INTRODUCTION

The technical appendices for the New Quincy Courthouse Draft Environmental Impact Report (EIR) are presented in two volumes. This document is Appendices Volume 2 of the Draft EIR.

Volume 1 presents the following appendices:

Appendix A. Notice of Preparation and Public Scoping Comments

Appendix B. Air Quality and GHG Emissions Calculations

Appendix C. Biological Resources Report

Appendix D. Historical Resources Study & Archaeological Resources Report

Appendix E. Geotechnical Engineering and Geohazard Study

Volume 2 presents the following appendices:

Appendix F. Phase I Environmental Site Assessment

Appendix G. Hazardous Building Material Survey

Appendix H. CEQA Transportation Analysis Memo

Page intentionally left blank.

APPENDIX F

Phase I Environmental Site Assessment

Subject: PHASE I ENVIRONMENTAL SITE ASSESSMENT REPORT
253, 287, AND 293 LAWRENCE STREET
QUINCY, PLUMAS COUNTY, CALIFORNIA

Ms. Coatsworth:

In accordance with Ascent Environmental, Inc.'s (Ascent) *Subconsultant Agreement* executed on May 2, 2023, Geocon Consultants, Inc. has performed a Phase I Environmental Site Assessment (ESA) of the contiguous properties and their improvements (the Site) at 253, 287, and 293 Lawrence Street in Quincy, Plumas County, California. The enclosed report describes the Phase I ESA and presents our findings, opinions, and conclusions.

We performed the Phase I ESA for Ascent to assess the Site for the potential presence of recognized environmental conditions (REC) as defined by ASTM International (ASTM) *Designation E 1527-21, Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process*. The Code of Federal Regulations (CFR) *Standards and Practices for All Appropriate Inquiries* (AAI; CFR Title 40, Part 312) identifies ASTM *Designation E 1527-21* as an acceptable guidance document for performing a Phase I ESA that satisfies the federal requirements for AAI under Sections 101(35)(B)(ii) and (iii) of the Comprehensive Environmental Response, Compensation, and Liability Act. Ascent requested the Phase I ESA on behalf of the Judicial Council of California (JCC) as part of the JCC's environmental due diligence prior to potentially purchasing the Site and redeveloping it with a new courthouse for Plumas County.

We appreciate the opportunity to have performed this Phase I ESA for Ascent and the JCC. Please contact us if you have any questions concerning the report and our findings or if we may be of further service.

Sincerely,

GEOCON CONSULTANTS, INC.

Kristopher Williams, GIT
Staff Geologist

Jim Brake, PG
Senior Geologist

PHASE I ENVIRONMENTAL SITE ASSESSMENT REPORT

1.0 INTRODUCTION

Geocon Consultants, Inc. (Geocon) has performed a Phase I Environmental Site Assessment (ESA) of three contiguous properties and their improvements (the Site) at 253, 287, and 293 Lawrence Street in Quincy, California. We performed the Phase I ESA for Ascent Environmental, Inc. (Ascent; the Client) to assess the Site for the potential presence of recognized environmental conditions (REC) pursuant to guidelines established by ASTM International (ASTM) Designation E 1527-21 - *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process.* Ascent requested the Phase I ESA on behalf of the Judicial Council of California (JCC) as part of the JCC's environmental due diligence prior to potentially purchasing the Site and redeveloping it with a new courthouse for the Superior Court of California, County of Plumas (Plumas County Superior Court).

This report describes the Phase I ESA methodology and presents our findings, opinions, and conclusions. The report is organized as follows:

- Section 1.0 describes the purpose and objectives of the Phase I ESA, defines terms, and describes the Phase I ESA services, limitations, and identified data gaps;
- Section 2.0 describes the Site's physical setting and conditions;
- Section 3.0 summarizes information provided by Ascent as the "user" of the Phase I ESA;
- Section 4.0 summarizes readily available records for the Site and surrounding properties that we obtained from regulatory and administrative agencies and other sources;
- Section 5.0 describes the historical use of the Site and surrounding area ascertained from historical records and information sources;
- Section 6.0 describes the Site and surrounding properties and facilities from our observations during the Site reconnaissance;
- Section 7.0 summarizes information obtained from interviews of persons familiar with the Site;
- Section 8.0 presents our findings and conclusions regarding RECs and recommendations for further environmental assessment, if any;
- Section 9.0 lists the references cited in this Phase I ESA report; and
- Section 10.0 provides a qualifications statement from the environmental professional responsible for the Phase I ESA and report.

1.1 Purpose and Definitions

The purpose of the Phase I ESA was to identify evidence or indications of RECs, or other qualified RECs, at the Site as defined by ASTM Designation E 1527-21 and/or any potential environmental concerns. ASTM *Designation E 1527-21* defines an REC as "(1) the presence of hazardous substances or petroleum products in, on, or at the subject property due to a release to the environment; (2) the likely presence of

hazardous substances or petroleum products in, on, or at the subject property due to a release or likely release to the environment; or (3) the presence of hazardous substances or petroleum products in, on, or at the subject property under conditions that pose a material threat of a future release to the environment. A de minimis condition is not a recognized environmental condition." De minimis conditions are further described as "a condition related to a release that generally does not present a threat to human health or the environment and that generally would not be the subject of the enforcement action if brought to the attention of appropriate governmental agencies. A condition determined to be a de minimis condition is not a recognized environmental condition nor a controlled recognized environmental condition."

ASTM *Designation E1527-21* also defines "historical" and "controlled" RECs (HREC and CREC, respectively). An HREC is defined as "a previous release of hazardous substances or petroleum products affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority or authorities and meeting unrestricted use criteria established by the applicable regulatory authority or authorities without subjecting the subject property to any controls (for example, activity and use limitations or other property use limitations)." A CREC is defined as "recognized environmental condition affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority or authorities with hazardous substances or petroleum products allowed to remain in place subject to implementation of required controls (for example, activity and use limitations or other property use limitations)." An HREC is generally not an REC if a property meets current standards for unrestricted residential use. A CREC remains an REC by definition when a property does not meet the unrestricted residential use requirement unconditionally.

We define a "potential environmental concern" as a past use of the Site or adjoining or adjacent property that may have involved the use, storage, and/or release of hazardous substances or petroleum products that could have impacted the Site, but for which there are no records or other information to confirm that use, storage, or release. An example would be the possible application of pesticides to an agricultural field (i.e., irrigated row crop or orchard), but for which there are no records of such application or confirmation from a knowledgeable person (i.e., site owner/occupant/operator) that pesticides were used at the Site.

The Code of Federal Regulations (CFR) *Standards and Practices for All Appropriate Inquiries* (AAI; CFR Title 40, Part 312) identifies ASTM *Designation E 1527-21* as an acceptable guidance document for performing a Phase I ESA that satisfies the federal requirements for AAI under Sections 101(35)(B)(ii) and (iii) of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). The purpose of AAI is to meet some of the requirements to qualify for certain landowner liability protections under CERCLA. A title company or other real estate professional should search for recorded environmental cleanup liens (if any) as required by CFR Title 40 312.25 as a search for those records is not part of our services for a Phase I ESA.

1.2 Phase I ESA Principles

The following principles are an integral part of ASTM *Designation E1527-21*:

- "**Uncertainty Not Eliminated** - No environmental site assessment can wholly eliminate uncertainty regarding the potential for recognized environmental conditions in connection with a subject property. Performance of this practice is intended to reduce, but not eliminate, uncertainty regarding the potential for recognized environmental conditions in connection with a subject property, and this practice recognizes reasonable limits of time and cost."
- "**Not Exhaustive** - All Appropriate Inquiries does not mean an exhaustive assessment of a property. There is a point at which the cost of information obtained or the time required to gather it outweighs the usefulness of the information and, in fact, may be a material detriment to the orderly completion of transactions. One of the purposes of this practice is to identify a balance between the competing goals of limiting the costs and time demands inherent in performing an environmental site assessment and the reduction of uncertainty about unknown conditions resulting from additional information."
- "**Level of Inquiry is Variable** - Not every property will warrant the same level of assessment. Consistent with good commercial and customary standards and practices as defined at 42 U.S.C. § 9601(35)(B), the appropriate level of environmental site assessment will be guided by the type of property subject to assessment, the expertise and risk tolerance of the user, future intended uses of the subject property disclosed to the environmental professional, and the information developed in the course of the inquiry."
- **"Comparison with Subsequent Inquiry** - It should not be concluded or assumed that an inquiry was not all appropriate inquiries merely because the inquiry did not identify recognized environmental conditions in connection with a subject property. Environmental site assessments must be evaluated based on the reasonableness of judgments made at the time and under the circumstances in which they were made. Subsequent environmental site assessments should not be considered valid standards to judge the appropriateness of any prior assessment based on hindsight, new information, use of developing technology or analytical techniques, or other factors."
- **"Point in Time** - The environmental site assessment is based upon conditions at the time of completion of the individual environmental site assessment elements." The following table lists the Phase I ESA elements and the date they were completed:

Phase I ESA Element	Report Section	Completion Date
Physical Setting Resources	2.0	May 31, 2023
User's Responsibilities	3.0	May 26, 2023
Government Records	4.0	May 31, 2023
Historical Records	5.0	May 31, 2023
Site Reconnaissance	6.0	May 11, 2023
Owner/Operator/Occupant Interviews	7.0	May 11, 2023
Local Government Official Interviews	4.0	May 3, 2023
Evaluation and Report	8.0	March 31, 2023

Therefore, the information contained herein is valid as of May 11, 2023, and will require an update after 180 days to reflect updated records and another site reconnaissance to assess current site conditions.

1.3 Scope of Services

Our proposal number LS-23-71 dated March 17, 2023, describes our Phase I ESA services. We performed the services as outlined in our proposal. The main components of a Phase I ESA and their objectives, as specified by the referenced standards, include the following:

- **Physical Setting:** We reviewed various references to obtain information concerning the topographic, geologic, and hydrologic/hydrogeologic characteristics of the Site and vicinity. Such information may be indicative of the direction and/or extent that a contaminant could be transported in the event of a spill or release on or near the Site.
- **Records Review:** We reviewed publicly available federal, state, and local regulatory agency records to obtain information that could potentially help identify RECs at or potentially affecting the Site.
- **Site History:** We reviewed historical information sources to assess previous uses of the Site and surrounding area and identify those that could have led to RECs on the Site. Those information sources included Sanborn Fire Insurance maps (Sanborn maps), historical aerial photographs, topographic maps, and city directories. In addition, we conducted interviews with persons who were expected to be reasonably knowledgeable about historical and/or current uses and conditions at of the Site.
- **Site Reconnaissance:** We performed a site reconnaissance to observe site uses and conditions for evidence or indications of RECs. We viewed adjoining and adjacent offsite properties and features solely from the vantage of the Site and public thoroughfares.

1.4 Report Limitations

We prepared this Phase I ESA report exclusively for Ascent and the JCC. The information obtained is only relevant for the latest of the dates of the records reviewed, the latest site visit, and completion of interviews with governmental officials and/or site owner(s), occupant(s), and/or operator(s) as cited in Section 1.2.

Ascent and the JCC should recognize that a Phase I ESA is not a comprehensive site characterization and should not be construed as such. The findings and conclusions presented in this report are predicated on the site reconnaissance, information in the specified regulatory records, and information regarding the historical usage of the Site, as presented in this report. Ascent and the JCC should also understand that we did not assess the Site for wetlands or perform testing (sample collection and laboratory analysis) for asbestos-containing building materials, lead-containing paint, lead in drinking water, radon, mercury and other contaminants related to mining, methane, mold, per- and polyfluoroalkyl substances, or potential naturally occurring hazards such as asbestos and arsenic as part of this Phase I ESA. The Phase I ESA did not include sample collection and laboratory analysis, nor did it include the evaluation of regulatory compliance, cultural and historical resources, industrial hygiene, health and safety, ecological resources, endangered species, air quality or geologic hazards. The information provided in this report is not meant

to eliminate the risk involved in property transactions. No guarantee or warranty of the results of the Phase I ESA is implied within the intent of this report or any subsequent reports, correspondence, or consultation, either express or implied. We strived to conduct the services summarized herein in accordance with the local standard of care in the geographic region at the time the services were rendered.

1.5 Data Gaps and Significant Data Gaps

A data gap is defined by ASTM *Designation E 1527-21* as "a lack of or inability to obtain information required by this practice despite good faith efforts by the environmental professional to gather such information." Data gaps could include such things as insufficient historical information, the inability to interview persons with direct site knowledge (e.g., the owner(s), past owner(s), tenants, workers, etc.) or the lack of access to all parts of a site during the site reconnaissance. We identified no data gaps during this Phase I ESA.

A "significant" data gap is defined by ASTM Designation E 1527-21 as "a data gap that affects the ability of the environmental professional to identify a recognized environmental condition." These data gaps are only significant if "other information and/or professional experience raises reasonable concerns involving the effects of that data gap on the ability of the environmental professional to render an opinion regarding whether conditions exist that are indicative of recognized environmental conditions or controlled recognized environmental conditions." We identified no significant data gaps during this Phase I ESA.

2.0 SITE DESCRIPTION

This section describes the location and physical characteristics of the Site including its size, topography, geologic, soil, and hydrogeologic conditions.

2.1 Location and Legal Description

The Site is located at 253, 287, and 293 Lawrence Street in Quincy, California. The Site is situated along the northern side of State Routes (SR) 70/89 (Figure 1).

Within the Public Land Survey System of California, the Site is in the southern half of Section 14, Township 24 North, Range 9 East, Mount Diablo Base and Meridian.

The Site is identified by Plumas County assessor's parcel numbers 115-031-052, 115-031-054, and 115-031-055. A parcel map depicting the Site is in Appendix A.

2.2 Site and Vicinity General Characteristics

The approximate 2.86-acre Site is developed with three commercial buildings. The Site is surrounded by commercial and residential development (Figure 2).

2.2.1 Topography

The Site is located in the generally flat-lying American Valley surrounded by mountainous terrain of the northern Sierra Nevada. Elevations on the Site range from approximately 3,415 feet above mean sea level (MSL) in the northwestern portion of the Site to approximately 3,424 feet above MSL in the southern portion (USGS, 2022). The surrounding land surface slopes very gently to the north toward the bottom of the American Valley where Spanish Creek flows through from the west to the east and northeast.

2.2.2 Geologic Conditions

We obtained site geologic information from a variety of sources including:

- *California Geology* (Harden, 2003);
- *Note 36, California Geomorphic Provinces* (California Geological Survey [CGS], 2002); and
- *Geologic Map of the Chico Quadrangle, California* (California Division of Mines and Geology [CDMG], 1992).

Following are summaries of pertinent information obtained.

2.2.2.1 Geomorphic Region

The Site is located in the northern portion of the Sierra Nevada geomorphic province of California. The Sierra Nevada is an approximately 400-mile-long tilted fault block mountain range. The eastern side of the Sierra Nevada range is characterized by high-elevation, rugged, mountainous terrain with a steep eastern escarpment, while the western side of the range slopes more gently to the west toward the Great Valley. The northern Sierra Nevada crest and surrounding mountains also generally decrease in elevation from south to north with peak elevations of over 14,000 feet in the southern portion of the range to less than 8,000 feet in the northern portion where the Site is located. The Sierra Nevada is bounded by the Great Valley to the west, the Cascade Range to the north, the Mojave Desert to the south, and the Basin and Range to the east (CGS, 2002; Harden, 2003).

2.2.2.2 Geologic Formations/Stratigraphy

The referenced geologic map indicates that the Site is underlain by Quaternary Lake deposits (map symbol Ql), which typically consists of interlayered, interbedded clay, silt, and fine sand (CDMG, 1992).

2.2.3 Soil Conditions

The United States Department of Agriculture – Natural Resources Conservation Service *Web Soil Survey* (http://websoilsurvey.nrcs.usda.gov/app/WebSoilSurvey.aspx) indicates that surficial soil on the Site is primarily classified as:

- **Forgay-Urban land complex**: stratified extremely gravelly coarse sandy loam; and
- **Keddie loam**: clay loam to sandy loam formed in alluvium.

The urban land classification indicates soil that is likely altered by grading and excavation for, and largely covered by, development.

2.2.4 Hydrologic and Hydrogeologic Conditions

There are no surface water bodies on the Site. The nearest surface water is in an unnamed drainage ditch adjacent to the east of the Site. We observed water in this ditch flowing north during the site reconnaissance. The nearest named surface water body is Clear Stream, a partially channelized, partially natural stream approximately 1,500 feet north of the Site that flows east-northeast to Spanish Creek, which is approximately 2,200 feet north of the Site.

Site-specific groundwater information is not available. Stantec Consulting Services, Inc.'s (Stantec) *First Quarter 2013 Groundwater Monitoring Report, Former Tosco Bulk Plant No. 0620, 180 and 197 Andy's Way, Quincy, California*, dated April 19, 2013, (for the former Tosco Bulk Plant approximately 970 feet west of the Site) available on the State Water Resources Control Board's (SWRCB) GeoTracker online data management system (http://geotracker.waterboards.ca.gov), indicates that depth to groundwater in groundwater monitoring wells MW-9, MW-4, and MW-3 located approximately 782, 825 and 812 west of the Site, respectively, was 9.27, 9.20, and 8.50 feet, respectively, in February 2013.

Environmental Compliance Group, LLC's Third Quarter 2019 Groundwater Monitoring Report, Fuel Star 76, 106 Crescent Street, Quincy, California, dated October 31, 2019, also available on GeoTracker, indicates that depth to groundwater in groundwater monitoring wells MW-1 and MW-3 located approximately 1,400 and 1,455 feet west of the Site, respectively, was 11.04 and 11.44 feet, respectively, in September 2019.

Groundwater elevations in the wells at both properties show variable groundwater flow directions, but more commonly to the northeast toward the lower-lying portions of American Valley (Stantec, 2013; Environmental Compliance Group, 2019).

2.3 Current and Planned Uses of the Site

The Site is currently occupied by the Quincy Paint Center and The2Mic at 293 and 295 Lawrence Street, Feather Publishing Co., Inc. at 287 Lawrence Street, and recreational trailer and boat storage at 253 Lawrence Street. We understand that the JCC potentially plans to purchase the Site and redevelop it with a new Plumas County Superior Court.

2.4 Descriptions of Structures, Roads, Other Improvements on the Site

The Site is developed with three commercial buildings with paved parking areas around the structures in the southern and central portions of the Site. The northwestern and northern portions of the Site are unpaved and used for recreational trailer and boat storage. A 150-gallon propane above-ground storage tank (AST)

is on the northern side of the 253 Lawrence Street structure, a 500-gallon propane AST is adjacent to the northeast of the 287 Lawrence Street structure, and 200-gallon and 120-gallon kerosene ASTs are inside the 293 and 295 Lawrence Street structure and outside the western side of this structure, respectively. Chain-link fencing is present along the eastern site boundary and a wooden fence is present along the western site boundary. Further description of site conditions and improvements is provided in Section 6.0.

2.5 Current Uses of Adjoining and Adjacent Properties

Buildings associated with an inactive, former wastewater treatment plant are on the adjacent property north of the Site beyond a bike path (former railroad alignment). Single-family residences and commercial businesses are on adjacent properties east of the Site beyond North Church Street. Commercial businesses and a veteran's hall are on adjacent properties south of the Site beyond Lawrence Street. Single-family residential properties on Summerfield Lane are adjoining to the west of the northern portion of the Site and also adjoining to the west of the central and southern portions of the Site.

3.0 USER–PROVIDED INFORMATION

This section summarizes information regarding the Site that Patrick Morrison with the JCC (the "user" of this Phase I ESA) provided to us. We provided Mr. Morrison with user questionnaires regarding the past and present uses of the 287 Lawrence Street and 253 & 295 Lawrence Street portions of the Site and the potential for RECs related to the use, storage, or disposal of hazardous substances and/or petroleum products on the Site. Copies of the user questionnaires are in Appendix B.

3.1 Title, Appraisal and Sale Agreement Records

The JCC provided us with *Preliminary Reports* regarding the titles (title reports) for the Site prepared by Stewart Title and dated March 31, 2023. The *Preliminary Reports* note no items indicating or suggesting impacts to the environmental conditions of the Site.

3.2 Environmental Liens or Activity and Use Limitations

Mr. Morrison indicated that he is not aware of any environmental liens or activity use limitations for the Site.

3.3 Specialized Knowledge

Mr. Morrison indicated that he has no specialized knowledge regarding the Site or its past or current uses that could potentially impair, or could have impaired, the environmental conditions of the Site. We also asked Mr. Morrison if he had knowledge of legal or administrative proceedings involving the Site and he indicated that he did not.

3.4 Commonly Known or Reasonably Ascertainable Information

Mr. Morrison indicated that he is aware the current and past uses of the Site is commercial.

3.5 Valuation Reduction for Environmental Issues

Mr. Morrison indicated that he is not aware of any environmental conditions on the Site that could lead to a potential valuation reduction for the Site.

3.6 Owner, Property Manager, and Occupant Information

The *Preliminary Reports* indicate that the 287 Lawrence Street portion of the Site is owned by Keith C. Brown and Susan L. Brown, husband and wife as community property, with the right of supervisorship; and the 253 & 295 Lawrence Street portions of the Site are owned by William C. Seibold and Jennifer L. Seibold, Trustees of the William C. Seibold and Jennifer L. Seibold Trust. We provided Mr. Brown, Mr. Seibold, and the tenants of the 295 Lawrence Street portion of the Site with owner/occupant questionnaires. Information from the questionnaires are summarized in Section 7.0.

3.7 Reason for Performing Phase I ESA

Ascent requested the Phase I ESA on behalf of the JCC as part of the JCC's environmental due diligence prior to potentially purchasing the Site and redeveloping it with a new Plumas County Superior Court.

3.8 Previous Documents

We also asked Mr. Morrison if he knew of previous environmental reports or documents that may exist and, if so, whether copies could be provided. He indicated that he did not.

4.0 RECORDS REVIEW

This section summarizes information we obtained from readily available agency records pertaining to the Site and properties and facilities in the vicinity of the Site.

4.1 Standard Environmental Record Sources

Environmental Data Resources, LLC. (EDR) searched federal, state, and local environmental databases for listings pertaining to the Site and properties/facilities within one mile of the Site. The following table shows the databases that list the Site and/or offsite properties/facilities and the total number of listed properties/facilities for each database. Databases that list no properties/facilities within one mile of the Site are not included in the table. A copy of *The EDR Radius Map Report with Geocheck* (radius report), dated May 3, 2023, is in Appendix C.

