

## ***Attachment 10: Technical and Administrative Requirements***

**GENERAL QUESTIONS** *(If possible, please limit responses to one page or less.)*

- A. Please outline the system requirements for each component of the proposed solution. Include client platform requirements, browser support, server platforms and recommended hard disk requirements for acceptable performance.
- B. Outline the skills required to develop and maintain your solution.
- C. Is your system fully scalable? Does it allow for an increase in the number of users and volumes of data without requiring replacement of primary system components? Please describe how your system will scale to meet the growing information needs of the appellate courts.

## DETAILED REQUIREMENTS

### Response Key:

5	Item is "Out Of Box"- indicate module
4	Item will be included in future release - specify version and date
3	Item addressed by 3rd party integration- specify partner
2	Item requires customized code to be written- estimate level of effort and cost
1	Item not addressed by solution

### Technical and Administrative

ITEM	REQUIREMENT	RESPONSE	COMMENTS
1	System shall comply with JSR 168 and 170.		
2	System shall follow XML Web Services standards.		
3	Web interface shall be Section 508 compliant.		
4	System shall operate with the AOC's chosen database product, Oracle.		
5	System shall have the ability to integrate with products included in agency standard operating environment (defined in RFP).		
6	System shall run on agency standard platform.		
7	System shall have the ability to use XML to interface with other products.		
8	System shall provide or support standards-based development tools (eg XML, CSS, DHTML, XSLT and other open standards).		
9	Systems shall support agency application servers and platforms.		
10	System shall support current industry standard web programming frameworks (e.g. J2EE or Microsoft .NET).		
11	System shall support data exchange involving open standards and protocols for web services. This includes WSDL (web services definition language), UDDI (Universal Description,

	Discovery and Integration) and SOAP (Simple Object Access Protocol).		
12	System shall support operating systems, browser and productivity applications included in agency SOEs.		
13	System shall support standard messaging protocols (eg SMTP, MIME).		
14	System shall provide a means for data replication at multiple physical sites		
15	System shall integrate with native tools for user authentication and support single sign on (Active Directory).		
17	System shall support exposure of any content through standard interfaces (SOA)		
18	System shall support migration and conversion of data from existing repositories, including file servers.		
19	System shall have the ability to generate PDF documents from XML Documents.		
20	System shall have the ability to use XML to interface with other products for document or web content import.		
21	Systems shall be scalable to meet anticipated growth of the agency, both in user base and content volume.		
22	System shall provide web-based administration tools for managing the complete solution, including users, roles, repositories, etc.		
23	System shall support customized role/security definition, allowing for individual system functions to be grouped, assigned or removed from an individual user or role profile.		
24	System shall provide for segregation and assignment of administrative functions, so that individual functions may be assigned to a customized role.		
25	System shall support scheduled jobs for monitoring and maintenance of the system.		
26	System shall integrate with AOC
