized area surrounded by similarly urbanized uses, limiting its potential for mineral resource conservation or extraction. Additionally, the Project Site is not classified as an area of locally important mineral resource recovery. As such, no impact related to this issue would occur. This issue will not be further evaluated in the EIR.

### 3.13 Noise

Would the project:

a. Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?			
<input checked="" type="checkbox"/> Potentially Significant Impact	<input type="checkbox"/> Less than Significant with Mitigation Incorporated	<input type="checkbox"/> Less than Significant Impact	<input type="checkbox"/> No Impact

**Potentially Significant Impact**

A temporary increase in noise due to construction related activities of the Project is anticipated but would cease upon Project completion. Because the Project would involve replacing an existing currently vacant 19,994 SF one-story building with a larger 50,000 SF up to three-story facility there is a potential for permanent increases in ambient noise associated with an increase in the volume of staff and visitors to the new courthouse. Since construction activities may generate temporary noise in excess of local noise standards and there is potential the Project could result in a permanent increase in ambient noise levels in the Project vicinity, the Project may have a potentially significant impact. This issue will be further evaluated in the EIR. Mitigation measures will be identified if applicable and included to the extent feasible.

b. Generation of excessive groundborne vibration or groundborne noise levels?			
<input checked="" type="checkbox"/> Potentially Significant Impact	<input type="checkbox"/> Less than Significant with Mitigation Incorporated	<input type="checkbox"/> Less than Significant Impact	<input type="checkbox"/> No Impact

**Potentially Significant Impact**

Vibration refers to groundborne noise and perceptible motion. Typical sources of groundborne vibration and noise are construction activities (e.g., operating heavy-duty earthmoving equipment), steel-wheeled trains, and occasional traffic on rough roads. As the Project involves the replacement of the current single-story Sunnyvale Courthouse building with a new up to three-story Sixth Appellate District Courthouse, groundborne vibration and noise generated after construction is completed would be similar to existing conditions. During construction, groundborne vibration and noise may be generated by large trucks and other heavy equipment during demolition, grading, and construction of buildings. The Project may have a potentially significant impact. This issue will be further evaluated in the EIR. Mitigation measures will be identified if applicable and included to the extent feasible.

**California Environmental Quality Act Initial Study  
Evaluation of Environmental Impacts**

c. For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?			
<input type="checkbox"/> Potentially Significant Impact	<input type="checkbox"/> Less than Significant with Mitigation Incorporated	<input type="checkbox"/> Less than Significant Impact	<input checked="" type="checkbox"/> No Impact

**No Impact**

The Project Site is located approximately 2.20 miles southeast of the Moffett Federal Airfield Airport and the city of Sunnyvale is within the boundaries of The Moffett Federal Airfield Comprehensive Land Use Plan (CLUP). However, per The Moffett Federal Airfield CLUP, the Project Site is located outside of the Moffett Federal Airfield Airport Influence Area (AIA). As such, the Project Site is not located within the noise, safety, or height restriction zones delineated in the CLUP. There are no private airstrips located within the vicinity of the Project. Therefore, no impacts to excessive airport-related noise levels or excessive private airstrip-related noise levels in the vicinity of the Project Site would occur. This issue will not be further evaluated in the EIR.

### 3.14 Population and Housing

Would the project:

a. Induce substantial unplanned population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure)?			
<input type="checkbox"/> Potentially Significant Impact	<input type="checkbox"/> Less than Significant with Mitigation Incorporated	<input type="checkbox"/> Less than Significant Impact	<input checked="" type="checkbox"/> No Impact

**No Impact**

The Project involves the relocation of the Sixth Appellate District Courthouse from its leased office building to the site of the existing vacant Sunnyvale Courthouse. It would not create new housing or businesses, nor would it extend any roadway infrastructure. Relocation of jobs is not expected to create an increase in the need for housing, as the relocation of the court is less than 12 miles from the existing Sixth Appellate District Courthouse. Therefore, the Project would not have impacts related to population growth. This issue will not be further evaluated in the EIR.

b. Displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere?			
<input type="checkbox"/> Potentially Significant Impact	<input type="checkbox"/> Less than Significant with Mitigation Incorporated	<input type="checkbox"/> Less than Significant Impact	<input checked="" type="checkbox"/> No Impact

**No Impact**

The Project would not result in the removal or demolition of any residential units because there are no existing residential units on the property. The Project would not entail the displacement of any residential uses, or the use of any land designated for residential uses. Additionally, the Project would not have impacts relating to the displacement of people. Therefore, no impacts would occur, and this issue will not be further evaluated in the EIR.

### 3.15 Public Services

Would the project:

a. Result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times, or other performance objectives for any of the public services:			
i. Fire Protection?			
<input type="checkbox"/> Potentially Significant Impact	<input type="checkbox"/> Less than Significant with Mitigation Incorporated	<input type="checkbox"/> Less than Significant Impact	<input checked="" type="checkbox"/> No Impact

**No Impact**

The City of Sunnyvale is served by the Department of Public Safety which is one of the few fully integrated police and fire departments in America. Public Safety Officers are cross-trained as police officers, firefighters and emergency medical technicians (EMTs). The Civic Center Master Plan details the anticipated construction of the Public Safety Headquarters which will include an Emergency Operations Center in Phase 1 of the Civic Center updates. This center would provide on-site emergency services to the proposed Project once in operation. The current nearest fire station is the Sunnyvale Fire Department located at 700 All America Way, within the Civic Center. The Project would comply with all Fire Department standards and policies and would not result in the need for any new facilities to maintain performance objectives for fire protection. Therefore, there would be no impact and the issue will not be further evaluated in the EIR.

ii. Police Protection?			
<input type="checkbox"/> Potentially Significant Impact	<input type="checkbox"/> Less than Significant with Mitigation Incorporated	<input type="checkbox"/> Less than Significant Impact	<input checked="" type="checkbox"/> No Impact

**No Impact**

The City of Sunnyvale Police Department is co-located with the Fire Department at 700 All America Way Sunnyvale, in the Civic Center. Existing law enforcement service in the area would adequately meet the demand for police protection services under the Project. Constructing and operating the new courthouse would not require additional services beyond those currently provided. The existing Sixth District courthouse is served by both the California Highway Patrol (CHP), which provides security outside the courthouse, and Santa Clara County law enforcement, which provides security inside the courthouse. Relocation of the courthouse within Santa Clara County will not have an impact on CHP or police

**California Environmental Quality Act Initial Study  
Evaluation of Environmental Impacts**

protection for court officers, employees, and citizens. Therefore, the Project would have no impact. This issue will not be further evaluated in the EIR.

iii. Schools?			
<input type="checkbox"/> Potentially Significant Impact	<input type="checkbox"/> Less than Significant with Mitigation Incorporated	<input type="checkbox"/> Less than Significant Impact	<input checked="" type="checkbox"/> No Impact

**No Impact**

The Project involves the relocation of the Sixth Appellate District to a new permanent courthouse location and would not result in any population increases or shifts in population. The Project would not include any introduced residential population and therefore, the Project would have no impact on local schools. This issue will not be further evaluated in the EIR.

iv. Parks?			
<input type="checkbox"/> Potentially Significant Impact	<input type="checkbox"/> Less than Significant with Mitigation Incorporated	<input type="checkbox"/> Less than Significant Impact	<input checked="" type="checkbox"/> No Impact

**No Impact**

The Project would not entail the construction of residential or commercial uses that would result in an increase in park usage or meet the need for additional parks. Therefore, Project would have no impact. This issue will not be further evaluated in the EIR.

v. Other public facilities?			
<input type="checkbox"/> Potentially Significant Impact	<input type="checkbox"/> Less than Significant with Mitigation Incorporated	<input type="checkbox"/> Less than Significant Impact	<input checked="" type="checkbox"/> No Impact

**No Impact**

The Project is not anticipated to adversely affect the City's overall ability to provide services Citywide including school and library services, nor would it create any significant increase in demand for such services. Therefore, the Project would have no impact. This issue will not be further evaluated in the EIR.

### 3.16 Recreation

Would the project:

a. Would the project increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?			
<input type="checkbox"/> Potentially Significant Impact	<input type="checkbox"/> Less than Significant with Mitigation Incorporated	<input type="checkbox"/> Less than Significant Impact	<input checked="" type="checkbox"/> No Impact

**No Impact**

The Project would not entail the construction of residential or commercial uses that would result in an increased use of area parks or recreation facilities. There are no increases to the use of existing neighborhood or regional parks or other recreation facilities such that substantial physical deterioration of the facility would occur or be accelerated. Therefore, no impacts related to the physical deterioration of a park associated with the Project would occur. This issue will not be further evaluated in the EIR.

b. Does the project include recreational facilities or require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment?			
<input type="checkbox"/> Potentially Significant Impact	<input type="checkbox"/> Less than Significant with Mitigation Incorporated	<input type="checkbox"/> Less than Significant Impact	<input checked="" type="checkbox"/> No Impact

**No Impact**

The Project involves the construction and redevelopment of new courthouse facilities and parking area. The Project does not include the construction of recreational facilities either on or off the Project property. Therefore, the Project would have no impacts. This issue will not be further evaluated in the EIR.

### 3.17 Transportation

Would the project:

a. Conflict with a program, plan, ordinance or policy addressing the circulation system, including transit, roadway, bicycle and pedestrian facilities?			
<input checked="" type="checkbox"/> Potentially Significant Impact	<input type="checkbox"/> Less than Significant with Mitigation Incorporated	<input type="checkbox"/> Less than Significant Impact	<input type="checkbox"/> No Impact

#### **Potentially Significant Impact**

The proposed Project would include seventeen (17) secured parking spaces for justices and approximately sixty (60) surface parking spaces for the public and staff. Because the Project would involve replacing an existing one-story building with a up to three-story facility with additional parking, there is a potential for increases in the amount of traffic associated with an increase in the volume of staff and visitors to the new courthouse. Additionally, some of the site layouts proposed in the New Courthouse Feasibility Study include access to the Project Site in addition to the current entrance from El Camino Real, which would need to be evaluated. Project construction could potentially significantly increase vehicular traffic that could affect the performance of the surrounding street system as a result of construction worker trips, as well as haul truck and delivery trips. The Land Use and Transportation Chapter of the City of Sunnyvale’s General Plan suggests that transportation performance metrics for assessing the Project’s impact should consist of both a traditional approach using level of service (LOS) and a new approach using vehicle miles traveled (VMT). The Project could potentially significantly impact an applicable plan, ordinance, or policy establishing measures of effectiveness for the performance of a circulation system during construction and operation. Therefore, the Project may have a potentially significant impact. This issue will be further evaluated in the EIR. Mitigation measures will be identified if applicable and included to the extent feasible.

b. Conflict or be inconsistent with CEQA Guidelines § 15064.3, subdivision (b)?			
<input checked="" type="checkbox"/> Potentially Significant Impact	<input type="checkbox"/> Less than Significant with Mitigation Incorporated	<input type="checkbox"/> Less than Significant Impact	<input type="checkbox"/> No Impact

#### **Potentially Significant Impact**

Section 15064.3 of the CEQA Guidelines addresses specific considerations for evaluating a project’s transportation impacts, generally using VMT as a measurement. Subdivision (b) of Section 15064.3 provides criteria for analyzing transportation impacts. Subdivision (b) (1) states a less than significant impact should generally be assumed for land use projects within one-half mile of either an existing major transit stop or a stop along an existing high-quality transit. However, this presumption may not apply if information indicates a project could still generate significant levels of VMT. The Project Site is served by VTA bus stops, but the Sunnyvale Transit Center is located seven blocks (approximately 0.65 mile) to the

**California Environmental Quality Act Initial Study  
Evaluation of Environmental Impacts**

northeast of the Project site. To confirm the Project would be consistent with CEQA Guidelines § 15064.3, subdivision (b) further analysis would be warranted. Therefore, the Project may have a potentially significant impact. This issue will be further evaluated in the EIR. Mitigation measures will be identified if applicable and included to the extent feasible.

c. Substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?			
<input type="checkbox"/> Potentially Significant Impact	<input type="checkbox"/> Less than Significant with Mitigation Incorporated	<input type="checkbox"/> Less than Significant Impact	<input checked="" type="checkbox"/> No Impact

**No Impact**

The Project would be constructed in the existing boundaries of the current Sunnyvale Courthouse facility. Roadway improvements in and around the Project Site have not changed and would continue to be consistent with all local requirements for street widths, corner radii, intersection control, and design standards tailored specifically to site access requirements. Therefore, the Project will have no impact. This issue will not be further evaluated in the EIR.

d. Result in inadequate emergency access?			
<input type="checkbox"/> Potentially Significant Impact	<input type="checkbox"/> Less than Significant with Mitigation Incorporated	<input type="checkbox"/> Less than Significant Impact	<input checked="" type="checkbox"/> No Impact

**No Impact**

The Project's emergency access would not change in design from the existing access. The Project would be required to be designed, constructed, and maintained to provide for adequate emergency access and evacuation. Construction activities, which may temporarily restrict vehicular traffic, would be required to implement adequate and appropriate measures to facilitate the passage of persons and vehicles through/around any required road closures. A less than significant impact related to this issue would occur. This issue will not be further evaluated in the EIR.

### 3.18 Tribal Cultural Resources

Would the project:

a. Would the project cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code § 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is:			
i. Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code section 5020.1(k), or			
<input checked="" type="checkbox"/>	Potentially Significant Impact	<input type="checkbox"/>	Less than Significant with Mitigation Incorporated
<input type="checkbox"/>		<input type="checkbox"/>	Less than Significant Impact
<input type="checkbox"/>		<input type="checkbox"/>	No Impact

#### **Potentially Significant Impact**

The potential to encounter intact historic resources on the Project Site is low given the Site has been previously disturbed and altered by the construction of the existing Sunnyvale Courthouse. Consultation with traditionally and culturally affiliated California Native American tribes, and a search of the CHRIS/NWIC database and California Native American Heritage Commission’s Sacred Lands File will be needed to confirm the presence or absence of tribal cultural resources on the Project site that are listed or eligible for listing on the California Register of Historical Resources. It is assumed that the proposed Project may have a potentially significant impact on tribal cultural resources until tribal consultation and review are completed. This issue will be further evaluated in the EIR. Mitigation measures will be identified if applicable and included to the extent feasible.

ii. A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code § 5024.1. In applying the criteria set forth in subdivision (c) of Public Resource Code § 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe.			
<input checked="" type="checkbox"/>	Potentially Significant Impact	<input type="checkbox"/>	Less than Significant with Mitigation Incorporated
<input type="checkbox"/>		<input type="checkbox"/>	Less than Significant Impact
<input type="checkbox"/>		<input type="checkbox"/>	No Impact

#### **Potentially Significant Impact**

Pursuant to Assembly Bill 52, California Native American tribes who have formally requested notification on CEQA projects will be notified that the Judicial Council proposes to undertake the Project. This notification affords California Native American tribes the opportunity for consultation pursuant to Public Resources Code § 21080.3.1. This Initial Study was prepared prior to the 30-day period that each

## **California Environmental Quality Act Initial Study Evaluation of Environmental Impacts**

California Native American tribe has after receipt of the above referenced notification to request consultation. As a result, it is assumed that the proposed Project may have a potentially significant impact pursuant to criteria set forth in subdivision (c) of Public Resources Code Section 5024.1 to a resource considered significant to a California Native American tribe until consultation is completed. This issue will be further evaluated in the EIR. Mitigation measures will be identified if applicable and included to the extent feasible.

### 3.19 Utilities and Service Systems

Would the project:

a. Require or result in the relocation or construction of new or expanded water, wastewater treatment or storm water drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects?			
<input type="checkbox"/> Potentially Significant Impact	<input type="checkbox"/> Less than Significant with Mitigation Incorporated	<input checked="" type="checkbox"/> Less than Significant Impact	<input type="checkbox"/> No Impact

**Less than Significant Impact**

The Project Site is served by existing utilities that will be expanded to support the operation of the new building. The Project would redevelop an existing courthouse facility and utility needs would not substantially differ from those currently available on the Project Site. Additionally, according to the ECRSP, it has been determined existing public utilities are generally able to accommodate growth within the plan area with minimal changes to infrastructure. The Project will not require substantial construction or relocation of utilities and a less than significant impact associated with this issue would occur. This issue will not be further evaluated in the EIR.

b. Have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry and multiple dry years?			
<input type="checkbox"/> Potentially Significant Impact	<input type="checkbox"/> Less than Significant with Mitigation Incorporated	<input checked="" type="checkbox"/> Less than Significant Impact	<input type="checkbox"/> No Impact

**Less than Significant Impact**

The Project Site was utilized as the Sunnyvale Courthouse up until 2016. Water needs for the updated courthouse facilities are not anticipated to be substantially greater than that of the previous use and would be nominal given the overall level of development in the surrounding areas. According to the Environmental Management chapter of the City of Sunnyvale’s General Plan, the city has adequate supply commitments and facilities to consistently fulfill the anticipated water requirements of residents and businesses for the foreseeable future. There are sufficient water supplies available to serve the Project from existing entitlements. A less than significant impact associated with this issue would occur. This issue will not be further evaluated in the EIR.

**California Environmental Quality Act Initial Study  
Evaluation of Environmental Impacts**

c. Result in a determination by the wastewater treatment provider, which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?			
<input type="checkbox"/> Potentially Significant Impact	<input type="checkbox"/> Less than Significant with Mitigation Incorporated	<input checked="" type="checkbox"/> Less than Significant Impact	<input type="checkbox"/> No Impact

**Less than Significant Impact**

The City of Sunnyvale currently provides wastewater treatment services to the Project Site and would continue to provide services to the new courthouse facility. According to the ECRSP, wastewater to the plan area, and therefore the Project site, is conveyed through the city's wastewater collection system to the Donald M. Somers Water Pollution Control Plant (WPCP). While the ECRSP states the WPCP is currently operating at approximately 50 percent of its capacity, it notes additional wastewater treatment and infrastructure capacity improvements would be needed to serve future development in the city, and a wastewater capacity analysis will be required on an individual project basis. While wastewater treatment requirements for the proposed Project are not anticipated to be substantially greater those currently provided, further analysis would be needed to confirm there is an adequate capacity to accommodate a larger courthouse facility. This issue is to be further evaluated in the EIR.

d. Generate solid waste in excess of state or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals?			
<input type="checkbox"/> Potentially Significant Impact	<input type="checkbox"/> Less than Significant with Mitigation Incorporated	<input checked="" type="checkbox"/> Less than Significant Impact	<input type="checkbox"/> No Impact

**Less than Significant Impact**

Solid waste generation may increase during the demolition and construction phase of the Project. The Project would involve demolition of the existing single-story courthouse building and approximately 45,000 SF of existing parking and surfacing, which would generate demolition waste such as asphalt, concrete, and scrap metal. Similar to existing conditions on the Project Site, waste generated by operation of the new courthouse and associated facilities would be properly managed and/or disposed of in compliance with applicable federal, state, and local statutes and regulations related to solid and hazardous waste management. The amount of waste disposed would remain similar to existing conditions and additional capacity would not be required. Therefore, operational impacts of the Project would be less than significant. This issue will not be further evaluated in the EIR.

**California Environmental Quality Act Initial Study  
Evaluation of Environmental Impacts**

e. Comply with federal, state, and local management and reduction statutes and regulations related to solid waste?			
<input type="checkbox"/> Potentially Significant Impact	<input type="checkbox"/> Less than Significant with Mitigation Incorporated	<input checked="" type="checkbox"/> Less than Significant Impact	<input type="checkbox"/> No Impact

**Less than Significant Impact**

Solid waste generated during construction would be disposed of in accordance with applicable statutes and regulations. Solid waste generated during operation of the new courthouse will be disposed of in a manner similar to that of the current site, which is in compliance with all federal, state, and local statutes and regulations. Adequate solid waste storage areas will be incorporated at the Project site and waste will be stored in a manner consistent with applicable federal, state, and local statutes and regulations. Solid waste collection vehicles will be given adequate access to the designated waste storage areas for disposal. Therefore, the Project would follow applicable federal, state, and local statutes and regulations related to solid waste and impacts would be less than significant. This issue will not be further evaluated in the EIR.