Database Name	Search Radius (Miles)	Number of Listings
FEDERAL DATABASES		
Superfund Enterprise Management System (SEMS)	0.5	1
SEMS-ARCHIVE	0.5	2
Resource Conservation and Recovery Act [RCRA] - Small Quantity Generator (SQG)	0.25	1
STATE, LOCAL, AND TRIBAL DATABASES		
Department of Toxic Substances Control [DTSC] Site Mitigation and Brownfields Reuse Program (ENVIROSTOR)	1.0	1
Leaking Underground Storage Tank (LUST)	0.5	21
Cleanup Program Sites - Spills, Leaks, Investigations, and Cleanup sites (CPS-SLIC)	0.5	5
Underground Storage Tanks (UST)	0.25	3
Aboveground Storage Tanks (AST)	0.25	6
ADDITIONAL ENVIRONMENTAL RECORDS		
California Environmental Protection Agency's [CalEPA] California Environmental Reporting System (CERS HAZ WASTE)	0.25	4
Statewide Environmental Evaluation and Planning System (SWEEPS UST)	0.25	11
Hazardous Substance Storage Container Database (HIST UST)	0.25	24
California Environmental Reporting Systems (CERS TANKS)	0.25	2
Deed Restriction Listing (DEED)	0.5	3
RCRA – Non-Generators / No Longer Regulated (NonGen/NLR)	0.25	20*
Mines Master Index File (US MINES)	0.25	1
ABANDONED MINES	0.25	1
Facility Index System/Facility Registry System (FINDS)	0.001	2*
Enforcement & Compliance History Information (ECHO)	0.001	1*

Facility Manifest Data (HAZNET)	0.001	1*
Historical Hazardous Waste & Substance Site List (HIST CORTESE)	0.5	9
Proposition 65 Records (Notify 65)	1.0	1
California Environmental Protection Agency's [CalEPA] CalEPA Regulated Site Portal Data (CERS)	0.001	1
EDR HIGH RISK HISTORICAL RECORDS		
EDR Exclusive Dry Cleaners (EDR Hist Cleaner)	0.125	2
* Site is listed		

4.1.1 Site

The Feather Publishing Co., Inc. is listed for the 287 Lawrence Street site address on the RCRA NonGen/NLR, HAZNET, ECHO, FINDS, and HWTS databases. The RCRA NonGen/NLR, HWTS, and ECHO databases list this business as a newspaper publisher. The other databases provide no information pertaining to this business.

4.1.2 Offsite Properties

Six properties within 1/8 mile of the Site are listed on various non-release-related databases[1], and therefore, are unlikely to have caused an REC at the Site. Following are summaries of information for properties/facilities within 1/8 mile of the Site (or within ¼ mile for Leaking Underground Storage Tank [LUST] cases) that are listed on one or more release-related databases or databases that indicate or suggest the storage and use of petroleum products and/or hazardous substances (and therefore may have had the potential for a release), the status of their listings, and their potential, if any, to cause (or have caused) an REC at the Site.

Business	Address	Approximate Distance from the Site	Database	Pertinent Information/Potential to Cause an REC at the Site
Quincy Readymix Concretes/E.H. Orr DBA Quincy Readymix	307 Lawrence Street	O feet west (adjoining property; cross-gradient)	SWEEPS UST and HIST UST	The SWEEPS UST and HIST UST databases indicate that a 500-gallon gasoline underground storage tank (UST) was installed at this former facility (date unknown). We did not observe a ready mix facility on the adjoining property west of the Site on the Sanborn maps (Section 5.1) and aerial photographs (Section 5.2); and therefore, is likely located at another property further from the Site. The lack of any reported contaminant releases at this former facility indicates that this property is unlikely to have caused an REC at the Site.
Spear Cleaner/Keystone Laundry & Cry CLRS	95 N Church Street	55 feet southwest (upgradient)	EDR Hist Cleaner	The EDR Hist Cleaner database indicates that a dry cleaner operated at this location from 1971 to 1985. The lack of any reported contaminant releases at this property suggests that this facility is unlikely to have caused an REC at the Site.
Hi-Country Cleaners/Church	79 N Church	95 feet southwest	HIST UST, HAZNET, HWTS,	The HAZNET database indicates that this facility generated liquids

[1] "Release" refers to an unauthorized release of a petroleum product or hazardous substance to the environment - i.e. the ground surface, soil, soil vapor, groundwater, or surface water on a property. "Release-related database" refers to those which provide information regarding an unauthorized release. "Non-release-related database" refers to those that may report use, storage, or disposal of hazardous substances and/or petroleum products or other environmental conditions, but do not report releases of such.

Business	Address	Approximate Distance from the Site	Database	Pertinent Information/Potential to Cause an REC at the Site
Street Laundry & Dry Cleaning	Street	(upgradient)	DRYCLEANERS	with halogenated organic compounds and alkaline solution without metals that was transported offsite from 2003 to 2010. The HIST UST database indicates that a 500-gallon diesel UST was installed at this property (year unknown). The DRYCLEANERS database indicates that Church Street Laundry & Dry Cleaning operated at this property from 1990 to 2012. The HWTS database provides no pertinent information. The lack of any reported contaminant releases at this property suggests that this facility is unlikely to have caused an REC at the Site.
Plumas Unified School District Office Audio Visual Building/Media Building	50 Church Street	375 feet south (upgradient)	AST, RCRA NonGen/NLR, LUST, SWEEPS UST, HIST UST, Cortese, HIST CORTESE, CERS	The LUST and CERS databases indicate that a release from a leaking heating oil UST impacted groundwater at this property in 1997 and the case was closed in 2002. The closed status of the LUST case and distance from the Site suggest that the release at this property is unlikely to have caused an REC at the Site. The SWEEPS UST and HIST UST databases indicate that a 1,000-gallon diesel UST was installed at this property in 1989. The AST database indicates that a 6,000-gallon above-ground storage tank (AST) was installed at this property (contents and year unknown). The HIST CORTESE and Cortese databases provide no pertinent information.

Business	Address	Approximate Distance from the Site	Database	Pertinent Information/Potential to Cause an REC at the Site
Crocker Guard Station/USDA Forest Service Headquarters/ Plumas National Forest	159 Lawrence Street	540 feet east (cross-gradient)	LUST, HIST UST, Cortese, HIST CORTESE, CERS, SEMS, Notify 65, RCRA NonGen/NLR, FINDS, ECHO	The LUST database indicates that a release from a leaking gasoline UST impacted groundwater at this property in 1986 and the case was closed in 1997. Given the closed status of the LUST case, distance of the property from the Site, and the cross-gradient location of this property relative to the Site, the release at this property is unlikely to have caused an REC at the Site. The HIST UST database indicates that one 1,000-gallon diesel UST, one 1,000-gallon gasoline UST, one 1,000-gallon UST (contents unknown), and one 2,000-gallon gasoline UST were installed at this property in 1975, and one 500-gallon #6 fuel (likely heating oil) UST was installed at this property (year unknown). The SEMS, Notify 65, RCRA NonGen/NLR, FINDS, ECHO, Cortese, HIST CORTESE, and CERS databases provide no pertinent information. Additional information pertaining to this property is provided in Section 4.3.1.
ConocoPhillips (Former Tosco #0620)	180 and 197 Andy's Way (former Plumas Avenue)	770 feet west (cross-gradient)	CPS-SLIC, DEED, CERS	The CPS-SLIC, DEED, and CERS databases indicate that gasoline, diesel, and methyl tertiary-butyl ether (MTBE) impacted groundwater at this former facility. A deed restriction on this property "restricts site activities without prior consent from the Central Valley Regional Water Quality Control Board." The case was closed in 2018. The closed status of the case, distance of the property from the Site, and cross-gradient location of this property relative to the Site suggest that the release at this property is unlikely to have caused an REC at the Site. Additional information pertaining to this property is provided in Section 4.3.1.

Business	Address	Approximate Distance from the Site	Database	Pertinent Information/Potential to Cause an REC at the Site
Richardson Heating Oil (Former Tom's Sierra)	199 Andy's Way (former Plumas Avenue)	885 feet west-northwest (cross-gradient)	CPS-SLIC and CERS	The CPS-SLIC and CERS databases indicate that a release from a diesel UST impacted soil (and potentially groundwater) at this property in 1998 and the case was closed in 2014. The closed status of the case, distance of this property from the Site, and cross-gradient location of this property relative to the Site suggest that the release at this property is unlikely to have caused an REC at the Site. Additional information pertaining to this property is provided in Section 4.3.1.
Nugget Motors, Inc.	116 East Main Street	910 feet east-southeast (cross- to down-gradient)	LUST, RCRA-SQG, FINDS, ECHO, Cortese, HIST CORTESE, CERS	The LUST, Cortese, and CERS databases indicate that a release from a leaking gasoline UST and associated piping impacted soil only at this property in 1999 and the case was closed in 2010. The closed status of the LUST case, soil-only nature of the release, distance of this property from the Site, and the cross- to down-gradient location of this property relative to the Site suggest that the release at this property is unlikely to have caused an REC at the Site. The FINDS, ECHO, HIST CORTESE, and RCRA-SQG databases provide no pertinent information.
Plumas County Courthouse	520 Main Street	1,040 feet southwest (cross- to up-gradient)	LUST, Cortese, HIST CORTESE, CERS, AST, SWEEPS UST, HIST UST, CERS TANKS, CHMIRS, CUPA Listings	The LUST, Cortese, and CERS databases indicate that a release from a leaking diesel UST impacted groundwater at this property in 1996 and the case was closed in 1998. The closed status of the LUST case, and distance of this property from the Site suggest that the release at this property is unlikely to have caused an REC at the Site. The AST database indicates that a 6,000-gallon AST was installed at this property (contents and year unknown).

Business	Address	Approximate Distance from the Site	Database	Pertinent Information/Potential to Cause an REC at the Site
				The SWEEPS UST database indicates that two 7,000-gallon heating oil USTs were installed at this property in 1990. The HIST UST database indicates that one 3,000-gallon diesel UST and a second (unknown volume and contents) UST were installed at this property. The CERS database lists multiple compliance violations for this property in 2016 and 2020; however, provides no information pertaining to releases (if any). The CERS TANKS, CHMIRS, CUPA Listings, and HIST CORTESE databases provide no pertinent information. Additional information pertaining to this property is provided in Section 4.3.1.
California Highway Patrol	86 Main Street	1,060 feet east-southeast (cross-gradient)	LUST, HIST UST, Cortese, CERS, CERS HAZ WASTE, CUPA Listings, HAZNET, HWTS, UST, SWEEPS UST, RCRA NonGen/NLR	The LUST, Cortese, and CERS databases indicate that a release from a 12,000-gallon UST impacted groundwater with petroleum hydrocarbons at this facility in 2012. A release of rinseate also impacted soil (and potentially groundwater) during UST removal activities at this facility. The case was closed in 2012. The closed status of the LUST case, distance of this facility from the Site, and cross-gradient location of this facility relative to the Site suggest that the releases at this facility are unlikely to have caused an REC at the Site. The HIST UST and SWEEPS UST databases indicate that a sump (associated with a vehicle washing area; year unknown) and a 12,000-gallon gasoline UST (1978) were installed at this facility.

Business	Address	Approximate Distance from the Site	Database	Pertinent Information/Potential to Cause an REC at the Site
				The CERS database lists multiple violations for this facility in 2014 and 2020; however, provides no information pertaining to releases (if any). The HAZNET database indicates that this facility generated hydrocarbon solvents (benzene, hexane, Stoddard, etc.), oil-containing waste, and organic aqueous solutions that were transported offsite from 2008 to 2021. The CERS HAZ WASTE, CUPA Listings, HWTS, UST, and RCRA NonGen/NLR databases provide no pertinent information. Additional information pertaining to this property is provided in Section 4.3.1.
Bob's Texaco	60 Main Street	1,270 east (cross-gradient)	LUST, SWEEPS UST, HIST UST, UST, Cortese, CUPA Listings, HIST CORTESE, CERS	The LUST, Cortese, and CERS databases indicate that a release from a leaking gasoline UST impacted soil and groundwater at this property in 1989 and the case was closed in 1992. The closed status of the LUST case, distance of this property from the Site, and cross-gradient location of this property from the Site suggest that the release at this property is unlikely to have caused an REC at the Site. The SWEEPS UST database indicates that two 1,000-gallon gasoline USTs were installed at this property (dates unknown). The HIST UST database indicates that one 250-gallon waste oil UST, one 500-gallon diesel UST, one 1,000-gallon diesel UST, one 8,000-gallon gasoline UST, and one 10,000-gallon gasoline UST were installed at this property (dates unknown). The CUPA Listings, HIST CORTESE, and UST databases provide no pertinent information.

Business	Address	Approximate Distance from the Site	Database	Pertinent Information/Potential to Cause an REC at the Site
Unocal Fuel Star	106 Crescent Street	1,276 west (cross-gradient)	LUST, Cortese, CERS	The LUST, Cortese, and CERS databases indicate that a release from a leaking gasoline UST potentially impacted groundwater at an adjacent public water supply well with MTBE in 2002 and the case was closed in 2005. A second LUST case for this property that was opened in 2017 indicates a release from as many as four USTs impacted soil and groundwater at this property with petroleum hydrocarbons. Following soil and groundwater assessment and remediation, the case was closed in 2020. The closed status of both LUST cases, distance of this property from the Site, and cross-gradient location of this property relative to the Site suggest that the releases at this property are unlikely to have caused an REC at the Site. Additional information pertaining to this property is provided in Section 4.3.1.

4.2 Orphan Summary

EDR's Orphan Summary identifies properties and facilities that have incomplete address information and therefore could not be accurately plotted. No properties or facilities are listed on the Orphan Summary.

4.3 Other Environmental Record Sources

4.3.1 GeoTracker and EnviroStor

We reviewed information available on GeoTracker and the California Department of Toxic Substance Control's (DTSC) EnviroStor (http://www.envirostor.dtsc.ca.gov/public/) online environmental data management systems for information regarding documented environmental assessment and cleanup at the Site and/or properties/facilities within ¼ mile of the Site. No information pertaining to the Site is available on GeoTracker or EnviroStor and no information regarding properties/facilities within ¼ mile of the Site is available on EnviroStor. Following are summaries of information available on GeoTracker for properties/facilities within ¼ mile of the Site:

USDA Forest Service, 159 Lawrence Street (approximately 540 feet east - cross-gradient) – the Central Valley Regional Water Quality Control Board (CVRWQCB) issued a case closure summary for the LUST case at this property on September 19, 1997. As described in Section 4.1.2, the closed status of the LUST case, distance of the property from the Site, and the cross-gradient location of this property relative to the Site, the release at this property is unlikely to have caused an REC at the Site.

ConocoPhillips (former Tosco #0620), 180 & 197 Andy's Way (approximately 770 feet west - cross-gradient) – Stantec's *First Quarter 2013 Groundwater Monitoring Report, Former Tosco Bulk Plant No. 0620, 180 and 197 Andy's Way, Quincy, California*, dated April 19, 2013, indicates that total petroleum hydrocarbons (TPH) as diesel (TPHd) was detected in groundwater samples collected from groundwater monitoring wells MW-9, MW-4, and MW-3 nearest the Site (approximately 782, 825 and 812 feet, respectively) at concentrations of 190 micrograms per liter (µg/l), 140 µg/l, and 6,000 µg/l, respectively. Figure 7 of the report indicates that the downgradient extent of contaminated groundwater was no closer than approximately 790 feet west of the Site. As soil and groundwater beneath this property remains contaminated, the CVRWQCB issued a *Covenant and Environmental Restriction on Property* on November 22, 2017, which prevents any subsurface work (i.e., excavation, drilling, groundwater extraction, etc.) without consent from the CVRWQCB, and subsequently issued a no-further-action (NFA) letter on February 28, 2018, which states that contaminated soil and soil vapor did not pose a significant risk to human health, and that contaminated groundwater could not extend to surface water. The closed status of the case, lateral extent of the contaminant plume, distance of the property from the Site, and cross-gradient location of the property relative to the Site suggest that the release at this property did not cause an REC at the Site.

Richardson Heating Oil (former Tom's Sierra), 199 Andy's Way (approximately 885 feet west-northwest - cross-gradient) – E_2C Remediation's *Second Quarter 2010 Groundwater Monitoring and TEAPs Evaluation Report, Sierra Energy - Richardson Enterprises, 199 Plumas Avenue, Quincy, California*, dated July 16, 2010, indicates that a release from a diesel AST during refueling activities impacted soil and groundwater at this property in 1998. Impacted surface soil was excavated and removed offsite and in July 2000, groundwater monitoring wells MW-1, MW-2, and MW-3 were installed on the property.

Groundwater monitoring data from May 2010 shows that methyl tertiary-butyl ether (MTBE) was detected in groundwater samples collected from groundwater monitoring well MW-1 nearest the Site (approximately 1,058 feet west-northwest) at concentrations ranging from 28.2 to 34.9 µg/l. Figure 4 of the report indicates that contaminated groundwater did not extend off the property and the downgradient extent was no closer than approximately 1,030 feet west-northwest of the Site. In July 2014, the CVRWQCB issued an NFA letter for the property and closed the case. The closed status of the case, lateral extent of the contaminant plume, distance of the property from the Site, and cross-gradient location of the property relative to the Site suggest that the release at this property did not cause an REC at the Site.

Plumas County Courthouse, 520 Main Street (approximately 1,040 feet southwest - cross- to upgradient) – the CVRWQCB issued a case closure summary for the LUST case for this property on June 1, 1998.

California Highway Patrol (Quincy Office #165), 86 Main Street (approximately 1,060 feet east-southeast - cross-gradient) – Quest Geosystems Management's *Underground Storage Tank (UST) Closure Report, CHP Quincy Area Office, 96 W. Main Street, Quincy, California*, dated October 5, 2012, indicates that a release from a leaking 12,000-gallon gasoline underground storage tank (UST) impacted soil and groundwater at the property. During UST removal activities, contaminated soil around the UST was excavated, sampled and analyzed, and transported offsite. The walls of the UST collapsed during rinsing of the UST interior, and approximately 5 gallons of rinseate was released to soil and groundwater beneath the UST. After the UST was removed, additional soil and groundwater were sampled beneath the former UST and analyzed for TPH as gasoline (TPHg), MTBE, and volatile organic compounds including benzene, toluene, ethylbenzene, and total xylenes (BTEX), and naphthalene. TPHg, benzene, and naphthalene were detected in a groundwater grab sample collected from underneath the former UST at concentrations of 1,000 µg/l, 31 µg/l, and 5.8 µg/l, respectively. In October 20102, the CVRWQCB issued an NFA letter for the property and closed the case. The closed status of the case, distance of the property from the Site, and predominantly cross-gradient location of the property relative to the Site suggest that the release at this property did not cause an REC at the Site.

Unocal Fuel Star, 106 Crescent Street (approximately 1,276 feet west - cross-gradient) – Apex Envirotech, Inc.'s *Results of Site Characterization, Quincy Fuel Star, Inc., 106 Crescent Street, Quincy, California*, dated November 5, 2002, indicates that a site assessment was performed for this property to determine if the former gas station impacted a nearby water supply well (Norton water supply well) with MTBE and BTEX. In September 2002, soil and groundwater samples were collected from three direct-push borings advanced to a depth of 25 feet approximately 1,480 feet west of the Site and analyzed for BTEX and MTBE.

Groundwater analytical data shows that MTBE and benzene were detected in groundwater samples collected from the direct-push borings at concentrations ranging from 1.7 to 2.6 µg/l and 0.34 to 3.1 µg/l, respectively. Impacted groundwater beneath this property was determined to not have impacted the Norton water supply well, and in November 2005, the CVRWQCB issued an NFA letter for the property and closed the case. The closed status of the case, distance of the property from the Site, and cross-gradient location of the property relative to the Site suggest that the release at this property did not cause an REC at the Site.

Fuel Star 76, 106 Crescent Street (approximately 1,276 feet west - cross-gradient) – ECG's *Third Quarter 2019 Groundwater Monitoring Report, Fuel Star 76, 106 Crescent Street, Quincy, California*, dated October 31, 2019, indicates that releases from four USTs impacted soil and groundwater at the

property. In September 2017, the USTs, piping, and dispenser islands were removed, and impacted soil was excavated and transported offsite. In November 2018, groundwater monitoring wells MW-1 through MW-4 were installed on the property.

Groundwater monitoring data from September 2019 shows that TPHd and TPHg were detected in a groundwater sample collected from groundwater monitoring well MW-1 nearest the Site (approximately 1,400 feet west) at concentrations of 710 and 790 µg/l, respectively. MTBE was detected in a groundwater sample collected from groundwater monitoring well MW-3 approximately 1,455 feet west of the Site at a concentration of 1.1 µg/l. Figure 5 of the report indicates that TPHg impacted groundwater likely extends off the property towards the southeast; however, in December 2020, the CVRWQCB issued an NFA letter for the property and closed (low-threat closure) the case. The closed status of the case, distance of the property from the Site, and cross-gradient location of the property relative to the Site suggest that the release at this property did not cause an REC at the Site.

4.3.2 Plumas County Environmental Health Department

We submitted a request to the Plumas County Environmental Health Department (PCEHD) for records pertaining to the use, storage, disposal, or any releases of or violations related to hazardous substances and/or petroleum products at the Site. We are still waiting for a response from PCEHD staff. If the PCEHD provides pertinent information for the Site, we will include that information in an addendum to this Phase I ESA.

4.3.3 Plumas County Department of Pesticide Regulation

We submitted a request to the Plumas County Department of Pesticide Regulation (PCDPR) for records pertaining to permitted pesticide use at the Site. PCDPR staff communicated that no pesticide applications were reported for the Site.

4.3.4 California Geologic Energy Management Division

The California Geologic Energy Management Division's (CalGEM) Well Finder, an online petroleum (oil and natural gas) field and well mapping system, does not show any oil or natural gas wells on or within ¼ mile of the Site (CalGEM, 2023). Oil or gas wells further than ¼ mile from the Site are too far for releases (if any) to have caused an REC at the Site.

4.3.5 National Pipeline Mapping System

The National Pipeline Mapping System online pipeline mapping system does not show any natural gas or liquid petroleum pipelines on or within ¼ mile of the Site (USDOT, 2023). Pipelines further than ¼ mile from the Site are too far for releases (if any) to have caused an REC at the Site.

5.0 HISTORICAL USE

We evaluated the historical use of the Site and adjacent properties through review of Sanborn maps, historical aerial photographs, topographic maps, and city directories provided by EDR. This section summarizes information obtained from these sources.

5.1 Sanborn Fire Insurance Maps

We reviewed Sanborn maps for the years 1912, 1929, and 1938 (Appendix D) to obtain information pertaining to historical development and uses of the Site. The following table summarizes information on the maps for the Site and nearby properties.

Year	Observations	
	Site	**Adjoining and Adjacent Properties**
1912	The Site is unmapped.	Properties west, north, and east of the Site are unmapped or depicted with dwellings. Dwellings, vacant lots, and "U.S. Forest Service Office" are depicted on adjacent properties south of the Site beyond Lawrence Street.
1929	The Site is depicted as vacant.	Conditions depicted are similar to those on the 1912 map except dwellings and vacant lots are depicted west and east of the Site and "Ranger Equipment Storage" and "Forest Ranger Headquarters" are depicted on the adjacent property south of the Site.
1938	"The Diamond Match Company Lumber Yard" is depicted in the southwestern portion of the Site.	Vacant lots and "Auto Court" with associated cabins are depicted east of the Site. Dwellings with auto garages and a movie theater are depicted south of the Site and "Ranger Equipment Storage" depicted on the 1929 map is depicted as "Beer Storage" on this map. Additional dwellings and auto garages are depicted southwest and west of the Site.

The Sanborn maps depict a lumber yard on the Site on the 1938 map. The age of the building suggests that asbestos-containing materials (ACM) and lead-containing paints (LCP) may have been used during construction of the site building, and during subsequent building maintenance. The potential presence of ACM and LCP in and on the site building are potential environmental concerns for the Site.

The Sanborn maps do not depict other features or land uses that directly suggest the presence of conditions or features on the Site or on adjoining and adjacent properties likely to have caused an REC at the Site.

5.2 Aerial Photographs

We reviewed historical aerial photographs for the years 1946, 1954, 1962, 1973, 1977, 1984, 1993, 1998, 2005, 2009, 2012, and 2020 (Appendix E) and 2022 (available on Google Earth) for indications of past land uses that had the potential to have caused an REC at the Site through the use, storage, or disposal of hazardous substances and/or petroleum products. The following table summarizes our observations of the Site and adjoining and adjacent properties on the historical aerial photographs.

Year	Observations	
	Site	**Adjoining and Adjacent Properties**
1946 (1" = 500')	A commercial building with an associated storage area and parking was present in the southern portion of the Site and the northern portion of the Site was undeveloped and does not appear to have been used for any purpose.	A railroad siding track was either present north of the Site or had been removed, but the alignment is visible. Undeveloped land which may have been used for livestock grazing (rangeland) was present north of the Site. Residences and commercial structures were present east and west of the Site and on adjacent properties south of the Site beyond Lawrence Street.
1954 (1" = 500')	The image quality is poor; however, conditions appear to have been similar to those observed on the 1937 photograph.	Conditions appear to have been generally similar to those on the 1946 photograph except a facility (indiscernible, but in the location of a "sewage disposal" facility depicted on historical topographic maps as described in Section 5.3) was present north of the Site and a road (current N. Church Street) extending north-south was adjacent to the east of the Site.
1962 (1" = 500')	Conditions appear to have been generally similar to those observed on the 1954 photograph except an outbuilding was present northeast of the larger site building.	Conditions appear to have been generally similar to those observed on the 1954 photograph. A larger rectangular pond, smaller square pond, cylindrical tank, and buildings were present at the facility adjacent to the north of the Site.
1973 (1" = 500')	Conditions appear to have been generally similar to those observed on the 1962 photograph except the outbuilding was no longer present.	Conditions appear to have been generally similar to those observed on the 1962 photograph except a property east of the Site appears to have been developed with a mobile home park and a commercial building was present southeast of the Site beyond Lawrence Street.
1977 (1" = 500')	The image quality is poor; however, conditions appear to have been generally similar to those observed on the 1973 photograph.	The image quality is poor; however, conditions appear to have been generally similar to those observed on the 1973 photograph.

Year	Observations	
	Site	Adjoining and Adjacent Properties
1984 (1" = 500')	The current open-sided, covered storage structure was present in the southeastern portion of the Site and an area that appears to have been disturbed ground or dumped material was present in the northern portion of the Site.	Conditions appear to have been generally similar to those observed on the 1977 photograph except a cul-de-sac (Summerfield Lane) and additional residences were present west of the Site.
1993 (1" = 500')	Conditions appear to have been generally similar to those observed on the 1984 photograph.	Conditions appear to have been generally similar to those observed on the 1984 photograph except the facility adjacent to the north of the Site appears to have been inactive as the ponds there appear to have been dry and vegetated.
1998 (1" = 500')	The existing large commercial building and associated parking area was present in the northern portion of the Site.	Conditions appear to have been generally similar to those observed on the 1993 photograph except additional residences were present west of the Site.
2005 (1" = 500')	Conditions appear to have been generally similar to those observed on the 1998 photograph except the northern portion of the southwestern structure appears to have been removed.	Conditions appear to have been generally similar to those observed on the 1998 photograph.
2009 (1" = 500')	Conditions appear to have been generally similar to those observed on the 2005 photograph.	Conditions appear to have been similar to those observed on the 2005 photograph except a residence was present on the adjacent property east of the Site.
2012 (1" = 500')	Conditions appear to have been generally similar to those observed on the 2009 photograph.	Conditions appear to have been similar to those observed on the 2009 photograph.
2020 (1" = 500') and 2022 (Google Earth)	Conditions appear to have been generally similar to those observed on the 2012 photograph.	Conditions appear to have been generally similar to those observed on the 2012 photograph.

The aerial photographs do not show features or land uses that directly suggest the presence of conditions or features on the Site or on adjoining and adjacent properties likely to have caused an REC at the Site.

5.3 Topographic Maps

We reviewed historical topographic maps for the years 1891, 1893, 1895, 1896, 1897, 1950, 1951, 1975, 1994, 2012, 2015, and 2018 (Appendix F). The following table summarizes our observations of the Site and adjoining and adjacent properties on the historical topographic maps.

Year	Observations	
	Site	Adjoining and Adjacent Properties
1891, 1893, 1895, 1896, and 1897 (1:125,000)	No structures are depicted on the Site.	No structures or land uses are depicted in areas north and east of the Site. A grid of blocks and streets are depicted southwest of the Site and roads (Main Street and State Routes 70/89) are depicted east, south, and west of the Site.
1950 (1:24,000)	A structure is depicted in the southwestern portion of the Site.	A railroad and sewage disposal are depicted north of the Site. Roads and structures are depicted on adjoining and adjacent properties east, south, and west of the Site.
1951 (1:24,000)	Conditions depicted are similar to those on the 1950 map.	Conditions depicted are similar to those on the 1950 map.
1975 (1:24,000)	Conditions depicted are similar to those on the 1951 map.	Conditions depicted are similar to those on the 1951 map except additional structures are depicted northwest, northeast, and southeast of the Site.
1994 (1:24,000)	Conditions depicted are similar to those on the 1975 map.	Conditions depicted are similar to those on the 1975 map except an unimproved road is depicted where the railroad was previously depicted north of the Site.
2012 (1:24,000)	No structures are depicted on the Site.	No structures are depicted in areas surrounding the Site and the sewage disposal facility is not depicted north of the Site. Residential streets are depicted north, east, south, and west of the Site.
2015 (1:24,000)	Conditions depicted are similar to those on the 2012 map.	Conditions depicted are similar to those on the 2012 map except Lawrence Street is depicted adjacent to the south of the Site.
2018 (1:24,000)	Conditions depicted are similar to those on the 2015 map.	Conditions depicted are similar to those on the 2015 map.

The topographic maps depict a sewage disposal facility adjacent to the north of the Site in 1994. This facility is not listed on any release-related databases, and therefore, is unlikely to have caused an REC at the Site.

The topographic maps do not depict other features or land uses on the Site or adjoining or adjacent properties that suggest the potential to have caused an REC at the Site.

5.4 City Directories

EDR prepared an abstract of city directories including city, cross-reference, and telephone directory listings (Appendix G) and included information at approximate 5-year intervals, if available, from 1971 to 2020. Following are summaries of the entities listed for the Site and offsite addresses.

5.4.1 Site Addresses

The following entities are listed for Site addresses:

Site Address	Business and/or Entities
287 Lawrence Street	- Feather River Bulletin (2014 to 2020)
291 Lawrence Street	- Residence (2005 to 2014) - Quincy Lumber & Supply Company (1986 to 1995)
293 Lawrence Street	- Quincy Paint Center (2014 to 2020) - UPS Authorized Shipping Provider (2020) - Bargain Boutique PDH Volunteers (2010)
295 Lawrence Street	- Plumas PC (2020) - Energy & Data Systems (2010) - Silver Dove (2010) - Native Touch Massage & Body (2005)

The entities listed for the Site do not suggest the potential to have caused an REC at the Site.

5.4.2 Offsite Addresses

The following entities are listed for adjoining and adjacent properties:

Offsite Address	Business and/or Entities
227 Lawrence Street	- Resident (2020)
237 Lawrence Street	- Resident (1986)
239 Lawrence Street	- Resident (2020)
274 Lawrence Street	- Plumas Senior Nutrition (1986 to 1995)
304 Lawrence Street	- Residents (1986 and 2005 to 2014) - Center for Spiritual Living (2010) - Plumas Rural Services Inc/WIC Program (2005) - Mary's Catering Service
307 Lawrence Street	- Resident (2020) - Ted Orr (2010 to 2014) - E.H. Orr (1986)
314 Lawrence Street	- Logan's Mountain Landscaping (2005) - Resident (1986 to 1992)
317 Lawrence Street	- Ted Orr (1986, 1992, and 2005)
333 Lawrence Street	- Residents (2010 to 2020)
341 Summerfield Lane	- Residents (2005 and 2014) - Unknown Occupant (2010)
345 Summerfield Lane	- Residents (2000 to 2014)
349 Summerfield Lane	- Residents (2005 to 2017)

Offsite Address	Business and/or Entities
352 Summerfield Lane	- Residents (1986 and 2005 to 2017)
356 Summerfield Lane	- Residents (1986 and 2005 to 2020)

E.H. Orr at 307 Lawrence Street on the adjoining property west of the Site is listed on the city directories in 1986. This entity may be associated with "E.H. Orr DBA Quincy Readymix", which had a documented UST (500-gallon gasoline); however, this entity is not listed on any release-related databases suggesting that a release from this UST has not occurred, and therefore, is unlikely to have caused an REC at the Site.

Individual residences and commercial businesses are listed for other adjoining and adjacent properties, neither of which suggest the potential to have caused an REC at the Site.

6.0 SITE RECONNAISSANCE

This section summarizes our observations of the Site and surrounding properties during the site reconnaissance.

6.1 Methodology and Limiting Conditions

Cristian Virrueta, Senior Staff Geologist, and Chris Bates, Senior Staff Scientist, both with Geocon, performed the site reconnaissance on May 11, 2023, by walking throughout the Site to observe site features and conditions. They were accompanied by Brett Elliott with Quincy Real Estate & Property Management, and Keith Brown, owner of the 287 Lawrence Street portion of the Site, who provided access to all areas of the Site. Mr. Virrueta and Mr. Bates performed the offsite survey by observing adjoining and adjacent properties from the Site and public roads. Weather on the day of the site reconnaissance was sunny with temperatures in the mid-70s°F. Photographs of various site features and offsite properties are appended.

6.2 Site Setting

The Site is situated in an area of commercial and residential development (Figure 2).

6.3 Onsite Survey

The Site is developed with three commercial structures and asphalt-paved drive and parking areas around the structures (Photo 1). The 253 Lawrence Street site parcel in the southeastern portion of the Site is developed with a metal carport storage structure with an enclosed garage on its northern end (Photo 4). The 287 Lawrence Street parcel in the northern portion of the Site is developed with a commercial building occupied by Feather Publishing Co., Inc (Photo 2). The 293/295 Lawrence Street site parcel in the southwestern portion of the Site is developed with a commercial building previously occupied by Quincy Lumber & Supply (Photo 3), but now occupied by Quincy Paint Center and The2Mic. The interior and exterior areas of the Site observed during the site reconnaissance are described in the following sections.

6.3.1 253 Lawrence Street

The bays of the carport storage structure are currently leased to tenants for vehicle storage. We observed recreational vehicles, trailers, pick-up trucks, and boats stored in the carport on unpaved ground (Photos 4 and 5). We observed no evidence of leakage beneath the vehicles.

William Seibold, owner of the 253 & 293/295 Lawrence Street portions of the Site, currently uses the enclosed garage for vehicle storage, repair, and maintenance (Photo 6). We observed two vintage vehicles, tires, wheels, spare parts, hand tools, tool storage, and retail-size containers of oil, lubricants, aerosols, and degreasers (Photos 7 through 12). The enclosed garage has a concrete floor.

The exterior of this site parcel includes landscaping along the southern side of the carport structure and asphalt-paved driveways around the structure. A 150-gallon propane AST is present along the eastern exterior of the enclosed garage (Photo 13).

We observed no evidence of RECs or features or conditions likely to cause an REC at the 253 Lawrence Street site parcel.

6.3.2 287 Lawrence Street

The commercial building on the 287 Lawrence Street site parcel that is occupied by Feather Publishing is improved with a conference room, private and open (cubical) offices (Photo 14), two print shops, photo processing rooms, bathrooms, and storage rooms.

In the small print shop, we observed printing equipment, retail-size (5 gallons or less) containers of antifreeze, water-miscible press wash, acetone, printing ink, and other printing supplies on shelves, carts, and on the floor (Photos 15 through 18). We observed de minimis staining on cardboard beneath some of the printing equipment (Photo 19).

Inside a photography darkroom, we observed photography developing equipment with small quantities of development solution stored in a sink (Photos 20 and 21)

Inside a dimly lit plate development room, we observed photography negatives on shelves (Photo 22), an office area with printing plate equipment and containers of plate finisher chemicals stored on the floor (Photos 23 and 24). We observed retail-size (5 gallons or less) containers of all-purpose cleaners, aerosols, cleaning products, and other miscellaneous janitorial supplies inside a janitorial closet (Photo 25).

In the main print shop, we observed various printing and processing equipment (Photo 26 and 27), a propane-powered forklift, paper products on pallets, an ink tote, rolls of printing paper, various pails of ink stored on shelves, and other miscellaneous printing materials (Photos 28 through 30). We observed de minimis ink staining near the ink tote (Photo 31).

The second floor of the building is improved with offices, a bathroom, a break room, a utility closet housing a water heater, and a storage area (Photo 32). We observed furniture, office supplies, newspaper archives, heating furnaces, paint cans, and other miscellaneous materials in the storage area (Photos 33 and 34).

The exterior of this portion of the Site includes asphalt-paved driveways around the building with parking stalls along the southern side (front) of the building. The northern and western portions of the site parcel are unpaved and used to store vehicles, RVs, and trailers (Photos 35 and 36). We observed a 500-gallon propane AST (Photo 37) and pad-mounted transformer (Photo 38) in the northeastern portion of the site parcel. The transformer appeared to be in good condition with no evidence of leakage.

We observed no evidence of RECs or features or conditions likely to cause an REC at the 287 Lawrence Street site parcel. Improper onsite disposal (dumping) of inks and solvents used to clean printing equipment or leaks from underground piping to a sewer or septic system has the potential to impact soil and groundwater at printing facilities. We observed no evidence of improper disposal of these types of materials at the Site, but possible releases from underground piping is a potential environmental concern for the Site.

6.3.3 293/295 Lawrence Street

The commercial structure on the 293/295 Lawrence Street site parcel (Photo 39) that previously housed Quincy Lumber & Supply (and still retains the signage for that former business), is now a multi-tenant building occupied by "Quincy Paint Center" and "The2Mic". The Quincy Paint Center is a retailer of paints, wood stains, lacquers, painting equipment, and miscellaneous supplies. The2Mic manufactures musical instruments, components such as microphones and small amplifiers, and repairs small consumer electronics.

The interior of the Quincy Paint Center includes a retail area and two storage rooms. We observed retail-size (5-gallons or less) containers interior and exterior paints, wood stains, lacquers, painting equipment, and miscellaneous supplies in the retail area (Photos 40 and 41). The two storage rooms contain additional containers of paint, wood stains, and lacquer, empty boxes, miscellaneous equipment, and paint mixing equipment (Photos 42 through 46).

The interior of The2Mic consists of a shop, breakroom, and storage rooms (Photos 47 through 49). We observed stationery and handheld tools, soldering equipment, toolboxes, and tool storage drawers (Photos 50 through 52) in the shop.

The building has an open, central corridor that is predominantly used for storage by Mr. Seibold and both tenants (Photo 53). Mr. Seibold currently uses the southern portion of the corridor for RV storage (Photo 54). The Quincy Paint Center uses the eastern side of the corridor for additional storage. Used or damaged paint containers are stored in a covered wooden enclosure for removal offsite (Photo 55). According to Tyler Newell, manager of Quincy Paint Center, the paint and containers are transported

offsite for recycling approximately once a week. We observed a 200-gallon kerosene AST with no secondary containment beneath it on the eastern side of the corridor (Photo 56). The AST stores and supplies fuel for a heating furnace inside the paint shop. The AST appeared to be in fair condition with no evidence of leakage.

A media room with internet communications equipment and a bathroom are on a second (mezzanine) level above the paint shop (Photos 57 and 58) accessible from the central corridor. The2Mic uses the western side of the corridor for additional storage (Photo 59). We observed lumber, stationary tools, handheld tools, tool storage, boxes of microphone parts, and other miscellaneous items inside three storage lockers (Photos 60 through 62).

The exterior of this portion of the Site includes asphalt-paved driveways with parking stalls along the southern and eastern sides of the building. We observed a concrete pad with two capped pipes (remnants of a possible former AST) near the northern side of the structure (Photos 63 and 64). We observed a 120-gallon propane AST (Photo 65) on the western exterior of the building.

The kerosene AST is an REC for the Site as a material threat of release due to the lack of secondary containment beneath it.

6.4 Offsite Survey

Adjoining and adjacent properties consist of the following:

- North – a bicycle path beyond which are buildings associated with an inactive, former sewage disposal plant (Photo 66);
- East – an unnamed stream and North Church Street beyond which are single-family residential and a commercial property (Photos 67 and 68);
- South – Lawrence Street beyond which is the Quincy Real Estate and Property Management building, Veterans Hall building, and Church Street (Photo 69); and
- West – Single-family residential properties and Summerfield Lane, a cul-de-sac (Photo 70 and 71).

We observed no conditions or uses on adjoining and adjacent properties likely to cause or have caused an REC at the Site.

7.0 INTERVIEWS

We provided Keith Brown, President and owner of Feather Publishing Co., Inc., with an owner/occupant questionnaire regarding the past and present uses of the 287 Lawrence Street portion of the Site and the potential for impacts related to the use, storage, or disposal of hazardous substances and/or petroleum products on the Site. Mr. Brown indicated a portion of the building is used for commercial printing, while the remaining portion is office space. He indicated that ink totes stored in steel drums and a 500-gallon propane AST are present onsite. Mr. Brown also indicated that he has owned the 287 Lawrence Street portion of the Site for 34 years and the building was constructed in 1995. The Site has been used for retail, newspaper offices, and commercial printing for approximately 22 years. A copy of the owner/occupant questionnaire is in Appendix H.

We provided William Seibold, owner of the 253 & 293 Lawrence Street buildings, with an owner/occupant questionnaire regarding the past and present use of the 253 & 293 Lawrence Street portions of the Site. Mr. Seibold indicated that the current and past uses at these portions of the Site are retail and RV storage. Mr. Seibold also indicated that he has owned the property since 2005 and that the previous owners were Quincy Lumber and Diamond Lumber. We asked Mr. Seibold if he knows of any releases from the heating oil AST and he indicated that he is not aware of any releases. A copy of the owner/occupant questionnaire is in Appendix H.

We provided Tyler Newell, Manager of the Quincy Paint Center, with an owner/occupant questionnaire regarding past and present use of the 293 Lawrence Street portion of the Site. Mr. Newell indicated that the Quincy Paint Center has been a tenant at this portion of the Site since 2013 and that the shop also receives paints, stains, and lacquers at this location for the removal and recycling offsite. A copy of the owner/occupant questionnaire is in Appendix H.

We provided Ken Donnell, owner of The2Mic, with an owner/occupant questionnaire regarding past and present use of the 295 Lawrence Street portion of the Site. Mr. Donnell indicated that his business consists of light manufacturing (repair and construction) of musical instruments and electronic equipment. He indicated that he has been a tenant of this portion of the Site for 9 months. A copy of the owner/occupant questionnaire is in Appendix H.

8.0 FINDINGS AND CONCLUSIONS

We have performed a Phase I ESA, in general conformance with the scope and limitations of ASTM *Designation E 1527-21* of 253, 287, and 293 Lawrence Street in Quincy, California. Exceptions to, or deletions from, this practice are described in Section 1.4 (limitations) and Section 1.5 (data gaps). The Phase I ESA has revealed no evidence of CRECs or significant data gaps in connection with the Site or on adjoining properties.

A 200-gallon kerosene AST without secondary containment in the interior of the 293/295 Lawrence Street site building is an REC for the Site as a material threat of release. We observed no evidence of leakage from the AST; however, we recommend that some form of secondary containment that is at least 110% of the AST capacity be installed beneath this AST.

The site building on the 293 Lawrence Street portion of the Site was constructed sometime prior to 1938, suggesting that ACMs and LCPs may be present in and on the site building and is a potential environmental concern for the Site. An ACM and LCP survey should be performed prior to demolition of the building to determine appropriate handling and disposal of demolition debris and to inform workers of the presence of these materials so that they can take appropriate health and safety precautions.

Lastly, improper onsite disposal (dumping) of inks and solvents used to clean printing equipment or leaks from underground piping to a sewer or septic system has the potential to impact soil and groundwater at printing facilities. We observed no evidence of improper disposal of these types of materials at the 287 Lawrence Street portion of the Site, but possible releases from underground piping is a potential environmental concern for the Site. During demolition of this site building and subsequent site grading in this area, if evidence of a release (i.e., stained soil or chemical odors) is observed, an environmental professional should be consulted to observe the condition and collect samples of the apparently impacted soil for laboratory chemical analysis.