### 3.20 Wildfire

Would the project:

a. Substantially impair an adopted emergency response plan or emergency evacuation plan?			
<input type="checkbox"/> Potentially Significant Impact	<input type="checkbox"/> Less than Significant with Mitigation Incorporated	<input checked="" type="checkbox"/> Less than Significant Impact	<input type="checkbox"/> No Impact

**Less than Significant Impact**

The Project site is located in an existing developed area with close access to major roadways that would allow for emergency evacuation. It is additionally located adjacent to Public Safety departments for easy accessibility to emergency responses. Therefore, the Project would not impair implementation of, or physically interfere with emergency response and impacts would be less than significant. This issue will not be further evaluated in the EIR.

b. Due to slope, prevailing winds, and other factors, exacerbate wildfire risks, and thereby expose project occupants to pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire?			
<input type="checkbox"/> Potentially Significant Impact	<input type="checkbox"/> Less than Significant with Mitigation Incorporated	<input checked="" type="checkbox"/> Less than Significant Impact	<input type="checkbox"/> No Impact

**Less than Significant Impact**

As shown on the California Department of Forestry and Fire Protection Hazard Severity Zones Map, the Project site is not located within land mapped as a fire hazard severity zone. The Project would be developed in a part of the City that is generally flat and is mostly surrounded by existing development. The project consists of the demolition and rebuild of the Sunnyvale Courthouse facility and does not propose any design elements that would exacerbate risks. It also would not expose project occupants to pollutant concentrations from a wildfire or the uncontrolled spread of wildfire. Therefore, the Project impacts would be less than significant and will not be further evaluated in the EIR.

c. Require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment?			
<input type="checkbox"/> Potentially Significant Impact	<input type="checkbox"/> Less than Significant with Mitigation Incorporated	<input checked="" type="checkbox"/> Less than Significant Impact	<input type="checkbox"/> No Impact

**California Environmental Quality Act Initial Study  
Evaluation of Environmental Impacts**

**Less than Significant Impacts**

The Project does not involve the installation of roads, fuel breaks, power lines, or other associated infrastructure that may exacerbate fire risk. The Project Site will be served by existing utilities and therefore, the Project would not create new fire risk. The Project would have less than significant impacts and the issue will not be further evaluated in the EIR.

d. Expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes?			
<input type="checkbox"/> Potentially Significant Impact	<input type="checkbox"/> Less than Significant with Mitigation Incorporated	<input type="checkbox"/> Less than Significant Impact	<input checked="" type="checkbox"/> No Impact

**No Impact**

The Project is not located near a hillslope or in an area subject to downstream flooding or landslides. As such, the Project does not include any design elements that would expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes. Therefore, the Project would have no impact and the issue will not be evaluated further in the EIR.

### 3.21 Mandatory Findings of Significance

<p>a. Does the project have the potential to substantially degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, substantially reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory?</p>							
<input checked="" type="checkbox"/>	Potentially Significant Impact	<input type="checkbox"/>	Less than Significant with Mitigation Incorporated	<input type="checkbox"/>	Less than Significant Impact	<input type="checkbox"/>	No Impact

#### **Potentially Significant Impact**

The Initial Study has identified biological resources as a potentially significant impact, prompting further review during the EIR process. This assessment aligns with the concern that the Project may have adverse effects on the environment, including the degradation of habitat for fish or wildlife species, potential reduction in population levels, or threats to rare or endangered plant and animal species. The EIR will provide a more detailed analysis to determine the extent of these potential impacts and propose appropriate mitigation measures to address and minimize any adverse effects on biological resources.

<p>b. Does the project have impacts that are individually limited, but cumulatively considerable? (“Cumulatively considerable” means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects.)?</p>							
<input checked="" type="checkbox"/>	Potentially Significant Impact	<input type="checkbox"/>	Less than Significant with Mitigation Incorporated	<input type="checkbox"/>	Less than Significant Impact	<input type="checkbox"/>	No Impact

#### **Potentially Significant Impact**

Cumulative impact analysis is a crucial aspect of CEQA that focuses on the combined effects of a proposed project in conjunction with other past, present, and reasonably foreseeable future projects. Cumulative impact refers to the combined effect of an individual project and the effects of other projects in the same geographic area. It considers the additive or synergistic impacts that multiple projects may have on the environment over time. It aims to provide decision-makers and the public with a clear understanding of how a proposed project, combined with other activities, may affect the environment over time. This analysis plays a crucial role in promoting sustainable development and responsible decision-making in California.

The Initial Study conducted for the proposed Project has yielded findings indicating either no impact or less than significant impact on specific environmental resource categories. While these results suggest that, when considered in isolation, the project's effects on individual resource areas are minimal, it is

**California Environmental Quality Act Initial Study  
Evaluation of Environmental Impacts**

essential to note that the subsequent EIR will evaluate the cumulative impacts associated with the Project. Specifically, even if certain resource categories were initially deemed to have no or less than significant impact in this Initial Study, the EIR will address their cumulative impacts, where applicable, to ensure a comprehensive understanding of the potential environmental consequences.

c. Does the project have environmental effects which will cause substantial adverse effects on human beings, either directly or indirectly?			
<input checked="" type="checkbox"/> Potentially Significant Impact	<input type="checkbox"/> Less than Significant with Mitigation Incorporated	<input type="checkbox"/> Less than Significant Impact	<input type="checkbox"/> No Impact

**Potentially Significant Impact**

The Initial Study has identified several potentially significant environmental impacts. Whether any of these impacts will result in substantial adverse effects on humans depends on a more in-depth analysis, and any mandatory finding of significance will be subject to further review and clarification during the EIR process.

## 4 Determination

On the basis of this initial evaluation:

- I find that the proposed project COULD NOT have a significant effect on the environment, and a NEGATIVE DECLARATION will be prepared.
- I find that although the proposed project could have a significant effect on the environment, there will not be a significant effect in this case because revisions in the project have been made by or agreed to by the project proponent. A MITIGATED NEGATIVE DECLARATION will be prepared.
- I find that the proposed project MAY have a significant effect on the environment, and an ENVIRONMENTAL IMPACT REPORT is required.
- I find that the proposed project MAY have a “potentially significant impact” or “potentially significant unless mitigated” impact on the environment, but at least one effect 1) has been adequately analyzed in an earlier document pursuant to applicable legal standards, and 2) has been addressed by mitigation measures based on the earlier analysis as described on attached sheets. An ENVIRONMENTAL IMPACT REPORT is required, but it must analyze only the effects that remain to be addressed.
- I find that although the proposed project could have a significant effect on the environment, because all potentially significant effects (a) have been analyzed adequately in an earlier EIR or NEGATIVE DECLARATION pursuant to applicable standards, and (b) have been avoided or mitigated pursuant to that earlier EIR or NEGATIVE DECLARATION, including revisions or mitigation measures that are imposed upon the proposed project, nothing further is required.

## **Appendix C Air Quality and Greenhouse Gas Impact Assessment**

The conclusions in the Report titled NEW SIXTH APPELLATE DISTRICT COURTHOUSE PROJECT are Stantec's professional opinion, as of the time of the Report, and concerning the scope described in the Report. The opinions in the document are based on conditions and information existing at the time the scope of work was conducted and do not take into account any subsequent changes. The Report relates solely to the specific project for which Stantec was retained and the stated purpose for which the Report was prepared. The Report is not to be used or relied on for any variation or extension of the project, or for any other project or purpose, and any unauthorized use or reliance is at the recipient's own risk.

Stantec has assumed all information received from Judicial Council of California (the "Client") and third parties in the preparation of the Report to be correct. While Stantec has exercised a customary level of judgment or due diligence in the use of such information, Stantec assumes no responsibility for the consequences of any error or omission contained therein.

This Report is intended solely for use by the Client in accordance with Stantec's contract with the Client. While the Report may be provided by the Client to applicable authorities having jurisdiction and to other third parties in connection with the project, Stantec disclaims any legal duty based upon warranty, reliance or any other theory to any third party, and will not be liable to such third party for any damages or losses of any kind that may result.

Executive Summary  
July 12, 2024

## Executive Summary

The purpose of this Air Quality and Greenhouse Gas Impact Assessment is to support the preparation of the California Environmental Quality Act document for the New Sixth Appellate District Courthouse Project (Project). This technical analysis has been prepared to analyze the potential air quality and greenhouse gas emissions generated from the Project.

## Project Understanding

The Project consists of the demolition of an existing building and the construction of a new courthouse with onsite parking for the Sixth Appellate District of the Court of Appeal in a more practical and accessible infill location. The Judicial Council of California (Judicial Council) is proposing to build a new Sixth Appellate District Courthouse, at a state-owned asset located at 605 W. El Camino Real, Sunnyvale California 94087 (Site).

## Summary of Analysis

- **Impact AIR-1:** The Project would not conflict with or obstruct implementation of the applicable air quality plan. There is a **less-than-significant impact**.
- **Impact AIR-2:** The Project would not result in a cumulatively considerable net increase of any criteria pollutant for which the Project region is non-attainment under an applicable federal or state ambient air quality standard. There is a **less-than-significant impact**.
- **Impact AIR-3:** The Project would not expose sensitive receptors to substantial pollutant concentrations. There is a **less-than-significant impact**.
- **Impact AIR-4:** The Project would not result in other emissions (such as those leading to odors) affecting a substantial number of people. There is a **less-than-significant impact**.
- **Impact GHG-1:** The Project would not generate direct and indirect greenhouse gas emissions that would result in a significant impact on the environment. There is a **less-than-significant impact**.
- **Impact GHG-2:** The Project would not conflict with any applicable plan, policy or regulation of an agency adopted to reduce the emissions of greenhouse gases. There is a **less-than-significant impact**.

# NEW SIXTH APPELLATE DISTRICT COURTHOUSE PROJECT

Introduction  
July 12, 2024

## 1.0 Introduction

### 1.1 Purpose of Analysis

The purpose of this Air Quality and Greenhouse Gas Impact Assessment is to provide a discussion of air pollutants, health risks posed to nearby sensitive receptors, and greenhouse gas (GHG) emissions from construction and operation of the New Sixth Appellate District Courthouse Project (Project). This evaluation relies on guidance and thresholds established by the United States Environmental Protection Agency (USEPA), the California Air Resources Board (CARB), and the Bay Area Air Quality Management District (BAAQMD).

### 1.2 Project Description

The Project consists of the demolition of an existing building and the construction of a new courthouse with onsite parking for the Sixth Appellate District of the Court of Appeal in a more practical and accessible infill location. Since it was established in 1984, the Sixth Appellate District of the Court of Appeal (Sixth Appellate District), has operated out of 43,758 square feet (SF) of the Comerica Bank Building, located at 333 West Santa Clara Street within downtown San Jose pursuant to a lease. In 2006, the Sixth Appellate District's lease that was managed by the California Department of General Services was assigned to the Judicial Council of California (Judicial Council). The current lease expires in January 2029 and has a final extension option through January 2034.

The Sixth Appellate District's current space on the 10th and 11th floors of the Comerica Bank Building includes one courtroom with support spaces, justice chambers, attorney offices, mediation operations, clerk operations, a law library, and court administration. This space is not contiguous and is distributed between the two floors. Additionally, there is no onsite parking available for any court user including the public and court staff. Only a small number of spaces are available for the justices and the court executive officer. Parking for the public and court staff is accommodated offsite through public pay lots and very limited street parking. Approximately 50 onsite parking spaces is estimated to be needed, including 12 secure parking spaces for justices and surface parking for the public, court staff, which cannot be achieved at the current leased property.

The Judicial Council is proposing to build a new Sixth Appellate District Courthouse, at a state-owned asset located at 605 W. El Camino Real, Sunnyvale California 94087 (Site), see **Figure 1**. The Site is situated on W. El Camino Real between Mathilda Avenue and Pastoria Avenue. The Site was previously used by the Superior Court of Santa Clara County for trial court operations. The State of California, on behalf of the Judicial Council retains ownership of the Site.

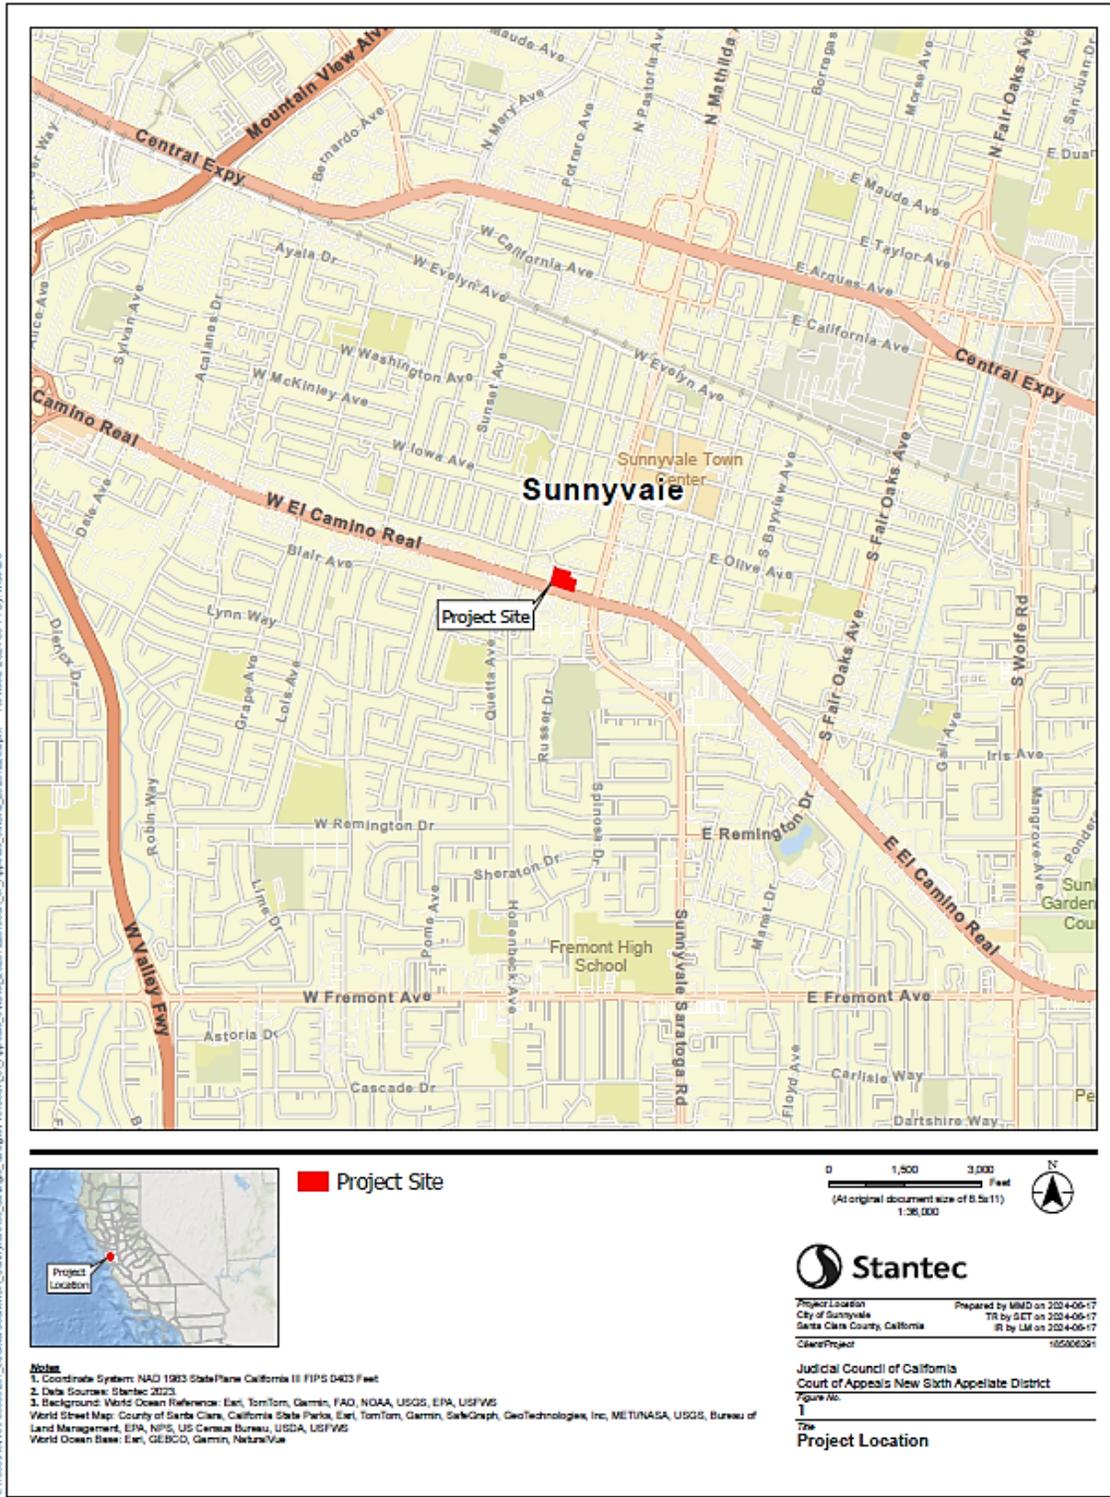

Site preparation would include the demolition of an existing 19,994 square foot one-story building with a partial basement as well as an unused shed structure currently within the parking lot. The Project would additionally involve demolition of approximately 19,760 SF of existing paving, full repaving of 4,580 SF of existing drive access road, resurfacing of 9,800 SF of existing parking area, and paving of 13,200 SF of new parking area to build a new courthouse within the 2.03-acre Site, see **Figure 2**.

## NEW SIXTH APPELLATE DISTRICT COURTHOUSE PROJECT

Introduction  
July 12, 2024

The proposed new courthouse would be approximately 50,000 SF up to three stories in height located in the same general footprint as the existing building on the Site. The new courthouse would include one courtroom with support spaces, justice chambers, administrative support and operations areas, a law library, mediation area, public entry and lobby, and a building support area.

Electrical service to the Project area is provided by Pacific Gas & Electric Company (PG&E), via underground lines located within El Camino Real. The Project would include connection to the existing electrical lines located in El Camino Real similarly to the existing courthouse building. The Project would include emergency power generators. In addition, photovoltaic panels would be located on the parking canopy within the secured parking area. Natural gas service and equipment will not be provided to or included in the Project. Existing natural gas infrastructure within the Site would be removed during demolition and construction.

Construction is planned to occur over 34 months and is anticipated to start in December 2025 with construction completed by September 2028. Construction laydown areas and temporary workspaces are proposed to be located within the existing footprint of the Site. Construction will be phased to align with the Office of the State Fire Marshal's permitting guidelines. Phase 1 construction (civil, grading, utilities, and foundations) is anticipated to start in December 2025 and be completed by May 2026. Phase 2 construction (structure, building and finish site work) is anticipated to start in December 2026 with construction completed by September 2028. Site work (paving, landscape irrigation, and planting) would occur during the last four to six months of construction. Up to 12 construction workers per day would be anticipated during construction activities.

# NEW SIXTH APPELLATE DISTRICT COURTHOUSE PROJECT

Air Quality  
July 12, 2024

## 2.0 Air Quality

### 2.1 Environmental Setting

The Site is within the San Francisco Bay Area Air Basin (SFBAAB) which is under the jurisdiction of the BAAQMD. The SFBAAB encompasses all of Alameda, Contra Costa, Marin, Napa, San Francisco, San Mateo, and Santa Clara counties, the southern portion of Sonoma, and the southwestern portion of Solano County. Air quality in this area is determined by natural factors including topography, meteorology, and climate, in addition to the presence of existing air pollution sources and ambient conditions.

#### 2.1.1 CLIMATE AND METEOROLOGY

Climate and meteorology are important considerations for air quality. Local dispersion and regional transport of air pollutants directly relate to prevailing meteorological factors. Wind directions and speeds, and vertical temperature structure (inversions) are the primary determinants of transport and dispersion effects.

The SFBAAB is characterized by complex terrain, consisting of coastal mountain ranges, inland valleys, and bays, which distort normal wind flow patterns. The Coast Range splits resulting in a western coast gap (i.e., Golden Gate) and an eastern coast gap (i.e., Carquinez Strait), which allows air to flow in and out of the SFBAAB and the Central Valley.