10.0 QUALIFICATIONS

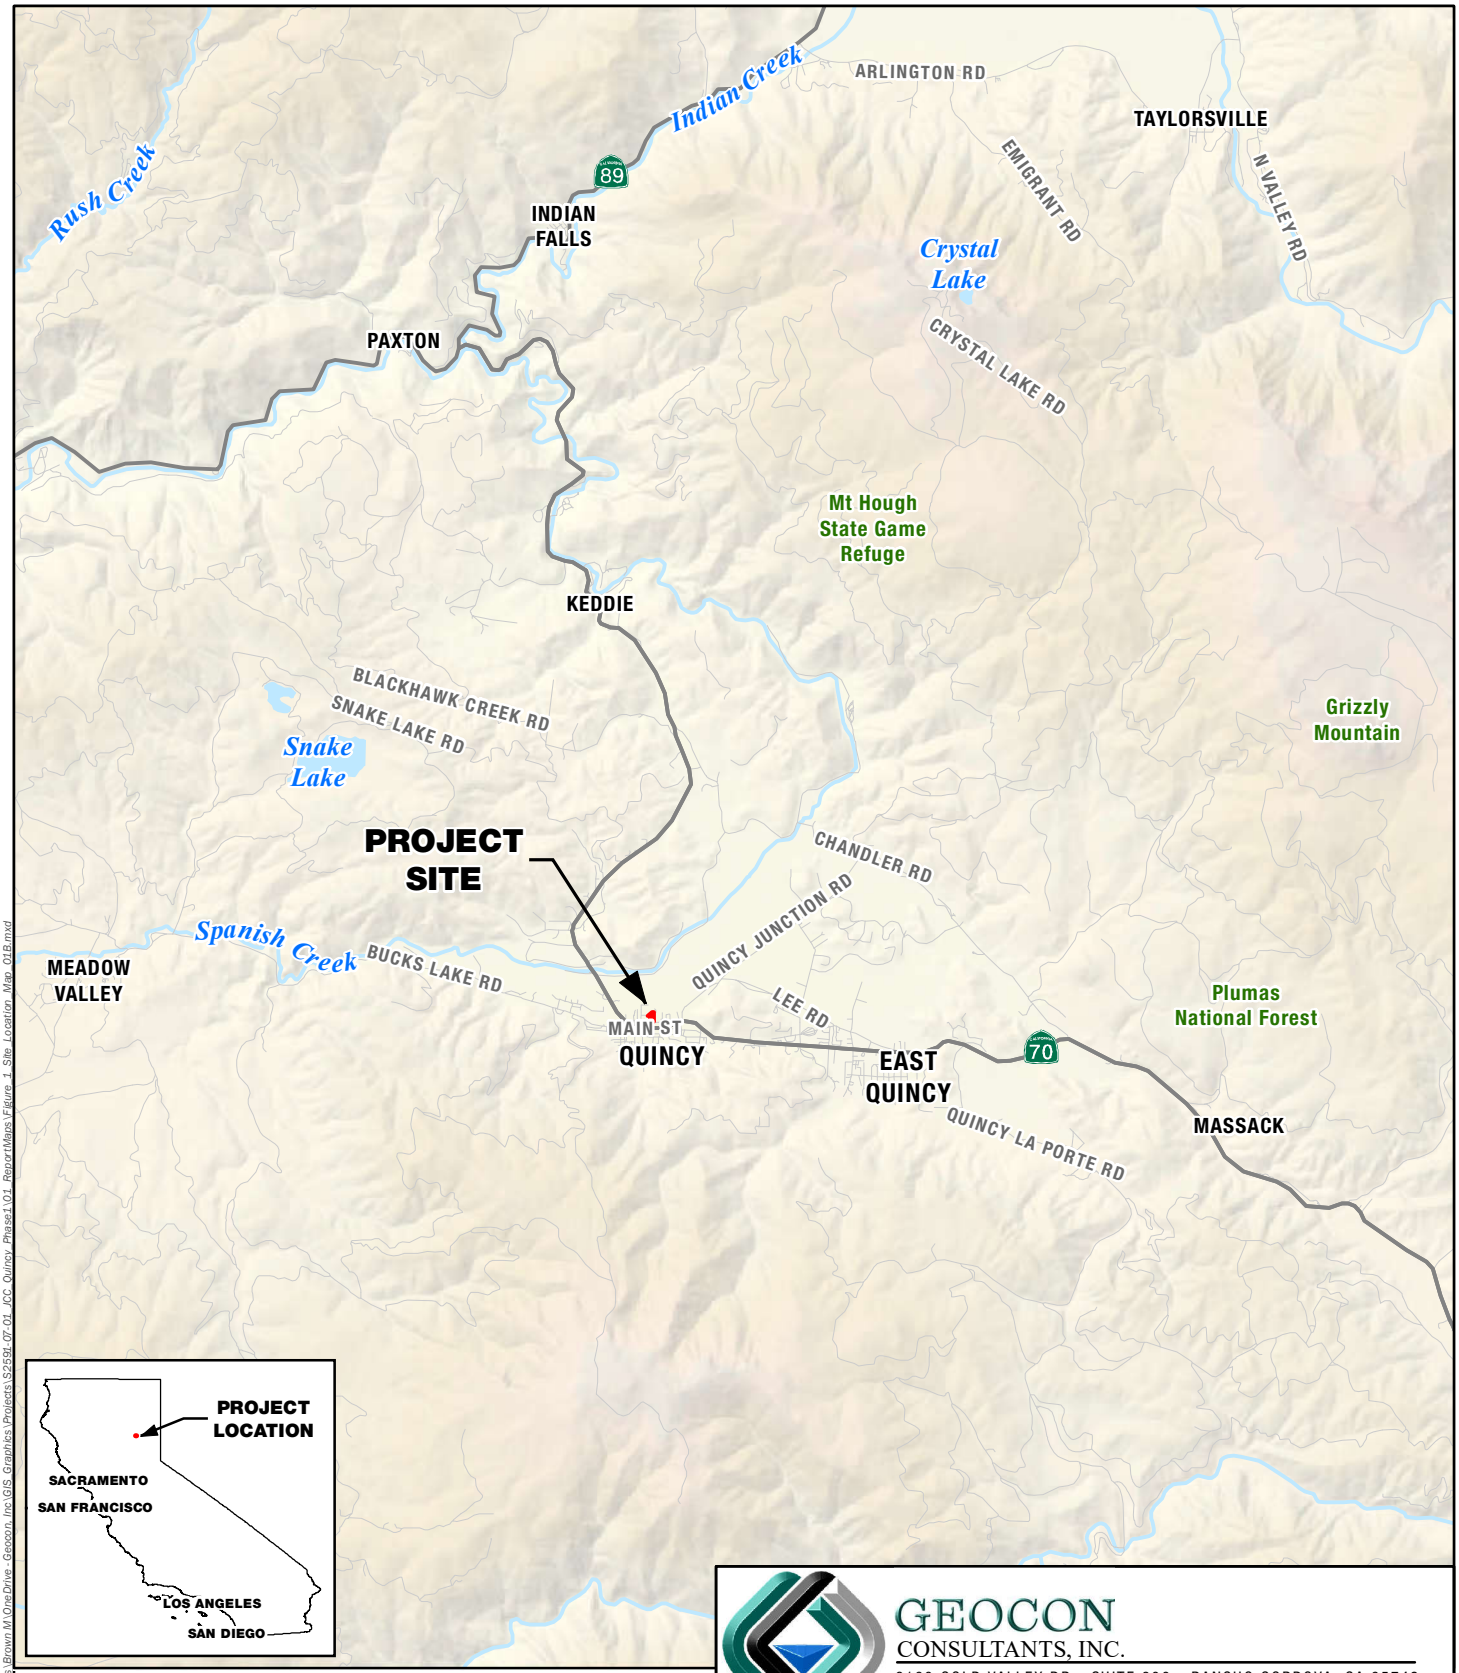

This Phase I ESA report was prepared by Kristopher Williams, GIT, and Jim Brake, PG. Mr. Williams is a Staff Geologist with a Bachelor of Science degree in Geology and has worked on a variety of environmental assessment projects.

Mr. Brake has an MS degree in Geological Science and 36 years of experience in environmental investigation and remediation, including implementation of Remedial Investigation/Feasibility Study programs and soil, soil vapor, and groundwater remedial actions for private industrial and government clients. He has managed a wide variety of projects for clients in the manufacturing, transportation, mining, automobile, and real estate development/redevelopment industries. Mr. Brake has extensive experience in the performance of Phase I and II ESAs of commercial, industrial, and agricultural properties throughout California.

I declare that, to the best of my professional knowledge and belief, I meet the definition of environmental professional as defined in §312.10 of 40 CFR 312 and I have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. I have performed all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

Jim Brake, PG
Senior Geologist

APPENDIX B

253 & 295 Lawrence Street
User Questionnaire

1. What is the purpose of the Phase I Environmental Site Assessment? What is the planned use?
   New Quincy Courthouse

2. Who is the property owner(s)?
   William Seibold

3. Are you aware of any environmental cleanup liens against the property that are filed or recorded under federal, tribal, state, or local law?
   No

4. Are you aware of any activity and land use limitations, such as engineering controls, land use restrictions or institutional controls that are in place for the site and/or have been filed or recorded in a registry under federal, tribal, state, or local law?
   No

5. Do you have any specialized knowledge related to the property or nearby properties?
   No

6. Does the purchase price reasonably reflect the fair market value of the property?
   TBD

7. Do you know the past uses of the property?
   Commercial

8. What is the planned use of the property?
9. Commercial

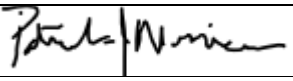

10. Do you know of specific chemicals that are present or once were present at the property?
    Unknown, currently lumber and supply store.

11. Do you know of spills or other chemical releases that have taken place at the property?
    No

12. Do you know of any environmental cleanups that have taken place at the property?
    No

13. Do you know whether any helpful documents exist and, if so, whether copies can and will be provided for this assessment? These documents may include: Phase I or II Environmental Site Assessment reports, environmental compliance audit reports, environmental permits, registrations for underground or aboveground storage tanks, registrations for underground injection systems, or any other documents related to the property.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

EXECUTIVE SUMMARY

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal sites subject to CERCLA removals and CERCLA orders

SEMS: SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the SEMS list, as provided by EDR, and dated 01/25/2023 has revealed that there is 1 SEMS site within approximately 0.5 miles of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page
PLUMAS NAT FOREST Site ID: 0903144 EPA Id: CA1122307639	PLUMAS NAT FOREST	ESE 0 - 1/8 (0.116 mi.)	21	58

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 01/25/2023 has revealed that there are 2 SEMS-ARCHIVE sites within approximately 0.5 miles of the target property.

Lists of Federal RCRA generators

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 03/06/2023 has revealed that there is 1 RCRA-SQG site within approximately 0.25 miles of the target property.

Lists of state- and tribal hazardous waste facilities

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 01/23/2023 has revealed that there is 1 ENVIROSTOR site within approximately 1 mile of the target property.

EXECUTIVE SUMMARY

Lists of state and tribal leaking storage tanks

LUST: Leaking Underground Storage Tank (LUST) Sites included in GeoTracker. GeoTracker is the Water Boards data management system for sites that impact, or have the potential to impact, water quality in California, with emphasis on groundwater.

A review of the LUST list, as provided by EDR, has revealed that there are 21 LUST sites within approximately 0.5 miles of the target property.

CPS-SLIC: Cleanup Program Sites (CPS; also known as Site Cleanups [SC] and formerly known as Spills, Leaks, Investigations, and Cleanups [SLIC] sites) included in GeoTracker. GeoTracker is the Water Boards data management system for sites that impact, or have the potential to impact, water quality in California, with emphasis on groundwater.

A review of the CPS-SLIC list, as provided by EDR, has revealed that there are 5 CPS-SLIC sites within approximately 0.5 miles of the target property.

Lists of state and tribal registered storage tanks

UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the State Water Resources Control Board's Hazardous Substance Storage Container Database.

A review of the UST list, as provided by EDR, has revealed that there are 3 UST sites within

approximately 0.25 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 03/06/2023 has revealed that there are 20 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

Database: MINES VIOLATIONS, Date of Government Version: 02/27/2023				

ABANDONED MINES: An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

A review of the ABANDONED MINES list, as provided by EDR, and dated 12/20/2022 has revealed that there is 1 ABANDONED MINES site within approximately 0.25 miles of the target property.

CUPA Listings: A listing of sites included in the county's Certified Unified Program Agency database. California's Secretary for Environmental Protection established the unified hazardous materials and hazardous waste regulatory program as required by chapter 6.11 of the California Health and Safety Code. The Unified Program consolidates the administration, permits, inspections, and enforcement activities.

A review of the CUPA Listings list, as provided by EDR, has revealed that there are 9 CUPA Listings sites within approximately 0.25 miles of the target property.

DRYCLEANERS: A list of drycleaner related facilities that have EPA ID numbers. These are facilities with certain SIC codes: power laundries, family and commercial; garment pressing and cleaners' agents; linen supply; coin-operated laundries and cleaning; drycleaning plants except rugs; carpet and upholster cleaning; industrial launderers; laundry and garment services.

A review of the DRYCLEANERS list, as provided by EDR, has revealed that there is 1 DRYCLEANERS site within approximately 0.25 miles of the target property.

HAZNET: The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000-1,000,000 annually, representing approximately 350,000-500,000 shipments. Data from non-California manifests & continuation sheets are not included at the present time. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, & disposal method. The source is the Department of Toxic Substance Control is the agency. This database begins with calendar year 1993.

A review of the HAZNET list, as provided by EDR, and dated 12/31/2021 has revealed that there is 1 HAZNET site within approximately 0.001 miles of the target property.

CERS: The CalEPA Regulated Site Portal database combines data about environmentally regulated sites and facilities in California into a single database. It combines data from a variety of state and federal databases, and provides an overview of regulated activities across the spectrum of environmental programs for any given location in California. These activities include hazardous materials and waste, state and federal cleanups, impacted ground and surface waters, and toxic materials

A review of the CERS list, as provided by EDR, and dated 01/05/2023 has revealed that there is 1 CERS site within approximately 0.001 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR Hist Cleaner: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

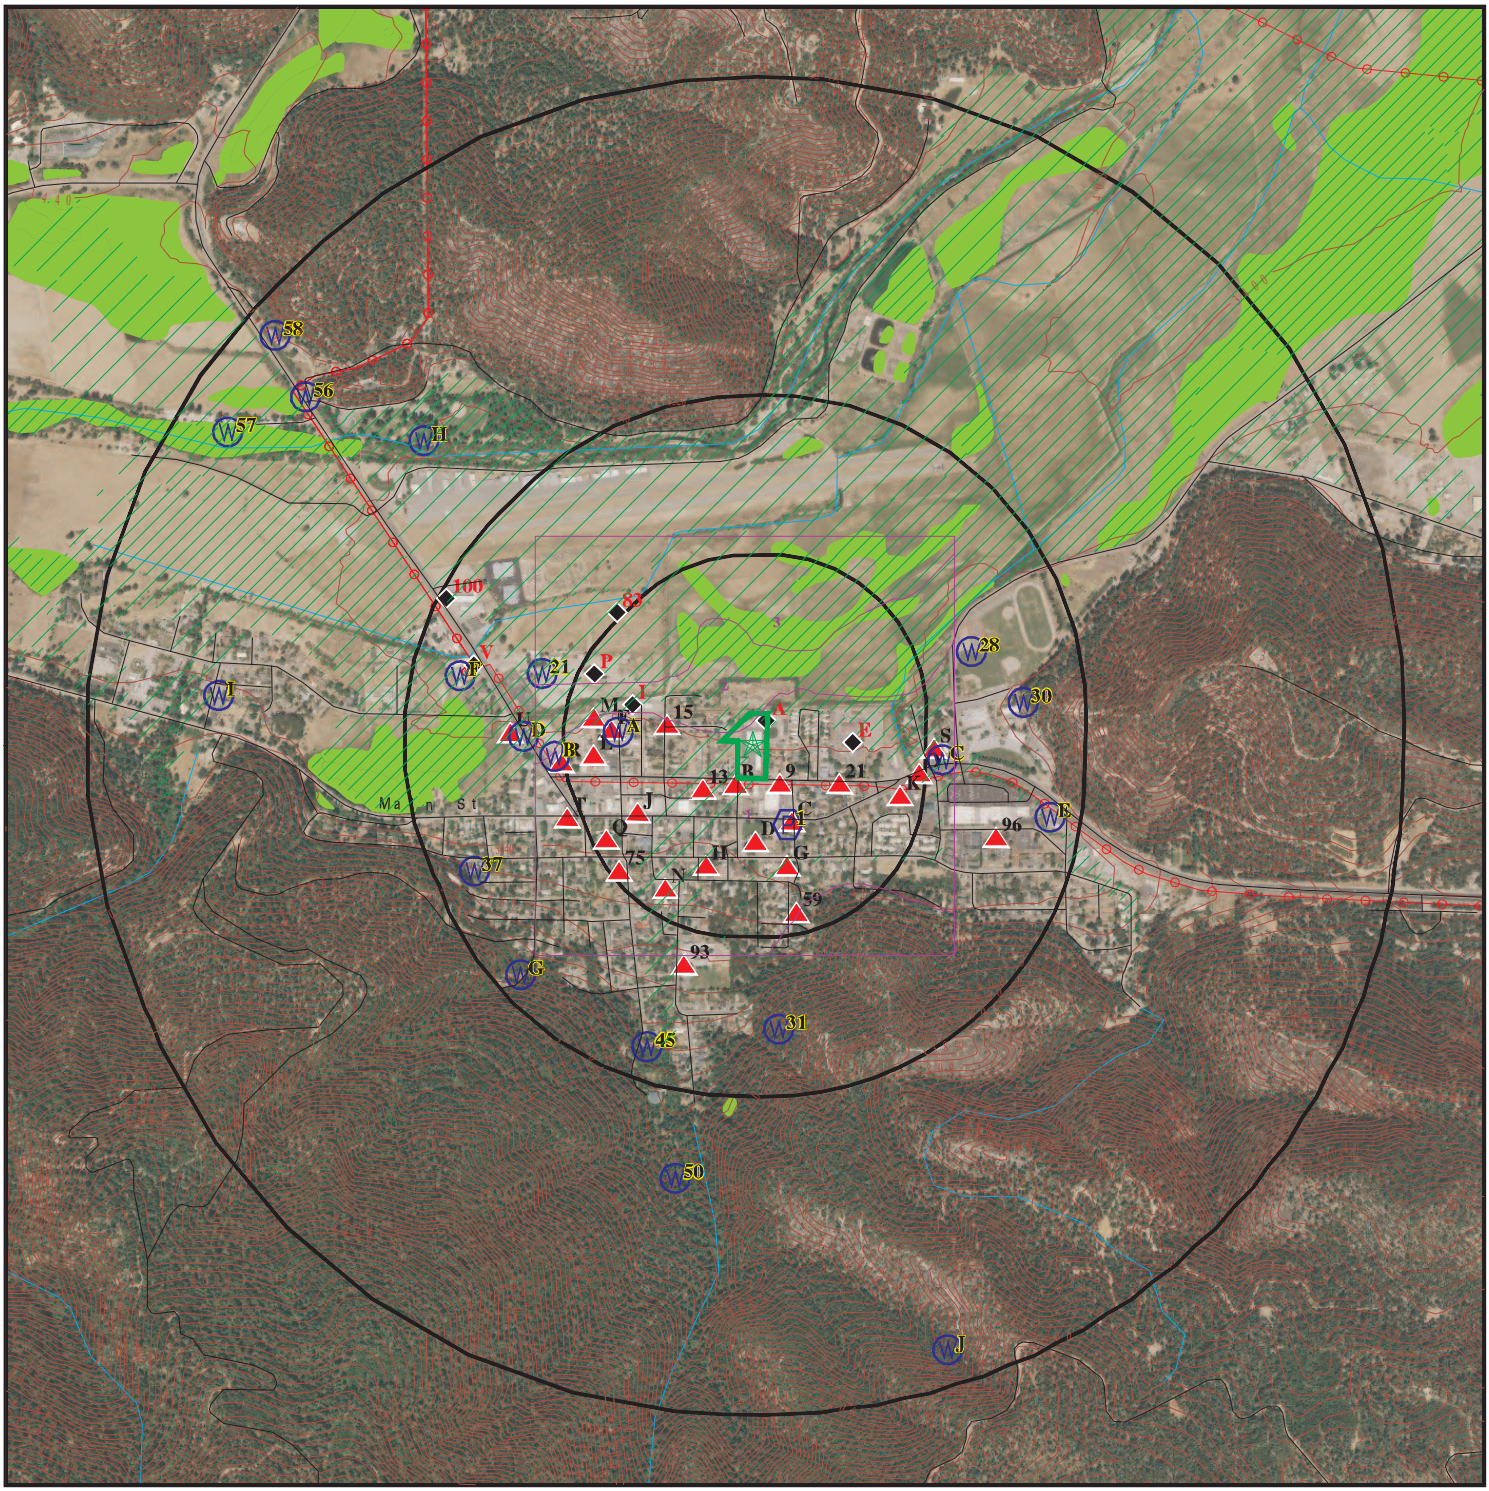

A review of the EDR Hist Cleaner list, as provided by EDR, has revealed that there are 2 EDR Hist Cleaner sites within approximately 0.125 miles of the target property.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:

US EPA Air Quality System (AQS) contains ambient air pollution data collected by EPA, State, Local, and Tribal air pollution control agencies from thousands of monitoring stations.
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

CA BOND EXP. PLAN:
Reponsible Party: RESPONSIBLE PARTY-LEAD SITE CLEANUP WORKPLAN
Project Revenue Source Company: Not reported
Project Revenue Source Addr: Not reported
Project Revenue Source City,St,Zip: Not reported
Project Revenue Source Desc: DHS will be issuing a remedial action order or entering into an enforceable agreement with the responsible parties. DHS has budgeted $30,000 for oversight/monitoring of cleanup efforts. DHS will recover 100 percent of direct costs plus staff costs and overhead related to the project. The parties will pay all costs associated with remedial investigations and cleanup activities.
Site Description: Mine operations began circa 1915 and continued until 1941. Drainage from this mine has been a known source of pollution since the 1940s.
Hazardous Waste Desc: The average concentration found for copper was 11.0 parts per million (ppm). The average concentration found for zinc was 0.78 ppm. The average concentration found for aluminum was 4.8 ppm. Chromium was also found.
Threat To Public Health & Env: The receptors for contamination are recreationists who drink and fish in the drainage waters from the mine and general area. The main pathway for the contamination to migrate offsite is via surface water.
Site Activity Status: A preliminary assessment is pending.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Military DOD Site:	No
Facility Project Subtype:	Not reported
RWQCB Region:	CENTRAL VALLEY RWQCB (REGION 5R)
Site History:	The site was formerly a Unocal and Tosco bulk plant that was constructed in 1949. Tosco removed the bulk fueling facilities in 2001, and subsequently sold the property to Quincy Tow and Repair. TPHD, TPHG, and MTBE have been detected primarily in the shallow zone with MTBE detected in the deeper zone at low concentrations. A Deed Notification was prepared that restricts site activities without prior consent from the CVWB.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

RWQCB Region:	CENTRAL VALLEY RWQCB (REGION 5R)
Site History:	The Site is an active retail fuel station. Central Valley Regional Water Quality Control Board (Central Valley Water Board) has provided oversight for two cases at this property. Case 1: In September 2002, the Discharger performed a soil and groundwater assessment under oversight of Central Valley Regional Water Quality Control Board (Central Valley Water Board) staff (see closed UST Case 320065). The Case 1 objective was to assess whether the Site had contributed to methyl tert-butyl ether (MTBE) discovered in the nearby Norton public supply well operated by the Quincy Community Services District. Staff determined that the mass flux of MTBE from the Site was not sufficient to have impacted the Norton well. Staff issued a No Further Action Letter for UST Case 320065 in November 2005. Case 2: In September 2017, four USTs were removed from the Site under Plumas

FUEL STAR 76 (CASE 2) (Continued) **S121307853**

County Environmental Health Department (PCEHD) oversight. Upon observing obvious petroleum pollution in groundwater encountered in the tank excavation, PCEHD referred the case to the Central Valley Water Board. The Discharger estimated approximately 1,037 pounds of petroleum were removed with the soil excavated during UST removal. Staff estimate that 7 pounds of petroleum were removed with the water pumped from the excavation. Between November 2018 and September 2019, the Discharger performed a subsurface investigation and conducted quarterly groundwater monitoring and reporting. Based on the results of the assessment and groundwater monitoring, Central Valley Water Board staff closed the case in December 2020.

Military DOD Site:	No
Facility Project Subtype:	Not reported
RWQCB Region:	CENTRAL VALLEY RWQCB (REGION 5R)
Site History:	An investigation conducted in 2012 encountered free product upon the groundwater surface. Subsequent investigations defined the extent of the free product plume to an approximately 50-ft area beneath West Main Street and likely underlying the building located at 555 West Main. The maximum thickness of this free product was determined to be less than an inch. A human health risk assessment concluded that there is no risk to human health from vapor intrusion due to remaining hydrocarbon pollution in soil and groundwater beneath 555 West Main Street. Due to the presence of the building, the street, subsurface utilities and the highly weathered nature and limited mobility of the product, no further action was taken on the free product plume, other than recording of an environmental deed restriction. Staff closed the case under the Low Threat Closure

RWQCB Region:	CENTRAL VALLEY RWQCB (REGION 5R)
Site History:	In May 2012, during a geotechnical investigation in Dame Shirley Plaza, hydrocarbon pollution was observed in one of the geotechnical borings. A preliminary investigation determined that the source of the pollution was likely a historic heating oil UST. Approximately 60 kg of impacted soil was excavated during UST removal. Investigations conducted in 2012 and 2013 defined the horizontal extent of soil pollution. A human health risk assessment concluded that remaining pollution did not present a threat to human health, with the exception of subsurface workers that might contact the free product

DAME SHIRLEY PLAZA (Continued) **S112141909**

plume and contamination in the area of the former UST. An environmental deed restriction was recorded as a result of the HHRA finding. Central Valley Water Board staff found that the case met all of the criteria for closure under the LTCP and closed the case in July 2016.

Facility Project Subtype:	Not reported
RWQCB Region:	CENTRAL VALLEY RWQCB (REGION 5R)
Site History:	The Central Valley Water Board currently regulates an environmental case at the subject property regarding a release of petroleum hydrocarbons from underground storage tanks (USTs) and an aboveground bulk plant facility operated by Toms Sierra Company, Inc. (Discharger). Three potential receptor drinking water supply wells known as the Norton well, the Spanish Creek Motel well and the Feather River Materials well are located near the Site. The Norton well, located approximately 175 feet west of the Site, is the nearest receptor well. An additional sensitive receptor is the unnamed drainage ditch located along the north Site boundary. In 1991, two 5,000-gallon USTs were closed in place, under a Plumas County Department of Environmental Health (PCDEH) permit. In early 1999, Central Valley Water Board staff opened UST Case # 320062. On 2 May 2001, the Quincy Community Services District (QCSD) found 3.1 micrograms/Liter (ug/L) of methyl tert-butyl ether (MTBE) in the Norton well. Although this concentration is below the 15 ug/L water quality objective for MTBE, QCSD shut down the Norton well as a precautionary measure. In September and October 2003, the Discharger and two neighboring fuel distributing facilities (Warner s Chevron and Allied Washoe) conducted a coordinated pumping test in which water levels were monitored in the Site monitoring wells. The pumping test results indicate that the water-bearing formations beneath the Site are hydraulically connected to the Norton well. On 21 March 2007, the Central Valley Water Board opened Site Cleanup Program (SCP) Case 2050307 and issued Cleanup and Abatement Order (CAO) No R5-2007-0706 to the Discharger for potential impacts to groundwater, surface water, and sensitive receptors in the area. Separate CAOs were also issued to the two neighboring fuel distributors at that time. In July 2007, the Discharger removed the two previously closed-in-place USTs under PCDEH permit. Between June 2014 and November 2015, the Discharger actively remediated groundwater using a dual-phase extraction system (DPE). Seasonally shallow water levels required intermittent operation of the DPE. Between the dates of 2000 and 2015, soil excavation and DPE operation activities removed a total of 1,440 pounds of petroleum and 10 pounds of lead from the subsurface. The Discharger performed groundwater monitoring intermittently from September 2008 until October 2019. Site investigation results indicate that minimal pollution remains at the Site. Based on subsurface conditions, the residual petroleum hydrocarbon concentrations will continue to biodegrade. Central Valley Water Board staff have reviewed the case for closure. The investigative data indicate that the Site in not the source of pollution detected in the Norton well and has not impacted the

TOMS SIERRA BULK FUEL STORAGE (Continued) **S110654898**

unnamed drainage to the north. The Site is on a public water supply. Residual petroleum impacts are limited in extent and do not exceed Low-Threat Underground Storage Tank Case Closure Policy criteria. Accordingly, staff propose rescinding CAO R5-2007-0706 and closure of the UST and SCP cases.

receptor well. An additional sensitive receptor is the unnamed drainage ditch located along the north Site boundary. In 1991, two 5,000-gallon USTs were closed in place, under a Plumas County Department of Environmental Health (PCDEH) permit. In early 1999, Central Valley Water Board staff opened UST Case # 320062. On 2 May 2001, the Quincy Community Services District (QCSD) found 3.1 micrograms/Liter (ug/L) of methyl tert-butyl ether (MTBE) in the Norton well. Although this concentration is below the 15 ug/L water quality objective for MTBE, QCSD shut down the Norton well as a precautionary measure. In September and October 2003, the Discharger and two neighboring fuel distributing facilities (Warner s Chevron and Allied Washoe) conducted a coordinated pumping test in which water levels were monitored in the Site monitoring wells. The pumping test results indicate that the water-bearing formations beneath the Site are hydraulically connected to the Norton well. On 21 March 2007, the Central Valley Water Board opened Site Cleanup Program (SCP) Case 2050307 and issued Cleanup and Abatement Order (CAO) No R5-2007-0706 to the Discharger for potential impacts to groundwater, surface water, and sensitive receptors in the area. Separate CAOs were also issued to the two neighboring fuel distributors at that time. In July 2007, the Discharger removed the two previously closed-in-place USTs under PCDEH permit. Between June 2014 and November 2015, the Discharger actively remediated groundwater using a dual-phase extraction system (DPE). Seasonally shallow water levels required intermittent operation of the DPE. Between the dates of 2000 and 2015, soil excavation and DPE operation activities removed a total of 1,440 pounds of petroleum and 10 pounds of lead from the subsurface. The Discharger performed groundwater monitoring intermittently from September 2008 until October 2019. Site investigation results indicate that minimal pollution remains at the Site. Based on subsurface conditions, the residual petroleum hydrocarbon concentrations will continue to biodegrade. Central Valley Water Board staff have reviewed the case for closure. The investigative data indicate that the Site in not the source of pollution detected in the Norton well and has not impacted the unnamed drainage to the north. The Site is on a public water supply. Residual petroleum impacts are limited in extent and do not exceed Low-Threat Underground Storage Tank Case Closure Policy criteria. On 11/9/2020, the Discharger submitted a Report of Well Destructions and Removal of Investigation Derived Waste. Staff rescinded CAO R5-2007-0706 and closed the UST case and SCP cases on 23 November 2020.

Disadvantaged Community:	Disadvantaged Community
CA Enviroscreen 3 Score:	26-30%
CA Enviroscreen 4 Score:	25-30%
Military DOD Site:	No
Facility Project Subtype:	Not reported
RWQCB Region:	CENTRAL VALLEY RWQCB (REGION 5R)
Site History:	In August 1986, five underground storage tanks (USTs) were removed from the Site. Soil and groundwater near one of the gasoline USTs indicated petroleum pollution was present at the Site. In 2000, the Quincy Community Services District (QCSD) shut down the Norton Well due to taste and odor complaints. The Norton Well was sampled in May and July 2001. Methyl tertiary butyl ether (MTBE) was detected at a maximum concentration of 3.3 ug/L. The adjacent Spanish Creek Motel well also contained low levels of MTBE. An initial site investigation was conducted in January 2003 and indicated that the pollution beneath the Site threatened identified receptor wells. In 2003, five monitoring wells (MW-1 through MW-5) were installed. Beginning in March 2006, monitoring wells began showing ethanol detections, indicating a recent gasoline release. In March 2007, the Water Board issued Cleanup and Abatement Order R5-2007-0707. Subsequently in August 2007, 30 wells were installed in there different groundwater zones. The most recent sampling event conducted in June 2015 indicates that plume is delineated that concentrations are decreasing. As per a June 2016 conversation with QCSD, the Norton Well will be discontinued from service and permitting. The Site meets the Low-Threat Closure Policy criteria and was closed in October 2016 and the Cleanup and Abatement Order R5-2007-0707 was rescinded.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

ALLIED WASHOE (Continued) **S106486355**

RWQCB Region: CENTRAL VALLEY RWQCB (REGION 5R)
Site History: Petroleum has discharged from underground and aboveground storage tank systems and impacted soil and groundwater. Pollution potentially threatens nearby wells, the sanitary sewer and surface water. The Discharger has not fully complied with Cleanup and Abatement Order R5-2007-0705. The Central Valley Water Board has conducted formal enforcement, most recently in 2019 with an Administrative and Civil Liability Order. Subsequently, the Discharger submitted a Corrective Action Plan (approved by staff) and conducted a groundwater monitoring event in the second quarter of 2019. CAP implementation is still pending.

Facility Project Subtype:	Not reported
RWQCB Region:	CENTRAL VALLEY RWQCB (REGION 5R)
Site History:	County lead investigation of small former heating oil tank, further considered due to proximiity to Allied Washoe case. However, findings indicated site not a likely groundwater pollution source.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 01/25/2023

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/1991

Lists of Federal Delisted NPL sites

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Lists of Federal sites subject to CERCLA removals and CERCLA orders

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 12/20/2022

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Data Release Frequency: Quarterly

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Lists of Federal RCRA TSD facilities

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Lists of Federal RCRA generators

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

RCRA-VSQG: RCRA - Very Small Quantity Generators (Formerly Conditionally Exempt Small Quantity Generators)

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

Lists of state- and tribal hazardous waste facilities

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites
Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

Date of Government Version: 01/06/2023

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

PFAS ECHO FIRE TRAINING: Facilities in Industries that May Be Handling PFAS Listing

A list of fire training sites was added to the Industry Sectors dataset using a keyword search on the permitted facilitys name to identify sites where fire-fighting foam may have been used in training exercises. Additionally, you may view an example spreadsheet of the subset of fire training facility data, as well as the keywords used in selecting or deselecting a facility for the subset. as well as the keywords used in selecting or deselecting a facility for the subset. These keywords were tested to maximize accuracy in selecting facilities that may use fire-fighting foam in training exercises, however, due to the lack of a required reporting field in the data systems for designating fire training sites, this methodology may not identify all fire training sites or may potentially misidentify them.

PFAS PART 139 AIRPORT: All Certified Part 139 Airports PFAS Information Listing

Since July 1, 2006, all certified part 139 airports are required to have fire-fighting foam onsite that meet military specifications (MIL-F-24385) (14 CFR 139.317). To date, these military specification fire-fighting foams are fluorinated and have been historically used for training and extinguishing. The 2018 FAA Reauthorization Act has a provision stating that no later than October 2021, FAA shall not require the use of fluorinated AFFF. This provision does not prohibit the use of fluorinated AFFF at Part 139 civilian airports; it only prohibits FAA from mandating its use. The Federal Aviation Administration?s document AC 150/5210-6D - Aircraft Fire Extinguishing Agents provides guidance on Aircraft Fire Extinguishing Agents, which includes Aqueous Film Forming Foam (AFFF).

AQUEOUS FOAM NRC: Aqueous Foam Related Incidents Listing

The National Response Center (NRC) serves as an emergency call center that fields initial reports for pollution and railroad incidents and forwards that information to appropriate federal/state agencies for response. The spreadsheets posted to the NRC website contain initial incident data that has not been validated or investigated by a federal/state response agency. Response center calls from 1990 to the most recent complete calendar year where there was indication of Aqueous Film Forming Foam (AFFF) usage are included in this dataset. NRC calls may reference AFFF usage in the ?Material Involved? or ?Incident Description? fields.

AQUEOUS FOAM: Former Fire Training Facility Assessments Listing

Airports shown on this list are those believed to use Aqueous Film Forming Foam (AFFF), and certified by the Federal Aviation Administration (FAA) under Title 14, Code of Federal Regulations (CFR), Part 139 (14 CFR Part 139). This list was created by SWRCB using information available from the FAA. Location points shown are from the latitude and longitude listed on the FAA airport master record.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

WASTEWATER PITS: Oil Wastewater Pits Listing
Water officials discovered that oil producers have been dumping chemical-laden wastewater into hundreds of unlined pits that are operating without proper permits. Inspections completed by the Central Valley Regional Water Quality Control Board revealed the existence of previously unidentified waste sites. The water boards review found that more than one-third of the region's active disposal pits are operating without permission.

WDR: Waste Discharge Requirements Listing

In general, the Waste Discharge Requirements (WDRs) Program (sometimes also referred to as the "Non Chapter 15 (Non 15) Program") regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. Exemptions from Title 27 may be granted for nine categories of discharges (e.g., sewage, wastewater, etc.) that meet, and continue to meet, the preconditions listed for each specific exemption. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Date of Government Version: 11/16/2022
Date Data Arrived at EDR: 11/16/2022

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

GEOCHECK ®- PHYSICAL SETTING SOURCE ADDENDUM

TARGET PROPERTY ADDRESS

SITE 2 JCC
253 LAWRENCE STREET
QUINCY, CA 95971

TARGET PROPERTY COORDINATES

Latitude (North):	39.938342 - 39° 56’ 18.03’’
Longitude (West):	120.943776 - 120° 56’ 37.59’’
Universal Tranverse Mercator:	Zone 10
UTM X (Meters):	675687.8
UTM Y (Meters):	4422728.0
Elevation:	3420 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map:	12015224 QUINCY, CA
Version Date:	2018

EDR’s GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

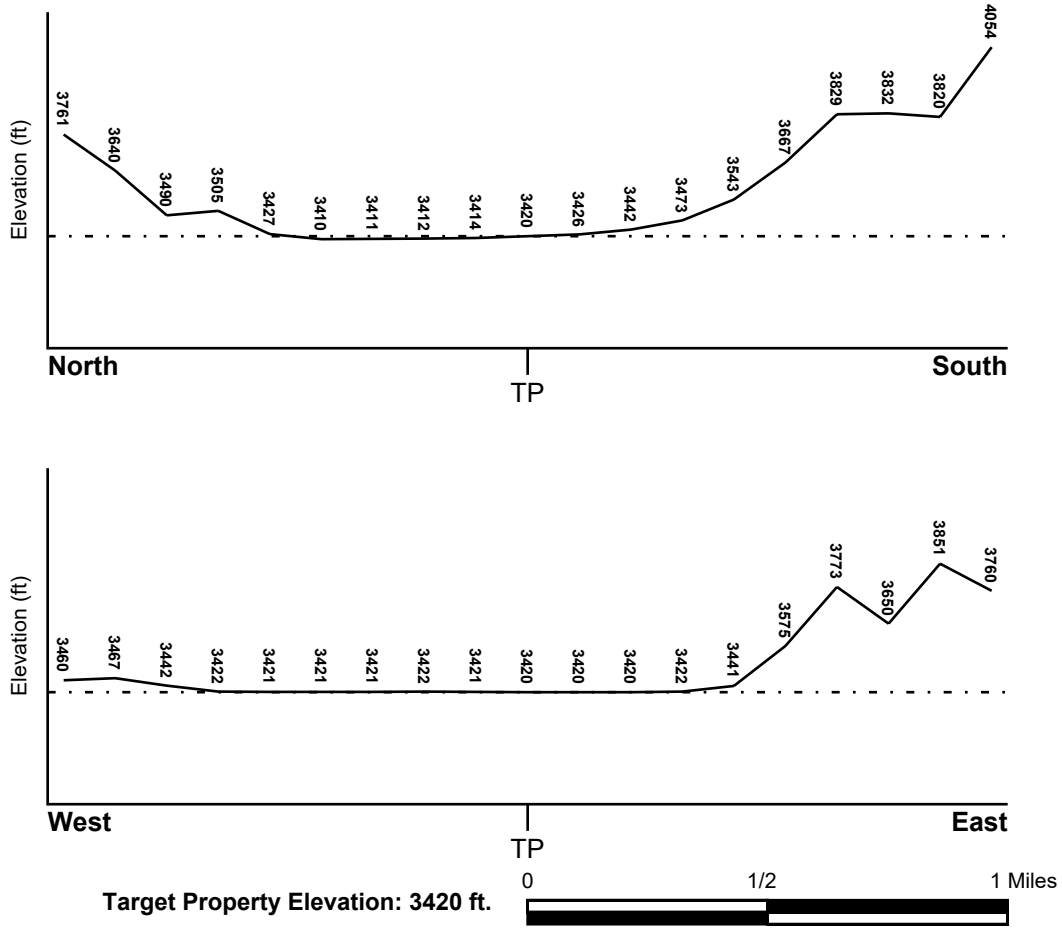

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General North

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
06063C0904E	FEMA FIRM Flood data

Additional Panels in search area:	FEMA Source Type
06063C0908E	FEMA FIRM Flood data

06063C0916E	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
QUINCY	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW

* ©1996 Site−specific hydrogeological data gathered by CERCLIS Alerts, Inc., Bainbridge Island, WA. All rights reserved. All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: Forgay

Soil Surface Texture:
Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Somewhat excessively drained

Hydric Status: Unknown

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	14 inches		Not reported	Not reported	Max: 42 Min: 14	Max: 6.5 Min: 5.8
2	14 inches	27 inches		Not reported	Not reported	Max: 42 Min: 14	Max: 6.5 Min: 5.8

Soil Map ID: 2

Soil Component Name: Keddie

Soil Surface Texture:
Hydrologic Group: Class C - Slow infiltration rates. Soils with layers impeding downward movement of water, or soils with moderately fine or fine textures.

Soil Drainage Class: Poorly drained

Hydric Status: Unknown

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 64 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	29 inches	59 inches		Not reported	Not reported	Max: 14 Min: 4	Max: 7 Min: 6.1
2	20 inches	29 inches		Not reported	Not reported	Max: 14 Min: 4	Max: 7 Min: 6.1
3	0 inches	20 inches		Not reported	Not reported	Max: 14 Min: 4	Max: 7 Min: 6.1

Soil Map ID: 3

Soil Component Name: Greenhorn

Soil Surface Texture:

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class: Poorly drained

Hydric Status: Unknown

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 64 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005, 2010 and 2015 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory
Source: Department of Fish and Wildlife
Telephone: 916-445-0411

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

OTHER STATE DATABASE INFORMATION

Groundwater Ambient Monitoring & Assessment Program
State Water Resources Control Board
Telephone: 916-341-5577
The GAMA Program is Californias comprehensive groundwater quality monitoring program. GAMA collects data by testing the untreated, raw water in different types of wells for naturally-occurring and man-made chemicals. The GAMA data includes Domestic, Monitoring and Municipal well types from the following sources, Department of Water Resources, Department of Heath Services, EDF, Agricultural Lands, Lawrence Livermore National Laboratory, Department of Pesticide Regulation, United States Geological Survey, Groundwater Ambient Monitoring and Assessment Program and Local Groundwater Projects.

Water Well Database
Source: Department of Water Resources
Telephone: 916-651-9648

California Drinking Water Quality Database
Source: Department of Public Health
Telephone: 916-324-2319
The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.

California Oil and Gas Well Locations
Source: Dept of Conservation, Geologic Energy Management Division
Telephone: 916-323-1779
Oil and Gas well locations in the state.

California Earthquake Fault Lines
Source: California Division of Mines and Geology
The fault lines displayed on EDR's Topographic map are digitized quaternary fault lines prepared in 1975 by the United State Geological Survey. Additional information (also from 1975) regarding activity at specific fault lines comes from California's Preliminary Fault Activity Map prepared by the California Division of Mines and Geology.

RADON

State Database: CA Radon
Source: Department of Public Health
Telephone: 916-210-8558
Radon Database for California

PHYSICAL SETTING SOURCE RECORDS SEARCHED

Area Radon Information
Source: USGS
Telephone: 703-356-4020
The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones
Source: EPA
Telephone: 703-356-4020
Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Geocon Consultants, Inc. were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

EDR Historical Topo Map Report

05/03/23

Site Name:

Site 2 JCC
253 Lawrence Street
Quincy, CA 95971
EDR Inquiry # 7327025.4

Client Name:

Geocon Consultants, Inc.
3160 Gold Valley Drive Suite 800
Rancho Cordova, CA 95742
Contact: Kris Williams

EDR Topographic Map Library has been searched by EDR and maps covering the target property location as provided by Geocon Consultants, Inc. were identified for the years listed below. EDR's Historical Topo Map Report is designed to assist professionals in evaluating potential liability on a target property resulting from past activities. EDRs Historical Topo Map Report includes a search of a collection of public and private color historical topographic maps, dating back to the late 1800s.