The climate is dominated by the strength and location of a semi-permanent, subtropical high-pressure cell. During the summer, the Pacific high-pressure cell is centered over the northeastern Pacific Ocean resulting in stable meteorological conditions and a steady northwesterly wind flow. This high-pressure cell keeps storms from affecting the California coast. Hence, the SFBAAB experiences little precipitation in the summer months. Winds tend to blow on shore out of the north/northwest. Upwelling of cold ocean water from below to the surface because of the northwesterly flow produces a band of cold water off the California coast. The cool and moisture-laden air approaching the coast from the Pacific Ocean is further cooled by the presence of the cold water band resulting in condensation and the presence of fog and stratus clouds along the Northern California coast.

In the winter, the Pacific high-pressure cell weakens and shifts southward resulting in wind flow offshore, the absence of upwelling, and the occurrence of storms. Weak inversions coupled with moderate winds result in a low air pollution potential.

#### 2.1.2 CRITERIA AIR POLLUTANTS

Criteria air pollutants include ozone (O<sub>3</sub>), carbon monoxide (CO), nitrogen dioxide (NO<sub>2</sub>), sulfur dioxide (SO<sub>2</sub>), particulate matter (PM) measured both in units of smaller than 2.5 microns in diameter (PM<sub>2.5</sub>) and in units smaller than 10 microns in diameter (PM<sub>10</sub>), and lead (Pb).

**Ozone.** Most ground-level O<sub>3</sub> is formed as a result of complex photochemical reactions in the atmosphere between reactive organic gases (ROG), nitrogen oxides (NO<sub>x</sub>), and oxygen. ROG and NO<sub>x</sub> are

## NEW SIXTH APPELLATE DISTRICT COURTHOUSE PROJECT

Air Quality  
July 12, 2024

considered precursors to the formation of O<sub>3</sub>, a highly reactive gas that can damage lung tissue and affect respiratory function. O<sub>3</sub> can damage the respiratory tract, causing inflammation and irritation, and it can induce symptoms, such as coughing, chest tightness, shortness of breath, and worsening of asthmatic symptoms. O<sub>3</sub> in sufficient doses increases the permeability of lung cells, rendering them more susceptible to toxins and microorganisms. Exposure to high concentrations of O<sub>3</sub> (above the current ambient air quality standard) leads to lung inflammation, lung tissue damage, and a reduction in the amount of air inhaled into the lungs. Health effects include potential increased susceptibility to respiratory infections and reduced ability to exercise. Health effects are more severe in people with asthma and other respiratory ailments. People who work or play outdoors are at a greater risk for harmful health effects from O<sub>3</sub>. Children and adolescents are also at greater risk because they are more likely than adults to spend time engaged in vigorous activities. While O<sub>3</sub> in the lower atmosphere is considered a damaging air pollutant, O<sub>3</sub> in the upper atmosphere is beneficial, as it protects earth from harmful ultraviolet radiation. However, atmospheric processes preclude ground-level O<sub>3</sub> from reaching the upper atmosphere (USEPA 2024a).

**Carbon Monoxide.** CO is a colorless, odorless, poisonous gas produced by the incomplete combustion of fossil fuels. Elevated levels of CO can result in harmful health effects, especially for the young and elderly, and can also contribute to global climate change (USEPA 2024a). When inhaled, CO enters the bloodstream and binds more readily to hemoglobin, the oxygen-carrying protein in blood, than oxygen, thereby reducing the oxygen-carrying capacity of blood and reducing oxygen delivery to organs and tissues. The health threat from CO is most serious for those who suffer from cardiovascular disease. Healthy individuals are also affected, but only at higher levels of exposure. Exposure to CO can cause chest pain, headaches, and reduced mental alertness. At high concentrations, CO can cause heart difficulties in people with chronic diseases and can impair mental abilities. Exposure to elevated CO levels is associated with visual impairment, reduced work capacity, reduced manual dexterity, poor learning ability, difficulty performing complex tasks, and, with prolonged enclosed exposure, death.

**Nitrogen Dioxide.** NO<sub>2</sub> is a brownish, highly reactive gas primarily produced as a result of the burning of fossil fuels. NO<sub>2</sub> can also lead to the formation of O<sub>3</sub> in the lower atmosphere. NO<sub>2</sub> can cause respiratory ailments, especially in the young and elderly, and can lead to degradations in the health of aquatic and terrestrial ecosystems (USEPA 2024a). Direct inhalation of NO<sub>2</sub> can cause a wide range of health effects, including irritation of the lungs, lung damage, and lowered resistance to respiratory infections, such as influenza. Short-term exposures (e.g., less than 3 hours) to low levels of NO<sub>2</sub> may lead to changes in airway responsiveness and lung function in individuals with preexisting respiratory illnesses. These exposures may also increase respiratory illnesses in children. Long-term exposures to NO<sub>2</sub> may lead to increased susceptibility to respiratory infection and may cause irreversible lung damage. Other health effects associated with NO<sub>2</sub> include an increase in the incidence of chronic bronchitis and lung irritation.

**Sulfur Dioxide.** SO<sub>2</sub> is primarily emitted from the combustion of coal and oil by steel mills, pulp and paper mills, and non-ferrous smelters. High concentrations of SO<sub>2</sub> can aggravate existing respiratory and cardiovascular diseases in asthmatics and others who suffer from emphysema or bronchitis. High concentrations of SO<sub>2</sub> can result in temporary breathing impairment for asthmatic children and adults who are active outdoors. Health effects from exposure to emissions of SO<sub>2</sub> include aggravation of lung diseases, especially bronchitis, and constricting of breathing passages, especially in asthmatics and

## NEW SIXTH APPELLATE DISTRICT COURTHOUSE PROJECT

Air Quality  
July 12, 2024

people involved in moderate to heavy exercise. Short-term exposures of individuals to elevated  $\text{SO}_2$  levels during moderate activity may result in health effects, including breathing difficulties that can be accompanied by symptoms, such as wheezing, chest tightness, or shortness of breath. Other health effects that have been associated with longer-term exposures to high concentrations of  $\text{SO}_2$ , in conjunction with high levels of particulate matter, include aggravation of existing cardiovascular disease, respiratory illness, and alterations in the lungs' defenses.  $\text{SO}_2$  also contributes to acid rain, which in turn, can lead to the acidification of lakes and streams (USEPA 2024a).

**Particulate Matter.** Airborne PM is not a single pollutant, but rather is a mixture of many chemical species. PM is a complex mixture of solids and aerosols composed of small droplets of liquid, dry solid fragments, and solid cores with liquid coatings. Particles vary widely in size, shape, and chemical composition; and they may contain inorganic ions, metallic compounds, elemental carbon, organic compounds, and compounds from Earth's crust. Particles are defined by their diameter for air quality regulatory purposes.  $\text{PM}_{10}$  are inhalable into the lungs and can induce adverse health effects.  $\text{PM}_{2.5}$ , also called fine particulate matter, constitutes a portion of  $\text{PM}_{10}$ . Emissions from combustion of gasoline, oil, diesel fuel, or wood produce much of the  $\text{PM}_{2.5}$  pollution found in outdoor air and a significant proportion of  $\text{PM}_{10}$ .  $\text{PM}_{10}$  also includes dust from construction sites, landfills and agriculture, wildfires and brush or waste burning, industrial sources, wind-blown dust from open lands, pollen, and fragments of bacteria.

PM may be either directly emitted from sources (primarily particles) or formed in the atmosphere through chemical reactions of gases (secondary particles) such as  $\text{SO}_2$ ,  $\text{NO}_x$ , and certain organic compounds (USEPA 2024a).

$\text{PM}_{10}$  and  $\text{PM}_{2.5}$  particles are small enough—about one-seventh the thickness of a human hair or smaller—to be inhaled and lodged in the deepest parts of the lung, where they evade the respiratory system's natural defenses and can be trapped in the nose, throat, and upper respiratory tract. Health effects from exposure to  $\text{PM}_{10}$  and  $\text{PM}_{2.5}$  occur when the body reacts to these foreign particles. Acute and chronic health effects associated with high particulate levels include the aggravation of chronic respiratory diseases; heart and lung disease; and coughing, bronchitis, and respiratory illnesses in children. Recent mortality studies have shown a statistically significant direct association between mortality and daily concentrations of PM in the air.  $\text{PM}_{10}$  and  $\text{PM}_{2.5}$  can aggravate respiratory disease and cause lung damage, cancer, and premature death. Sensitive populations, including children, the elderly, exercising adults, and those suffering from chronic lung disease, such as asthma or bronchitis, are especially vulnerable to the effects of PM. Of greatest concern are recent studies that link PM exposure to the premature death of people who already have heart and lung disease, especially the elderly. Acidic PM can also damage humanmade materials and is a major cause of reduced visibility in many parts of the United States. Non-health-related effects include reduced visibility and soiling of buildings.

**Lead.** Sources of Pb include pipes, fuel, and paint, although the use of Pb in these materials has declined dramatically over the years. Historically, the main source of Pb was automobile emissions. Pb can be inhaled directly or ingested by consuming Pb-contaminated food, water, or dust. Fetuses and children are most susceptible to Pb poisoning, which can result in heart disease and nervous system damage. Through regulations, the USEPA has gradually reduced the Pb content of gasoline. This program has essentially eliminated violations of the Pb standard in urban areas except those areas with Pb point

# NEW SIXTH APPELLATE DISTRICT COURTHOUSE PROJECT

Air Quality  
July 12, 2024

sources. Exposure to Pb occurs mainly through inhalation of air and ingestion of Pb in food, water, soil, or dust. It accumulates in the blood, bones, and soft tissues and can adversely affect the kidneys, liver, nervous system, and other organs. Excessive exposure to Pb may cause neurological impairments, such as seizures, mental retardation, and behavioral disorders. Even at low doses, Pb exposure is associated with damage to the nervous systems of fetuses and young children, resulting in learning deficits and lowered IQ. Recent studies also show that Pb may be a factor in high blood pressure and subsequent heart disease. Pb can also be deposited on the leaves of plants, presenting a hazard to grazing animals and humans through ingestion (USEPA 2024b).

## 2.1.3 AMBIENT AIR QUALITY STANDARDS AND ATTAINMENT STATUS

The USEPA and CARB designate air basins where ambient air quality standards are exceeded as “non-attainment” areas. If standards are met, the area is designated as an “attainment” area. If there is inadequate or inconclusive data to make a definitive attainment designation, they are considered “unclassified.” National non-attainment areas are further designated as marginal, moderate, serious, severe, or extreme as a function of deviation from standards. Attainment status is based on the National Ambient Air Quality Standards (NAAQS) and the California Ambient Air Quality Standards (CAAQS). Each standard has a different definition, or “form” of what constitutes attainment, based on specific air quality statistics. For example, the federal 8-hour CO standard is not to be exceeded more than once per year; therefore, an area is in attainment of the CO standard if no more than one 8-hour ambient air monitoring value exceeds the threshold per year. In contrast, the federal annual standard for PM<sub>2.5</sub> is met if the 3-year average of the annual average PM<sub>2.5</sub> concentration is less than or equal to the standard.

The Federal Clean Air Act (FCAA) identifies two types of NAAQS. Primary standards provide public health protection, including protecting the health of sensitive populations such as asthmatics, children, and the elderly. Secondary standards provide public welfare protection, including protection against decreased visibility and damage to animals, crops, vegetation, and buildings (USEPA 2024a). The CAAQS are equal to or more stringent than the NAAQS and include pollutants for which national standards do not exist. Table 1 presents the applicable NAAQS and CAAQS. The BAAQMD is designated as nonattainment for federal and state ozone and PM<sub>2.5</sub> as well as state PM<sub>10</sub> (BAAQMD 2017). The BAAQMD is in attainment or unclassified for all other NAAQS and CAAQS.

**Table 1. California and National Ambient Air Quality Standards**

Pollutant	Averaging Time	California Standards <sup>1</sup>	National Standards <sup>2</sup>	
			Primary	Secondary

Vinyl chloride (chloroethene)	24-hour	0.01 ppm (26 µg/m <sup>3</sup> )	--	--
Visibility reducing particles	8-hour	In 1989, the Air Resources Board converted the general statewide 10-mile visibility standard to instrumental equivalents, which are extinction of 0.23 per kilometer.	--	--

Sources: CARB 2016, USEPA 2024f.

Notes:

1. CO, SO<sub>2</sub> (1- and 24-hour), NO<sub>2</sub>, O<sub>3</sub>, PM<sub>10</sub>, and visibility reducing particles standards are not to be exceeded.
2. Not to be exceeded more than once a year except for annual standards.
3. On February 7, 2024, the USEPA issued a pre-publication version of the Final Rule to lower the primary annual NAAQS for PM<sub>2.5</sub> from 12.0 µg/m<sup>3</sup> to 9.0 µg/m<sup>3</sup> (USEPA 2024f).

Key:

-- = no standard established  
 µg/m<sup>3</sup> = micrograms per cubic meter  
 mg/m<sup>3</sup> = milligrams per cubic meter  
 ppm = parts per million

### 2.1.4 AMBIENT AIR QUALITY

Local air quality can be evaluated by reviewing relevant air pollution concentrations near the Site. Table 2 summarizes published monitoring data from the San Jose – Jackson Street Monitoring Station, located at 158B Jackson Street in San Jose, California, for the years 2020 to 2022 from CARB's Air Quality Data Statistics (CARB 2024a). The San Jose – Jackson Street Monitoring Station monitors ambient O<sub>3</sub>, NO<sub>2</sub>, PM<sub>10</sub>, and PM<sub>2.5</sub>.

## 2.1.5 ODORS

Typically, odors are regarded as an annoyance rather than a health hazard. However, manifestations of a person’s reaction to foul odors can range from the psychological (i.e., irritation, anger, or anxiety) to the physiological (i.e., circulatory and respiratory effects, nausea, vomiting, and headache).

The ability to detect odors varies considerably among the population and is subjective. Some individuals can smell very minute quantities of specific substances; others have varying sensitivities to odors; and people may have different reactions to the same odor (e.g., bakery, gasoline). It is important to note that an unfamiliar odor is more easily detected and is more likely to cause complaints than a familiar one. This is because of the phenomenon known as odor fatigue, in which a person can become desensitized to almost any odor and recognition only occurs with an alteration in the intensity.

Quality and intensity are two properties present in any odor. The quality of an odor indicates the nature of the smell experience, e.g., a description of flowery or sweet. Intensity refers to the strength of the odor and depends on the odorant concentration in the air. When an odorous sample is progressively diluted,

## NEW SIXTH APPELLATE DISTRICT COURTHOUSE PROJECT

Air Quality  
July 12, 2024

the odorant concentration decreases, the odor intensity weakens, and it eventually becomes so low that the detection or recognition of the odor is quite difficult. At some point during dilution, the concentration of the odorant drops below a human's detection threshold.

Neither the state nor the federal governments have adopted rules or regulations for the control of odor sources. Potential odors would be subject to BAAQMD Regulation 7, Odorous Substances (BAAQMD 1982).

### 2.1.6 TOXIC AIR CONTAMINANTS

Toxic air contaminants (TAC) are air pollutants that may cause or contribute to an increase in mortality or serious illness, or which may pose a hazard to human health. TACs are usually present in minute quantities in the ambient air; but due to their high toxicity, they may pose a threat to public health even at very low concentrations. Because there is no threshold level below which adverse health impacts are not expected to occur, TACs differ from criteria pollutants for which acceptable levels of exposure can be determined and for which state and federal governments have set ambient air quality standards. TACs, therefore, are not considered "criteria pollutants" under either the FCAA or the California Clean Air Act (CCAA) and are not subject to NAAQS or CAAQS ambient air quality standards. Instead, USEPA and CARB regulate hazardous air pollutants (HAP) and TACs, respectively, through statutes and regulations that generally require the use of the maximum or best available control technology to limit emissions. In conjunction with air district rules, these federal and state statutes and regulations establish the regulatory framework for TACs. At the national level, USEPA has established national emission standards for hazardous air pollutants (NESHAP) in accordance with the requirements of the FCAA and subsequent amendments. These are technology-based, source-specific regulations that limit allowable emissions of HAPs.

The following provides a summary of the primary TACs of concern within the State of California and related health effects.

#### 2.1.6.1 Asbestos

Asbestos is the name given to a number of naturally occurring fibrous silicate minerals with useful properties such as thermal insulation, chemical and thermal stability, and high tensile strength. The three most common types of asbestos are chrysotile, amosite, and crocidolite. Chrysotile, also known as white asbestos, is the most common type of asbestos found in buildings. Chrysotile makes up approximately 90 to 95 percent of all asbestos contained in buildings in the United States. Exposure to asbestos fibers may result in health issues such as lung cancer, mesothelioma (a rare cancer of the thin membranes lining the lungs, chest, and abdominal cavity), and asbestosis (a non-cancerous lung disease that causes scarring of the lungs). Exposure to asbestos can occur during demolition or remodeling of buildings constructed prior to 1977 when it was banned for use in buildings. Exposure to naturally occurring asbestos (NOA) can occur during soil disturbing activities in areas with deposits present (USEPA 2024c).

## NEW SIXTH APPELLATE DISTRICT COURTHOUSE PROJECT

Air Quality  
July 12, 2024

### 2.1.6.2 Diesel Particulate Matter

Diesel particulate matter (DPM) was identified as a TAC by CARB in August 1998. DPM is emitted from both mobile and stationary sources. Mobile sources include on-road vehicles (trucks, buses, etc.), off-road vehicles and equipment (locomotives, tractors, cargo handling equipment, construction equipment, etc.), marine vessels (recreational watercraft, commercial harbor craft, and ocean-going vessels), and transport refrigeration units. Stationary sources include stationary engines used in emergency-standby generators, prime generators, and agricultural irrigation pumps, as well as portable equipment such as portable generators and pumps (Office of Environmental Health Hazard Assessment [OEHHA] 2001).

DPM is typically composed of carbon particles (“soot,” also called black carbon) and numerous organic compounds, including over 40 known cancer-causing organic substances. Examples of these chemicals include polycyclic aromatic hydrocarbons, benzene, formaldehyde, acetaldehyde, acrolein, and 1,3-butadiene. Diesel exhaust also contains gaseous pollutants, including ROG and NO<sub>x</sub>. NO<sub>x</sub> emissions from diesel engines are important because they can undergo chemical reactions in the atmosphere leading to formation of PM<sub>2.5</sub> and O<sub>3</sub>.

In California, diesel exhaust particles have been identified as a carcinogen accounting for an estimated 70 percent of the total known cancer risks in California. DPM is estimated to increase statewide cancer risk by 520 cancers per million residents exposed over an estimated 70-year lifetime. Non-cancer health effects associated with exposure to DPM include premature death, exacerbated chronic heart and lung disease, including asthma, and decreased lung function in children. Short-term exposure to diesel exhaust can also have immediate health effects. Diesel exhaust can irritate the eyes, nose, throat, and lungs, and it can cause coughs, headaches, lightheadedness, and nausea. In studies with human volunteers, diesel exhaust particles made people with allergies more susceptible to the materials to which they are allergic, such as dust and pollen. Exposure to diesel exhaust also causes inflammation in the lungs, which may aggravate chronic respiratory symptoms and increase the frequency or intensity of asthma attacks (CARB 2024b).

Individuals most vulnerable to non-cancer health effects of DPM are children, whose lungs are still developing, the elderly, who often have chronic health problems, and people with emphysema, asthma, and chronic heart and lung disease (CARB 2024b). In addition to its health effects, DPM significantly contributes to haze and reduced visibility.

### 2.1.7 SENSITIVE RECEPTORS

Some land uses are considered more sensitive to air pollution than others due to the types of population groups or activities involved. Sensitive population groups include children, the elderly, the acutely ill, and the chronically ill, especially those with cardiovascular diseases. Examples of sensitive receptors include hospitals, residences, convalescent facilities, and schools. The nearest sensitive receptors to the Site include the residential units to the west of the Site, across South Pastoria Avenue, and to the south, across El Camino Real. The closest units are approximately 350 feet from the Site’s southern boundary.

# NEW SIXTH APPELLATE DISTRICT COURTHOUSE PROJECT

Air Quality  
July 12, 2024

## 2.2 Regulatory Setting

The agencies with regulatory authority over air emissions in the Project area are the USEPA, the CARB, and the BAAQMD. Each of these jurisdictions develops rules, regulations, and policies to attain the goals or directives imposed upon them through legislation. Although USEPA regulations may not be superseded, both state and local regulations may be more stringent. The Judicial Council is not generally subject to regional or local regulations, including those established by the BAAQMD, except to the extent the regulations are implementing delegated state and federal authority that is applicable to the Judicial Council.

### 2.2.1 FEDERAL

#### 2.2.1.1 U. S. Environmental Protection Agency

At the federal level, the USEPA has been charged with implementing national air quality programs. The USEPA's air quality mandates are drawn primarily from the FCAA, which was enacted in 1970. Congress substantially amended the FCAA in 1977 and again in 1990.

#### 2.2.1.2 Federal Clean Air Act

The FCAA required USEPA to establish NAAQS and set deadlines for their attainment. Two types of NAAQS have been established: primary standards, which protect public health, and secondary standards, which protect public welfare from non-health-related adverse effects, such as visibility restrictions. NAAQS are summarized in Table 1.

#### 2.2.1.3 National Emission Standards for Hazardous Air Pollutants

Pursuant to the FCAA of 1970, USEPA established NESHAP. These are technology-based source-specific regulations that limit allowable emissions of HAPs. These sources include asbestos-containing building materials (ACBM). NESHAPs include requirements pertaining to the inspection, notification, handling, and disposal of ACBMs associated with the demolition and renovation of structures.

#### 2.2.1.4 Non-Road Diesel Rule

The USEPA has established a series of increasingly strict emissions standards for new off-road diesel vehicles and engines, including aircraft, heavy equipment, and locomotives. Any off-road construction equipment used for the Project would be required to comply with the applicable emissions standards.

### 2.2.2 STATE

#### 2.2.2.1 California Air Resources Board

CARB is the agency responsible for coordination and oversight of state and local air pollution control programs in California and for implementing the CCAA of 1988. Other CARB duties include monitoring air quality in conjunction with air monitoring networks maintained by air pollution control districts and air

## NEW SIXTH APPELLATE DISTRICT COURTHOUSE PROJECT

Air Quality  
July 12, 2024

quality management districts, establishing CAAQS, which in many cases are more stringent than the NAAQS, and setting emissions standards for new motor vehicles. The emission standards established for motor vehicles differ depending on various factors including the model year, and the type of vehicle, fuel, and engine used. The CAAQS are set to be protective of human health and are summarized in Table 1. These standards apply to the same criteria pollutants as the FCAA and also include sulfates, visibility reducing particulates, hydrogen sulfide, and vinyl chloride. There are currently no NAAQS for these latter pollutants.

### **2.2.2.2 California Clean Air Act**

The CCAA requires that all air districts in the state endeavor to achieve and maintain CAAQS for O<sub>3</sub>, CO, SO<sub>2</sub>, and NO<sub>2</sub> by the earliest practical date. The CCAA specifies that districts focus attention on reducing the emissions from transportation and area wide emission sources, and the act provides districts with authority to regulate indirect sources of emissions. Each district plan is required to either (1) achieve a five percent annual reduction, averaged over consecutive 3-year periods, in district-wide emissions of each non-attainment pollutant or its precursors, or (2) to provide for implementation of all feasible measures to reduce emissions. Any planning effort for air quality attainment would thus need to consider both state and federal planning requirements.

### **2.2.2.3 Assembly Bills 1807 and 2588 – Toxic Air Contaminants**

Within California, TACs are regulated primarily through Assembly Bill (AB) 1807 (Tanner Air Toxics Act) and AB 2588 (Air Toxics Hot Spots Information and Assessment Act of 1987). AB 1807 sets forth a formal procedure for CARB to designate substances as TACs. This includes research, public participation, and scientific peer review before CARB designates a substance as a TAC.

Existing sources of TACs that are subject to the Air Toxics Hot Spots Information and Assessment Act are required to: (1) prepare a toxic emissions inventory; (2) prepare a risk assessment if emissions are significant; (3) notify the public of significant risk levels; and (4) prepare and implement risk reduction measures.

### **2.2.2.4 Assembly Bill 617 – Community Air Protection Program**

In response to AB 617 (C. Garcia, Chapter 136, Statutes of 2017), CARB established the Community Air Protection Program. The Community Air Protection Program includes community air monitoring, and the community emissions reduction program's focus is to reduce exposure in communities most impacted by air pollution. The California legislature has appropriated funding to support early actions to address localized air pollution through targeted incentive funding to deploy cleaner technologies in these communities and grants to support community participation in the AB 617 process. AB 617 also includes new requirements for accelerated retrofit of pollution controls on industrial sources, increased penalty fees, and greater transparency and availability of air quality and emissions data, which will help advance air pollution control efforts throughout the state.

## NEW SIXTH APPELLATE DISTRICT COURTHOUSE PROJECT

Air Quality  
July 12, 2024

### 2.2.2.5 Regulatory Attainment Designations

Under the CCAA, CARB is required to designate areas of the state as attainment, non-attainment, or unclassified with respect to applicable standards. An “attainment” designation for an area signifies that pollutant concentrations did not violate the applicable standard in that area. A “non-attainment” designation indicates that a pollutant concentration violated the applicable standard at least once, excluding those occasions when a violation was caused by an exceptional event, as defined in the criteria. Depending on the frequency and severity of pollutants exceeding applicable standards, the non-attainment designation can be further classified as serious non-attainment, severe non-attainment, or extreme non-attainment, with extreme non-attainment being the most severe of the classifications. An “unclassified” designation signifies that the data does not support either an attainment or non-attainment designation. The CCAA divides districts into moderate, serious, and severe air pollution categories, with increasingly stringent control requirements mandated for each category.

USEPA designates areas for O<sub>3</sub>, CO, and NO<sub>2</sub> as “does not meet the primary standards,” “cannot be classified,” or “better than national standards.” For SO<sub>2</sub>, areas are designated as “does not meet the primary standards,” “does not meet the secondary standards,” “cannot be classified,” or “better than national standards.” However, CARB terminology of attainment, non-attainment, and unclassified is more frequently used. The USEPA uses the same sub-categories for non-attainment status: serious, severe, and extreme. In 1991, USEPA assigned new non-attainment designations to areas that had previously been classified as Group I, II, or III for PM<sub>10</sub> based on the likelihood that they would violate national PM<sub>10</sub> standards. All other areas are designated as unclassified.

### 2.2.2.6 Low-Emission Vehicle Program and Zero-Emission Vehicle Program

CARB first adopted Low-Emission Vehicle (LEV) program standards in 1990. The first LEV program standards ran from 1994 through 2003. LEV II regulations, running from 2004 through 2010, represented continuing progress in emission reductions. As the state’s passenger vehicle fleet continued to grow and more sport utility vehicles and pickup trucks are used as passenger cars rather than work vehicles, the more stringent LEV II standards were adopted to provide reductions necessary for California to meet federally mandated clean air goals outlined in the 1994 State Implementation Plan (SIP). In 2012, CARB adopted the LEV III amendments to California’s LEV regulations. These amendments include more stringent emission standards for both criteria pollutants and GHGs for new passenger vehicles.

The Advanced Clean Cars II (ACC II) regulation builds on the Advanced Clean Cars (ACC) rule adopted in 2012. ACC II decreases emissions by increasing electric vehicle (EV) sales via two programs. First, the Zero-Emission Vehicle (ZEV) program requires ZEVs, defined as battery-electric vehicles (BEVs) or fuel-cell-electric vehicles (FCEVs), to comprise an increasing portion of annual vehicle sales. Under the ZEV program, original equipment manufacturers must increase sales of ZEVs from 35 percent in 2026 to 100 percent in 2035. Second, ACC II further strengthened the LEV program discussed above, with more stringent emission standards beginning with model year 2025.

## **NEW SIXTH APPELLATE DISTRICT COURTHOUSE PROJECT**

Air Quality  
July 12, 2024

### **2.2.2.7 On-Road Heavy-Duty Vehicle Program**

CARB has adopted standards for emissions from various types of new on-road heavy-duty vehicles. Section 1956.8, Title 13, California Code of Regulations (CCR) contains California's emission standards for on-road heavy-duty engines and vehicles, and test procedures. CARB has also adopted programs to reduce emissions from in-use heavy-duty vehicles including the Heavy-Duty Diesel Vehicle Idling Reduction Program, the Heavy-Duty Diesel In-Use Compliance Program, the Public Bus Fleet Rule and Engine Standards, and the School Bus Program and others.

In addition, the CARB's Truck and Bus regulation was established to meet federal attainment standards. This regulation requires heavy-duty diesel vehicles that operate in California to reduce TAC emissions from their exhaust. Diesel exhaust is responsible for 70 percent of the cancer risk from airborne toxics. Therefore, as of January 1, 2023, nearly all trucks and buses are required to have 2010 or newer model year engines to reduce PM and NOx emissions.

### **2.2.2.8 In-Use Off-Road Diesel-Fueled Fleets Regulation**

CARB has adopted the In-Use Off-Road Diesel-Fueled Fleets regulation with the intent to reduce PM and NOx emissions from existing off-road heavy-duty diesel vehicles in California. In general, the regulation imposes limits on vehicle idling; requires all vehicle usage to be reported to CARB; restricts the addition of older vehicles into fleets; requires the phase-out of the oldest and least efficient engines; and, starting in 2024, requires the procurement and use of renewable diesel.

### **2.2.2.9 Advanced Clean Truck Act**

To reduce emissions, the Advanced Clean Truck Act (ACT) requires original equipment manufacturers of medium- and heavy-duty vehicles to sell ZEVs or near-zero-emissions vehicles (NZEV), such as plug-in electric hybrids, at an increasing percentage of their annual sales from 2024 to 2035. A ZEV is a vehicle that produces zero tail-pipe emissions, including BEVs and hydrogen fuel cell vehicles. A NZEV is a vehicle with an internal combustion engine and an electric energy storage system, including plug-in hybrid vehicles and hydrogen internal combustion engine vehicles. The ACT includes a cap-and-trade system, capping the number of fossil fuel vehicles sold by stipulating annual sales percentage requirements. Manufacturers can comply with the ACT by generating compliance credits through the sale of ZEVs or NZEVs or through the trading of compliance credits.

## **California State Implementation Plan**

The FCAA (and its subsequent amendments) requires each state to prepare an air quality control plan referred to as the SIP. The SIP is a living document that is periodically modified to reflect the latest emissions inventories, plans, and rules and regulations of air basins as reported by the agencies with jurisdiction over them. The FCAA Amendments dictate that states with areas violating the NAAQS revise their SIPs to include extra control measures to reduce air pollution. The SIP includes strategies and control measures to attain the NAAQS by deadlines established by the CAA. The USEPA has the responsibility to review all SIPs to determine if they conform to the requirements of the CAA. State law makes CARB the lead agency for all purposes related to the SIP. Local air districts and other agencies

## NEW SIXTH APPELLATE DISTRICT COURTHOUSE PROJECT

Air Quality  
July 12, 2024

prepare SIP elements and submit them to CARB for review and approval. CARB then forwards SIP revisions to the USEPA for approval and publication in the Federal Register.

### 2.2.2.10 Judicial Council Policy on Asbestos Management for Court Facilities

In 2018, the Judicial Council of California (Judicial Council) adopted a policy with requirements to manage asbestos hazards related to renovation or demolition in court facilities. The policy generally requires compliance with applicable federal and state statutes, as well as notification of all Facilities Services staff and employees that may be affected (Judicial Council 2018).

## 2.2.3 REGIONAL

### 2.2.3.1 Bay Area Air Quality Management District

The Judicial Council is not generally subject to regional or local regulations, except to the extent the regulations are implementing delegated state or federal authority that is applicable to the Judicial Council. The BAAQMD is responsible for ensuring that emission standards are not violated. The BAAQMD is the public agency entrusted with regulating stationary sources of air pollution in the nine counties that surround San Francisco Bay: Alameda, Contra Costa, Marin, Napa, San Francisco, San Mateo, Santa Clara, southwestern Solano, and southern Sonoma counties. The BAAQMD has prepared its own California Environmental Quality Act (CEQA) Guidelines (April 2022), which are intended to be used for assistance with CEQA review related to air quality and GHG emissions. The BAAQMD CEQA Guidelines include thresholds of significance and project screening levels for criteria air pollutants (ROG, NO<sub>x</sub>, PM<sub>10</sub>, and PM<sub>2.5</sub>), GHGs, TACs, CO, and odors, as well as methods to assess and mitigate project-level and plan-level impacts.

#### 2.2.3.1.1 Current Air Quality Plans

As noted previously, the BAAQMD region is designated as non-attainment for federal and state ozone and PM<sub>2.5</sub> as well as state PM<sub>10</sub>; the BAAQMD region is in attainment or unclassified for all other NAAQS and CAAQS (BAAQMD 2017). The BAAQMD adopted the 2017 Clean Air Plan in April 2017 that includes control strategies to reduce ozone precursors (ROG and NO<sub>x</sub>), particulate matter, TACs, and GHG emissions. The 2017 Clean Air Plan includes several measures for reducing particulate matter emissions from stationary sources and wood burning (BAAQMD 2023).

#### 2.2.3.1.2 Rules and Regulations

BAAQMD's regulations and rules include, but are not limited to, the following (BAAQMD 2024):

- **Regulation 2: Permits.**
- **Rule 1: General Permit Requirements.** This regulation includes criteria for issuance or denial of permits, exemptions, and appeals against decisions of the Air Pollution Control Officer and BAAQMD actions on applications.
- **Regulation 6: Particulate Matter and Visible Emissions.**

## NEW SIXTH APPELLATE DISTRICT COURTHOUSE PROJECT

Air Quality  
July 12, 2024

- **Rule 1: General Requirements.** The purpose of this regulation is to limit the quantity of particulate matter in the atmosphere through the establishment of limitations on emission rates, emission concentrations, visible emissions, and opacity.
- **Rule 6: Prohibition of Trackout.** The purpose of this rule is to limit the quantity of particulate matter in the atmosphere through control of trackout of solid materials onto paved public roads outside the boundaries of Large Bulk Material Site, Large Construction Site, and Large Disturbed Surface sites including landfills. This rule does not apply to Bulk Material Sites, Construction Sites and Disturbed Surface Sites less than 1 acre.
- **Regulation 7: Odorous Substances.** Regulation 7 places general limitations on odorous substances and specific emission limitations on certain odorous compounds. The limitations of this regulation shall not be applicable until BAAQMD receives odor complaints from 10 or more complainants within a 90-day period alleging that a person has caused odors perceived at or beyond the property line of such person and deemed to be objectionable by the complainants in the normal course of their work, travel, or residence. BAAQMD staff shall investigate and track all odor complaints they receive and shall attempt to visit the site, identify the source of the objectionable odor, and assist the owner or facility in finding a way to reduce the odor.
- **Regulation 8: Organic Compounds**
  - **Rule 3: Architectural Coatings.** The purpose of this rule is to limit the quantity of volatile organic compounds in architectural coatings supplied, sold, offered for sale, applied, solicited for application, or manufactured for use within the District.
- **Regulation 11: Hazardous Pollutants**
  - **Rule 2: Asbestos Demolition, Renovation and Manufacturing.** The purpose of this rule is to control emissions of **asbestos** into the atmosphere during demolition, renovation, milling, and manufacturing and establish appropriate waste disposal procedures.

In addition, construction within BAAQMD's jurisdiction is required to implement the BAAQMD's Basic Best Management Practices (BMP) for Construction-Related Fugitive Dust Emissions, listed below:

1. All exposed surfaces (e.g., parking areas, staging areas, soil piles, graded areas, and unpaved access roads) shall be watered two times per day.
2. All haul trucks transporting soil, sand, or other loose material offsite shall be covered.
3. All visible mud or dirt trackout onto adjacent public roads shall be removed using wet power vacuum street sweepers at least once per day. The use of dry power sweeping is prohibited.
4. All vehicle speeds on unpaved roads shall be limited to 15 miles per hour (mph).
5. All roadways, driveways, and sidewalks to be paved shall be completed as soon as possible. Building pads shall be laid as soon as possible after grading unless seeding or soil binders are used.

## NEW SIXTH APPELLATE DISTRICT COURTHOUSE PROJECT

Air Quality  
July 12, 2024

6. All excavation, grading, and/or demolition activities shall be suspended when average wind speeds exceed 20 mph.
7. All trucks and equipment, including their tires, shall be washed off prior to leaving the site.
8. Unpaved roads providing access to sites located 100 feet or further from a paved road shall be treated with a 6- to 12-inch layer of compacted wood chips, mulch, or gravel.
9. Publicly visible signs shall be posted with the telephone number and name of the person to contact at the lead agency regarding dust complaints. This person shall respond and take corrective action within 48 hours. The Air District's General Air Pollution Complaints number shall also be visible to ensure compliance with applicable regulations.

### 2.2.4 LOCAL

There are no regional or local plans, policies, regulations, or ordinances related to air quality that apply to the Project.

# NEW SIXTH APPELLATE DISTRICT COURTHOUSE PROJECT

Greenhouse Gas  
July 12, 2024

## 3.0 Greenhouse Gas

### 3.1 Environmental Setting

To fully understand global climate change, it is important to recognize the naturally occurring “greenhouse effect” and to define the GHGs that contribute to this phenomenon. Various gases in the earth’s atmosphere, classified as atmospheric GHGs, play a critical role in determining the earth’s surface temperature. Solar radiation enters the earth’s atmosphere from space, and a portion of the radiation is absorbed by the earth’s surface. The earth emits this radiation back toward space, but the properties of the radiation change from high-frequency solar radiation to lower-frequency infrared radiation. GHGs, which are transparent to solar radiation, are effective in absorbing infrared radiation. As a result, this radiation that would have escaped back into space is now retained, resulting in a warming of the atmosphere. This phenomenon is known as the greenhouse effect.

#### 3.1.1 GREENHOUSE GASES

Among the prominent GHGs contributing to the greenhouse effect are carbon dioxide (CO<sub>2</sub>), methane (CH<sub>4</sub>), nitrous oxide (N<sub>2</sub>O), hydrofluorocarbons (HFC), perfluorocarbons (PFC), nitrogen trifluoride (NF<sub>3</sub>), and sulfur hexafluoride (SF<sub>6</sub>). Primary GHGs attributed to global climate change, are discussed in the following subsections.

**Carbon Dioxide.** CO<sub>2</sub> is a colorless, odorless gas. CO<sub>2</sub> is emitted in a number of ways, both naturally and through human activities. The largest source of CO<sub>2</sub> emissions globally is the combustion of fossil fuels such as coal, oil, and gas in power plants, automobiles, industrial facilities, and other sources. A number of specialized industrial processes, such as mineral production and metal production, and the use of petroleum-based products can also lead to CO<sub>2</sub> emissions. The atmospheric lifetime of CO<sub>2</sub> is variable because it is so readily exchanged in the atmosphere (USEPA 2024d).

**Methane.** CH<sub>4</sub> is a colorless and odorless gas. CH<sub>4</sub> is the major component of natural gas, about 87 percent by volume. It is also formed and released to the atmosphere by biological processes occurring in anaerobic environments. CH<sub>4</sub> is emitted from a variety of both human-related and natural sources. Human-related sources include fossil fuel production, animal husbandry (e.g., enteric fermentation in livestock and manure management), rice cultivation, biomass burning, and waste management. These activities release significant quantities of CH<sub>4</sub> into the atmosphere. Natural sources of CH<sub>4</sub> include wetlands, gas hydrates, permafrost, termites, oceans, freshwater bodies, non-wetland soils, and other sources such as wildfires. The atmospheric lifetime of CH<sub>4</sub> is about 12 years (USEPA 2024d).

**Nitrous Oxide.** N<sub>2</sub>O is a clear, colorless gas with a slightly sweet odor. N<sub>2</sub>O is produced by both natural and human-related sources. Primary human-related sources of N<sub>2</sub>O are agricultural soil management, animal manure management, sewage treatment, mobile and stationary combustion of fossil fuels, adipic acid production, and nitric acid production. N<sub>2</sub>O is also produced naturally from a wide variety of biological sources in soil and water, particularly microbial action in wet tropical forests. The atmospheric lifetime of N<sub>2</sub>O is approximately 120 years (USEPA 2024d).