Search Results:

P.O.# S2591-07-01B

Project: Site 2 JCC Phase I ESA

Coordinates:

Latitude:	39.938342 39° 56' 18" North

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Report is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Report includes a search of available business directory data at approximately five year intervals.

RECORD SOURCES

The EDR City Directory Report accesses a variety of business directory sources, including Haines, InfoUSA, Polk, Cole, Bresser, and Stewart. Listings marked as EDR Digital Archive access Cole and InfoUSA records. The various directory sources enhance and complement each other to provide a more thorough and accurate report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer.

RESEARCH SUMMARY

The following research sources were consulted in the preparation of this report. A check mark indicates where information was identified in the source and provided in this report.

Site Owner/Occupant Questionnaire

The following questions are for: (1) the current owner of the property, (2) any major occupant of the property or, if the property does not have any major occupants, at least 10% of the occupants of the property, and (3) in addition to the current owner and the occupants identified in (2), any occupant likely to be using, treating, generating, storing, or disposing of hazardous substances and/or petroleum products on or from the property. A major occupant is any occupant using at least 40% of the leasable area of the property or any anchor tenant when the property is a shopping center. In a multi-family property containing both residential and commercial uses, residential occupants do not need to respond to this questionnaire unless they are involved in or have knowledge of the commercial or other uses.

Address: 253-295 LAWRENCE ST. QUINCY CA
Description of Site: QUINCY LUMBER BUILDING + METAL COVERED STORAGE

Question	Owner			Occupants (if applicable)		
1a. Is the property used for an industrial use?	Yes	No X	Unk	Yes	No	Unk
Explain if yes:						
1b. Is any adjoining property used for an industrial use?	Yes	No X	Unk	Yes	No	Unk
Explain if yes:						
2a. Have you observed evidence of or do you have any knowledge that the property has been used for an industrial use in the past?	Yes	No	Unk ✓	Yes	No	Unk
Explain if yes:						
2b. Have you observed evidence of or do you have any knowledge that any adjoining property has been used for an industrial use in the past?	Yes	No	Unk ✓	Yes	No	Unk
Explain if yes:						
3a. Is the property used as a gasoline station, motor repair facility, commercial printing facility, dry cleaners, photo developing laboratory, junkyard or landfill, or as a waste treatment, storage, disposal, processing, or recycling facility (if applicable, identify which)?	Yes	No X	Unk	Yes	No	Unk
Explain if yes:						
3b. Is any adjoining property used as a gasoline station, motor repair facility, commercial printing facility, dry cleaners, photo developing laboratory, junkyard or landfill, or as a waste treatment, storage, disposal, processing, or recycling facility (if applicable, identify which)?	Yes	No	Unk X	Yes	No	Unk
Explain if yes:						
4a. Have you observed evidence of or do you have any knowledge that the property was previously used as a gasoline station, motor repair facility, commercial printing facility, dry cleaners, photo developing laboratory, junkyard	Yes	No X	Unk	Yes	No	Unk

Additional Questions

A) Describe the current use of the property.

RETAIL, SERVICE AND RV STORAGE

B) How long has the property been used for this purpose?

20 YEARS PLUS

C) How long have you owned the property?

D) List the existing structures on the property and their age.

OLD BARN STRUCTURE + COVERED METAL STORAGE

E) Describe the past uses, owners, and operators of the property. (Be as detailed as possible and note approximate time periods.)

PREVIOUS OWNERS - QUINCY LUMBER
DIAMOND "

F) Do any environmental documents exist for the Site such as environmental site assessment reports, environmental compliance audit reports, environmental permits, registrations for storage tank or any other environmentally related documents for the property?

NOT THAT WE ARE AWARE OF

This questionnaire was completed by:

Name: WILLIAM SEIBOLD
Title: OWNER
Address: PO BOX 206 QUINCY CA

Phone number: 530-909-0707
Date: MAY 25 2023

or landfill, or as a waste treatment, storage, disposal, processing, or recycling facility (if applicable, identify which)?						
Explain if yes:						
4b. Have you observed evidence of or do you have any knowledge that any adjoining property was previously used as a gasoline station, motor repair facility, commercial printing facility, dry cleaners, photo developing laboratory, junkyard or landfill, or as a waste treatment, storage, disposal, processing, or recycling facility (if applicable, identify which)?	Yes	No X	Unk	Yes	No	Unk
Explain if yes:						
5a. Are there currently any damaged or discarded automotive or industrial batteries, petroleum products, pesticides, paints or other chemicals in individual containers of > 5gal (19L) in volume or 50gal (190L) in the aggregate, stored on or used at the property or facility?	Yes X	No	Unk	Yes	No	Unk
Explain if yes: RETAIL PAINT STORE						
5b. Have you observed evidence of or do you have any knowledge that there have been previously any damaged or discarded automotive or industrial batteries, petroleum products, pesticides, paints or other chemicals in individual containers of > 5gal (19L) in volume or 50gal (190L) in the aggregate, stored on or used at the property or facility?	Yes	No X	Unk	Yes	No	Unk
Explain if yes:						
6a. Are there currently any industrial drums (typically 55 gal [208L]) or sacks of chemicals located on the property or at the facility?	Yes	No X	Unk	Yes	No	Unk
Explain if yes:						
6b. Have you observed evidence of or do you have any knowledge that there have been previously any industrial drums (typically 55 gal [208L]) or sacks of chemicals located on the property or at the facility?	Yes	No X	Unk	Yes	No	Unk
Explain if yes:						
7a. Have you observed evidence of or do you have any knowledge that fill dirt has been brought onto the property that originated from a contaminated site?	Yes	No X	Unk	Yes	No	Unk
Explain if yes:						

7b. Have you observed evidence of or do you have any knowledge that fill dirt has been brought onto the property that is of an unknown origin?	Yes	No X	Unk	Yes	No	Unk
Explain if yes:						
8a. Are there currently any pits, ponds, or lagoons located on the property in connection with waste treatment or disposal?	Yes	No	Unk X	Yes	No	Unk
Explain if yes:						
8b. Have you observed evidence of or do you have any knowledge that there have been previously any pits, ponds, or lagoons located on the property in connection with waste treatment or disposal?	Yes	No X	Unk	Yes	No	Unk
Explain if yes:						
9a. Is there currently any stained soil on the property?	Yes	No X	Unk	Yes	No	Unk
Explain if yes:						
9b. Have you observed evidence of or do you have any knowledge that there has been previously any stained soil on the property?	Yes	No X	Unk	Yes	No	Unk
Explain if yes:						
10a. Are there currently any registered or unregistered storage tanks (aboveground or underground) located on the property?	Yes	No X	Unk	Yes	No	Unk
Explain if yes:						
10b. Have you observed evidence of or do you have any knowledge that there have been previously any registered or unregistered storage tanks (aboveground or underground) located on the property?	Yes	No X	Unk	Yes	No	Unk
Explain if yes:						
11a. Are there currently any vent pipe, fill pipes, or access ways indicating a fill pipe protruding from the ground on the property or adjacent to any structure located on the property?	Yes	No X	Unk	Yes	No	Unk
Explain if yes:						
11b. Have you observed evidence of or do you have any knowledge that there have been previously any vent pipe, fill pipes, or access ways indicating a fill pipe protruding from the ground on the property or adjacent to any structure located on the property?	Yes	No X	Unk	Yes	No	Unk
Explain if yes:						

12a. Are there currently any flooring, drains, or walls located within the facility that are stained by substances other than water or were emitting foul odors?	Yes	No X	Unk	Yes	No	Unk
Explain if yes:						
12b. Have you observed evidence of or do you have any knowledge that there have been previously any flooring, drains, or walls located within the facility that are stained by substances other than water or were emitting foul odors?	Yes	No X	Unk	Yes	No	Unk
Explain if yes:						
13a. If the property is served by a private well or non-public water system, is there evidence of or do you have knowledge that contaminants have been identified in the well or system that exceed guidelines applicable to the water system?	Yes	No X	Unk	Yes	No	Unk
Explain if yes:						
13b. If the property is served by a private well or non-public water system, is there evidence of or do you have knowledge that the well has been designated as contaminated by any government/health agency?	Yes	No	Unk X	Yes	No	Unk
Explain if yes:						
14. Do you have any knowledge of environmental liens of governmental notification relating to past or recurrent violations of environmental laws with respect to the property or any facility located on the property?	Yes	No X	Unk	Yes	No	Unk
Explain if yes:						
15a. Have you been informed of the past existence of hazardous substances and/or petroleum products with respect to the property or any facility located on the property?	Yes	No X	Unk	Yes	No	Unk
Explain if yes:						
15b. Have you been informed of the current existence of hazardous substances and/or petroleum products with respect to the property or any facility located on the property?	Yes	No X	Unk	Yes	No	Unk
Explain if yes:						
15c. Have you been informed of the past existence of environmental violations with respect to the property or any facility located on the property?	Yes	No X	Unk	Yes	No	Unk
Explain if yes:						
15d. Have you been informed of the current existence of environmental violations with respect to the property or any facility located on the property?	Yes	No X	Unk	Yes	No	Unk
Explain if yes:						
16. Do you have any knowledge of any environmental site	Yes	No	Unk	Yes	No	Unk

assessment of the property or facility that indicated the presence of hazardous substances and/or petroleum products on, or contamination of, the property or recommended further assessment of the property?		X				
Explain if yes:						
17. Do you know of any past, threatened, or pending lawsuits or administrative proceedings concerning a release or threatened release of any hazardous substances and/or petroleum products involving the property by any owner or occupant of the property?	Yes	No X	Unk	Yes	No	Unk
Explain if yes:						
18a. Does the property discharge wastewater, on or adjacent to the property, other than stormwater, into a stormwater sewer system?	Yes	No X	Unk	Yes	No	Unk
Explain if yes:						
18b. Does the property discharge wastewater, on or adjacent to the property, other than stormwater, into a sanitary sewer system?	Yes X	No	Unk	Yes	No	Unk
Explain if yes:						
19. Have you observed evidence of or do you have any knowledge that any hazardous substances and/or petroleum products, unidentified waste materials, tires, automotive or industrial batteries, or any other waste materials have been dumped above grade, buried and/or burned on the property?	Yes	No X	Unk	Yes	No	Unk
Explain if yes:						
20. Is there a transformer, capacitor, or any hydraulic equipment for which there are records indicating the presence of PCBs?	Yes	No	Unk X	Yes	No	Unk
Explain if yes:						

Unk – "unknown" or "no response"

Site Owner/Occupant Questionnaire

The following questions are for: (1) the current owner of the property, (2) any major occupant of the property or, if the property does not have any major occupants, at least 10% of the occupants of the property, and (3) in addition to the current owner and the occupants identified in (2), any occupant likely to be using, treating, generating, storing, or disposing of hazardous substances and/or petroleum products on or from the property. A major occupant is any occupant using at least 40% of the leasable area of the property or any anchor tenant when the property is a shopping center. In a multi-family property containing both residential and commercial uses, residential occupants do not need to respond to this questionnaire unless they are involved in or have knowledge of the commercial or other uses.

Address: 287 LAWRENCE ST QUINCY CA

13a. If the property is served by a private well or non-public water system, is there evidence of or do you have knowledge that contaminants have been identified in the well or system that exceed guidelines applicable to the water system?	Yes	No	Unk	Yes	No	Unk
Explain if yes:						
13b. If the property is served by a private well or non-public water system, is there evidence of or do you have knowledge that the well has been designated as contaminated by any government/health agency?	Yes	No	Unk	Yes	No	Unk
Explain if yes:						
14. Do you have any knowledge of environmental liens of governmental notification relating to past or recurrent violations of environmental laws with respect to the property or any facility located on the property?	Yes	No	Unk	Yes	No	Unk
Explain if yes:						
15a. Have you been informed of the past existence of hazardous substances and/or petroleum products with respect to the property or any facility located on the property?	Yes	No	Unk	Yes	No	Unk
Explain if yes:						
15b. Have you been informed of the current existence of hazardous substances and/or petroleum products with respect to the property or any facility located on the property?	Yes	No	Unk	Yes	No	Unk
Explain if yes:						
15c. Have you been informed of the past existence of environmental violations with respect to the property or any facility located on the property?	Yes	No	Unk	Yes	No	Unk
Explain if yes:						
15d. Have you been informed of the current existence of environmental violations with respect to the property or any facility located on the property?	Yes	No	Unk	Yes	No	Unk
Explain if yes:						

16. Do you have any knowledge of any environmental site assessment of the property or facility that indicated the presence of hazardous substances and/or petroleum products on, or contamination of, the property or recommended further assessment of the property?	Yes	No	Unk	Yes	No	Unk
Explain if yes:						
17. Do you know of any past, threatened, or pending lawsuits or administrative proceedings concerning a release or threatened release of any hazardous substances and/or petroleum products involving the property by any owner or occupant of the property?	Yes	No	Unk	Yes	No	Unk
Explain if yes:						
18a. Does the property discharge wastewater, on or adjacent to the property, other than stormwater, into a stormwater sewer system?	Yes	No	Unk	Yes	No	Unk
Explain if yes:						
18b. Does the property discharge wastewater, on or adjacent to the property, other than stormwater, into a sanitary sewer system?	Yes	No	Unk	Yes	No	Unk
Explain if yes:						
19. Have you observed evidence of or do you have any knowledge that any hazardous substances and/or petroleum products, unidentified waste materials, tires, automotive or industrial batteries, or any other waste materials have been dumped above grade, buried and/or burned on the property?	Yes	No	Unk	Yes	No	Unk
Explain if yes:						
20. Is there a transformer, capacitor, or any hydraulic equipment for which there are records indicating the presence of PCBs?	Yes	No	Unk	Yes	No	Unk
Explain if yes:						

Unk – "unknown" or "no response"

Additional Questions

A) Describe the current use of the property.

Office space, Some commercial printing

B) How long has the property been used for this purpose?

22yrs

C) How long have you owned the property?

34yrs

D) List the existing structures on the property and their age.

Approx 12,000 sqft Building – Built 1995

E) Describe the past uses, owners, and operators of the property. (Be as detailed as possible and note approximate time periods.) Original owners - 10yrs - Retail store
Second owners - Newspaper, offices, printing
Current owners - News office, printing

F) Do any environmental documents exist for the Site such as environmental site assessment reports, environmental compliance audit reports, environmental permits, registrations for storage tank or any other environmentally related documents for the property? No

This questionnaire was completed by:

Name: Keith Brown
Title: Owner
Address: P.O. Box B
Quincy, CA 95971
Phone number: 530-283-0800 Cell 530-258-1655
Date: 5/10/25

Site Owner/Occupant Questionnaire

The following questions are for: (1) the current owner of the property, (2) any major occupant of the property or, if the property does not have any major occupants, at least 10% of the occupants of the property, and (3) in addition to the current owner and the occupants identified in (2), any occupant likely to be using, treating, generating, storing, or disposing of hazardous substances and/or petroleum products on or from the property. A major occupant is any occupant using at least 40% of the leasable area of the property or any anchor tenant when the property is a shopping center. In a multi-family property containing both residential and commercial uses, residential occupants do not need to respond to this questionnaire unless they are involved in or have knowledge of the commercial or other uses.

Address: 393 Lawrence St. Unit A
Description of Site:

Question	Owner			Occupants (if applicable)		
1a. Is the property used for an industrial use?	Yes	No	Unk	Yes	No ✓	Unk
Explain if yes:						
1b. Is any adjoining property used for an industrial use?	Yes	No	Unk	Yes	No ✓	Unk
Explain if yes:						
2a. Have you observed evidence of or do you have any knowledge that the property has been used for an industrial use in the past?	Yes	No	Unk	Yes	No ✓	Unk
Explain if yes:						
2b. Have you observed evidence of or do you have any knowledge that any adjoining property has been used for an industrial use in the past?	Yes	No	Unk	Yes	No ✓	Unk
Explain if yes:						
3a. Is the property used as a gasoline station, motor repair facility, commercial printing facility, dry cleaners, photo developing laboratory, junkyard or landfill, or as a waste treatment, storage, disposal, processing, or recycling facility (if applicable, identify which)?	Yes ✓	No	Unk	Yes	No	Unk
Explain if yes: This is a location for recycling paint, stain, lacquer, etc...						
3b. Is any adjoining property used as a gasoline station, motor repair facility, commercial printing facility, dry cleaners, photo developing laboratory, junkyard or landfill, or as a waste treatment, storage, disposal, processing, or recycling facility (if applicable, identify which)?	Yes	No	Unk	Yes	No	Unk
Explain if yes:						

Maybe breezeway for counts ~~of~~ adjoining

Question	Owner			Occupants (if applicable)		
4a. Have you observed evidence of or do you have any knowledge that the property was previously used as a gasoline station, motor repair facility, commercial printing facility, dry cleaners, photo developing laboratory, junkyard or landfill, or as a waste treatment, storage, disposal, processing, or recycling facility (if applicable, identify which)?	Yes	No	Unk	Yes	No ✓	Unk
Explain if yes:						
4b. Have you observed evidence of or do you have any knowledge that any adjoining property was previously used as a gasoline station, motor repair facility, commercial printing facility, dry cleaners, photo developing laboratory, junkyard or landfill, or as a waste treatment, storage, disposal, processing, or recycling facility (if applicable, identify which)?	Yes	No	Unk	Yes	No ✓	Unk
Explain if yes:						
5a. Are there currently any damaged or discarded automotive or industrial batteries, petroleum products, pesticides, paints or other chemicals in individual containers of > 5gal (19L) in volume or 50gal (190L) in the aggregate, stored on or used at the property or facility?	Yes ✓	No	Unk	Yes	No ✓	Unk
Explain if yes:						
5b. Have you observed evidence of or do you have any knowledge that there have been previously any damaged or discarded automotive or industrial batteries, petroleum products, pesticides, paints or other chemicals in individual containers of > 5gal (19L) in volume or 50gal (190L) in the aggregate, stored on or used at the property or facility?	Yes	No	Unk	Yes	No ✓	Unk
Explain if yes:						
6a. Are there currently any industrial drums (typically 55 gal [208L]) or sacks of chemicals located on the property or at the facility?	Yes	No	Unk	Yes	No ✓	Unk
Explain if yes:						
6b. Have you observed evidence of or do you have any knowledge that there have been previously any industrial drums (typically 55 gal [208L]) or sacks of chemicals located on the property or at the facility?	Yes	No	Unk	Yes	No ✓	Unk
Explain if yes:						
7a. Have you observed evidence of or do you have any knowledge that fill dirt has been brought onto the property that originated from a contaminated site?	Yes	No	Unk	Yes	No ✓	Unk
Explain if yes:						

7b. Have you observed evidence of or do you have any knowledge that fill dirt has been brought onto the property that is of an unknown origin?	Yes	No	Unk	Yes	No ✓	Unk
Explain if yes:						
8a. Are there currently any pits, ponds, or lagoons located on the property in connection with waste treatment or disposal?	Yes	No	Unk	Yes	No ✓	Unk
Explain if yes:						
8b. Have you observed evidence of or do you have any knowledge that there have been previously any pits, ponds, or lagoons located on the property in connection with waste treatment or disposal?	Yes	No	Unk	Yes	No ✓	Unk
Explain if yes:						
9a. Is there currently any stained soil on the property?	Yes	No	Unk	Yes	No ✓	Unk
Explain if yes:						
9b. Have you observed evidence of or do you have any knowledge that there has been previously any stained soil on the property?	Yes	No	Unk	Yes	No ✓	Unk
Explain if yes:						
10a. Are there currently any registered or unregistered storage tanks (aboveground or underground) located on the property?	Yes	No	Unk	Yes	No ✓	Unk
Explain if yes:						
10b. Have you observed evidence of or do you have any knowledge that there have been previously any registered or unregistered storage tanks (aboveground or underground) located on the property?	Yes	No	Unk	Yes	No ✓	Unk
Explain if yes:						
11a. Are there currently any vent pipe, fill pipes, or access ways indicating a fill pipe protruding from the ground on the property or adjacent to any structure located on the property?	Yes	No	Unk	Yes	No	Unk ✓
Explain if yes:						
11b. Have you observed evidence of or do you have any knowledge that there have been previously any vent pipe, fill pipes, or access ways indicating a fill pipe protruding from the ground on the property or adjacent to any structure located on the property?	Yes	No	Unk	Yes	No ✓	Unk
Explain if yes:						

12a. Are there currently any flooring, drains, or walls located within the facility that are stained by substances other than water or were emitting foul odors?	Yes	No	Unk	Yes	No ✓	Unk
Explain if yes:						
12b. Have you observed evidence of or do you have any knowledge that there have been previously any flooring, drains, or walls located within the facility that are stained by substances other than water or were emitting foul odors?	Yes	No	Unk	Yes	No ✓	Unk
Explain if yes:						
13a. If the property is served by a private well or non-public water system, is there evidence of or do you have knowledge that contaminants have been identified in the well or system that exceed guidelines applicable to the water system?	Yes	No	Unk	Yes	No	Unk ✓

1 INTRODUCTION

In accordance with the Moore Iacofano Goltsman (MIG) authorization, Ninyo & Moore has performed a hazardous building material survey, in support of upcoming demolition activities for the Judicial Courts of California (JCC), New Quincy Courthouse located at 253, 287 and 291 Lawrence Street in Quincy, California. This report has been prepared in accordance with generally accepted environmental science and engineering practices. This report is based on conditions at the site building at the time of the sampling activities and provides documentation of our findings and recommendations.

The survey was performed on March 19, 2026, by Mr. James Rich. Mr. Rich is a California (Cal) Department of Occupational Safety and Health (DOSH) Certified Asbestos Consultant (CAC) #96-2035 and aa California Department of Public Health (CDPH) Lead-Related Construction (LRC) Inspector Assessor (I/A) #00000928. Mr. Rich is also HAZWOPER trained (Occupational Safety and Health Administration [OSHA], 29 Code of Federal Regulations [CFR] 1910.120(e)(8). Mr. William Larkin provided principal-level oversight and quality review and is a DOSH-Certified Asbestos Consultant (No. 99-2688) and a CDPH-certified Lead Inspector/Assessor and Project Monitor (#s 000001284/000001285). Consultant certificates are presented in Appendix A

2 PURPOSE AND SCOPE OF SERVICES

The objective of the survey is to provide information about current conditions regarding the potential presence of asbestos containing materials (ACM), lead containing materials (LCM), Polychlorinated Biphenyl-Containing Materials (PCB-CM) for demolition activities. For the purposes of this assessment, LCM refers to lead in paint or other materials/surfaces in any amount as defined by Title 8 California Code of Regulations (CCR) 1532.1. Lead-Based Paint (LBP), as defined by the CDPH and United States Department of Housing and Urban Development (HUD), 24 Code of Federal Regulations (CFR) 35.110 is a paint or other surfaces that contain lead equal to or exceeding 0.5% by weight (or 5,000 milligrams per kilogram [mg/kg]) and any surfaces containing detectable amounts of lead by X-Ray fluorescence (XRF) or laboratory analysis.