## NEW SIXTH APPELLATE DISTRICT COURTHOUSE PROJECT

Greenhouse Gas  
July 12, 2024

**Hydrofluorocarbons.** HFCs are manufactured chemicals, many of which have been developed as alternatives to ozone-depleting substances for industrial, commercial, and consumer products. The only significant emissions of HFCs before 1990 were of the chemical HFC-23, which is generated as a byproduct of the production of HFC-22, or Freon 22, used in air conditioning applications. The atmospheric lifetime for HFCs varies from just over a year for HFC-152a to 260 years for HFC-23. Most of the commercially used HFCs have atmospheric lifetimes of less than 15 years (e.g., HFC-134a, which is used in automobile air conditioning and refrigeration, has an atmospheric life of 14 years) (USEPA 2024d).

**Perfluorocarbons.** PFCs are colorless, highly dense, chemically inert, and nontoxic. There are seven PFC gases: perfluoromethane (CF<sub>4</sub>), perfluoroethane (C<sub>2</sub>F<sub>6</sub>), perfluoropropane (C<sub>3</sub>F<sub>8</sub>), perfluorobutane (C<sub>4</sub>F<sub>10</sub>), perfluorocyclobutane (C<sub>4</sub>F<sub>8</sub>), perfluoropentane (C<sub>5</sub>F<sub>12</sub>), and perfluorohexane (C<sub>6</sub>F<sub>14</sub>). Natural geological emissions have been responsible for the PFCs that have accumulated in the atmosphere in the past; however, the largest current source is aluminum production, which releases CF<sub>4</sub> and C<sub>2</sub>F<sub>6</sub> as byproducts. The estimated atmospheric lifetimes for CF<sub>4</sub> and C<sub>2</sub>F<sub>6</sub> are 50,000 and 10,000 years, respectively (USEPA 2024d).

**Nitrogen Trifluoride.** NF<sub>3</sub> is an inorganic, colorless, odorless, toxic, nonflammable gas used as an etchant in microelectronics. NF<sub>3</sub> is predominantly employed in the cleaning of the plasma-enhanced chemical vapor deposition chambers in the production of liquid crystal displays and silicon-based thin film solar cells. In 2009, NF<sub>3</sub> was listed by California as a potential GHG to be listed and regulated under AB 32, Section 38505 Health and Safety Code. NF<sub>3</sub> has an atmospheric lifetime of 740 years (USEPA 2024d).

**Sulfur Hexafluoride.** SF<sub>6</sub> is an inorganic compound that is colorless, odorless, nontoxic, and generally nonflammable. SF<sub>6</sub> is primarily used as an electrical insulator in high voltage equipment. The electric power industry uses roughly 80 percent of all SF<sub>6</sub> produced worldwide. Leaks of SF<sub>6</sub> occur from aging equipment and during equipment maintenance and servicing. The use of SF<sub>6</sub> in electric power systems has decreased dramatically in recent years; for example, according to the USEPA, an old circuit breaker can contain up to 2,000 pounds of SF<sub>6</sub> while modern breakers usually contain less than 100 pounds. Best practices to reduce the potential for SF<sub>6</sub> leaks include training staff to handle SF<sub>6</sub> properly; implement leak detection and repair strategies; and decommissioning equipment appropriately. SF<sub>6</sub> has an atmospheric life of 3,200 years (USEPA 2023).

**Black Carbon.** Black carbon is the most strongly light-absorbing component of PM emitted from burning fuels such as coal, diesel, and biomass. Black carbon contributes to climate change both directly by absorbing sunlight and indirectly by depositing on snow and by interacting with clouds and affecting cloud formation. Black carbon is considered a short-lived species, which can vary spatially and, consequently, it is very difficult to quantify associated global warming potentials. The main sources of black carbon in California are wildfires, off-road vehicles (e.g., locomotives, marine vessels, tractors, excavators, dozers), on-road vehicles (e.g., cars, trucks, and buses), fireplaces, agricultural waste burning, and prescribed burning of forest or wildlands. California has been an international leader in reducing emissions of black carbon, including programs that target reducing PM from diesel engines and burning activities (CARB 2013).

## NEW SIXTH APPELLATE DISTRICT COURTHOUSE PROJECT

Greenhouse Gas  
July 12, 2024

### 3.1.2 GLOBAL WARMING POTENTIAL

Each GHG differs in its ability to absorb heat in the atmosphere based on the lifetime, or persistence, of the gas molecule in the atmosphere. Often, estimates of GHG emissions are presented in carbon dioxide equivalents (CO<sub>2</sub>e), which weigh each gas by its global warming potential (GWP).

Expressing GHG emissions in carbon dioxide equivalents takes the contribution of all GHG emissions to the greenhouse effect and converts them to a single unit equivalent to the effect that would occur if only CO<sub>2</sub> were being emitted. Based on a 100-year time horizon, CH<sub>4</sub> traps over 25 times more heat per molecule than CO<sub>2</sub>; and N<sub>2</sub>O absorbs roughly 298 times more heat per molecule than CO<sub>2</sub>. Additional GHGs with high GWP include NF<sub>3</sub>, SF<sub>6</sub>, PFCs, and black carbon.

### 3.1.3 SOURCES OF GREENHOUSE GAS EMISSIONS

On a global scale, GHG emissions are predominantly associated with activities related to energy production from fossil fuel sources; changes in land use, such as deforestation and land clearing; industrial sources; agricultural activities; transportation; waste and wastewater generation; and commercial and residential land uses. Worldwide, energy production including the burning of coal, natural gas, and oil for electricity and heat is the largest single source of global GHG emissions.

#### 3.1.3.1 United States of America

In 2021, net GHG emissions in the United States totaled 5,586 million metric tons of carbon dioxide equivalents (MMTCO<sub>2</sub>e). Within the United States, the largest contributor to GHG emissions is the transportation sector (28 percent). The next largest contributors are from electricity production (25 percent) and industry (23 percent), followed by the commercial and residential sector (13 percent) and the agricultural sector (10 percent). Transportation emissions primarily come from burning fossil fuels for cars, trucks, ships, trains, and planes. Over 90 percent of the fuel used for transportation is petroleum-based, which includes primarily gasoline and diesel. The bulk of emissions generated from energy production come from burning fossil fuels, mostly coal and natural gas. Industry emissions are also primarily generated from fossil fuels burned for heat, the use of certain products that contain GHGs, and the handling of waste. Similar to industry sector emissions, commercial and residential uses arise primarily from fossil fuels for heat, the use of certain products that contain GHGs, and the handling of waste. Agricultural emissions come from livestock such as cows, agricultural soil, and rice production. The land use and forestry sector within the U.S. serves as a carbon sink. Carbon sinks absorb CO<sub>2</sub> from the atmosphere. Land areas across the U.S. absorbed approximately 12 percent of the 2021 GHG emissions (USEPA 2024e).

#### 3.1.3.2 California

In 2021, GHG emissions within California totaled 381.3 MMTCO<sub>2</sub>e. Similar to national emissions, in California, the transportation sector is the largest contributor. Transportation emissions account for approximately 38 percent of the total statewide GHG emissions. The majority of transportation emissions are derived from passenger vehicles and heavy-duty trucks. Emissions associated with industrial uses are the second largest contributor, totaling roughly 19 percent. Industrial emissions are driven by fuel

## NEW SIXTH APPELLATE DISTRICT COURTHOUSE PROJECT

Greenhouse Gas  
July 12, 2024

combustion from sources that include refineries, oil and gas extraction, cement plants, and the portion of cogeneration emissions attribution to thermal energy output. Electricity generation (in-state and imports) totaled roughly 16 percent. Emissions from the electricity generation sector have declined over the years due to the increase in renewable generation that continues to replace fossil power (CARB 2023).

### 3.1.4 Effects of Global Climate Change

There are uncertainties as to exactly what the climate changes will be in various areas of earth. There are also uncertainties associated with the magnitude and timing of other consequences of a warmer planet, e.g., sea level rise, spread of certain diseases out of their usual geographic range, the effect on agricultural production, water supply, sustainability of ecosystems, increased strength and frequency of storms, extreme heat events, increased air pollution episodes, and the consequence of these effects on the economy.

Within California, climate changes would likely alter the ecological characteristics of many ecosystems throughout the state. Such alterations would likely include increases in surface temperatures and changes in the form, timing, and intensity of precipitation. For instance, historical records are depicting an increasing trend toward earlier snowmelt in the Sierra Nevada mountain range. This snowpack is a principal supply of water for the state, providing roughly 50 percent of the state's annual runoff. If this trend continues, some areas of the state may experience an increased danger of floods during the winter months and possible exhaustion of the snowpack during spring and summer months. An earlier snowmelt would also impact the state's energy resources. An early exhaustion of the Sierra snowpack may force electricity producers to switch to more costly or non-renewable forms of electricity generation during spring and summer months. A changing climate may also impact agricultural crop yields, coastal structures, and biodiversity. As a result, resultant changes in climate will likely have detrimental effects on some of California's largest industries, including agriculture, wine, tourism, skiing, recreational and commercial fishing, and forestry.

## 3.2 Regulatory Setting

There are considerable regulatory actions regarding GHGs and climate change at the federal, state, regional, and local level. The following includes the key regulations that may be relevant to the Project. As noted previously, the Judicial Council is not generally subject to regional or local regulations, except to the extent regulations are implementing delegated state and federal authority that is applicable to the Judicial Council.

### 3.2.1 FEDERAL

As noted previously, the USEPA is the federal agency responsible for implementing the FCAA. On April 2, 2007, the U.S. Supreme Court held that the USEPA must consider regulation of motor vehicle GHG emissions. In addition, in 2010, the USEPA issued a GHG Tailoring Rule, which relates to permitting GHG emissions of major sources.

The Inflation Reduction Act of 2022 is a multi-faceted, landmark federal law intended to reduce GHG emissions, help build a clean economy, reduce energy costs for Americans, and advance environmental

## NEW SIXTH APPELLATE DISTRICT COURTHOUSE PROJECT

Greenhouse Gas  
July 12, 2024

justice. The Inflation Reduction Act affirms USEPA's authority to regulate GHG emissions under the FCAA.

### 3.2.2 STATE

#### 3.2.2.1 Executive Order S-3-05

Executive Order (EO) S-3-05, issued in June 2005, set forth the following target dates by which statewide GHG emissions shall be progressively reduced:

- By 2010, reduce GHG emissions to 2000 levels.
- By 2020, reduce GHG emissions to 1990 levels.
- By 2050, reduce GHG emissions to 80 percent below 1990 levels.

#### 3.2.2.2 Assembly Bill 32: The California Global Warming Solutions Act

In line with EO S-3-05, AB 32, passed in 2006, required that GHGs emitted in California be reduced to 1990 levels by the year 2020. GHGs, as defined under AB 32, include CO<sub>2</sub>, CH<sub>4</sub>, N<sub>2</sub>O, HFCs, PFCs, and SF<sub>6</sub>. Since AB 32 was enacted, a seventh chemical, NF<sub>3</sub>, has also been added to the list of GHGs. CARB is the state agency charged with monitoring and regulating sources of GHGs. AB 32 states the following:

*Global warming poses a serious threat to the economic well-being, public health, natural resources, and the environment of California. The potential adverse impacts of global warming include the exacerbation of air quality problems, a reduction in the quality and supply of water to the state from the Sierra snowpack, a rise in sea levels resulting in the displacement of thousands of coastal businesses and residences, damage to marine ecosystems and the natural environment, and an increase in the incidences of infectious diseases, asthma, and other human health-related problems.*

CARB approved the 1990 GHG emissions level of 427 MMTCO<sub>2e</sub> on December 6, 2007. Therefore, to meet the state's target, emissions generated in California in 2020 were required to be equal to or less than 427 MMTCO<sub>2e</sub>. In order to set a framework for the state to meet this target, CARB was tasked with creating a Scoping Plan (as described below). California announced in July 2018 that the state emitted 427 MMTCO<sub>2e</sub> in 2016 and achieved AB 32 goals (CARB 2018).

#### 3.2.2.3 Executive Order B-30-15

EO B-30-15, issued in April 2015, established a statewide GHG reduction goal of 40 percent below 1990 levels by 2030. The emission reduction target acts as an interim goal between the AB 32 goal (i.e., achieve 1990 emission levels by 2020) and EO S-3-05 goal of reducing statewide emissions 80 percent below 1990 levels by 2050.

## NEW SIXTH APPELLATE DISTRICT COURTHOUSE PROJECT

Greenhouse Gas  
July 12, 2024

### 3.2.2.4 Senate Bill 32

Senate Bill (SB) 32 is an amendment to the California Global Warming Solutions Act (AB 32) and was signed into law on September 8, 2016. SB 32 states that “In adopting rules and regulations to achieve the maximum technologically feasible and cost-effective GHG emissions reductions authorized by this division, the state [air resources] board shall ensure that statewide GHG emissions are reduced to at least 40 percent below the statewide GHG emissions limit no later than December 31, 2030.”. In other words, SB 32 codified the interim goal established in EO B-30-15 of reducing statewide emissions to 40 percent below 1990 levels by 2030.

### 3.2.2.5 Executive Order N-19-19

EO N-19-19, issued in September 2019, directs the Department of Finance to create a Climate Investment Framework that shifts investments into sectors that focus on carbon reduction and climate resiliency. This EO also directs the state Transportation Agency to align transportation spending with the Scoping Plan, including encouraging manufacturers to produce clean vehicles.

### 3.2.2.6 Assembly Bill 1279: The California Climate Crisis Act

On September 16, 2022, AB 1279, also known as the California Climate Crisis Act, codified the carbon neutrality goal established by EO B-55-18. AB 1279 establishes the policy of the state to achieve carbon neutrality as soon as possible, but no later than 2045, and maintain net negative GHG emissions thereafter. AB 1279 would also ensure that by 2045 the statewide anthropogenic GHG emissions are reduced by at least 85 percent below 1990 levels. The bill would require CARB to ensure that an updated Scoping Plan identifies and recommends measures to achieve carbon neutrality, and to identify and implement policies and strategies that enable CO<sub>2</sub> removal and carbon capture, utilization, and storage technologies to complement AB 1279’s emissions reduction requirements.

### 3.2.2.7 2022 Climate Change Scoping Plan

The 2022 Climate Change Scoping Plan (2022 Scoping Plan) was approved in December 2022 and assesses progress toward achieving the interim 2030 Target and laying out a path to achieve carbon neutrality no later than 2045. The 2022 Scoping Plan focuses on outcomes needed to achieve carbon neutrality by assessing paths for clean technology, energy deployment, natural and working lands, and others, and is designed to meet the state’s long-term climate objectives and support a range of economic, environmental, energy security, environmental justice, and public health priorities (CARB 2022a).

### 3.2.2.8 Cap-and-Trade Program

CARB administers the state’s Cap-and-Trade Program, which covers GHG sources that emit more than 25,000 MTCO<sub>2e</sub> per year, such as refineries, power plants, and industrial facilities. This market-based approach to reducing GHG emissions provides economic incentives for achieving GHG emission reductions.

## NEW SIXTH APPELLATE DISTRICT COURTHOUSE PROJECT

Greenhouse Gas  
July 12, 2024

The governor signed AB 398 on July 25, 2017, to extend the Cap-and-Trade Program to 2030. The legislation includes provisions to ensure that offsets used by sources are limited to 4 percent of their compliance obligation from 2021 to 2025 and 6 percent of their compliance obligation from 2026 through 2030. AB 398 also prevents air districts from adopting or implementing emission reduction rules from stationary sources that are also subject to the Cap-and-Trade Program (CARB 2022b).

### **3.2.2.9 Senate Bill 375: The Sustainable Communities and Climate Protection Act of 2008**

SB 375 was signed into law on September 30, 2008. According to SB 375, the transportation sector is the largest contributor of GHG emissions, which emits more than 40 percent of the total GHG emissions in California. SB 375 states, "Without improved land use and transportation policy, California will not be able to achieve the goals of AB 32." SB 375 does the following: (1) requires metropolitan planning organizations to include sustainable community strategies in their regional transportation plans for reducing GHG emissions, (2) aligns planning for transportation and housing, and (3) creates specified incentives for the implementation of the strategies.

On March 22, 2018, CARB updated the SB 375 Greenhouse Gas Emission Reduction Targets setting GHG reduction targets for metropolitan planning organizations for 2020 and 2035 (CARB 2024c). The Bay Area reduction targets for per capita vehicular emissions were 10 percent by 2020 and are 19 percent by 2035.

#### **3.2.2.10 Assembly Bill 1493: Pavley Regulations and Fuel Efficiency Standards**

AB 1493, enacted on July 22, 2002, required CARB to develop and adopt regulations and fuel efficiency standards that reduce GHGs emitted by passenger vehicles and light duty trucks. The fuel efficiency standards were phased in during the 2009 through 2016 model years.

The second phase of the implementation for AB 1493 was incorporated into Amendments to the LEV III or the ACC program. The ACC program combines the control of smog-causing pollutants and GHG emissions into a single coordinated package of requirements for model years 2017 through 2025. The regulation would reduce GHGs from new cars by 34 percent from 2016 levels by 2025. The rules would reduce pollutants from gasoline and diesel-powered cars and would deliver increasing numbers of zero-emission technologies, such as full battery-electric cars, newly emerging plug-in hybrid electric vehicles, and hydrogen fuel cell cars. The regulations would also provide adequate fueling infrastructure for the increasing numbers of hydrogen fuel cell vehicles planned for deployment in California. In general, these regulations ensure that emissions associated with non-commercial, personal transportation are gradually reduced such that the state is able to achieve its climate goals.

#### **3.2.2.11 Senate Bill 350: Clean Energy and Pollution Reduction Act of 2015**

SB 350 (October 7, 2015) reaffirms California's commitment to reducing its GHG emissions and addressing climate change. Key provisions include an increase in the Renewable Portfolio Standards, higher energy efficiency requirements for buildings, initial strategies toward a regional electricity grid, and improved infrastructure for EV charging stations.

## **NEW SIXTH APPELLATE DISTRICT COURTHOUSE PROJECT**

Greenhouse Gas  
July 12, 2024

### **3.2.2.12 Executive Order S-13-08: Climate Adaptation Strategy**

EO S-13-08 states that, “climate change in California during the next century is expected to shift precipitation patterns, accelerate sea level rise and increase temperatures, thereby posing a serious threat to California’s economy, to the health and welfare of its population and to its natural resources.” Pursuant to the requirements in this EO, the 2009 California Climate Adaptation Strategy was adopted, which is the, “... first statewide, multi-sector, region-specific, and information-based climate change adaptation strategy in the United States.” Objectives include analyzing risks of climate change in California, identifying and exploring strategies to adapt to climate change, and specifying a direction for future research.

### **3.2.2.13 Executive Order S-20-04**

EO S-20-04, issued in December 2004, required increased investments in energy efficiency in state-owned buildings. This EO also mandated that all new and renovated buildings paid for with State funds be certified as Leadership in Energy and Environmental Design Silver standard or higher.

### **3.2.2.14 Executive Order N-7-22**

EO N-7-22, issued in 2022, emphasizes the severity of long-term drought conditions throughout the state, and encourages the voluntary reduction in water consumption. In addition, the EO directs the State Water Board to adopt several emergency regulations, including, among other requirements, a ban on the irrigation of “non-functional turf,” which is defined as turf that is solely ornamental and not otherwise used for recreation.

### **3.2.2.15 California Green Building Code and Energy Efficiency Standards**

The California Green Building Code (CALGreen) (CCR Title 24, Part 11) is a state-mandated building code aimed at improving public health, safety, and general welfare through mandating efficient design and construction of buildings within the state. An updated CALGreen standards is published every three years by order of the California legislature.

The California Energy Efficiency Standards (CCR Title 24, Part 6) are updated by the California Energy Commission (CEC) every three years. The triennial updates strengthen efficiency standards and allow for the regulation consideration of new energy efficient technologies and methods. Energy efficient buildings require less electricity; therefore, increased energy efficiency reduces fossil fuel consumption and decreases GHG emissions. The current 2022 Building Energy Efficiency Standards went into effect on January 1, 2023.

### **3.2.2.16 Judicial Council’s Water Conservation Policy**

Adopted in 2015, the Judicial Council’s Water Conservation Policy identifies best practices to encourage water conservation in all capital projects and courthouse facilities. The best practices that may be applicable to the Project include using non-potable water for dust control during construction, installing

## **NEW SIXTH APPELLATE DISTRICT COURTHOUSE PROJECT**

Greenhouse Gas  
July 12, 2024

efficient indoor plumbing fixtures, and requiring climate-appropriate landscape planning (Judicial Council 2015).

### **3.2.2.17 Judicial Council's Appellate Court Facilities Guidelines**

The Judicial Council's Appellate Court Facilities Guidelines are intended to ensure that new facilities meet certain principles; specifically, facilities shall be (1) safe and cost effective, (2) durable, operationally efficient, and easily maintained, and (3) reflect a place of justice. Sections of the guidelines that relate to GHG emissions include General Facilities Design Guidelines sections 7, Heating, Ventilating and Air Conditioning, Section 8, Plumbing and Electrical, Section 10, Lighting, and Appendix A, Design Guidelines (Judicial Council 2002).

## **3.2.3 REGIONAL**

### **3.2.3.1 Bay Area Air Quality Management District**

Appendix B of the BAAQMD's CEQA Guidelines, CEQA Thresholds for Evaluating the Significance of Climate Impacts from Land Use Project and Plans, establishes recommendations for evaluating impacts and establishing thresholds of significance related to a project's impact on climate change (BAAQMD 2022a).

The BAAQMD analyzed the requirements of land use development projects that would achieve California's long-term climate goal of carbon neutrality by 2045. The resulting approach, if implemented and incorporated by a land use project, would result in the project contributing its portion ("fair share") toward achieving California's long-term climate goals and carbon neutrality by 2045.

## **3.2.4 LOCAL**

There are no regional or local plans, policies, regulations, or ordinances related to GHGs that apply to the Project.

# NEW SIXTH APPELLATE DISTRICT COURTHOUSE PROJECT

Modeling Inputs and Parameters  
July 12, 2024

## 4.0 Modeling Inputs and Parameters

The following modeling parameters and assumptions will be used to estimate criteria air pollutant and GHG emissions for the Project, as well as potential health risks associated with Project construction.

### 4.1 Criteria Pollutant and GHG Emission Methods

The California Emissions Estimator Model (CalEEMod) is a statewide land use emissions computer model designed to provide a uniform platform for government agencies, land use planners, and environmental professionals to quantify potential criteria pollutant and GHG emissions associated with both construction and operations from a variety of land use projects. CalEEMod quantifies direct GHG emissions, such as construction and operational activities and vehicle use, and indirect emissions, such as energy use, solid waste disposal, vegetation planting and/or removal, and water use. Further, CalEEMod identifies mitigation measures to reduce criteria pollutant and GHG emissions along with calculating the benefits achieved from measures chosen by the user.

CalEEMod was developed for the California Air Pollution Control Officers Association in collaboration with the California Air Districts. Default data (e.g., emission factors, trip lengths, meteorology, source inventory) have been provided by the various California Air Districts to account for local requirements and conditions. CalEEMod is a comprehensive tool for quantifying air quality impacts from land use projects located throughout California. The model can be used for a variety of situations where an air quality analysis is necessary or desirable, such as preparing CEQA or National Environmental Policy Act documents, conducting pre-project planning, and, verifying compliance with local air quality rules and regulations, etc.

CalEEMod version 2022.1.1.23 was used to estimate construction and operational impacts of the Project.

#### 4.1.1 MODELING ASSUMPTIONS

Phase 1 of construction is expected to include hazardous material abatement (including asbestos), demolition of the existing building and structures, site preparation work, undergrounding and/or relocation of existing underground utilities, and foundations. Phase 1 was modeled to commence in December 2025. Phase 2 would construct the new courthouse building and was modeled to begin in November 2026. All construction would conclude in October 2028, resulting in a total construction duration of approximately 3 years. The construction equipment used per phase was left as default values. During demolition, 65,000 SF of material was assumed to be removed from the site to account for the existing 19,994-SF building and all onsite paved areas. In addition, two vendor trips per day were added during the Site preparation and grading phases to represent water trucks traveling to the site.

The operational vehicle trip rate was updated based on Project-specific information, and the trip lengths were left as model default values. As noted previously, the Project would not include natural gas. A 100-horsepower emergency generator was assumed to operate onsite for up to 100 hours per year.

# NEW SIXTH APPELLATE DISTRICT COURTHOUSE PROJECT

Modeling Inputs and Parameters  
July 12, 2024

Operational emissions from all sources were estimated at full buildout of the Project, which is anticipated to occur by the end of 2028.

## 4.2 Health Risk Assessment Methods

This section describes the methodology used for the Project construction health risk assessment (HRA). The purpose of the HRA was to assess potential health impacts that could result from construction of the Project, consistent with guidelines and methodologies from the BAAQMD, CARB, California OEHHA, and USEPA.

To estimate the concentration of DPM from Project activities, an air dispersion model was prepared. Specifically, the AERMOD model was used to estimate the concentration of DPM at sensitive receptor locations from heavy diesel-fueled equipment used during Project demolition and construction. DPM is the primary pollutant of concern associated with construction equipment exhaust and consists of a range of TACs. An air dispersion model is a mathematical formulation used to estimate the air quality impacts at specific locations (receptors) surrounding a source of emissions given the rate of emissions and prevailing meteorological conditions. This assessment relied on the USEPA's AMS/EPA Regulatory Model (AERMOD) Version 22112 air dispersion model applied in the Lakes Software AERMOD View Version 11.2.0 interface. The AERMOD model provides a refined methodology for estimating health impacts by utilizing long-term, measured representative meteorological data for the Project site.

The modeling analysis considers the spatial distribution and elevation of each emitting source in relation to the sensitive receptors. Direction-dependent calculations were obtained by identifying the Universal Transverse Mercator (UTM) coordinates for each source location. Terrain elevations were obtained for the Project site using the AERMAP model, which is the AERMOD terrain data pre-processor. The air dispersion model assessment used meteorological data recorded from the San Jose International Airport, which is located approximately 5 miles east of the Project site. The meteorological data used was preprocessed in AERMET for use with AERMOD and included data for the most recent year available, 2017.

After using AERMOD to determine the concentration of DPM at sensitive receptor locations, the associated health risks were calculated using the CARB's Hotspot Analysis Reporting Program (HARP) Version 2 Risk Assessment Standalone Tool (RAST), which calculates the cancer and non-cancer health impacts using the OEHHA Guidance Manual for Preparation of Health Risk Assessments (OEHHA 2015).

### 4.2.1 MODELING ASSUMPTIONS

The estimated concentration of exhaust PM<sub>10</sub> was used as a proxy to represent emissions of DPM. The rate of PM<sub>10</sub> emissions from construction were determined using the results of the CalEEMod modeling conducted for the Project. Construction emissions were assumed to be distributed over the Project site by applying an area source in AERMOD.

To determine health risks, the concentration of PM<sub>10</sub> was determined at the maximally exposed residential receptor and the maximally exposed worker receptor by reviewing the receptor locations and associated concentration of PM<sub>10</sub> in the AERMOD output (see Appendix B). Using HARP 2 RAST, the

## NEW SIXTH APPELLATE DISTRICT COURTHOUSE PROJECT

Modeling Inputs and Parameters  
July 12, 2024

exposure period was set to encompass the entire construction period. Consistent with OEHHA guidance, for the maximally exposed residential receptor, exposure was assumed to occur during the third trimester, infant, and a portion of the child stages of life. For the maximally exposed worker receptor, exposure was assumed to occur starting at age 16, and a worker adjustment factor of 4.2 was applied to reflect an assumed 250 working days per year. Detailed parameters and complete calculations are contained in Appendix B.

# NEW SIXTH APPELLATE DISTRICT COURTHOUSE PROJECT

Air Quality Impact Analysis  
July 12, 2024

## 5.0 Air Quality Impact Analysis

This section calculates the expected emissions from construction and operation of the Project as a necessary requisite for assessing the regulatory significance of Project emissions on a regional and localized level.

### 5.1 California Environmental Quality Act Guidelines

According to the CEQA Guidelines Appendix G Environmental Checklist, the following questions are analyzed and evaluated to determine whether a project would result in significant impacts to air quality. Where available, the significance criteria established by the applicable air quality management or air pollution district may be relied upon to make the following determinations.

Would the project:

1. Conflict with or obstruct implementation of the applicable air quality plan?
2. Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard?
3. Expose sensitive receptors to substantial pollutant concentrations?
4. Result in other emissions (such as those leading to odors) affecting a substantial number of people?

### 5.2 Thresholds of Significance

While the final determination of whether a project is significant is within the purview of the lead agency pursuant to Section 15064(b) of the CEQA Guidelines, the BAAQMD's significance thresholds serve as a proxy for determining whether the Project could violate air quality standards, cause a substantial contribution to an existing or projected air quality violation, and/or conflict with any applicable air quality plan. The BAAQMD has adopted CEQA thresholds of significance for individual development projects, which establish maximum allowable emissions for ROG, NO<sub>x</sub>, PM<sub>10</sub>, and PM<sub>2.5</sub> (BAAQMD 2022a). If the lead agency finds that the project has the potential to exceed these air pollution thresholds, the project could be considered to have significant air quality impacts. The BAAQMD thresholds are presented in Table 3.

**Table 3. BAAQMD Criteria Pollutant Thresholds of Significance**

Pollutant	Construction	Operational	
	Average Daily Emissions (lbs/day)	Maximum Annual Emissions (tpy)	Average Daily Emissions (lbs/day)
ROG	54	10	54
NO <sub>x</sub>	54	10	54
PM <sub>10</sub>	82	15	82

# NEW SIXTH APPELLATE DISTRICT COURTHOUSE PROJECT

Air Quality Impact Analysis  
July 12, 2024

Pollutant	Construction	Operational	
	Average Daily Emissions (lbs/day)	Maximum Annual Emissions (tpy)	Average Daily Emissions (lbs/day)
PM <sub>2.5</sub>	54	10	54

Source: BAAQMD 2022a.

Note: Construction particulate matter thresholds only account for exhaust particulate matter emissions.

According to the BAAQMD, a project would result in a significant impact if it would individually expose sensitive receptors to TACs resulting in an increased cancer risk greater than 10.0 in 1 million, an increased non-cancer risk of greater than 1.0 on the hazard index (chronic or acute), or an annual average ambient PM<sub>2.5</sub> increase greater than 0.3 micrograms per cubic meter (µg/m<sup>3</sup>).

## 5.3 Air Impact Analysis

---

### Impact AIR-1      Conflict with or obstruct implementation of the applicable air quality plan?

---

#### Impact Analysis

Air districts are required to prepare air quality plans to identify strategies to bring regional emissions into compliance with federal and state air quality standards. Air districts establish emissions thresholds for individual projects to demonstrate the point at which a project would be considered to increase air quality violations. A project would conflict with the applicable air quality plan if it exceeded any emissions thresholds for which the region is in non-attainment.

As noted previously, the BAAQMD region is designated as non-attainment for federal and state ozone and PM<sub>2.5</sub> as well as state PM<sub>10</sub>. Accordingly, the BAAQMD has prepared air quality plans, including the 2017 Clean Air Plan, to achieve attainment of the applicable ozone and PM standards. The BAAQMD's adopted thresholds of significance indicate the levels of emissions that projects may emit while the region moves towards attainment of the CAAQS and NAAQS. Projects that exceed BAAQMD's thresholds of significance conflict with the 2017 Clean Air Plan.

#### Conclusion

As described under Impact AIR-2, the Project would not exceed the thresholds established by the BAAQMD. As a result, the Project would not conflict with or obstruct implementation of the applicable air quality plan.

---

### Impact AIR-2      Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard?

---

# NEW SIXTH APPELLATE DISTRICT COURTHOUSE PROJECT

Air Quality Impact Analysis  
July 12, 2024

## Impact Analysis

In developing thresholds of significance for air pollutants, the BAAQMD considered the emission levels for which a project's emissions would be cumulatively considerable. If a project exceeds the identified significance thresholds, its emissions would be cumulatively considerable, resulting in significant adverse air quality impacts to the region's existing air quality conditions.

### Construction Emissions

The Project's estimated construction emissions are provided in Table 4. As shown therein, construction of the Project would not result in emissions that exceed BAAQMD thresholds.

**Table 4. Construction Criteria Pollutant Emissions**

Year	Average Daily Emissions (lbs/day)			
	ROG	NOx	PM <sub>10</sub>	PM <sub>2.5</sub>
2025	0.05	0.45	0.06	0.02
2026	0.32	2.83	0.65	0.28
2027	0.64	5.36	0.29	0.18
2028	1.86	3.30	0.17	0.10
<b>BAAQMD Thresholds</b>	<b>54</b>	<b>54</b>	<b>82</b>	<b>54</b>
<b>Exceed BAAQMD Thresholds?</b>	<b>No</b>	<b>No</b>	<b>No</b>	<b>No</b>

Source: Appendix A.

Note: BAAQMD thresholds for PM<sub>10</sub> and PM<sub>2.5</sub> are intended for exhaust emissions only. The emissions presented above include total particulate matter (exhaust emissions and fugitive emissions) and are therefore a conservative estimate.

Key:

BAAQMD = Bay Area Air Quality Management District

NOx = oxides of nitrogen

PM<sub>10</sub> = fugitive dust, particulate matter 10 microns or smaller in diameter

PM<sub>2.5</sub> = fine particulate matter 2.5 microns or smaller in diameter

ROG = reactive organic gas

### Operational Emissions

The Project would replace the existing courthouse building at the Project site. The existing courthouse has been vacant since 2016 and generates only minor air emissions associated with off-gassing paints and asphalt and electricity for outdoor lighting. Additionally, the Sixth Appellate District currently operates out of leased space in a commercial office building in downtown San Jose in Santa Clara County. Following implementation of the Project, it can be assumed that the office space would be rented to another organization that will emit similar emissions. Therefore, to provide a conservative analysis, the modeled operational emissions were assumed to be from a new build with no net reductions from existing operations.

As shown in Table 5, operation of the Project would not result in emissions that exceed the BAAQMD operational thresholds.

# NEW SIXTH APPELLATE DISTRICT COURTHOUSE PROJECT

Air Quality Impact Analysis  
July 12, 2024

**Table 5. Operational Criteria Pollutant Emissions**

Source	Emissions			
	ROG	NOx	PM <sub>10</sub>	PM <sub>2.5</sub>
Mobile	0.27	0.22	0.58	0.15
Area	1.40	0.01	0.00	0.00
Energy	0.02	0.32	0.02	0.02
Stationary	0.09	0.25	0.01	1.01
<i>Total Average Daily (lbs/day)</i>	<i>1.77</i>	<i>0.80</i>	<i>0.62</i>	<i>0.19</i>
<b>BAAQMD Thresholds (lbs/day)</b>	<b>54</b>	<b>54</b>	<b>82</b>	<b>54</b>
<i>Total Annual (tons/year)</i>	<i>0.32</i>	<i>0.15</i>	<i>0.11</i>	<i>0.03</i>
<b>BAAQMD Thresholds (tons/year)</b>	<b>10</b>	<b>10</b>	<b>15</b>	<b>10</b>
<b>Exceed BAAQMD Thresholds?</b>	<b>No</b>	<b>No</b>	<b>No</b>	<b>No</b>

Source: Appendix A.

Key:

BAAQMD = Bay Area Air Quality Management District

lbs = pounds

NOx = oxides of nitrogen

PM<sub>10</sub> = fugitive dust, particulate matter 10 microns or smaller in diameter

PM<sub>2.5</sub> = fine particulate matter 2.5 microns or smaller in diameter

ROG = reactive organic gas

## Conclusion

The Project would not result in a cumulatively considerable net increase of any criteria pollutant for which the region is non-attainment under an applicable federal or state ambient air quality standard. Therefore, the impact would be less-than-significant.

---

### Impact AIR-3      Expose sensitive receptors to substantial pollutant concentrations?

---

#### Impact Analysis

This discussion addresses whether the Project would expose sensitive receptors to TACs during construction or operations. According to CARB, some land uses are considered more sensitive to air pollution than others due to the types of population groups or activities involved. Heightened sensitivity may be caused by health problems, proximity to the emissions source, or duration of exposure to air pollutants. Children, pregnant women, the elderly, and those with existing health problems are especially vulnerable to the effects of air pollution. Accordingly, land uses that are typically considered to be sensitive receptors include residences, schools, childcare centers, playgrounds, retirement homes, convalescent homes, hospitals, and medical clinics. The nearest sensitive receptors to the Project site include the residential units to the west of the site, across South Pastoria Avenue, and to the south, across El Camino Real. The closest residential units are approximately 350 feet from the Site's southern boundary and the closest worker receptor was identified at approximately 150 feet from the Site's northern boundary. As discussed further below, this analysis considers potential impacts to both residential and worker receptors.

## NEW SIXTH APPELLATE DISTRICT COURTHOUSE PROJECT

Air Quality Impact Analysis  
July 12, 2024

### **Construction Emissions**

During demolition and construction associated with the Project, the potential exists for emissions of fugitive dust, asbestos, and DPM to be released. Each TAC is discussed separately below.

#### ***Fugitive Dust***

Fugitive dust would be generated from demolition, site grading, and other earth-moving activities. Most of this fugitive dust would remain localized and would be deposited near the Site. However, the potential for impacts from fugitive dust exists unless control measures are implemented to reduce the emissions from the Project site. However, the Project would comply with the BAAQMD's Basic BMPs for Construction-Related Fugitive Dust Emissions, including watering exposed surfaces twice per day and covering haul truck loads (BAAQMD 2022a). The Project's implementation of the BAAQMD's Basic BMPs for Construction-Related Fugitive Dust Emissions would minimize construction-related fugitive dust emissions to a less-than-significant level.

#### ***Asbestos***

Construction in areas of rock formations that contain NOA could release asbestos into the air and pose a health hazard. BAAQMD enforces CARB's air toxic control measures at sites that contain ultramafic rock. The Air Toxic Control Measures for Construction, Grading, Quarrying and Surface Mining Operations were signed into state law on July 22, 2002, and became effective in November 2002. The purpose of this regulation is to reduce public exposure to NOA. A review of the map with areas more likely to have rock formations containing NOA in California indicates that there is no asbestos in the immediate Project area (California Department of Conservation 2024). Therefore, construction of the Project would not expose sensitive receptors to NOA.

Exposure to asbestos can occur during demolition or remodeling of buildings constructed prior to 1977, when asbestos was banned for use in buildings. The existing onsite building was constructed in 1967 and, as a result, has the potential to include ACBMs. BAAQMD Regulation 11 Rule 2, Asbestos Demolition, Renovation and Manufacturing, is intended to control the emissions of asbestos during demolition activities and establish appropriate waste disposal procedures. The Project would be subject to the measures listed in Section 11-2-303 of the rule, including conducting an asbestos survey and implementing asbestos reduction measures during demolition, if determined to be necessary (BAAQMD 1998). In addition, the Project would be required to comply with the provisions in the Judicial Council's Policy on Asbestos Management for Court Facilities. Compliance with BAAQMD Regulation 11 Rule 2 would ensure that sensitive receptors are not exposed to substantial concentrations of asbestos, and the impact would be less-than-significant.

#### ***Diesel Particulate Matter***

Exposure to DPM from diesel vehicles and off-road equipment can result in health risks to nearby sensitive receptors. A HRA was prepared for the Project to assess potential health impacts to the maximum exposed individual residential receptor, located approximately 350 feet from the Site, and the

# NEW SIXTH APPELLATE DISTRICT COURTHOUSE PROJECT

Air Quality Impact Analysis  
July 12, 2024

maximum exposed individual worker receptor, located approximately 160 feet from the Site exposed to DPM generated during Project construction. Results of the analysis are presented in Table 6.

**Table 6. Unmitigated Health Risk from Project Construction**

Receptor	Cancer Risk Per Million	Chronic Inhalation Hazard Index	Average Annual Increase in PM <sub>2.5</sub> Concentration (µg/m <sup>3</sup> ) <sup>1</sup>
Residential	9.86	0.01	0.03
Worker	3.17	0.03	0.13
<b>BAAQMD Thresholds</b>	<b>10.0</b>	<b>1.0</b>	<b>0.30</b>
<b>Exceed BAAQMD Thresholds?</b>	<b>No</b>	<b>No</b>	<b>No</b>

Source: Appendix B.