The scope of services included the tasks described below.

- Performed a visual reconnaissance of the buildings to evaluate for the possible presence of ACM, LCM, PCBs and Universal Waste.
- Collected 77 bulk samples and submitted these samples to an independent laboratory for analysis of asbestos content. Samples were analyzed in accordance with the United States Environmental Protection Agency (EPA) recommended method of Polarized Light Microscopy (PLM) in accordance with EPA Test Method 600/R-93/116 July 93.

- Collected 45 X-Ray fluorescence (XRF) readings (including calibrations) of potential LCM.
- Collected 19 suspect LCM samples and submitted these samples to a certified, independent laboratory for analysis of lead content (EPA Method SW-846 3050B/7000B).
- Performed a visual assessment and quantification of miscellaneous hazardous materials which may be affected by the demolition including, but not limited to, fluorescent light bulbs (possible mercury); fluorescent light ballasts (possible PCB-containing oils); high intensity light bulbs (possible mercury); thermostat switches (possible liquid mercury and/or batteries); emergency lighting and exit signs (possible lead acid or other metal containing batteries or tritium); heating, ventilation, and air-conditioning (HVAC) and refrigeration systems (possible chlorofluorocarbon [CFC] gas); and other possible hazardous materials.
- Prepared sample location maps showing suspect ACM and LCM sampling locations.
- Prepared this report, which presents our data and summarizes field activities, evaluated materials, and locations. This report includes a field drawn sample location map, a general area building description, laboratory testing information, laboratory test results, and conclusions and recommendations.

3 SITE BUILDING DESCRIPTION

Three buildings are located on the site for the new Quincy courthouse to be located at 253, 287 and 291 Lawrence Street in Quincy, California.

1. The building at 253 Lawrence Street was formally a a hardware store. It is a two-story structure on a concrete foundation, consisting of retail areas, restrooms, storage areas and offices. The interior walls are drywall and wood, the flooring materials vary throughout, the roofing is metal without a vapor barrier and the exterior is wood. This building was constructed prior to the 1930s.

2. The building located at 287 Lawrence Street is currently a print shop. It is a two-story structure on a concrete slab, consisting of offices, workshops, restrooms, printing areas and warehousing. The interior walls are drywall, the flooring materials vary throughout, the roofing is metal with a vapor barrier and the exterior is wood and block. This structure was constructed in the 1990s.

3. The building located at 291 Lawrence Street is a vehicle storage and shop structure. The shop area is on a concrete slab with a storage area and a work area. The vehicle storage area includes columns with concrete footings and a gravel parking area. The interior walls are drywall, the flooring is concrete, the roof is metal without a vapor barrier and the exterior is wood. This building was constructed in the 1990s.

4 FIELD LIMITATIONS

Survey activities were limited to above-ground areas of the subject buildings within our scope. Underground utilities, such as suspect cementitious water lines or suspect insulated/coated gas or electrical lines, were not assessed during survey activities.

There is a possibility that additional suspect materials and/or surfaces may be encountered in in-accessible areas (e.g., interstitial wall/ceiling spaces and/or canopy soffits) during planned demolition activities. For instance, un-tested thermal system insulation may be present within wall and ceiling cavities and/or behind plumbing and heating fixtures (e.g., sinks, boilers, and radiators). Suspect materials and/or surfaces encountered during the planned demolition/renovation activities that have not been assessed should be sampled and analyzed to assess whether they are asbestos, lead and/or PCB-containing.

5 ASBESTOS SURVEY

5.1 Asbestos Inspection, Sampling, and Quantification

The survey inspection and sampling procedures were performed in accordance with the guidelines published by the Environmental Protection Agency (EPA) in 40 CFR Part 763 Subpart E, October 30, 1987, Asbestos Hazard Emergency Response Act (AHERA); the EPA guidance document “Asbestos in Buildings: Simplified Sampling Scheme for Friable Surfacing Materials (EPA 560/5-85-030a, October 1985); the National Emission Standards for Hazardous Air Pollutants (NESHAP) 40 CFR Part 61, subpart M; and the California Air Resource Board.

The survey consisted of three parts including: visual inspection, sampling, and quantification of the building materials.

5.1.1 Visual Inspection

Initial observations were made throughout the structure to evaluate for the presence and condition of accessible suspect materials. Materials which were similar in general appearance were grouped into homogeneous sampling areas (areas in which the materials are uniform in color, texture, construction, or application date), as recommended by the EPA. Each homogeneous area was observed for material type, location, condition, and friability.

The definition of friability is any material containing more than one percent asbestos that, when dry, can be crumbled, pulverized, or reduced to powder by hand pressure. The EPA’s NESHAP regulation lists different material categories for ACMs. These categories are used

when demolition or renovation projects are being conducted. Each identified suspect homogeneous material was placed in one of the following EPA classifications:

- **Category I Non-friable** - NESHAP defines a Category I non-friable ACM as packing, gaskets, resilient floor covering (except sheet flooring products which are considered friable), and asphalt roofing products which contain more than one percent asbestos.
- **Category II Non-friable** - NESHAP defines a Category II non-friable ACM as any material, except for Category I non-friable ACM, which contains more than one percent asbestos and cannot be reduced to a powder by hand pressure when dry.
- **Regulated Asbestos Containing Material (RACM)** - is (a) friable asbestos material, (b) Category I nonfriable ACM that has become friable, (c) Category I nonfriable ACM that will be or has been subjected to sanding, grinding, cutting or abrading, or (d) Category II nonfriable ACM that has a high probability of becoming or has become crumbled, pulverized, or reduced to powder by the forces expected to act on the material in the course of demolition or renovation operations.

In accordance with the EPA and AHERA, suspect materials were placed in one of three categories:

- **Surfacing Materials** - materials generally applied via sprayed or trowel methods,
- **Thermal Systems Insulation (TSI)** - materials generally applied to various mechanical systems, or
- **Miscellaneous Materials** - any materials which do not fit in the Surfacing or TSI classifications.

If asbestos is identified in a sample from a homogeneous area, the entire homogeneous area is considered to contain asbestos.

Representative samples were collected from each homogeneous area within the survey area, except areas that were inaccessible, or areas of assumed ACM, within the limitations of the survey.

5.1.2 Sampling Procedures

Following an initial walkthrough, the inspector collected samples of accessible materials identified as suspect ACM. EPA, AHERA and NESHAP guidelines were used to determine the sampling protocol. Sampling locations were chosen to be representative of the homogeneous material. Samples of surfacing material were collected in general accordance with the EPA sampling protocol outlined in EPA 560/5-85-030a, October 1985. Representative samples were collected from already damaged areas or areas which were the least visible. Samples of miscellaneous materials were taken as randomly as possible, while attempting to

sample already damaged areas so as to minimize disturbance of the material. Generally, one to three samples of each homogeneous material were collected of miscellaneous materials and TSI, if present.

5.1.3 Quantification

Quantities of accessible and/or exposed building materials that were suspected of containing asbestos were estimated by taking approximate measurements in the field. Quantities are presented in square foot or linear feet to be used as a guide for contractor estimates on bidding for abatement activities.

It is the abatement contractor's responsibility to confirm quantities prior to bidding and removal.

5.2 Asbestos Laboratory Analysis Procedures

Analysis was performed by Microtest Laboratories, Inc. (MTL) located at 3110 Gold Canal Drive, Suite. A, Rancho Cordova, California. MTL is a National Volunteer Laboratory Accreditation Program (NVLAP) accredited laboratory (Certification No. 200999-0). A chain-of-custody, documenting the possession of the samples from the time they were collected until analyzed and stored, were submitted with the bulk samples. Custody documentation began at the time samples were collected and each transferor retained a copy of the chain-of-custody record. A copy of the laboratory analytical reports and chain-of-custody records are presented in Appendix B. General photographic documentation of the building and areas sampled is presented in Appendix C. The suspect asbestos containing sample locations are shown on the field drawings presented in Appendix D.

Analysis was performed by using the bulk sample for visual observation and slide preparation(s) for microscopic examination and identification. The samples were mounted on slides and then analyzed for asbestos (chrysotile, amosite, crocidolite, anthophyllite, and actinolite/tremolite), fibrous non-asbestos constituents (mineral wool, paper, etc.), and non-fibrous constituents. Refractive indices, morphology, color, pleochroism, birefringence, extinction characteristics, and signs of elongation identified asbestos. The same characteristics were used to identify the non-asbestos constituents.

The microscopist visually estimated relative amounts of each constituent by determining the volume of each constituent in proportion to the total volume of the sample, using a stereoscope. The bulk samples were analyzed by Polarized Light Microscope (PLM) with dispersion staining

as described by the method of the determination of asbestos in bulk insulation, EPA/600/R 93/116, July 1993. This is a standard method of analysis in optical mineralogy and the currently accepted method for the determination of asbestos in bulk samples. A suspect material is immersed in a solution of known refractive index and subjected to illumination by polarized light. The characteristic color displays which result enable mineral identification.

6 LCM SURVEY

Federal efforts to regulate LBP began with the LBP Poison Prevention Act in 1971. In 1973, the Consumer Product Safety Commission (CPSC) defined LBP as paint having lead content equal to or greater than 0.5 percent by weight (1.0 mg/cm^2 by XRF) in a dry film of newly applied paint. In 1978, the CPSC lowered the allowable lead levels in new paint to 0.06 percent. HUD developed guidelines relating to HUD facilities that specified lead content of 0.5 percent as an action level in determining the need for corrective action. Federal and State DOSH do not define the amount of lead in paint to a regulatory requirement, rather the activities, or tasks, define when the regulation is in effect. Both Federal and State standards use the term “trigger task” activities. In the work place, employers must make certain assumptions of the exposure levels and comply with regulations based on the level of disturbance rather than the lead level.

The survey was conducted using a portable Viken Detection, Pb200i XRF Lead Paint Analyzer 1600 in accordance with accepted environmental science and engineering practices. The protocol used for selecting components and sampling locations was that contained in the federal HUD “Guidelines for the Evaluation and Control of Lead-Based Paint Hazards in Housing” (Chapter 7 “Lead-Based Paint Inspection”), except the inspection was limited to accessible materials and, once a pattern was recognized for the component results, fewer readings for each component were collected.

Currently, the EPA stipulates what concentrations of lead in non-volatile components of surface coatings or materials indicate whether a material is considered to be lead-containing. The EPA stipulates that paint containing an amount equal to or in excess of 1 milligram per square centimeter (1.0 mg/cm^2), or more than half of one percent (0.5%) by weight (or 5,000 milligrams per kilogram [mg/kg]), constitute a lead-based paint (LBP). Coatings with any detectable amount of reported lead would be considered LCM.

The analytical results associated with paint chip samples collected from the buildings are summarized in Table 3. A copy of the laboratory analytical reports and chain-of-custody records are presented in Appendix B.

6.1 XRF Lead Readings

The XRF analyzer used for the testing is a direct-reading instrument that determines the concentration of lead in painted surfaces by subjecting the painted surface to energy from a small radioactive source when the instrument is placed against the surface and analyzes the absorption of X-Rays by the paint. The instrument was calibrated to the manufacturer's specifications and was also verified, at least every four hours and at the beginning and completion of each set of readings, against known lead sample standards produced by the National Institute of Standards and Testing. The XRF instrument measures lead in units of milligrams of lead per square centimeter of tested surface (mg/cm^2). A total of 45 XRF readings were collected (including calibration readings) over the course of the survey. Painted surfaces with a reading on 1.0 mg/cm^2 or greater are above the action level and designated as positive and are considered Lead-Based Paint (LBP). XRF readings are included in Appendix E.

6.2 Lead Laboratory Analysis Procedures

Confirmation paint chip samples from inconclusive XRF readings were collected from the suspect painted surfaces of the structures by collecting representative paint chip samples. Analysis was performed by MTL in their Rancho Cordova, California office. MTL is an accredited lead approved laboratory for environmental lead analysis through the A2LA Laboratory Accreditation Programs Accreditation No. 5034.01 and the California State Environmental Laboratory Accreditation Program (Certification No. 2974). Analysis of the paint chip samples was performed by the EPA recommended method of determination of Lead by Flame AAS in accordance with EPA Test Method SW-846/7240/7000B). A chain-of-custody, documenting the possession of the samples from the time they were collected until analyzed and stored, were submitted with the bulk samples. Custody documentation began at the time samples were collected and each transferor retained a copy of the chain-of-custody record. A copy of the laboratory analytical reports and chain-of-custody records are presented in Appendix B. General photographic documentation of the building and areas sampled is presented in Appendix C. The suspect asbestos containing sample locations are shown on the field drawings presented in Appendix D.

7 PCB-CM – BUILDING MATERIALS SURVEY

The EPA believes there was widespread use of PCB-containing building materials in buildings constructed or renovated between 1950 and 1980. PCBs were historically used as a plasticizing agent in caulking and glazing materials, as an additive to paints and floor finishes, as a sealant for heating systems and plumbing, and as insulators in electrical equipment. PCBs may be mobile and can migrate directly into adjoining building materials, particularly porous materials such as

wood, concrete, and other types of masonry. The manufacture and use of PCBs were banned in the United States in 1976, and PCBs were eventually phased out between 1978 and 1979.

Building materials that were manufactured using PCBs and that contain PCB concentrations greater than or equal to (≥) 50 mg/kg are defined as ***PCB Bulk Product Waste*** (40 Code of Federal Regulations Parts 761.3 and 761.61). Building materials that contain PCB concentrations less than (<) 50 mg/kg are defined as ***Excluded PCB Products*** and may be disposed of as general construction debris. However, it is recommended that the laboratory results be provided to the selected disposal facility for final waste classification and acceptance determination. Targeted suspect PCBCM were collected/analyzed as part of these sampling activities.

7.1 PCB-CM Visual Observations

The ages of the site buildings do not fall within the construction periods of 1950 to 1980. Therefore, no PCBCM samples were required to be collected for analysis. If renovation activities had occurred during that time period the only structure which may have required sampling and analysis would have been 253 Lawrence Street. No suspect PCBCM was identified during the inspection for that building.

8 INVENTORY OF UNIVERSAL WASTES

A visual assessment of potential mercury-containing thermostats/switches, PCB-containing items (transformers, light ballasts, etc.), fluorescent light tubes, exit signs, smoke detectors, air conditioning units, and Freon-containing refrigeration systems was performed at the site buildings. Materials observed within the site buildings are listed in Tables 8, 9 , 10.

9 SURVEY RESULTS

9.1 Asbestos Survey Summary

A total of 77 samples of suspect ACMs were collected from the three structures located at the site and transferred to MTL for analysis. The laboratory analyzed each sample by layer for a total of 119 analyses. The lower limit of reliable detection for asbestos using the PLM method is approximately 1 percent by volume. In the state of California, DOSH regulations consider construction materials to be *asbestos-containing construction materials* (ACCM) if one sample from a homogeneous area contains asbestos at greater than one tenth of 1 percent (>0.1 percent) which is confirmed by PLM point count analysis (PLM 400- or 1,000-point count analysis). Materials in which no asbestos was detected are defined in the laboratory report as “None

detected." Materials containing asbestos, but in amounts less than 1 percent, are defined as containing "trace" amounts and for the purpose of this report are assumed to be ACCM.

Based on field observations and the analytical results of bulk samples collected during the survey, ACMs were detected within the areas surveyed and inspected. The building materials which were sampled and found to be asbestos-containing are summarized in Table 1. The building materials which were sampled and found to be non-asbestos containing are summarized in Tables 2, 3 and 4. A copy of the laboratory analytical report and chain-of-custody records are presented in Appendix B. General photographic documentation of the site structures is presented in Appendix C. The sample locations are shown on the field drawing presented in Appendix D.

Table 1 – Positive Asbestos Survey Results
253 Lawrence Street

Sample No. from COC	HA No.	Material	Location	ACM Category	Approximate Quantity/ Asbestos Content	Photograph No.
253-1TSF-A & 253-2TSF-B	1	Transite sheet flooring	Room 6	Cat 2	1375 SF – 70% Chrysotile	2, 3
4VSF-A & 4VSF-B	5	Beige vinyl sheet flooring (linoleum)	Room 12	Cat 2	100 SF – 25% Chrysotile	4
5VSF-A & 5VSF-B	1	Brown vinyl sheet flooring (linoleum)	Room 14	Cat 2	80 SF – 25% Chrysotile	5

Please note that quantities of ACMs are approximate. It is the abatement contractor's responsibility to confirm quantities prior to bidding and removal activities. ACMs were only found in the 253 Lawrence Street building.

9.2 Lead-Containing Materials Survey Summary

Nine paint chip samples were analyzed at MTL by flame atomic absorption. A summary of the paint chip sampling and results is described below in Table 5, 6 and 7. A copy of the laboratory analytical report and chain-of-custody record is presented in Attachment B.

9.2.1 XRF Readings

A total of 45 XRF readings were collected from the representative testing combinations (e.g., unique combination of room equivalent, building component, and substrate) within the structure. LCM were detected within the structure. Building components with detectable quantities of lead are presented in Appendix E.

- LBP was detected in 3 of the XRF readings (> 1.0 mg/cm^2).
- LCM was detected in 8 of the XRF readings (0.1 mg/cm^2 and 0.9 mg/cm^2).
- Inconclusive was detected in 22 of the XRF readings (0.0 mg/cm^2).
- 12 XRF readings were for calibration.

Building components sampled with the XRF are listed in Appendix E. The reading of the LBP and the LCM were compared to the Inconclusive reads. Upon review of the XRF analysis it was determined that verification sampling would be conducted. A total of 19 samples were collected. 8 samples from 253 Lawrence Street, 5 samples from 287 Lawrence Street and 6 samples from 291 Lawrence Street.

9.2.2 Lead – Laboratory Analysis

The samples were collected by scraping an approximate 2-square-inch sample of the representative material down to the substrate and placing the sample in a sealed zip-lock type bag. The samples were submitted to MTL in ranch Cordova, California which is an accredited lead approved laboratory for environmental lead analysis through the California State Environmental Laboratory Accreditation Program (Certification No. 1406).

9.2.3 Lead-Based Paint (LBP) – Locations

Building 253 Lawrence Street has LBP on the wood-sashed windows, which are currently painted white and located on the east side of the building. LBP was also identified as being on the trims located on the front of the building (south side) around the windows and doors. See photographs 1 and 6 in Appendix C.

9.3 Universal Waste Results Inventory

Universal wastes were found within the building. The descriptions and locations of universal wastes found to be present are summarized in Tables 8, 9 and 10. The summarized materials are what is generally left in place prior to demolition. A select number of fluorescent light fixtures were inspected in each building to determine if PCB light ballasts were present. All inspected ballast indicated no PCBs, (though only a few lights were inspected). The contractor, upon removal of the light tubes, will be required to determine if the ballasts contain PCBs (by looking at each ballast). Also, other universal waste maybe left in the STRUCTURES? once the occupied spaces have been vacated.

Table 8 – Universal Waste Inventory 253 Lawrence Street		
Hazardous Material Location	Hazardous Material Description	Estimated Quantity
Throughout	Fluorescent light tubes	80

10 RECOMMENDATIONS

10.1 Asbestos

Asbestos was only detected at 253 Lawrence Street. The materials are as follows:

- The Vinyl Sheet Floorings (Linoleums) located in Area 3 (mezzanine) in rooms 12 and 14 contain 25% Chrysotile. The Transite Sheet Flooring located in Area 2 under a layer of particle board contains 75% Chrysotile. These materials shall not be disturbed by unauthorized personnel.

- Prior to demolition activities which would disturb identified ACMs, a licensed abatement removal contractor should remove the ACMs. The licensed abatement contractor must maintain current licenses as required by applicable state or local jurisdictions for the removal, transporting, disposal, or other regulated activities.

- Applicable laws and regulations should be followed, including those provisions requiring notification to regulatory agencies, building occupants, demolition contractors, and workers of the presence of asbestos.

- Although not a regulatory requirement, asbestos abatement monitoring consulting services should be performed by a third-party environmental consultant, to include oversight of abatement contractor activities to be performed in accordance with the abatement specifications, daily air monitoring, clearances, verification of complete removal of hazardous materials, and preparation of a closeout report summarizing the abatement activities.

10.2 Lead

- The identified LBP located at 253 Lawrence Street building on the sashed windows located on the east side and the door and window frames/trims located at the store front (south side) of the building should not be disturbed by unauthorized personnel. All disturbances and removal activities should be performed by a licensed abatement contractor with certified lead

personnel. All lead related removal activities should be performed in accordance with the DOSH Lead in Construction Standard, Title 8 California Code of Regulations (CCR) 1532.1.

- Proper waste stream categorization is required for lead components which will be removed. Prior to disposal, a composite sample of the representative LCM material should be analyzed for total lead for comparison with the Total Threshold Limit Concentration in accordance with EPA reference method SW-846. If the concentration of total lead is greater than or equal to 1,000 milligrams per kilogram (mg/kg), the LCM waste material must be disposed at a landfill which can receive such wastes. If the concentration is less than 50 mg/kg the sample may be disposed as construction debris, if it is to remain in California. If the total lead result is greater than or equal to 50 mg/kg and less than 1,000 mg/kg, the sample must be further analyzed for soluble lead by the Waste Extraction Test for comparison with the Soluble Threshold Limit Concentration (STLC) as described in Title 22 CCR 66261.24a. Additionally, if the result is greater than or equal to 100 mg/kg the sample must be further analyzed for leachable lead by the Toxicity Characteristic Leaching Procedure (TCLP) for comparison with the Resource Conservation and Recovery Act (RCRA) limits. Based on the results of the soluble and leachable analysis the waste material may require disposal as a RCRA-Hazardous waste or non-RCRA- (California-) Hazardous waste.

10.3 Universal Wastes

Universal wastes discussed and identified in this report (Tables 8, 9 and10), should be removed and properly recycled or disposed of by the selected abatement contractor during demolition activities. The abatement contractor should provide proper manifesting for all universal wastes removed and recycled to prove the disposal of all materials was completed in accordance with local, state, and federal requirements.