Notes:

<sup>1</sup> PM<sub>10</sub> concentration used as a proxy for PM<sub>2.5</sub>.

Key:

µg/m<sup>3</sup> = micrograms per cubic meter

BAAQMD = Bay Area Air Quality Management District

PM<sub>2.5</sub> = fine particulate matter 2.5 microns or smaller in diameter

As shown in the table, construction of the Project would not expose residential or worker receptors to an increase in health risk that would exceed the applicable thresholds of significance.

## **Operational Emissions**

Potential TACs that may be emitted during Project operations, including carbon monoxide and DPM, are discussed below.

### **Carbon Monoxide**

With regard to localized CO emissions, according to BAAQMD, a project would have to increase traffic volumes at a single intersection to more than 44,000 vehicles per hour, or to more than 24,000 vehicles per hour in areas where vertical or horizontal mixing is limited, in order to generate a significant CO impact. Areas where vertical or horizontal mixing is limited, such as tunnels or canyons, are not present in the Project area. Based on the California Department of Transportation (Caltrans) Traffic Census Program data for the year 2022, traffic volumes along El Camino Real near the Project site served an average of 35,000 vehicle trips per day (Caltrans 2024).<sup>1</sup> Based on the trip generation estimate prepared by Stantec, the Project would generate an average of 135 vehicle trips per day (Stantec 2024). Therefore, the increase in roadway traffic attributable to the Project is not sufficient to increase traffic volumes at any nearby intersection to more than 44,000 vehicles per hour. As a result, vehicle trips associated with Project operations would not exceed the screening criteria of BAAQMD and the Project would not be expected to result in substantial levels of localized CO at surrounding intersections or generate localized concentrations of CO that would exceed standards or cause health hazards.

<sup>1</sup> Traffic volumes from State Route 82 along roadway segment Sunnyvale, Saratoga/Sunnyvale Roads.

# NEW SIXTH APPELLATE DISTRICT COURTHOUSE PROJECT

Air Quality Impact Analysis  
July 12, 2024

## **Diesel Particulate Matter**

The greatest potential for exposure to DPM during long-term operations is typically from the use of heavy-duty diesel trucks and stationary generators that use diesel fuel. Given the nature of the Project, vehicle trips to and from the Project site during operations would primarily be from courthouse staff and guests. As a result, the Project would attract very few diesel-fueled truck trips. Additionally, the Project may include an emergency, back-up stationary generator onsite. However, the generator would only operate during routine testing and maintenance operations and, as a result, would not generate DPM that would impact nearby sensitive receptors. For these reasons, once operational, the Project would not be expected to expose nearby sensitive receptors to substantial amounts of DPM.

## **Conclusion**

The Project would not expose sensitive receptors to substantial pollutant concentrations, and the impact would be less-than-significant.

---

<b>Impact AIR-4</b>	<b>Result in other emissions (such as those leading to odors) affecting a substantial number of people?</b>
---------------------	---

---

## **Impact Analysis**

While offensive odors rarely cause physical harm, they can still be unpleasant, leading to distress among the public and often generating citizen complaints to local governments and BAAQMD. The occurrence and severity of odor impacts depends on numerous factors, including nature, frequency, and intensity of the source, the wind speed and direction, and the sensitivity of the receptor. The nearest receptors to the Site include the residences located south of the Site.

Construction activities associated with the Project could result in short-term odorous emissions from diesel exhaust associated with diesel-fueled equipment. However, these emissions would be intermittent and would dissipate rapidly from the source. Project construction would also be required to comply with all applicable CARB and BAAQMD rules and regulations, particularly associated with permitting of air pollutant sources. Compliance with the aforementioned regulations would help to minimize emissions, including emissions leading to odors.

Land uses typically considered as associated with the production of odors during operations include wastewater treatment facilities, waste disposal facilities, and agricultural operations. The Project does not include any land uses that are typically associated with emitting objectionable odors.

Finally, BAAQMD regulates objectionable odors through Regulation 7, Odorous Substances, which does not become applicable until the Air Pollution Control Officer (APCO) receives odor complaints from ten or more complainants within a 90-day period. Once effective, Regulation 7 places general limitations on odorous substances and specific emission limitations on certain odorous compounds, which remain effective until such time that citizen complaints have not been received by the APCO for one year. The limits of Regulation 7 become applicable again when the APCO receives odor complaints from five or more complainants within a 90-day period (BAAQMD 1982). Thus, although not anticipated, if odor

## **NEW SIXTH APPELLATE DISTRICT COURTHOUSE PROJECT**

Air Quality Impact Analysis  
July 12, 2024

complaints are made after the Project is developed, the BAAQMD would ensure that such odors are addressed, and any potential odor effects are minimized or eliminated.

### **Conclusion**

The Project would not result in other emissions, such as those leading to odors, affecting a substantial number of people. Therefore, the impact would be less-than-significant.

## 6.0 Greenhouse Gas Impact Analysis

### 6.1 California Environmental Quality Act Guidelines

The CEQA Guidelines define a significant effect on the environment as “a substantial, or potentially substantial, adverse change in the environment.” To determine whether a project would have a significant impact on GHGs, the type, level, and impact of emissions generated by the project must be evaluated. The following GHG significance thresholds are contained in CEQA Guidelines Appendix G.

Would the project:

1. Generate GHG emissions, either directly or indirectly, that may have a significant impact on the environment; or
2. Conflict with any applicable plan, policy or regulation of an agency adopted for the purpose of reducing the emissions of GHGs.

This section discusses potential impacts concerning GHGs associated with the Project and provides mitigation measures where necessary.

### 6.2 Thresholds of Significance

The statewide legislative context for GHG emissions analysis was initially established by AB 32 (2006), which required reduction of statewide GHG emissions to 1990 levels by 2020, and then by SB 32 (2016), which established a reduction mandate of 40 percent below 1990 statewide emissions levels by 2030, and AB 1279 (2022), which established a statewide policy of achieving carbon neutrality no later than 2045 and achieving and maintaining net negative emissions thereafter.<sup>2</sup> CARB’s 2022 Scoping Plan evaluates progress toward the 2030 target, as well as examining scenarios that could achieve statewide carbon neutrality by 2045 or sooner (CARB 2022a). The state’s GHG reduction goals reflect the scientific community’s consensus of what is needed to limit global warming. Therefore, these legislative targets create a framework that can be used to inform the level of emissions reductions necessary and whether GHG emissions associated with a project would represent a cumulatively considerable contribution to the significant cumulative impact of climate change. As the Supreme Court held, “consistency with meeting [those] statewide goals [is] a permissible significance criterion for project emissions” (*Center for Biological Diversity v. Department of Fish & Wildlife* (2015) 62 Cal.4th 220).

Compared to global emissions of GHGs, the Project will not, by itself, contribute significantly to climate change; however, cumulative emissions from many projects and plans all contribute to global GHG concentrations and the climate system. As stated by the Supreme Court, “[t]o the extent a project incorporates efficiency and conservation measures sufficient to contribute its portion of the overall GHG

---

<sup>2</sup> “Carbon neutrality” is defined in Executive Order B-55-18 as the point at which the removal of carbon pollution from the atmosphere meets or exceeds carbon emissions. Carbon neutrality is achieved when carbon dioxide and other GHGs generated by sources such as transportation, power plants, and industrial processes are less than or equal to the amount of carbon dioxide that is stored, both in natural sinks and mechanical sequestration.

## NEW SIXTH APPELLATE DISTRICT COURTHOUSE PROJECT

Greenhouse Gas Impact Analysis  
July 12, 2024

reductions necessary [to achieve the state’s climate goals], one can reasonably argue that the project’s impact is not cumulatively considerable, because it is helping to solve the cumulative problem...” (*Center for Biological Diversity v. Department of Fish & Wildlife* (2015) 62 Cal.4th 220 [internal quotation marks omitted]).

Lead agencies have flexibility to develop their own significance thresholds or to determine significance thresholds on a case-by-case basis. Although CARB has not adopted quantitative thresholds of significance for GHG emissions, they have delegated regulatory authority over the air quality within the SFBAAB to the BAAQMD. Applying its expertise, the BAAQMD adopted guidelines which, if followed, provide that a project’s GHG impacts, including cumulative impacts, are less-than-significant. The Judicial Council finds the BAAQMD’s analysis and guidelines persuasive and adopts the proposed measures as the threshold of significance for this Project.

In April 2022, the BAAQMD Board of Directors adopted the CEQA Thresholds for Evaluating the Significance of Climate Impacts from Land Use Projects and Plans, which updated the BAAQMD’s previous guidance related to evaluating GHG emissions to address the most recent climate legislation (BAAQMD 2022b).

Because construction-related emissions are temporary and represent a very small portion of a project’s lifetime GHG emissions, the BAAQMD has not developed a quantitative threshold of significance for construction-related GHG emissions. However, BAAQMD recommends that construction-related GHG emissions should still be quantified and disclosed in environmental documents.

For land use projects, the BAAQMD considers a project to have contributed its “fair share” of emissions reductions and have a less-than-significant impact on climate change under CEQA if it meets the specific project design elements listed below (BAAQMD 2022b).

### 6.2.1 BUILDINGS

1. The project will not include natural gas appliances or natural gas plumbing (in both residential and nonresidential development).
2. The project will not result in any wasteful, inefficient, or unnecessary energy use as determined by the analysis required under CEQA Section 21100(b)(3) and Section 15126.2(b) of the State CEQA Guidelines

### 6.2.2 TRANSPORTATION

1. The project will achieve a reduction in project-generated vehicle miles traveled (VMT) below the regional average consistent with the current version of the California Climate Change Scoping Plan (currently 15 percent) or meet a locally adopted Senate Bill 743 VMT target that reflects the recommendations provided in the Governor’s Office of Planning and Research’s Technical Advisory on Evaluating Transportation Impacts in CEQA:
  - a. Residential projects: 15 percent below the existing VMT per capita;

# NEW SIXTH APPELLATE DISTRICT COURTHOUSE PROJECT

Greenhouse Gas Impact Analysis  
July 12, 2024

- b. Office projects: 15 percent below the existing VMT per employee;
  - c. Retail projects: no net increase in existing VMT.
2. The project will achieve compliance with off-street EV requirements in the most recently adopted version of CALGreen Tier 2.

In consideration of the legislative context and statewide policy to achieve carbon neutrality no later than 2045, the Judicial Council looks to the CARB’s 2022 Scoping Plan along with BAAQMD’s defined thresholds of significance to determine the Project’s impact and level of significance on the environment and global climate change. In other words, this analysis relies on the Project’s consistency with the BAAQMD’s Building and Transportation design elements, listed above, for determining the significance of potential impacts.

## 6.3 Greenhouse Gas Impact Analysis

---

### Impact GHG-1      **Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?**

---

#### Impact Analysis

As noted previously, the applicable thresholds for the significance of GHG emissions are qualitative, and the following GHG emissions inventories are provided for informational purposes. Potential impacts related to GHGs from implementation of the Project are considered in comparison to BAAQMD’s adopted thresholds of significance below.

#### Construction Emission Inventory

Construction GHGs would be emitted by the off-road construction equipment and vehicle travel by workers and material deliveries to the Site. The estimated construction GHG emissions are shown in Table 7.

**Table 7. Construction Greenhouse Gas Emissions**

Construction Year	Emissions (MTCO <sub>2</sub> e)
2025	17.97
2026	116.94
2027	223.89
2028	142.32
<i>Total</i>	<i>501.12</i>

Source: Appendix A.

Key:

MMTCO<sub>2</sub>e = million metric tons of carbon dioxide equivalents

# NEW SIXTH APPELLATE DISTRICT COURTHOUSE PROJECT

Greenhouse Gas Impact Analysis  
July 12, 2024

## Operational Emission Inventory

The Project would replace the existing courthouse building at the Site. The existing courthouse has been vacant since 2016 and generates only minor emissions associated with off-gassing paints and asphalt and electricity for outdoor lighting. Additionally, the Sixth Appellate District currently operates out of leased space in a commercial office building in downtown San Jose in Santa Clara County. Following implementation of the Project, it can be assumed that the office space would be rented to another organization that will emit similar emissions. Therefore, to provide a conservative analysis, the modeled operational emissions were conservatively assumed to be from a new build with no net reductions from existing operations.

Operational, or long-term, emissions occur over the life of the Project. Operational activities of the Project would generate GHG emissions primarily from mobile sources. Operational GHG emissions are shown in Table 8.

**Table 8. Operational Greenhouse Gas Emissions**

Source	Emissions (MTCO <sub>2</sub> e per year)
Mobile	98.07
Area	0.73
Energy	165.23
Water	19.65
Waste	14.52
Refrigerants	0.02
Stationary	7.64
<i>Total</i>	<i>305.86</i>

Source: Appendix A.

Key:

MMTCO<sub>2</sub>e = million metric tons of carbon dioxide equivalents

## Consistency with BAAQMD's Project Design Elements

As noted previously, global climate change is inherently a cumulative issue; however, GHG emissions from an individual project would not result in a significant impact on the global scale. The BAAQMD has adopted GHG thresholds and determined that a project would support the CARB's statewide GHG reduction goals and result in a less than cumulatively considerable contribution to climate change if the project complies with the thresholds. In other words, according to the BAAQMD's guidance, in order to find a less-than-significant and less than cumulatively considerable GHG impact, projects must include certain project design elements. The Project is evaluated in relation to each design element in Table 9.

**Table 9. Project Consistency with BAAQMD's Project Design Elements**

Measure	Consistency Determination
<b>Buildings a)</b> The project will not include natural gas appliances or natural gas plumbing (in both residential and nonresidential development).	<b>Consistent.</b> The Project would include all electric appliances and plumbing and, therefore, would not include natural gas appliances or natural gas plumbing.

# NEW SIXTH APPELLATE DISTRICT COURTHOUSE PROJECT

Greenhouse Gas Impact Analysis  
July 12, 2024

Measure	Consistency Determination
<b>Buildings b)</b> The project will not result in any wasteful, inefficient, or unnecessary energy use as determined by the analysis required under CEQA Section 21100(b)(3) and Section 15126.2(b) of the State CEQA Guidelines.	<b>Consistent.</b> The Project would comply with all applicable federal and state regulations regarding energy use during both Project construction and operations. Therefore, the Project would not result in any wasteful, inefficient, or unnecessary energy use.
<b>Transportation a)</b> The project will achieve a reduction in project-generated VMT below the regional average consistent with the current version of the California Climate Change Scoping Plan (currently 15 percent) or meet a locally adopted Senate Bill 743 VMT target that reflects the recommendations provided in the Governor’s Office of Planning and Research’s Technical Advisory on Evaluating Transportation Impacts in CEQA: i. Residential projects: 15 percent below the existing VMT per capita; ii. Office projects: 15 percent below the existing VMT per employee; iii. Retail projects: no net increase in existing VMT.	<b>Consistent.</b> The significance threshold that would represent 15 percent below the regional average is 13.03 VMT per employee, and Project VMT was determined to be 8.75 VMT per employee (Stantec 2024). Therefore, the Project would achieve a 15 percent reduction in project-generated VMT below the regional average consistent with the current version of the California Climate Change Scoping Plan.
<b>Transportation b)</b> The project will achieve compliance with off-street EV requirements in the most recently adopted version of CALGreen Tier 2.	<b>Consistent.</b> Consistent with Tier 2 of the CALGreen Code (see Table A5.106.5.3.2), for nonresidential projects with 26 to 50 onsite parking stalls, at least 17 spaces shall be EV capable, and 6 of those shall include a Level 2 EV charging station. The Project would include 17 EV capable spaces, including 6 with charging stations. Therefore, the Project would comply with the applicable Tier 2 CALGreen standards.

Source: BAAQMD 2022b

Key:

BAAQMD = Bay Area Air Quality Management District

CALGreen = California Green Building Code

CEQA = California Environmental Quality Act

VMT = vehicle miles traveled

Based on the analysis included above, the Project would comply with the BAAQMD’s project design elements.

## Conclusion

The Project would not generate GHG emissions that may have a significant impact on the environment, and the impact would be less-than-significant.

---

## Impact GHG-2      Conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of greenhouse gases?

---

### Impact Analysis

A project would have a significant impact with respect to GHG emissions and global climate change if it would substantially conflict with the provisions of Section 15064.4(b) of the CEQA Guidelines. Pursuant to Appendix G of the CEQA Guidelines, a significant GHG impact is identified if the project could conflict with applicable GHG reduction plans, policies, or regulations. The Project would be subject to complying

## NEW SIXTH APPELLATE DISTRICT COURTHOUSE PROJECT

Greenhouse Gas Impact Analysis  
July 12, 2024

with SB 32 and AB 1279. For this analysis, the applicable plan adopted for the purpose of reducing GHG emissions is the CARB's 2022 Scoping Plan. Project consistency with the foregoing plan is evaluated below.

### Consistency with CARB's 2022 Scoping Plan

The 2022 Scoping Plan, approved in December 2022, builds upon previous iterations of state scoping plans to achieve carbon neutrality and reduce anthropogenic GHG emissions below 85 percent below 1990 no later than 2045, as directed by AB 1279 (CARB 2022a). Table 10 identifies the Scoping Plan policies that may be applicable to the Project.

**Table 10. Project Consistency with 2022 Scoping Plan Greenhouse Gas Reduction Strategies**

Measure	Consistency Determination
Deploy ZEV and reduce driving demand	<b>Consistent.</b> While the Project would not deploy ZEVs, consistent with the 2022 California Building Standards Code, or applicable code at the time of construction, the proposed parking area would include EV-capable spaces and EV chargers. Additionally, the Project would reduce driving demand due to the Site location along the El Camino Real high-quality transit corridor (Metropolitan Transportation Commission [MTC]/Association of Bay Area Governments [ABAG] 2024), and within 0.5-mile of the following four bus stops serviced by Valley Transportation Authority: El Camino & Pastoria, El Camino & Hollenbeck, El Camino & Mathilda north, and El Camino & Mathilda south. The availability of public transportation options would encourage the use of alternative modes of transportation and reduce single-passenger vehicle use.
Generate clean electricity	<b>Consistent.</b> The Project would include photovoltaic (PV) panels to provide solar power generation on 17 covered spaces in the proposed parking area. Therefore, the Project would support future generation of clean electricity.
Decarbonize Buildings	<b>Consistent.</b> The Project would not include any natural gas connections and would be constructed in compliance with the applicable version of the California Building Standards Code. Additionally, the Project would include PV panels on 17 parking spaces to generate clean energy.
Reduce non-combustion emissions (Methane)	<b>Consistent.</b> The Project would not include any land uses that generate significant levels of methane, such as landfills or dairy farms.
Reduce non-combustion emissions (Hydrofluorocarbons [HFCs])	<b>Consistent.</b> The Project will comply with all state regulations governing short-lived climate pollutants, including HFCs.

Source: CARB 2022a.

This analysis finds that the Project would be consistent with the applicable strategies recommended in the 2022 Scoping Plan.

### Conclusion

The Project would not conflict with an applicable plan adopted for the purposes of reducing GHG emissions, and impacts would be considered less-than-significant.