11 LIMITATIONS

Ninyo & Moore's opinions and recommendations regarding environmental conditions, as presented in this report, are based on limited sampling and chemical analysis. Further assessment of potential adverse environmental impacts may be accomplished by a more comprehensive assessment. The samples collected and used for testing, and the observations made, are believed to be representative of the area(s) evaluated. However, if additional suspect ACMs or LCS are encountered during renovation activities, these materials should be sampled by qualified personnel, and analyzed for content prior to further disturbance. In addition, please note that quantities of ACMs are approximate. These numbers should be confirmed prior to removal or repair activities.

The environmental services described in this report have been conducted in general accordance with current regulatory guidelines and the standard-of-care exercised by environmental consultants performing similar work in the project area. No warranty, expressed or implied, is made regarding the professional opinions presented in this report. Variations in site conditions

may exist and conditions not observed or described in this report may be encountered during subsequent activities.

This document is intended to be used only in its entirety. No portion of the document, by itself, is designed to completely represent any aspect of the project described herein. Ninyo & Moore should be contacted if the reader requires any additional information, or has questions regarding content, interpretations presented, or completeness of this document.

The environmental interpretations and opinions contained in this report are based on the results of laboratory tests and analyses intended to detect the presence and concentration of specific chemical or physical constituents in samples collected from the subject site. The testing and analyses have been conducted by an independent laboratory which is certified by the State of California to conduct such tests. Ninyo & Moore has no involvement in, or control over, such testing and analysis. Ninyo & Moore, therefore, disclaims responsibility for any inaccuracy in such laboratory results.

Our conclusions, recommendations, and opinions are based on an analysis of the observed site conditions. It should be understood that the conditions of a site can change with time as a result of natural processes or the activities of man at the subject site or nearby sites. In addition, changes to the applicable laws, regulations, codes, and standards of practice may occur due to government action or the broadening of knowledge. The findings of this report may, therefore, be invalidated over time, in part or in whole, by changes over which Ninyo & Moore has no control.

Dear Certified Asbestos Consultant or Technician:

Enclosed is your certification card. **To maintain your certification, you must abide by the rules printed on the back of the certification card.**

Your certification is valid for a period of one year. If you wish to renew your certification, you must apply for renewal at least 60 days before the expiration date shown on your card. [8 CCR 341.15(h)(1)].

Please hold and do not send copies of your required AHERA refresher renewal certificates to our office until you apply for renewal of your certification.

Certificates must be kept current if you are actively working as a CAC or CSST. The grace period is only for those who are not actively working as an asbestos consultant or site surveillance technician.

Please contact our office at the above address or email w any changes in your contact/mailing information within 15 days of the change.

Sincerely,

Dean Mochrie, CAC
Senior Safety Engineer

MicroTest Laboratories

Notes and Definitions

Notes and Definitions

This document serves as the final report. The results apply only to the sample as received. Due to the inherent limitations of Polarized Light Microscopy (PLM) and the complexity of certain sample matrices, some materials classified as "None Detected" (ND) for asbestos (e.g., floor tiles or similar materials) may require further analysis. MicroTest Laboratories recommends additional testing using PLM and/or Transmission Electron Microscopy (TEM) with gravimetric reduction preparation.

Soil, rock and Vermiculite matrices present analytical challenges. MicroTest recommends homogenization by milling before PLM analysis. The thermal breakdown of asbestos fibers can change their properties, causing them to exhibit different mineral characteristics. Even if altered asbestos isn't counted by the method used, OSHA and various state regulations still recognize it as asbestos. PLM analysis will determine the presence of non-altered asbestos, but fire-altered, former asbestos fibers will be reported as an “Altered” Asbestiform result. Materials commonly seen with fire-altered minerals include, but are not limited to, cementitious sidings, tiles, textures, joint compounds, and fibrous backings. Due to the potential for incomplete or partial decomposition, additional analysis by TEM is advisable.

The reporting limit for calibrated visual area estimation quantitation procedures is 1%. The reporting limits for 400-point count and 1000-point count quantitation procedures are 0.25% and 0.1%, respectively. Samples are considered acceptable unless otherwise noted. Each layer of a sample is analyzed separately unless it consists of multiple manufactured layers (e.g., linoleum, drywall) or if otherwise specified by the client.

Samples received from multiple homogeneous areas and placed in a single bag were analyzed using MicroTest’s MT Sub-sampling Standard Operating Procedures. This method ensures unambiguous and reliable analysis despite the combined nature of the samples received.

All samples will be retained for a minimum of 30 days before disposal. Bench sheets detailing sampling methodologies can be provided upon request. This report must not be used by the client to imply product endorsement by NVLAP or any agency of the U.S. Government. This report may only be reproduced in its entirety with the written approval of MicroTest Laboratories, Inc.

Estimated Positive Error Ranges
<1% - 2% : +/- 1%
3 - 20% : +/- 6%
21 - 50% : +/- 17%

MicroTest Laboratories

Notes and Definitions

Notes and Definitions

This document serves as the final report. The results apply only to the sample as received. Due to the inherent limitations of Polarized Light Microscopy (PLM) and the complexity of certain sample matrices, some materials classified as "None Detected" (ND) for asbestos (e.g., floor tiles or similar materials) may require further analysis. MicroTest Laboratories recommends additional testing using PLM and/or Transmission Electron Microscopy (TEM) with gravimetric reduction preparation.

Soil, rock and Vermiculite matrices present analytical challenges. MicroTest recommends homogenization by milling before PLM analysis. The thermal breakdown of asbestos fibers can change their properties, causing them to exhibit different mineral characteristics. Even if altered asbestos isn't counted by the method used, OSHA and various state regulations still recognize it as asbestos. PLM analysis will determine the presence of non-altered asbestos, but fire-altered, former asbestos fibers will be reported as an “Altered” Asbestiform result. Materials commonly seen with fire-altered minerals include, but are not limited to, cementitious sidings, tiles, textures, joint compounds, and fibrous backings. Due to the potential for incomplete or partial decomposition, additional analysis by TEM is advisable.

The reporting limit for calibrated visual area estimation quantitation procedures is 1%. The reporting limits for 400-point count and 1000-point count quantitation procedures are 0.25% and 0.1%, respectively. Samples are considered acceptable unless otherwise noted. Each layer of a sample is analyzed separately unless it consists of multiple manufactured layers (e.g., linoleum, drywall) or if otherwise specified by the client.

Samples received from multiple homogeneous areas and placed in a single bag were analyzed using MicroTest’s MT Sub-sampling Standard Operating Procedures. This method ensures unambiguous and reliable analysis despite the combined nature of the samples received.

All samples will be retained for a minimum of 30 days before disposal. Bench sheets detailing sampling methodologies can be provided upon request. This report must not be used by the client to imply product endorsement by NVLAP or any agency of the U.S. Government. This report may only be reproduced in its entirety with the written approval of MicroTest Laboratories, Inc.

Estimated Positive Error Ranges
<1% - 2% : +/- 1%
3 - 20% : +/- 6%
21 - 50% : +/- 17%
51+% : +/- 23%

Total Samples Received: 25 Total layers analyzed: 43

MicroTest Laboratories

Notes and Definitions

Notes and Definitions

This document serves as the final report. The results apply only to the sample as received. Due to the inherent limitations of Polarized Light Microscopy (PLM) and the complexity of certain sample matrices, some materials classified as "None Detected" (ND) for asbestos (e.g., floor tiles or similar materials) may require further analysis. MicroTest Laboratories recommends additional testing using PLM and/or Transmission Electron Microscopy (TEM) with gravimetric reduction preparation.

Soil, rock and Vermiculite matrices present analytical challenges. MicroTest recommends homogenization by milling before PLM analysis. The thermal breakdown of asbestos fibers can change their properties, causing them to exhibit different mineral characteristics. Even if altered asbestos isn't counted by the method used, OSHA and various state regulations still recognize it as asbestos. PLM analysis will determine the presence of non-altered asbestos, but fire-altered, former asbestos fibers will be reported as an “Altered” Asbestiform result. Materials commonly seen with fire-altered minerals include, but are not limited to, cementitious sidings, tiles, textures, joint compounds, and fibrous backings. Due to the potential for incomplete or partial decomposition, additional analysis by TEM is advisable.

The reporting limit for calibrated visual area estimation quantitation procedures is 1%. The reporting limits for 400-point count and 1000-point count quantitation procedures are 0.25% and 0.1%, respectively. Samples are considered acceptable unless otherwise noted. Each layer of a sample is analyzed separately unless it consists of multiple manufactured layers (e.g., linoleum, drywall) or if otherwise specified by the client.

Samples received from multiple homogeneous areas and placed in a single bag were analyzed using MicroTest’s MT Sub-sampling Standard Operating Procedures. This method ensures unambiguous and reliable analysis despite the combined nature of the samples received.

All samples will be retained for a minimum of 30 days before disposal. Bench sheets detailing sampling methodologies can be provided upon request. This report must not be used by the client to imply product endorsement by NVLAP or any agency of the U.S. Government. This report may only be reproduced in its entirety with the written approval of MicroTest Laboratories, Inc.

Estimated Positive Error Ranges
<1% - 2% : +/- 1%
3 - 20% : +/- 6%
21 - 50% : +/- 17%
51+% : +/- 23%

Total Samples Received: 7 Total layers analyzed: 10

CEQA Transportation Analysis Memo

This page intentionally left blank

Fehr & Peers

Memo

Date: January 23, 2026

To: Kate Werner, MIG

From: Ian Barnes, PE, and Alexandra Ray, Fehr & Peers

Subject: Quincy Courthouse CEQA Transportation Analysis

This technical memorandum presents the CEQA transportation analysis for the New Quincy Courthouse Project.

Superior Court of California, Plumas County operations are currently provided at the county-owned, historic Plumas County Courthouse, located in Quincy. The proposed Project (Project) relocates court operations approximately 0.2 miles northeast of the existing location to a Judicial Council-selected location along Lawrence Street at Church Street.

Project Description

The Project site consists of three contiguous, privately-owned parcels in the unincorporated town of Quincy in Plumas County, encompassing 2.86 acres. Site addresses include 253, 287, and 293 Lawrence Street (SR 70-89). The main access point of the Project is located on Lawrence Street (SR 70-89), a one-way westbound roadway. There will be a second driveway on Lawrence Street, on the southwest corner of the site, that will serve as controlled secured vehicle access. There will be an emergency vehicle access point on Summerfield Lane, an existing cul-de-sac at the northwest corner of the site. The Summerfield Lane driveway will not be accessible to the public. The site plan proposes a total of 117 parking stalls to serve the courthouse operations. The site plan is displayed in **Figure 1** (figure included at the end of this memorandum).

CEQA Vehicle-Miles Traveled Analysis

Regulatory Framework

Senate Bill 743 (Steinberg 2013) instructed the State Office of Planning and Research (OPR) to update CEQA Guidelines to eliminate congestion-based analysis (such as Level of Service analysis) from CEQA Transportation analysis, and replace it with a new metric, vehicle-miles traveled (VMT). The intent of SB 743 was to encourage infill development, promote healthier communities through active transportation (e.g., walking and bicycling), and align CEQA Transportation analysis in meeting greenhouse gas reduction targets set by other State legislation (i.e., AB 32). Ultimately, SB 743 shifted CEQA transportation analysis from measuring the effects of a project on drivers, to measuring the environmental effects of driving generated by a project. Adopted in December 2018, Section 15064.3 of the CEQA Guidelines notes that VMT is the most appropriate metric for the analysis of impacts in the Transportation section of CEQA documents. OPR provided guidance in its *Technical Advisory on Evaluating Transportation Impacts in CEQA* (December 2018) (Technical Advisory) as to how the analysis of VMT could be

performed and the CEQA thresholds of significance that could be applied. The guidance in the Technical Advisory is non-binding and states that lead agencies may develop their own specific thresholds.

The JCC has adopted recommendations from the Technical Advisory for the use of determining the CEQA threshold of significance. The Technical Advisory states, "*where a project replaces existing VMT-generating land uses, if the replacement leads to a net overall decrease in VMT, the project would lead to a less-than-significant transportation impact*." Therefore, the VMT threshold of significance for the Project is a net-zero change in total VMT.

Methodology

The analysis is based on the understanding that the relocation of court operations would result in a shifting of travel patterns and trip characteristics, yet trip generation would remain consistent, given that the Project will provide the same services as the current courthouse.

Streetlight Data's database of "Big Data" location-based services was utilized to collect average weekday trip volume and trip lengths to and from the existing courthouse location. The expected change in trip lengths and routes to and from the Project were calculated in GIS.

Analysis

Trip Length & Distribution

Average weekday trip volumes to and from the existing courthouse were collected from StreetLight "Big Data" location-based services. The data was collected at the block group level and included trip volumes and lengths in an origin-destination format. There were 24 unique block groups included in the analysis. Using the existing trip origins and destinations, the trip lengths to the proposed new location of the courthouse were then calculated via a network analysis in GIS. **Table 1** displays the average trip length to the existing and proposed courthouse locations, weighted by the trip distribution of block groups. The delta between the existing and proposed courthouse average trip lengths was less than 1/1000th of a mile, which is beyond the reasonable resolution of the Big Data source.

Table 1. Average Trip Lengths Weighted by Trip Distribution

Scenario	Weighted Average Trip Length (miles)
Existing Quincy Courthouse	12.60
Proposed Quincy Courthouse	12.60

VMT Analysis

To estimate the net change in VMT, the analysis assumes the volume of trips remains the same, and would be shifted from the existing site on Main Street in Quincy, CA to the nearby proposed site on Lawrence Street (SR 70-89) in Quincy, CA. The distance between the trip origin and destination was calculated in GIS using the shortest path trip lengths between block groups and courthouse sites. The net change in VMT was calculated using the following equation:

$$\text{VMT} = \sum_{\text{All destinations}} \text{Project Trip Generation} * \text{Trip Distribution \%} * \text{Trip Length delta}$$

The GIS analysis determined that the average trip lengths between the existing and proposed courthouse were equivalent given the resolution of the Big Data. Therefore, the Project-related change in VMT is negligible, as shown in **Table 2**. Thus, the Project results in a ***less-than-significant impact*** to VMT.

Table 2. Net Change in VMT for Proposed Courthouse

Existing Average Daily VMT	Proposed Average Daily VMT	Net Change in Average Daily VMT	Impact?
4,158	4,158	0	No

CEQA Multimodal Analysis

Pedestrian System Impacts

There are existing sidewalks along the Project frontage on Lawrence Street (SR 70-89) and an existing painted crosswalk at Church Street. The Project would not increase existing hazards to pedestrian travel and does not conflict with any pedestrian facilities plans or programs. Overall, the Project would result in ***no impact*** related to the pedestrian system.

Bicycle System Impacts

There are no existing bicycle facilities on Lawrence Street (SR 70-89) There is an existing Class I Bike Path north of the Project site. The Project would not increase existing hazards to bicycle travel and does not conflict with any bicycle facilities plans or programs. Overall, the Project would result in ***no impact*** related to the bicycle system.

Transit System Impacts

The Project site is well served by the Plumas Transit Systems Quincy Local bus route, with three bus stops within 0.25-mile of the site and additional bus stops within 0.5-mile of the site. The Quincy Local bus route provides connections to the East County and North County bus routes, also operated by Plumas Transit Systems (Plumas County Transportation Commission 2025).

Overall, the Project proposes no features which would conflict with existing or planned transit services, nor does it preclude future facilities. The Project is not expected to result in increases in ridership on local or regional transit facilities that would exceed its capacity. Thus, the Project would result in ***no impact*** related to transit.

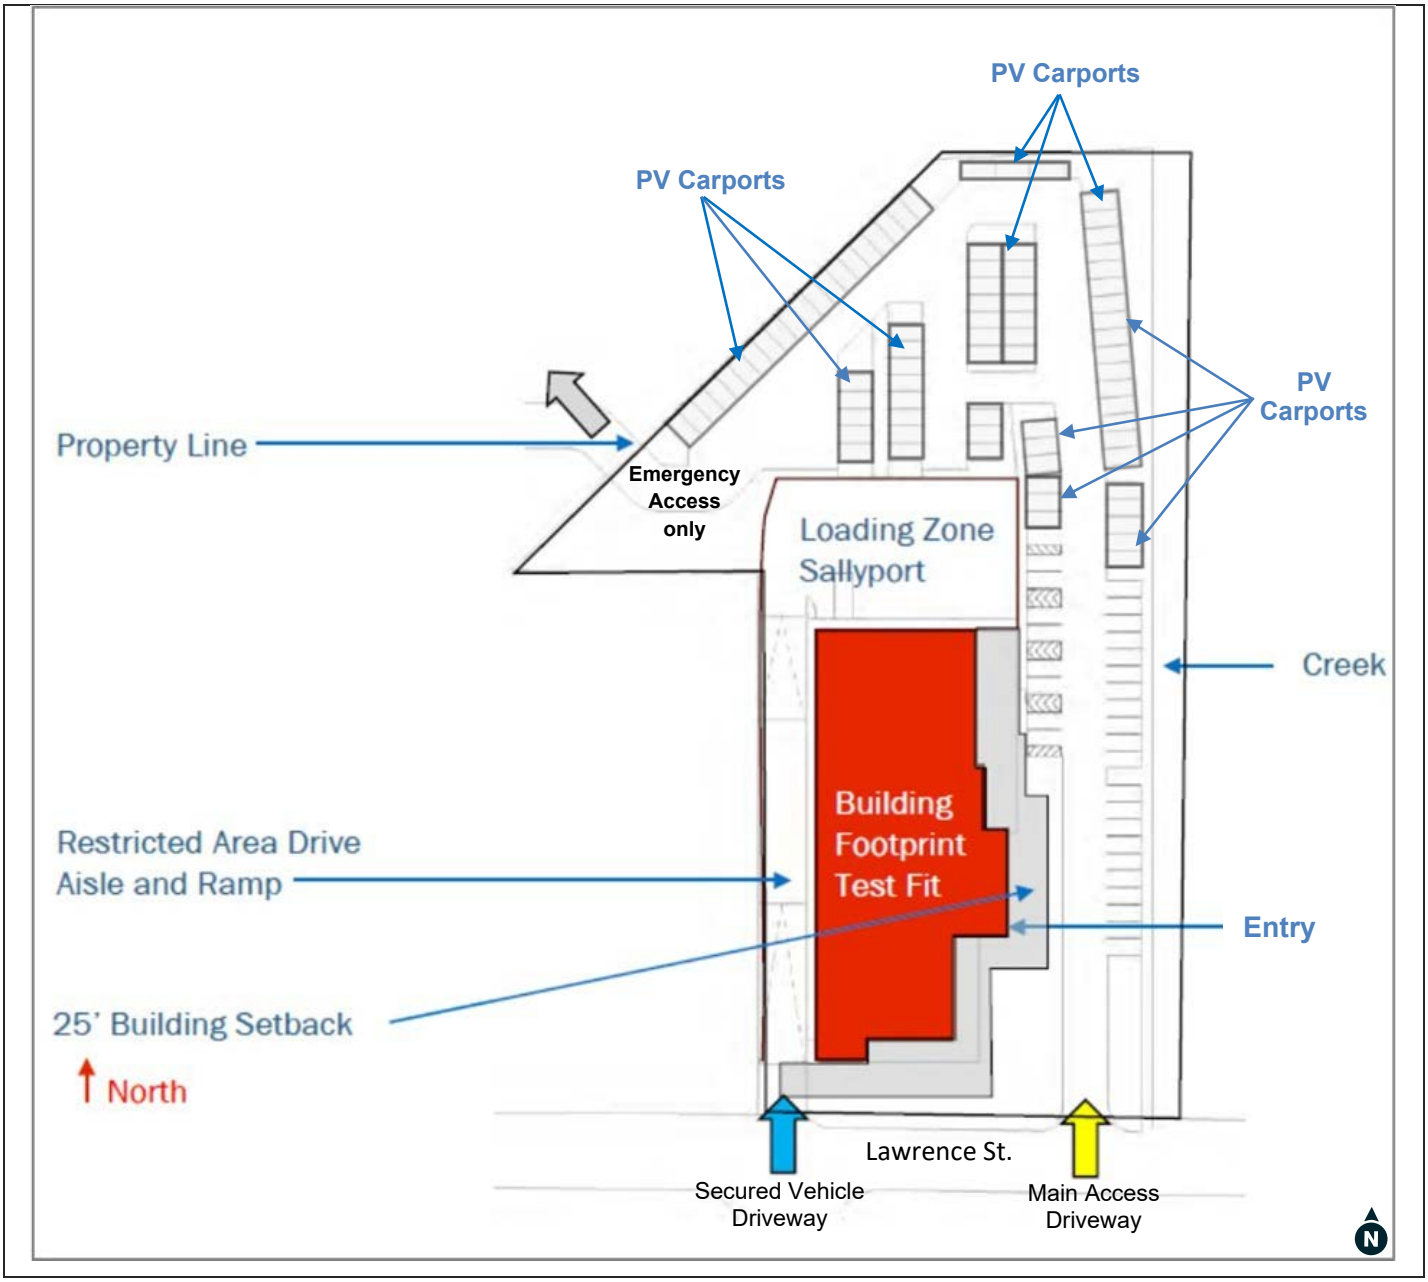

Emergency Vehicle Access

Factors such as the number of access points, roadway width, and proximity to fire stations determine whether a site provides sufficient emergency access. Emergency vehicle access is provided by the driveways on Lawrence Street (SR 70-89) and Summerfield Lane, with Summerfield Lane serving as an emergency-only access point. The fire station most likely to serve the site is the Quincy Fire Station, located on Lawrence Street (SR 70-89), approximately 0.2 miles away from the Project site. While the Project may modify traffic patterns in the vicinity of the Project, emergency vehicles would still retain the right to use lights and sirens to indicate to drivers that they need to yield. Thus, the Project would result in ***no impact*** to emergency vehicle access.

Conclusions

Results of the VMT analysis using Streetlight Big Data indicate that the average trip length to and from the existing and proposed courthouse locations are equivalent to the hundredths of a mile. Therefore, it is projected that there is a negligible change in VMT, resulting in a ***less-than-significant impact*** to Project VMT. CEQA analysis of the bicycle, pedestrian, and transit systems, and emergency vehicle access indicate ***no impact*** to those modes.

This concludes the CEQA transportation analysis for the New Quincy Courthouse Project. Please contact Alexandra Ray at (925) 930-7100 with any questions.