## Table of Contents

1. Basic Project Information
  - 1.1. Basic Project Information
  - 1.2. Land Use Types
  - 1.3. User-Selected Emission Reduction Measures by Emissions Sector
2. Emissions Summary
  - 2.1. Construction Emissions Compared Against Thresholds
  - 2.2. Construction Emissions by Year, Unmitigated
  - 2.3. Construction Emissions by Year, Mitigated
  - 2.4. Operations Emissions Compared Against Thresholds
  - 2.5. Operations Emissions by Sector, Unmitigated
  - 2.6. Operations Emissions by Sector, Mitigated
3. Construction Emissions Details
  - 3.1. Abatement and Demolition (2025) - Unmitigated
  - 3.2. Abatement and Demolition (2025) - Mitigated

3.3. Abatement and Demolition (2026) - Unmitigated

3.4. Abatement and Demolition (2026) - Mitigated

3.5. Site Preparation (2026) - Unmitigated

3.6. Site Preparation (2026) - Mitigated

3.7. Grading (2026) - Unmitigated

3.8. Grading (2026) - Mitigated

3.9. Building Construction (2026) - Unmitigated

3.10. Building Construction (2026) - Mitigated

3.11. Building Construction (2027) - Unmitigated

3.12. Building Construction (2027) - Mitigated

3.13. Building Construction (2028) - Unmitigated

3.14. Building Construction (2028) - Mitigated

3.15. Paving (2028) - Unmitigated

3.16. Paving (2028) - Mitigated

3.17. Architectural Coating (2028) - Unmitigated

3.18. Architectural Coating (2028) - Mitigated

#### 4. Operations Emissions Details

#### 4.1. Mobile Emissions by Land Use

4.1.1. Unmitigated

4.1.2. Mitigated

#### 4.2. Energy

4.2.1. Electricity Emissions By Land Use - Unmitigated

4.2.2. Electricity Emissions By Land Use - Mitigated

4.2.3. Natural Gas Emissions By Land Use - Unmitigated

4.2.4. Natural Gas Emissions By Land Use - Mitigated

#### 4.3. Area Emissions by Source

4.3.1. Unmitigated

4.3.2. Mitigated

#### 4.4. Water Emissions by Land Use

4.4.1. Unmitigated

4.4.2. Mitigated

#### 4.5. Waste Emissions by Land Use

4.5.1. Unmitigated

4.5.2. Mitigated

#### 4.6. Refrigerant Emissions by Land Use

4.6.1. Unmitigated

4.6.2. Mitigated

#### 4.7. Offroad Emissions By Equipment Type

4.7.1. Unmitigated

4.7.2. Mitigated

#### 4.8. Stationary Emissions By Equipment Type

4.8.1. Unmitigated

4.8.2. Mitigated

#### 4.9. User Defined Emissions By Equipment Type

4.9.1. Unmitigated

4.9.2. Mitigated

#### 4.10. Soil Carbon Accumulation By Vegetation Type

4.10.1. Soil Carbon Accumulation By Vegetation Type - Unmitigated

4.10.2. Above and Belowground Carbon Accumulation by Land Use Type - Unmitigated

4.10.3. Avoided and Sequestered Emissions by Species - Unmitigated

4.10.4. Soil Carbon Accumulation By Vegetation Type - Mitigated

4.10.5. Above and Belowground Carbon Accumulation by Land Use Type - Mitigated

4.10.6. Avoided and Sequestered Emissions by Species - Mitigated

## 5. Activity Data

5.1. Construction Schedule

5.2. Off-Road Equipment

5.2.1. Unmitigated

5.2.2. Mitigated

5.3. Construction Vehicles

# 1. Basic Project Information

## 1.1. Basic Project Information

Data Field	Value
Project Name	New Sixth Appellate District Courthouse Project
Construction Start Date	12/1/2025
Operational Year	2028
Lead Agency	—
Land Use Scale	Project/site
Analysis Level for Defaults	County
Windspeed (m/s)	2.70
Precipitation (days)	32.8
Location	605 W El Camino Real, Sunnyvale, CA 94087, USA
County	Santa Clara
City	Sunnyvale
Air District	Bay Area AQMD
Air Basin	San Francisco Bay Area
TAZ	1750
EDFZ	1
Electric Utility	Pacific Gas & Electric Company
Gas Utility	Pacific Gas & Electric
App Version	2022.1.1.24

## 1.2. Land Use Types

Land Use Subtype	Size	Unit	Lot Acreage	Building Area (sq ft)	Landscape Area (sq ft)	Special Landscape Area (sq ft)	Population	Description
------------------	------	------	-------------	-----------------------	------------------------	--------------------------------	------------	-------------

Government Office Building	50.0	1000sqft	1.15	50,000	25,000	—	—	—
Parking Lot	50.0	Space	0.88	0.00	0.00	—	—	—

### 1.3. User-Selected Emission Reduction Measures by Emissions Sector

Sector	#	Measure Title
Energy	E-15	Require All-Electric Development

## 2. Emissions Summary

## 5.4. Vehicles

### 5.4.1. Construction Vehicle Control Strategies

Non-applicable. No control strategies activated by user.

## 5.5. Architectural Coatings

Phase Name	Residential Interior Area Coated (sq ft)	Residential Exterior Area Coated (sq ft)	Non-Residential Interior Area Coated (sq ft)	Non-Residential Exterior Area Coated (sq ft)	Parking Area Coated (sq ft)
Architectural Coating	0.00	0.00	75,000	25,000	2,305

## 5.6. Dust Mitigation

### 5.6.1. Construction Earthmoving Activities

Phase Name	Material Imported (cy)	Material Exported (cy)	Acres Graded (acres)	Material Demolished (Building Square Footage)	Acres Paved (acres)
Abatement and Demolition	0.00	0.00	0.00	45,000	—
Site Preparation	—	—	30.0	0.00	—
Grading	—	—	15.0	0.00	—
Paving	0.00	0.00	0.00	0.00	0.88

### 5.6.2. Construction Earthmoving Control Strategies

Non-applicable. No control strategies activated by user.

### 5.7. Construction Paving

Land Use	Area Paved (acres)	% Asphalt
Government Office Building	0.00	0%
Parking Lot	0.88	100%

### 5.8. Construction Electricity Consumption and Emissions Factors

#### kWh per Year and Emission Factor (lb/MWh)

Year	kWh per Year	CO2	CH4	N2O
2025	2.51	204	0.03	< 0.005
2026	2.51	204	0.03	< 0.005
2027	0.00	204	0.03	< 0.005
2028	0.00	204	0.03	< 0.005

### 5.9. Operational Mobile Sources

#### 5.9.1. Unmitigated

Land Use Type	Trips/Weekday	Trips/Saturday	Trips/Sunday	Trips/Year	VMT/Weekday	VMT/Saturday	VMT/Sunday	VMT/Year
Government Office Building	135	0.00	0.00	35,196	1,172	0.00	0.00	305,475
Parking Lot	0.00	0.00	0.00	0.00	0.00	0.00	0.00	0.00

### 5.9.2. Mitigated

Land Use Type	Trips/Weekday	Trips/Saturday	Trips/Sunday	Trips/Year	VMT/Weekday	VMT/Saturday	VMT/Sunday	VMT/Year
Government Office Building	135	0.00	0.00	35,196	1,172	0.00	0.00	305,475
Parking Lot	0.00	0.00	0.00	0.00	0.00	0.00	0.00	0.00

## 5.10. Operational Area Sources

### 5.10.1. Hearths

#### 5.10.1.1. Unmitigated

#### 5.10.1.2. Mitigated

### 5.10.2. Architectural Coatings

Residential Interior Area Coated (sq ft)	Residential Exterior Area Coated (sq ft)	Non-Residential Interior Area Coated (sq ft)	Non-Residential Exterior Area Coated (sq ft)	Parking Area Coated (sq ft)
0	0.00	75,000	25,000	2,305

### 5.10.3. Landscape Equipment

Season	Unit	Value
Snow Days	day/yr	0.00
Summer Days	day/yr	180

### 5.10.4. Landscape Equipment - Mitigated

Season	Unit	Value
Snow Days	day/yr	0.00
Summer Days	day/yr	180

## 5.11. Operational Energy Consumption

### 5.11.1. Unmitigated

#### Electricity (kWh/yr) and CO2 and CH4 and N2O and Natural Gas (kBTU/yr)

Land Use	Electricity (kWh/yr)	CO2	CH4	N2O	Natural Gas (kBTU/yr)
Government Office Building	1,058,432	204	0.0330	0.0040	1,187,515
Parking Lot	33,656	204	0.0330	0.0040	0.00

### 5.11.2. Mitigated

#### Electricity (kWh/yr) and CO2 and CH4 and N2O and Natural Gas (kBTU/yr)

Land Use	Electricity (kWh/yr)	CO2	CH4	N2O	Natural Gas (kBTU/yr)
Government Office Building	1,058,432	204	0.0330	0.0040	1,187,515
Parking Lot	33,656	204	0.0330	0.0040	0.00

## 5.12. Operational Water and Wastewater Consumption

### 5.12.1. Unmitigated

Land Use	Indoor Water (gal/year)	Outdoor Water (gal/year)
Government Office Building	9,932,984	267,261
Parking Lot	0.00	0.00

### 5.12.2. Mitigated

Land Use	Indoor Water (gal/year)	Outdoor Water (gal/year)
Government Office Building	9,932,984	267,261
Parking Lot	0.00	0.00

## 5.13. Operational Waste Generation

### 5.13.1. Unmitigated

Land Use	Waste (ton/year)	Cogeneration (kWh/year)
Government Office Building	46.5	—
Parking Lot	0.00	—

### 5.13.2. Mitigated

Land Use	Waste (ton/year)	Cogeneration (kWh/year)
Government Office Building	46.5	—
Parking Lot	0.00	—

## 5.14. Operational Refrigeration and Air Conditioning Equipment

### 5.14.1. Unmitigated

Land Use Type	Equipment Type	Refrigerant	GWP	Quantity (kg)	Operations Leak Rate	Service Leak Rate	Times Serviced
Government Office Building	Household refrigerators and/or freezers	R-134a	1,430	0.02	0.60	0.00	1.00
Government Office Building	Other commercial A/C and heat pumps	R-410A	2,088	< 0.005	4.00	4.00	18.0

### 5.14.2. Mitigated

Land Use Type	Equipment Type	Refrigerant	GWP	Quantity (kg)	Operations Leak Rate	Service Leak Rate	Times Serviced
Government Office Building	Household refrigerators and/or freezers	R-134a	1,430	0.02	0.60	0.00	1.00
Government Office Building	Other commercial A/C and heat pumps	R-410A	2,088	< 0.005	4.00	4.00	18.0

### 5.15. Operational Off-Road Equipment

#### 5.15.1. Unmitigated

Equipment Type	Fuel Type	Engine Tier	Number per Day	Hours Per Day	Horsepower	Load Factor
----------------	-----------	-------------	----------------	---------------	------------	-------------

#### 5.15.2. Mitigated

Equipment Type	Fuel Type	Engine Tier	Number per Day	Hours Per Day	Horsepower	Load Factor
----------------	-----------	-------------	----------------	---------------	------------	-------------

### 5.16. Stationary Sources

#### 5.16.1. Emergency Generators and Fire Pumps

Equipment Type	Fuel Type	Number per Day	Hours per Day	Hours per Year	Horsepower	Load Factor
Emergency Generator	Diesel	1.00	2.00	100	100	0.73

#### 5.16.2. Process Boilers

Equipment Type	Fuel Type	Number	Boiler Rating (MMBtu/hr)	Daily Heat Input (MMBtu/day)	Annual Heat Input (MMBtu/yr)

#### 5.18.1.2. Mitigated

Biomass Cover Type	Initial Acres	Final Acres
--------------------	---------------	-------------

### 5.18.2. Sequestration

#### 5.18.2.1. Unmitigated

Tree Type	Number	Electricity Saved (kWh/year)	Natural Gas Saved (btu/year)
-----------	--------	------------------------------	------------------------------

#### 5.18.2.2. Mitigated

Tree Type	Number	Electricity Saved (kWh/year)	Natural Gas Saved (btu/year)
-----------	--------	------------------------------	------------------------------

## 6. Climate Risk Detailed Report

### 6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit
Temperature and Extreme Heat	11.6	annual days of extreme heat
Extreme Precipitation	3.80	annual days with precipitation above 20 mm
Sea Level Rise	—	meters of inundation depth
Wildfire	0.00	annual hectares burned

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about ¾ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (Radke et al., 2017, CEC-500-2017-008), and consider inundation location and depth for the San Francisco Bay, the Sacramento-San Joaquin River Delta and California coast resulting different increments of sea level rise coupled with extreme storm events. Users may select from four scenarios to view the range in potential inundation depth for the grid cell. The four scenarios are: No rise, 0.5 meter, 1.0 meter, 1.41 meters

Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

### 6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	N/A	N/A	N/A	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	N/A	N/A	N/A	N/A
Wildfire	N/A	N/A	N/A	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A

Air Quality Degradation	N/A	N/A	N/A	N/A
-------------------------	-----	-----	-----	-----

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.

The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.

The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

### 6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	N/A	N/A	N/A	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	N/A	N/A	N/A	N/A
Wildfire	N/A	N/A	N/A	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	N/A	N/A	N/A	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.

The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.

The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

### 6.4. Climate Risk Reduction Measures

## 7. Health and Equity Details

### 7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Exposure Indicators	—

AQ-Ozone	16.8
AQ-PM	14.3
AQ-DPM	77.4
Drinking Water	41.1
Lead Risk Housing	63.1
Pesticides	0.00
Toxic Releases	34.4
Traffic	62.6
Effect Indicators	—
CleanUp Sites	51.6
Groundwater	86.9
Haz Waste Facilities/Generators	85.8
Impaired Water Bodies	0.00
Solid Waste	0.00
Sensitive Population	—
Asthma	9.06
Cardio-vascular	15.9
Low Birth Weights	79.2
Socioeconomic Factor Indicators	—
Education	33.9
Housing	37.5
Linguistic	68.4
Poverty	8.98
Unemployment	11.9

## 7.2. Healthy Places Index Scores

The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Economic	—
Above Poverty	76.8766842
Employed	86.15424099
Median HI	89.70871295
Education	—
Bachelor's or higher	83.65199538
High school enrollment	100
Preschool enrollment	81.47055049
Transportation	—
Auto Access	52.22635699
Active commuting	73.21955601
Social	—
2-parent households	72.37264211
Voting	93.28884897
Neighborhood	—
Alcohol availability	44.41165148
Park access	81.35506224
Retail density	79.49441807
Supermarket access	53.16309509
Tree canopy	79.27627358
Housing	—
Homeownership	51.14846657
Housing habitability	61.26010522
Low-inc homeowner severe housing cost burden	40.04876171
Low-inc renter severe housing cost burden	50.01924804
Uncrowded housing	60.05389452

Health Outcomes	—
Insured adults	94.43089953
Arthritis	55.6
Asthma ER Admissions	86.5
High Blood Pressure	45.3
Cancer (excluding skin)	30.9
Asthma	88.8
Coronary Heart Disease	63.8
Chronic Obstructive Pulmonary Disease	81.8
Diagnosed Diabetes	65.9
Life Expectancy at Birth	78.8
Cognitively Disabled	60.3
Physically Disabled	67.1
Heart Attack ER Admissions	80.7
Mental Health Not Good	87.0
Chronic Kidney Disease	64.9
Obesity	84.3
Pedestrian Injuries	19.6
Physical Health Not Good	81.0
Stroke	75.8
Health Risk Behaviors	—
Binge Drinking	76.5
Current Smoker	88.4
No Leisure Time for Physical Activity	74.8
Climate Change Exposures	—
Wildfire Risk	0.0
SLR Inundation Area	0.0

Children	33.8
Elderly	45.9
English Speaking	35.2
Foreign-born	71.5
Outdoor Workers	47.6
Climate Change Adaptive Capacity	—
Impervious Surface Cover	32.7
Traffic Density	42.7
Traffic Access	70.1
Other Indices	—
Hardship	25.9
Other Decision Support	—
2016 Voting	93.4

### 7.3. Overall Health & Equity Scores

Metric	Result for Project Census Tract
CalEnviroScreen 4.0 Score for Project Location (a)	31.0
Healthy Places Index Score for Project Location (b)	91.0
Project Located in a Designated Disadvantaged Community (Senate Bill 535)	No
Project Located in a Low-Income Community (Assembly Bill 1550)	No
Project Located in a Community Air Protection Program Community (Assembly Bill 617)	No

a: The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

b: The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

### 7.4. Health & Equity Measures

No Health & Equity Measures selected.

### 7.5. Evaluation Scorecard

Health & Equity Evaluation Scorecard not completed.

## 7.6. Health & Equity Custom Measures

No Health & Equity Custom Measures created.

## 8. User Changes to Default Data

Screen	Justification
Land Use	Parking lot acreage adjusted so total project disturbance area matches site plan. Landscape area assumed to be equal to footprint of building.
Construction: Construction Phases	Construction phase timing adjusted per project description.
Construction: Demolition	demolition material includes on-site building and parking areas.
Operations: Emergency Generators and Fire Pumps	Emergency generator added, assumed to operate for up to 100 hours per year for emergencies, as well as maintenance and testing.
Construction: Off-Road Equipment	Demolition: Abatement equipment (wet vacuum pumps) added during the Demolition/Abatement phase, and hours of use adjusted to reflect asbestos abatement vs active demolition. Grading: The project site is built out and required grading will be minimal. Accordingly, six hours of equipment use per day was assumed. Building Construction: Based on the size of the proposed building and the duration of the construction phase, forklifts, cranes, and generator set were assumed to operate for half of the period, or four hours per day.
Construction: Trips and VMT	Demolition waste trip length adjusted based on the location of regional landfills.
Operations: Vehicle Data	Weekday trip generation rate updated with project-specific data (135 average vehicle trips per day)

# **APPENDIX B**

PAGE 1

\*\*\* MODELOPTs: CONC ELEV URBAN ADJ\_U\*

\*\*\* MODEL SETUP

OPTIONS SUMMARY \*\*\*

-----  
-----

\*\* Model Options Selected:

\* Model Allows User-Specified Options  
\* Model Is Setup For Calculation of Average CONCentration  
Values.

\* NO GAS DEPOSITION Data Provided.  
\* NO PARTICLE DEPOSITION Data Provided.  
\* Model Uses NO DRY DEPLETION. DDPLETE = F  
\* Model Uses NO WET DEPLETION. WETDPLT = F  
\* Stack-tip Downwash.  
\* Model Accounts for ELEVated Terrain Effects.  
\* Use Calms Processing Routine.  
\* Use Missing Data Processing Routine.  
\* No Exponential Decay.  
\* Model Uses URBAN Dispersion Algorithm for the SBL for  
1 Source(s),

for Total of 1 Urban Area(s):  
Urban Population = 153091.0 ; Urban Roughness Length =  
1.000 m

\* Urban Roughness Length of 1.0 Meter Used.  
\* ADJ\_U\* - Use ADJ\_U\* option for SBL in AERMET  
\* CCVR\_Sub - Meteorological data includes CCVR  
substitutions  
\* TEMP\_Sub - Meteorological data includes TEMP  
substitutions  
\* Model Assumes No FLAGPOLE Receptor Heights.  
\* The User Specified a Pollutant Type of: PM\_10

\*\*Model Calculates 1 Short Term Average(s) of: 1-HR  
and Calculates ANNUAL Averages

\*\*This Run Includes: 1 Source(s); 1 Source Group(s);  
and 7204 Receptor(s)

with: 0 POINT(s), including  
0 POINTCAP(s) and 0 POINTHOR(s)  
and: 0 VOLUME source(s)  
and: 1 AREA type source(s)  
and: 0 LINE source(s)

and: 0 RLINE/RLINEXT source(s)  
and: 0 OPENPIT source(s)  
and: 0 BUOYANT LINE source(s) with a total  
of 0 line(s)  
and: 0 SWPOINT source(s)

\*\*Model Set To Continue RUNNING After the Setup Testing.

\*\*The AERMET Input Meteorological Data Version Date: 18081

\*\*Output Options Selected:

Model Outputs Tables of ANNUAL Averages by Receptor  
Model Outputs Tables of Highest Short Term Values by  
Receptor (RECTABLE Keyword)  
Model Outputs External File(s) of High Values for  
Plotting (PLOTFILE Keyword)  
Model Outputs Separate Summary File of High Ranked  
Values (SUMMFILE Keyword)

\*\*NOTE: The Following Flags May Appear Following CONC Values:  
c for Calm Hours

m for Missing Hours

b for Both Calm and Missing Hours

\*\*Misc. Inputs: Base Elev. for Pot. Temp. Profile (m MSL) =  
15.50 ; Decay Coef. = 0.000 ; Rot. Angle = 0.0  
Emission Units =  
GRAMS/SEC ; Emission Rate Unit  
Factor = 0.10000E+07  
Output Units = MICROGRAMS/M\*\*3

\*\*Approximate Storage Requirements of Model = 4.3 MB of  
RAM.

\*\*Input Runstream File: aermod.inp  
\*\*Output Print File: aermod.out

\*\*Detailed Error/Message File: SunnyvaleCourthouse.err  
\*\*File for Summary of Results: SunnyvaleCourthouse.sum
